7. Finally, with reference to the query put in paragraph 8 of the resolution, I would merely prohibit the use of opium shops to Burmans. If Chinamen are forced to consume in their own houses there is danger of an increase in the number of opium-smoking dens, and there will be less chance of ascertaining who frequent them.

* Six months only.

REMARKS.

The vice of opium-eating and smoking is a very common practice in this district. The latter form of consumption is very largely indulged in and predominates over the former.

Nearly 69 per cent. of the present population received in the jail are addicted to this pernicious habit, and with very few exceptions almost all came in in an indifferent or bad state of health.

The quantity consumed by these convicts prior to their incarceration varies from nearly 10 grains to 180 grains (one tola) or more in weight, but this depends according to the length of time they were using the drug, because continued and long use of the drug necessitates increased doses to bring on the desired effect. On the whole the vice of opium-eating and smoking, with all its worst and direct consequences, prevails largely in this district and deteriorates the unfortunate and infatuated people who indulge themselves in the drug, physically and mentally.

1. *Physical Deterioration.*—Opium is used at the commencement for its primary stimulant effect, but after a certain time increased doses are needed to produce the same result, and as experiments have proved that the drug exercises a depressing effect on the functional activity of the sympathetic system and affects the terminations of the motor nerves as well as lessens the conductivity of sensory nerves by acting on the grey matter of the brain, the whole nervous system suffers when this deleterious habit is continued long.

To maintain healthy nutrition, a certain influence of the nervous system is essentially necessary, and when the whole nervous system suffers more or less as stated above, by virtue of the action of the drug, nutrition undoubtedly is interfered with. The functions of the internal organs also undergo changes such as a diminished excretion of bile and diminished secretion of the gastro, intestinal and bronchial mucous membranes, and the man who consumes opium thus becomes physically weak, he suffers a general waste. Emaciation sets in, his skin becomes sallow, his lips and gums become black, and a dark areola encircles his orbit and he undergoes loss in weight.

The general stamina of opium consumers who are received in the jail is very poor and their weight, with

very few exceptions, rarely exceeds 100 lbs., the majority of them averaging from 86 lbs. to 100 lbs.

2. *Mental Deterioration.*—A man who consumes opium for a long time suffers from mental weakness, due to the action of the drug lessening the conductivity of the sensory nerves by acting on the grey matter of the brain. He thus becomes fretful and irritable, has a dull and stupid look, becomes timid and despondent, and his memory becomes impaired.

When the habit is continued long and a man thereby becomes an inveterate or confirmed opium consumer, his nervous system becomes irritated, his circulation weak and languid, and his physical strength fails, and independently of any great exciting cause or causes, a simple cold or an extremely trifling cause, which would be of little or no consequence to any other system, is sufficient to call into activity fatal diseases, such as pleurisy, pneumonia, virulent forms of diarrhoea and dysentery, scurvy, purpura, sloughing sores, &c. This fact is well confirmed by reference to the records of the jail hospital as well as post-mortem reports. Out of 15 deaths that took place in this jail during the past four years, 11 occurred amongst persons who indulged themselves in the consumption of this drug. The condition of a patient's general health determines the success or otherwise of treatment. I have seen opium consumers carried off by fatal disease supervening on some very trifling causes which in no way endanger life.

Distinction between Opium-smoking and Eating.—Both these forms of opium consumption are prevalent in this district, and, as stated above, smoking is more rife and more freely indulged in by both sexes than eating. It is not easy to draw a distinction between the two forms of consumption, as the one is as vicious as the other, but, as far as my experience goes, I am inclined to believe that smoking exercises a more pernicious and deleterious effect on the system within a short time than eating.

All the signs described above, such as irritable temper, emaciated look, timidity, and a dull and peculiar look, are more pronounced in opium-smokers, and although these signs, may be present with an inveterate opium-eater, but they do not manifest themselves within a short time, neither in such a marked degree. Jail hospital records show that a

APPENDIX L.

smoker is more susceptible to sickness than an eater, and post-mortem examination reveals also a certain difference, *i.e.*, in smoking, the gall-bladder is always found full of inspissated bile and the lungs invariably are mottled with dark or black spots.

The horrors which an opium consumer suffers when the drug is withheld are something striking and fearful, and so great is the suffering that he has not sufficient resolution to relinquish the drug.

D. D. BHATTACHARGI,
Superintendent of the Jail.

REPORT REGARDING OPIUM CONSUMERS.

IN submitting the return of opium consumers of the Kyaukpyu township, I beg to state that there are 918 opium-eaters and 489 opium-smokers, making a total of 1,407.

On inquiry it turned out that each of these people consumes in a month an average of 2 tolas, and it would require 35 seers per month for this township alone.

The present price at which opium is sold here is Rs. 2 per tola, and the expenditure, therefore, is Rs. 5,600 per month.

It has been suggested to prohibit both sale to and possession of opium by Burmans, and a report is now called for whether it would be possible to enforce the suggested prohibition. On this point I would beg to state that if foreigners, such as Chinese, Shans, and cognate races are only allowed to make their own arrangement for keeping and procuring opium for their own use, and that no special shop be opened by Government for them, I consider it is possible to enforce the suggested prohibition. The existence of Government shops in Akyab, Rangoon, and other places has been the reason for the inability to put down the opium-consuming not only in the places where shops are opened but adjacent ones too.

A custom prevalent in former days in the Akyab district and, I am informed, in this district too, that each village has its own agreement, drawn up after consultation amongst the villagers, for the general comfort of the village, and in such agreement some of the conditions imposed were to abstain from selling or using opium, from gambling, from receiving stolen property, or harbouring bad characters under penalty of being looked upon as a person unworthy of social intercourse or a fine and removal of the agreement; such fine, if paid up, is spent on some good work done for the village in case any person commits a breach of the condition.

Where such agreement existed, the elders in combination can call upon opium consumers to give up the evil practice by fixing a time. Such agreements amongst the villagers have kept down evil practices to a great extent until certain Government officials of higher rank, whose ambition was for the increase of the excise revenue have called for all such documents and declared them to be illegal, when the use of opium has spread to the present extent.

During the time the Government opium shop was closed for about three months at Akyab in the year 1886, and although its re-opening expected every moment, nearly one-quarter of the opium consumers of that district were seen to have given up the evil practice, and they, together with the good-disposed people, have spoken much good of the Commissioner who ordered the closing of the shop; but on its being re-opened the opium consumers have resorted to the former practice with more inclination and with every belief that Government will never close the opium shop.

Where opium shops now closed, the elders of the village, if not interfered with unnecessarily by Govern-

ment officials, will clamorously exert their influence to see the use of opium stopped *in toto*, and my humble opinion is that it is then the preventive agency will be able to stop illicit sale without difficulty. For the present generation who have become addicted to opium using or "confirmed opium consumers" a proclamation issued and posted in every village that Government opium shops will be closed after a certain period, say, three to six months, will, I am certain, have a very good effect. Few people have gone too far with the practice may on application presented by him to the effect and confirmed by the civil surgeon of the district, be allowed a special certificate to possess opium in which case they should be left to make their own arrangement to procure opium as people of other races do.

There is no licensed shop in this district and I believe the Arakanese do not consume their opium on the premises of the Akyab licensed shop, but go to some private dwellings, the owners of which accommodate such people for obtaining some extra charges, consequently for the Arakan division any rule such as contained in the Chief Commissioner's Resolution, paragraph 8, is not necessary.

SAN HLA BAN,
Extra Assistant Commissioner,
Kyaukpyu.

From B. HOUGHTON, Esq., Deputy Commissioner, Sando-
way, to the COMMISSIONER OF THE ARAKAN DIVISION,
—No. 1,861-96—91, dated the 26th October 1891.

WITH reference to your endorsement, Revenue Department (Excise), No. 977-2,591, dated the 18th September 1891, on proceedings No. 10E, dated the 29th August 1891, of the Chief Commissioner, I have the honour to report as follows on the opium question so far as this district is concerned.

The accompanying tables show the proportion of opium-eaters and smokers in certain large villages in the district, the number of those who have been actually convicted of crimes under the Penal Code, and the number who, although not convicted, are supposed to be in the habit of indulging in petty theft. Offences under the Opium Act are not shown for obvious reasons; were it otherwise, almost every consumer of opium would be shown as convicted.

These tables show firstly that the number of known opium-smokers in the district is comparatively small, for taking an average of five persons to each house, it will be seen that only one person in a total of 42 is shown as a consumer of opium. The tables have, I believe, been carefully compiled by the Mycöks with the assistance of the ywathluygis concerned, but it is possible that a few persons who indulge very secretly in the habit of opium smoking or eating may have escaped notice. At the same time it is well known that consumers of the drug are more frequent in the large villages, such as those enumerated, than in the smaller and less civilized ones, so that the proportion of opium-smokers

throughout the district is, making all due allowances, less than that stated above. Accordingly, taking the last census returns, I would estimate the total number of opium-smokers and eaters in the district at less than 1,835.

The next deduction to be made from these tables is that opium smokers and eaters are very nearly equal in number, the former slightly predominating. Opium-smoking is, I understand, considered somewhat the better (or, to use a slang expression, "the more correct") method of taking the drug, but, on the other hand, an opium-eater runs less chance of detection, as he has no paraphernalia of pipes, &c. Lastly, it will be seen that the consumption of the drug has a most marked effect in predisposing persons to crime. Of the total number of consumers shown, upwards of 93 or nearly 32 per cent. have been convicted once or oftener under the Penal Code, whilst 35 per cent. are commonly suspected to be petty thieves. These figures fully support the common idea that an opium-eater (or smoker) is a scoundrel and a thief, whilst there can be only one opinion as to the general effect, physically and morally, of opium on persons of the Burman race. I think, therefore, that Government is morally bound, even at a considerable loss of revenue, to limit by every practicable means the consumption of this pernicious drug so far as Burmans, Arakanese, and Chins (who form the great bulk of the population) are concerned. Now as to the means for effecting this restriction, it is the common and apparently well founded opinion in this district that most of the present opium-eaters contracted this vice during the time when there were opium shops at Sandoway, Taungup, and Gwa. These shops were abolished, I believe, partly in consequence of the strong protest of the then Deputy Commissioner (Major Poole) in 1880, and it is not believed that many persons have since acquired the habit. Further, as regards the (illicit) supply of opium to those opium-eaters still living in this district, there can be very little doubt that almost every tola of it is sent to them illegally by the Prome and Bassein licensees. I am informed that between 300 and 400 balls of Government opium, each weighing 80 tolas, are exported annually from Prome to this district, and Kyauppyu, and the amount sent from Bassein, though smaller, must still be considerable. It is not my place now to remark on the amount of supervision these shops receive as evidenced by this state of things, but it may be added that Omad Ally, formerly opium farmer here, admits that he employed a clerk to make out long lists of buyers of 3 tolas each to account for the opium he sent out illicitly into the district. So far, therefore, as experience in this district is concerned, it may be laid down that the harm is done by the illicit rather than the licit sales of the opium farmers, who have, it must be admitted, a very strong interest to push the former. I am of opinion that it would be advisable, so far as this district is concerned, as suggested by the Chief Commissioner, to partially close the opium shops by limiting the sales to non-Burmans. The number of legitimate buyers would then be so small that it should be possible for the superintendent of police or a European assistant to personally check the lists of sales every week and thus prevent the illicit trade in Government opium. The

amount of supervision, &c. required should be laid down and rigorously insisted on.

I do not anticipate, however, that we should obtain by such action any particular goodwill from the pöngyis or lugyis. I have never known the former to give the slightest assistance in the prevention or detection of crime, though ready enough to excommunicate anyone who makes the slightest insinuation (even though true) against themselves. Neither pöngyis nor lugyis, though they will frequently tell one that smoking opium and drinking are wrong, will exert themselves in the smallest degree to stop the growth of these habits.

As to the suppression of opium smuggling from outside Burma, consequent on the partial suppression of the opium shops, it seems to me that as far as this district is concerned the smugglers would have sufficient work to supply opium to large numbers of consumers in Akyab, Kyauppyu, &c. and that very little, if any, would then reach here. At present, as already remarked, this district is entirely supplied by the Government farmer. As to the prevention of smuggling in other parts I would suggest a frontier excise force in Upper Burma, another on the Chittagong border, together with a system of steam launches to examine and search the native boats from Chittagong, &c. Special arrangement would, of course, have to be made to keep a check on the large English-owned steamers.

With reference to the fear expressed in paragraph 6 of the proceedings of the Chief Commissioner, I would point out that if the list of opium buyers is really checked by the European superintendents and assistant superintendents of police, it should be impossible with the reduction in their number for the licensees to export opium illicitly.

A permanent excise establishment should, however, be entertained, their relation with the regular force defined by the Chief Commissioner, and strong and unremitting pressure kept on them and on the regular police in the matter of the detection of opium smuggling. Experience shows that if a fair out-turn of work in this respect is resolutely insisted on, it will be obtained; but that if left to themselves, the police will do little or nothing to detect the illicit possession, &c. of opium. Besides the police and the excise officers, the ywathugyis (especially when they are all paid) will afford a very considerable amount of help in the detection of offences under the Opium Act. Not a few ywathugyis in this district have already made seizures of small amount, whilst others have searched, though unsuccessfully. To rely on non-official lugyis to do anything in the matter would, I think, be to lean on a broken reed.

As to the proposed sale of opium to the present opium-eaters, I would remark that it is probably not required in this district. It would appear to be the only course open in a district like Akyab, where there are now large opium shops, but as to this, not having any special experience of such districts, I would not express an opinion.

In conclusion, if Burmans are not to be debarred from consuming opium it would certainly seem best to close the shops for consumption to them alone.

From AUNG RAI, TUN CHIN, and MAUNG ZAN U, Advocates (Municipal Commissioners), and MAUNG CHIN HTUN AUNG, Advocate to the COMMISSIONER of the ARAKAN DIVISION.

We have the honour to forward to you a brief account of the lives of some of the opium-smokers belonging to respectable families in the town of Akyab. We beg to say that we have selected only well-known cases. One peculiar feature amongst Arakanese in the use of opium is that it creates such a craving for opium in the hearts of its victims that work of any serious nature becomes to them impossible; that they lose all regard for all things in the world; they love nothing else except opium. It induces them to spend their time in indulging in opium, and consequently they squander all their property and take to gambling, opium-smuggling, and thieving.

1. Tha Do, son of Mra Tun, deceased, age 25, of Mawlu village, belonging to a respectable family, got a decent English education, was employed in the Bank of Bengal, became opium-smoker and eater, was dismissed from the bank. He took to gambling, and subsequently to stealing; lately was sent to jail for cattle theft.

2. Shwe Phu, aged 27, son of Maung Thaikewa, pensioned thugyi, got his English education in Calcutta, worked in the post office at Maungdaw as postmaster, took to opium-smoking and gambling, was obliged to resign, as he had neglected his duties. He returned home, and his father tried to make him leave off opium, but of no avail; became a vagabond in the street of Akyab. His father was obliged to turn him out from his house, and he is now roaming at large in Burma.

3. Do Aung Gyaw, son of Re Phaw Thè Thaw Ha Thu, deceased, was one of the richest men in Akyab, owning many sailing vessels. He inherited a great portion of his father's properties. He took to opium and did no work, but spent his time in squandering his property by gambling, and soon became poor. Now he is living in poverty in Sandoway.

4. Kaing Hla Phru, son of Rhauk Phwè, deceased, was a rich merchant; became opium-smoker. His father tried all in his power to make him leave off opium, but of no avail. He did no work, and died a confirmed opium-smoker in the lifetime of his father.

5. Shwe Tha, aged 23, son of Aung Rhe, advocate, passed his Middle School examination, and was preparing for his entrance examination; took to opium-smoking and left off all study. His father tried his best to reform his son, but of no avail, and when he could not get any money for opium, he used to take away anything he could lay hold of. The father was obliged to send him away.

6. Shwe Myaik, son of U Dök Kè, deceased, a very rich man, the first owner of pucca buildings in Akyab, inherited the valuable properties of his father; became opium-smoker, and led a lazy life, spending all his time in smoking opium, and did no work, and became

opium smuggler. He soon squandered all his wealth by gambling, and died in a wretched state about two years ago.

7. Tha Htun Aung and 8. Paw Htun Aung are sons of Htun Aung Rhi, merchant, deceased, are owners of valuable properties; became opium-smokers, and squandered their properties and those of their parents, and are now living in a miserable condition. The former has been sent to jail for gambling, and the latter for illicit sale of liquor.

9. Pha Htaw, son of Chyi Khau Rhi, merchant, deceased, Lanmadaw, belongs also to rich parents, and took to opium-smoking. His father was obliged to turn him out from his house, as all efforts to reform him failed. Although he inherited the riches of his father, still he is now reduced to very poor condition.

10. Kyaw Htun Aung, son of Gank Re, Honorary Magistrate of Rugri village, and a rich man. He took to opium-smoking and gambling, and is not doing any business. His brother Tha Zan U and his relations are doing well, but he remains a confirmed opium-smoker and a useless man.

11. U Gah Zan and 12. Maung Phru, of Haungtharaw, sons of Tha Ban, deceased, owner of many shops in the bazaar. They became opium-smokers, squandered all the properties they inherited from their parents, and are now gaining their daily food with hardship, working as coolies—the last resource which an Arakanese would do.

13. Maung Hla U, son of Mret Phru, advocate, deceased, is a confirmed opium-smoker. Although his father tried to give him a decent living, yet of no use. He does no work, and spent the money of his parents; now living in a poor state, gaining his livelihood with difficulty.

14. Mret Tha, son of Kyaw Zaw Wè, grantee, is of rich parents; became opium-smoker in the lifetime of his father, and squandered his father's money; and the parents were obliged to send him to jail for theft; and after his father's death he is experiencing great hardship, and has now no ostensible means of livelihood.

15. Re Phaw, son of Ka La, merchant, deceased, was doing a good business, dealing in piece goods from Calcutta; became opium-smoker, stopped all his work, and devoted all his time in smoking opium, and spent all his money in opium and gambling, and died in a wretched state.

16. Hla Phaw Zan, brother of the late Akunwun of the Akyab municipality, received English education; became opium-smoker, and does no work, and now leading the life of a vagabond.

17. Shaw O, son of Aung Phaw, merchant, received English education in Calcutta, and when returned to Akyab became opium-smoker, and squandered his father's money in opium and gambling, and was twice sent to jail for theft, and on the last occasion he died in jail about two years ago.

18. Htun Aung Gyaw, son of Ah Thu Ke, merchant; became opium-smoker, and when he could not get money from his parents he commenced stealing from his parents, and when they died he inherited their valuable properties, which he soon squandered; lastly, he sold his house, and became so poor that no one would receive him, and was obliged to go away to the district, and is now living in Chaingdök, in Tauktaw township, a confirmed opium-smoker in very straightened circumstances.

19. Tha Lök Phru, son of Gwa Maung, paddy-broker and Honorary Magistrate of Shwebyu, became opium-smoker, and does no work. All his brothers are doing well, but he was sent away by his father from his house, and is now living in a poor state in Maungdaw.

20. Maung Hlo Phru, *alias* Tha Do Tha, son of Tha Du, paddy-broker, was doing the business of paddy-broker with his father in the rice mills. He was worth some money at the time, a well-known wrestler of great strength; became opium-smoker and left off his business of paddy-broker, and after his father's death he sold all the properties, and soon squandered them, and became thin and emaciated, and subsequently, having no money in his hands, he took to stealing, and was sent to jail twice. Even now he is in jail feeling the evil effects of opium.

21. Mra Tha Htun, son of Htun, Aung, merchant, of Öntabin village, of well-to-do parents; became opium-smoker and squandered his parents' money, and subsequently became a thief and was sent to jail.

22. Gwa Hla Phru, son of Ban Yi, of Öntabin, opium smoker, does no work, and spent his parents' money in opium-smoking, and now living in a poor condition.

23. Chyi Aung Rhi, son of Dun Chan Wè, merchant; became opium-smoker, and squandered all his money and that of his parents, who had turned him out from the house, and is now a confirmed opium-smoker, with no ostensible means of livelihood.

24. Gwa Htu of second Shwebya, received English education, worked in the Bank of Bengal for some time, and became a trader, and was in prosperous condition; but he took to opium, and left off doing his work as a trader, and spent all his money in opium and gambling, and is now living in a poor state.

25. Re Phaw, son of Gaung Zan Ke, trader, of Helaungthat, was doing work with his father in the shop, and doing good business; but took to opium-smoking, and subsequently to gambling, and commenced squandering his father's money. He deserted his wife and children, and commenced stealing, and had been sent to jail twice, and even now he is in jail.

From A. M. B. IRWIN, Esq., Deputy Commissioner, Akyab, to the COMMISSIONER of the ARAKAN DIVISION.—No. 1764-14R., dated the 18th December 1891.

APPENDIX L.

In continuation of my letter, No. 1639-14R., dated the 16th November last, I have the honour to submit a further report on the consumption of opium, and to annex a statement of the result of the inquiry made by the township officers of Urittaung and Kyelet, from whom I have not hitherto been able to get statistics.

The Subdivisional Officer, Akyab, who has confined his inquiries to outside of the town of Akyab, reports that in his subdivision there are practically no non-Burman opium-smokers; that he found 10 Chins at Minbya who use opium and examined 15 opium-smokers at Ywathitke. To give you an idea of the result of his inquiry I quote that part of his report on the subject:—

"I examined 15 opium-smokers (or eaters) at Ywathitke, which is said to be the worst village in Akyab township (outside the town) in this respect.

"In most of them the effect of opium was apparent in their discoloured skin and shrunken appearance, but only one could be said to look at all bad.

"All of them, however, with but one exception, admitted that they had lost strength through the use of opium. Two men I found had actually given it up within the year, and these were not the only efforts which I discovered at reformation. Nearly all the men had at least reached middle age, and several whom I asked had grown-up sons who had not taken to opium."

The Subdivisional Officer is of opinion that the effect of opium on the Chins is much like those he found on the 15 Arakanese at Minbya.

The Myoök of Kyelet, reports that in four villages of the town of Akyab he examined 340 persons who are addicted to the use of opium. Of this number 242 were Arakanese, 75 Chinese, and 23 Bengalis. The Chinese only smoke the drug, but the Arakanese and Bengalis both eat and smoke it. That he has not been able to discover amongst the Chinese any ill-effects of the use of the drug, but the Arakanese have all suffered physically and some of them also morally.

The Urittaung Myoök reports that there are 1,784 persons who make use of opium; that of this number 762 smoke it and 1,022 eat it. That he found that all the Arakanese smokers make use of the drug at all hours of the day or night in any quantity they could afford to buy, hence they appeared emaciated and were not capable of earning their living, whereas the Bengalis take a certain quantity at fixed hours of the day and they do not appear to have suffered from the effects of the drug. They are strong and capable of doing their work.

In conclusion I beg to state that it is the opinion of all the officers whom I have directed to report on this matter, after personal investigation, that the ill-effects of opium on the Arakanese are apparent on all those whom they have examined, but that with perhaps a few exceptions the use of the drug has not either physically or morally affected the non-Burmans.

Endorsement by Major B. A. N. PARROTT, Officiating Commissioner of the Arakan Division.—No. 1270-25—91, dated the 22nd December 1891.

COPY (with annexure) submitted to the Financial Commissioner, Burma, for information, in continuation of this office letter, No. 1223-25—91, dated the 3rd instant.

From Colonel G. A. STROVER, Commissioner of the Pegu Division, to the SECRETARY TO THE CHIEF COMMISSIONER, Burma.—No. 497-55E., dated the 30th November 1891.

WITH reference to extract from the proceedings of the Chief Commissioner in the Financial Department, No. 10E., dated the 29th August 1891, I have the honour to submit in original the reports of district officers on the different points upon which report was called for. The original reports

APPENDIX L.

are submitted so as to avoid further delay. The reports of the Deputy Commissioners, Hanthawaddy and Rangoon Town districts, were received this day. The reason of the delay is explained by both officers. The Deputy Commissioner, Prome, has not yet favoured me with his reply, but I hope to receive it soon.

2. The statistics given by district officers are, I fear, not very reliable. In Rangoon Town the Excise Department return 1,557 Burman consumers of opium, while the police return only 783; and as regards the non-Burman consumers the difference in the figures is very marked. Accepting, however, those of the Excise officer's for the purpose of this report, it will be seen that the number of persons addicted to opium-smoking or opium-eating is 3,587, or about 1.97 per cent. of the population of Rangoon according to the last census. Of Burman smokers of opium there are 851, and Burman eaters of opium 706; of these 71 are said to have become physically wrecked by the habit, while 29 have taken to crime. In the Hanthawaddy district the number of habitual consumers of opium is stated to be 1,532, or about 0.51 per cent. of the population, which is over 260,000. Of the total number 852 are classed as opium-eaters, and 680 as opium-smokers. The distinction between Burman and non-Burman consumers is not given, but it is assumed that the figures relate principally to Burmans. The number of such consumers who have taken to crime by the use of opium is put down at 1,006, and 379 are said to have become physically wrecked by its means. The Deputy Commissioner, Tharrawaddy, states that in 10 days 1,149 men and women attended five dispensaries for outdoor or indoor relief. Of this number nine were opium-eaters and 11 opium-smokers, and the 20 men and women thus addicted to opium appeared to have suffered physically or mentally, or both. In three towns, with an estimated population of 5,839 inhabitants, 75 were opium-smokers and 30 opium-eaters, and of this number 51 appeared to have suffered both mentally and physically.

In the Pegu district, containing a population of over 221,000, the number of opium-smokers and eaters is returned as 154, and the number of persons physically wrecked as 42, while 20 such persons are said to have taken to crime.

3. In respect of the next point for report—whether it would be possible to enforce the suggested prohibition of the sale of opium and possession by Burmans—there is a difference of opinion. The Deputy Commissioners, Rangoon Town, Hanthawaddy, and Pegu are apparently of opinion that prohibition might be enforced. The Deputy Commissioner, Tharrawaddy, considers that the prohibition would reduce, but not stop, smuggling, and he suggests that every person who desires to consume opium should take out a license from the Deputy Commissioner of the district to do so under certain conditions.

Mr. Macrae suggests that permission to possess opium should be limited to the inhabitants of large towns. This would not, I think, be advisable, and would certainly not be effectual for the purpose in view.

Mr. Fraser, late Deputy Commissioner, Pegu, would prohibit the possession of opium entirely after six months' notice, and in this connexion there should be no distinction between Burmans and non-Burmans of whatever race.

4. Personally I am not in favour of making any distinction between Burmans and non-Burmans in Lower Burma. The number of Indians in Burma is now considerable; indeed, they may be said to be more or less all over the province. Certainly the prohibition would increase the difficulties of obtaining opium, but at the same time it would induce smuggling, as profits on the illicit trade are considerable.

No doubt it is desirable to keep the Burmese population from acquiring and maturing a habit of opium smoking or eating, and prohibition to possess would, as a matter of bare principle, be sound and beneficial.

The measure, however, would be, as regards Lower Burma, perhaps a little drastic.

The better course would be to gradually reduce the consumption of opium, and so force the consumers thereof to educate their wants to a gradual diminution of consumption. In the course of a year or two further repressive measures could be introduced if necessary.

5. As reported in my letters to the Financial Commissioner, Nos. 159-42E. and 345-43E., dated respectively the 10th and 22nd July 1891, the chief offenders

against the opium law are the opium farmers, who undoubtedly have expert Chinese smugglers all over the country. To strike at the root of the evil of opium consuming it is obvious that the sacrifice of a large proportion of opium revenue is a *sine quâ non*. It is inconsistent to force the opium revenue, fix large minimum prices, sanction extensive sales of opium to the farmers, thus affording facilities for the spread of the taste for the drug, and then to appear shocked when we find an unfortunate Burman or other person in possession of half a tola weight, and punish him accordingly, because he cannot or does not care to take the trouble or involve the expense necessary to prove that he purchased the opium from a licensed opium farmer. It seems to me, then, that in order to bring about reform, and as a means towards the end of the object in view, we should commence by limiting farmers of opium to certain reduced quantities, which they should be bound to take from the Government treasury every two months. This limit of quantity and time would ensure against too rapid or extensive sales by farmers, and educate them and the people who consume opium to economical ways in respect thereof. If the supply of the farmer ran short two or three weeks before the expiration of two months, no harm would be caused. The only result would be that opium consumers would have difficulty in obtaining the drug for a short time, and thus undergo an abstinence training. I would prohibit by law all opium dens and divans. No opium-smoking or eating should be permitted in licensed shops. I would reduce the quantity that could be possessed by law to one tola weight, and abrogate the law by which it is now penal to possess any quantity of opium whatever unless it can be proved that it was purchased from a licensed farmer. Sales by farmers should be checked daily, and stock be taken by some responsible officer, and a report be submitted daily to the Deputy Commissioner that such has been done.

Concurrent with these arrangements every district should possess a small excise establishment, whose sole duty should be to prevent and detect offences against the excise and opium laws. It is better to make no distinctions between Burmans and non-Burmans in Lower Burma.

Practically we have educated all classes with a lavish hand to the taste of opium ever since we annexed the country.

Arakan was annexed in 1826 or thereabouts, and I was informed by an old resident there that immediately following the annexation Government opium was hawked about the streets. The correctness of this assertion I will not vouch for, but the stern fact remains that the people have been afforded every facility for the purchase and consumption of opium, and have been well educated in its use; therefore to suddenly rule that it is an offence on the part of any Burman to possess opium would be perhaps somewhat inconsistent and harsh. There is no doubt whatever that opium-smoking and eating can be eradicated, but it should be done gradually. The whole thing is in a nutshell, and the kernel is the opium revenue. If we are prepared to sacrifice that to a great extent, the taste for opium and the consumption thereof can be in time effectually suppressed by a process of abstinence training.

From A. L. HOUGH, Esq., Deputy Commissioner, Rangoon Town District, to the COMMISSIONER of the PEGU DIVISION.—No. 966-45—12R., dated the 29th November 1891.

WITH reference to your Revenue Department No. 166-55E., dated the 10th September last, I have the honour to report as follows:—

2. In the first place I must state that I have had some difficulty in obtaining statistics, and I doubt if they are very accurate.

I thought it would have been better to get the information through the thugyis, the same as is done in a mofussil district in such cases; but the Deputy Commissioner of Town Lands, under whose orders the thugyis are, objected to them rendering assistance, intimating that they were too busy with other work, and for other reasons.

3. I then deputed the District Superintendent of Police and the excise officers to do the work, and they

have submitted separate statements, which are widely different, copies of which I forward herewith.

I cannot vouch for their accuracy, but I think there can be little doubt the excise officers' figures (List A.) are much nearer the mark than the others, and they have been prepared with more care with the assistance of the Myogan luyvis.

4. If some of the figures are analysed in detail, it is apparent that even these cannot be correct. For instance, take Pazundaung circle; it is absurd to suppose there are not more than 49 Burman opium smokers therein, and only two in Cantonments, six in Dala, or nine in the Theinbyu circles.

5. The figures as regards the other circles are, I think, fairly correct, at any rate as regards Burmans as much so as it is possible to obtain, but as regards the non-Burman races there are no doubt as a matter of fact a much larger number of opium consumers than the list shows.

6. The natives of India will not admit that they use the drug, and the habit is not apparent in them so much as in a Burman, so it is difficult to get the truth out of them. Many of the coolies working at the mills and elsewhere are addicted to the habit, but will not confess to it.

7. Referring to the statistics required, I give the following abstract of the two lists compared:—

	Excise Officers' List A.	Police List B.
Burman smokers - - -	851	409
Non-Burman smokers - - -	814	374
Burman eaters - - -	706	462
Non-Burman eaters - - -	1,216	210
Total - - -	3,587	1,455

8. It is obvious that the police figures must be wrong, as that list shows more Burman than non-Burman consumers, which is manifestly wrong.

According to the Excise Department list there are 1,557 Burman consumers of opium, and 2,080 non-Burmans.

9. The figures show that of the total consumers 1,666 persons smoke opium, while 1,922 eat the drug, and that the habit of eating is practised more by non-Burmans.

The common form in which Burmans use opium is in preparations made for smoking such as "bein-se."

According to the figures there are 850 Burman smokers against 1,216 non-Burmans who use the drug in that form.

10. If the figures given are correct, it would appear that of the 1,557 Burman consumers of opium 71 have become physically wrecked by the habit, while 219 have taken to crime.

11. Referring to the question of enforcing the prohibition in the case of Burmans, the matter is attended with great difficulty; and it seems to me that it is impossible to altogether stop the use of the drug; but the suggested measure might in effect prevent the spread of the habit, and the first act to be done is naturally to curtail the issue of opium to the licensed vendors.

The existing police and excise preventive agency must be left to deal with the matter after that, assisted as it will be, by the village headmen. So long as Burman nature is what it is, bribes will be offered and taken no matter what the preventive agency may be, and no check need be placed on their action so long as it is lawful.

12. If it is found possible to deal with the matter successfully in the upper province, I see no reason why it should not be tried in Lower Burma. Certainly the measure will be approved of by the priests and respectable teachers and elders.

13. I do not see how it is possible to utilise the strong anti-opium feeling which the Burmese elders hold as a preventive agency everywhere, as I doubt if it will be found possible to induce them to give anything more than passive assistance in many cases; still, many may be found who might perhaps be given certain powers of search and seizure and arrest, though such men would

have to be carefully selected. Where this can be done, it would greatly assist the present preventive agency.

14. As regards the question of providing a rule so as to fix a limited age for incurables, I am of opinion that such a provision would be absolutely necessary, as, while there are many Burmans who have given up the habit completely after a time, there are many, who, advancing in years and with increasing physical debility, cannot give it up.

To harass such men as these with continual punishment would, under the circumstances, be most harsh and cruel.

I would, therefore, fix a limit of age for Burman incurables, and the age of 40 years is, I think, the most suitable.

15. Referring to the questions raised in paragraph 8 of the resolution, if the object is to stop the use of the drug, and not illicit dealing therein, it seems to me that closing the shops for the consumption of opium by Burmans will not have the desired effect.

It is in their homes, or in private places outside shops, where the chance of young men acquiring the habit is greatest.

16. I regret the delay that has occurred in the submission of this report, but I am very much pressed for time, and have been for a long time, and have had no suitable opportunity. Even now it is done at the sacrifice of other very important work both in the income-tax office, the Bench, and my other duties.

17. I forward herewith a copy of a report on the subject written by Mr. Olive.

REPORT.

The collection of opium statistics in Rangoon has proved a matter of far greater difficulty than I anticipated, and I own that the statement I forward is in many respects incorrect.

I think the number of Burman opium consumers is fairly correct. The sergeants and others who collected the information have done so from private sources. There are doubtless many private consumers who are not entered, still, as I have already stated, I consider this statement regarding the numbers to be fairly correct. The number of those "physically wrecked by the habit" is 45; this would fairly represent the number of men who have taken opium to such an extent as to render them unfit for work, but it does not represent the men who are simply rendered unfit for any hard or continuous work, but who could manage to make a fair living.

The number of smokers and eaters fluctuates; when rice is cheap, &c. smokers will predominate, when times are hard, eaters.

At present the price of rice is very high. The pipe is generally preferred amongst Burmans, and would be universally used (except by clerks and others who wish to hide their habit) but for the extra expense.

I should say for a guess that "smoking" costs about twice as much as "eating."

Non-Burmans.—The numbers given in the statement are totally wrong. I only give them to show the number of persons whose appearance indicates that they use the drug. With non-Burmans the police can only be guided by appearances. They, of course, know that the majority of Chinamen use opium, as well as a very large number of natives of India, but all of these will deny the use of the drug.

I know for a certainty that in most Chinese houses of any size, opium pipes are kept. If a visitor comes in a pipe is offered. He may take a draw or not, as he pleases. In fact the pipe is offered to him very much in the way in which a "peg" is offered amongst Europeans, and with very much the same results. Suppose that a bottle of whisky contains 12 pegs, and all of these taken within two hours or so will produce intoxication. Also suppose that 12 smokes at a pipe will produce the same effect. A man in the course of the day might smoke four or five times and be none the worse. Many Chinamen smoke with the same moderation that Europeans drink. Without their own statements it would be impossible to say whether they be consumers or not.

Natives of India are, as a rule, opium-eaters, but mostly in moderation. The appearance of some is quite enough to determine their habit, but very many (thousands, I believe) only eat opium with the greatest moderation. I hear that very many of the hardworking

APPENDIX L.

coolies do so, although, if asked, they strenuously deny it; still a little opium box containing a pill or two is generally found on their waist-belts. I would instance private servants, syces, &c. Every employer must suspect that they use opium in some form or other, but not one employer in 20 can say for certain that they do so.

It appears to me that the only place to calculate the numbers of opium consumers with any accuracy is to take the daily amount sold at the opium farms, and deduce therefrom. The amount is about 2,100 ticals. The question now arises—

What is the average consumption per head after deducting, say, 500 ticals sold to persons living in the adjoining districts - = 1,600
I should say about (3 or 5 to a tical) - - 5
Total - - - 8,000

This would give 8,000 opium-smokers in Rangoon, of whom 871, or say, 1,000, to be on the right side, are Burmans.

J. W. OLIVE,
District Superintendent of Police,
Rangoon.

J. W. OLIVE,
District Superintendent of Police, Rangoon.

From J. K. MACRAE, Esq., Deputy Commissioner, Hanthawaddy, to the COMMISSIONER of the PEGU DIVISION.—No. 565-25, dated the 30th November 1891.

WITH reference to your indorsement, No. 166-55E., dated the 10th September 1891, forwarding extracts from the proceedings of the Chief Commissioner in the Financial Department, No. 10E., dated the 29th August 1891, I have the honour to report as follows:—

1. There can be no doubt that the unanimous opinion in Burma pronouncing the use of opium to be specially deleterious to Burmans as a race is correct. No doubt has been expressed on the point by any one truly conversant with the subject. The Government of India itself has fully admitted this nearly 20 years ago.

2. The acquisition of facts in support of this opinion is easy. In the rural districts the fact that a person is addicted to opium is sure to be known to his neighbours; in fact the effects are so marked that a man's appearance betrays him.

The number of habitual consumers of opium in this district has been ascertained by careful inquiry to be 1,532 (out of a population of over 260,000); of these 852 are put down as opium-eaters and 680 as opium-smokers. Out of this number 1,006 have taken to crime by taking to the use of opium, and 379 have become physically wrecked by its means.

3. It is not possible to draw a distinction between opium-smoking and opium-eating, as both forms are indulged in by the same persons. The effects of smoking are more immediate and said to be more alluring.

4. I think it would be quite possible to enforce the prohibition of the possession by Burmans. I have bestowed upon this subject considerable thought and attention, and have always been of opinion that, provided the officer of the district and his subordinates took an active interest in the subject, the illicit traffic would soon be, if not suppressed at once, at all events so much restricted as gradually to expire. The correspondence referred to in the margin expressed my views on the subject and suggested a source from which the deficit in the opium revenue would be made up.

The prohibition should be extended to cognate races settled and living among the Burmese in Lower Burma, i.e., Arakanese, Chaungthas, Taungthus, Karens, and Shans.

If thought desirable, members of easily identifiable races, like natives of India and Chinese, might be exempted from complete prohibition, but I do not think it advisable in rural districts. Every such exemption would tend to form a centre for illicit sale. My proposal is to keep opium out of the rural districts entirely, and let it be used only in the seaport towns, where all nationalities congregate. The distributors of opium (except in Arakan) are exclusively Chinese, of which two distinct races come to Burma:—The Cantonese, or short jackets as they are called by the Burmese, are industrious handicraftsmen, gardeners, &c.; the Amoy Chinese or long jackets, on the other hand, never work; they spread themselves all over the rural districts, making a pretence of keeping a shop or rearing a few pigs, but in reality living by smuggling and gambling. There is one to be found in every village in the Pegu and Tenasserim Divisions engaged in this underhand traffic. They have reduced smuggling to an art, so that without information it is most difficult to catch them. If these Chinese were turned out of the villages, in any case where the district officer had reason to believe that their business was an unlawful one, the work of the preventive agency of the province would be much facilitated. I am inclined to recommend, as regards Burmans and other cognate Buddhist races inhabiting Lower Burma, to make breaches against the opium laws criminal, instead of being regarded, as hitherto, mere offences against the revenue laws.

5. This section of the resolution does not apply to my district.

6. With regard to the fear that any measure of the kind proposed would place in the hands of the police an engine for the general blackmailing of the Burmese population, I may say at once that as far as the rural

districts like Hanthawaddy are concerned, there are no Burmans of sufficient standing to be made the subjects for blackmailing by the police likely to come in their way. Opium-eaters are rather distinguished for their wretchedness and abject poverty. Persons who disappear and abscond to avoid payment of the capitation tax and subsist by petty theft, are not likely to be subjected to any blackmailing process.

The vendors could not bribe the police to overlook illicit sales to Burmans on my view of the form the prohibition should take, namely, the prohibition of the drug in the rural districts, because the vendors, being licensed to sell opium only in town, could have no control by means of bribe over the police in all the outer districts. He could not possibly bribe them all. If in the towns in which opium shops are established sales to Burmans are prohibited, there would be, of course, the danger that the vender would bribe the police to allow such sale to take place; but the police are not the only preventive agency. The luggis would, I believe, gladly assist in checking such sales. The greatest preventive effect in any case can be exercised by the district officer; if he is indifferent or negligent, smuggling will flourish. The opium which the farmer obtains from the treasury may not be taken to his shop at all, and, so far as known, may be taken to some place whence it can be easily conveyed away clandestinely. Even if it is taken to the shop, under lax administration it may be removed at night, or even by day, wholesale. The district officer has a hundred things to attend to, of, in his opinion, more relative importance; and Government, it must be said, has not always recognised extra zeal in the suppression of opium smuggling as particularly meritorious service. When the Government does that the district officers will take trouble to make the preventive agency more efficient.

7. The sudden stoppage of opium is not, in my opinion, likely to hurt much. Prisoners in jail do not suffer from it. In a very few cases I believe opium is given to them in some jails when first received, but not in all jails. The discontinuance of the practice has been sometimes successfully accomplished by the victims themselves, chiefly by continuous bathing; but, if desired, there would be no difficulty in opening a register of opium-smokers over 40 years of age, to whom the possession of the drug is not prohibited, subject, of course, to the restriction of the opium laws. My proposal, i.e., to limit the permission to possess opium to the inhabitants of the large towns, would oblige such persons to live in town or go without their supply.

8. I would be inclined, if it were practicable, to restrict the smoking of opium to the premises of the opium shop rather than to prohibit smoking in the shop itself. I think it would be more conducive to the spread of opium-smoking if it became common to smoke it in private houses. Some of the Chinese do this who are ashamed to go to the common opium shop, but I should not recommend its being made compulsory.

9. I regret the delay in sending on this report, which arose from the delay in getting in the required statistics from the interior. I have called on the Myoök of Tuntè, who was the latest in sending in the return from his township, for an explanation.

From J. S. D. FRASER, Esq., Deputy Commissioner, Pegu, to the COMMISSIONER of the PEGU DIVISION.—No. 8-20—985B., dated the 16th October 1891.

As requested by you in your Revenue Department, No. 166-56E., dated the 10th September 1891, I have, after a very full inquiry, the honour to submit the report asked for.

After receiving the reports of the subdivisional officer, Kyauktan, subdivisional officer, Pegu, and headquarters magistrate, Pegu, I convened a meeting of the leading members of each community, including Chinese, natives of India, and other cognate races. To this assembled body was read and carefully explained the extract from the proceedings of the Chief Commissioner, Burma, in the Financial Department, No. 10E., dated the 29th August 1891, and the opinions of the district officers after local inquiry. Amongst the Chinese members present was the opium farmer, who is also a municipal commissioner, and a Chinese contractor, a man of means, who himself smokes opium.

APPENDIX L.

The assembly were absolutely unanimous in their opinions, which were as follows :—

- (i.) The majority of Burmans and natives of India eat opium. The majority of Chinese smoke opium.
- (ii.) Opium should be absolutely prohibited in the province after due notice of six months.
- (iii.) There should be no distinction between Burmans and Chinese, Shans, and cognate races. If such a distinction is made the Burmans will purchase opium more illicitly than ever, and the people of the country will be more than ever harassed by the police and other excise officers.
- (iv.) That on no account should Burmans accustomed to opium be allowed to register themselves as foreigners, as, if six months' notice is given, it is ample time for a person accustomed to take opium to give up the habit. Formerly ganja used to be consumed by Burmans, but since its entire prohibition the people of the country have given up consuming it (of course natives from India consume it).

I made this full inquiry from the leading members of each community in public assembly as I scarcely credited the leaders of the Chinese were willing to prohibit the use of opium by themselves, and suggested to the Chinese members that the chief Chinese merchants in Rangoon, not all, smoked opium, and some consumed Rs. 5 a day, and that they smoked opium in

their own country. In reply, the Chinese opium farmer replied: "True, but in our country we did not smoke " opium till forced to do so."

The statistics attached speak for themselves. To sum up, the general opinion of the assembly was that on public and moral grounds the prohibition of opium is essential, and it should be extended to every class in the province. There should be no distinction between Burmans and other cognate races, and that six months' notice of this reform should be given.

I fully concur in the views expressed by the Burmese magistrates. A Burman cannot take opium or liquor in moderation; when once he takes to either he becomes a "bein-sa," or inveterate drunkard. In the former case he becomes an outcast, and his parents reject his coming to their house, as they say, "he comes to the house to steal," and in the latter case he generally ends his days in jail or on the gallows for using his da without provocation. I will quote one case to prove this that I tried myself.

A Burman official of high rank, with some subordinate officials, went into a liquor shop to quench their thirst, and ordered some beer. After taking some, one said what is the use of this, we cannot get drunk quickly, so a bottle of Hollands gin (known in Burma as Laidauing palin) was ordered. This, mixed with the beer, had the desired effect, for the party were speedily drunk, and commenced firing off their guns in the village. Equally speedily were they in confinement, and conviction followed.

STATISTICS OF OPIUM CONSUMERS.

Name of Village.	Number of Opium-smokers.	Number of Opium-eaters.	Number of Persons physically Wrecked.	Number of Persons who have taken to Crime.	Per-centage of Physical Wrecks to Consumers.	Per-centage of Persons who have taken to Crime to Consumers.

From MAUNG PU, Myoók of Pegu, to the DEPUTY COMMISSIONER, Pegu, No. 1-2, dated the 3rd October 1891.

In compliance with your docket, No. 8-20—762, dated the 15th September 1891, directing me to make full inquiry regarding the prohibition of the use of opium by Burmans and report for the town of Pegu, I have the honour to submit the following combined opinions with the town luggis after consulting them by me.

That in accordance with the Buddhist scripture the use of opium and alcohol is strictly prohibited, not to smoke, or eat, or drink, because the man or men who generally were accustomed to it are wholly demoralised and they will never be trusted by any respectable people in any manner of reference. I have never seen people who were accustomed to consume opium are faithful, honest, and trustworthy. By consuming opium three following great and important results are produced to the consumers, namely, avarice, anger, and ignorance.

There are about 200 or 300 persons who use opium publicly in the Pegu town itself, besides there are

about 100 persons who consume it privately in their own premises.

As regards Chinese, there are only 300 of this race in the Pegu town, and of this number 80 of whom use opium only. The Burmese and Chinese are most heartily agreeable to stop the consumption of opium. The Chinese also say the consumers amongst the Chinese are becoming pernicious, and they have the same direction as the Burmese scripture cited. Day by day it becomes a greater evil in consequence of consuming opium. Fathers dislike their sons who smoke or eat it, and abandon them.

If the Chinese and foreigners are only allowed to possess opium it will cause much confusion with Burmans and will be no prohibition at all.

I am told by the luggis that there is no fear whatever if the use of opium is totally prohibited. The not using opium by the person or persons who are accustomed to consume it will naturally feel the craving for it and be laid up and consequently suffer for a few days. The continuous consumption of opium is demoralising

and hateful to the opium-smokers or eaters, that is, they will suffer weakness and purging day by day, and be shortlived; and I am therefore inclined to think that it would be well to be without the use of opium, and that the prohibition of the use of opium should be carried out.

From MAUNG TET TO, Subdivisional Officer, Pegu, to the DEPUTY COMMISSIONER, Pegu.—No. 1-16, dated the 2nd October 1891.

With reference to your letter, No. 8-20—761, dated the 15th October 1891, I have the honour to report as follows:—

1. Opium-eating and smoking are the same, as men either eat or smoke opium. The lives of men who are in the habit of using opium are short lived, and do not live as long as those men who are not addicted to opium, though they be of the same age.

2. The constitutions of those men who eat and smoke opium are weaker than those not addicted to its use.

3. The eaters and smokers of opium are very indolent in carrying out their work, whether as traders or labourers, &c.

4. The intentions of those men who eat or smoke opium are always bad.

5. Whether cultivators, labourers, or traders who take to opium neglect their work and cannot perform it properly, having lost strength and constitution, become gamblers and thieves, as I have generally known.

6. I do not know that any benefit whatever is to be derived from opium-smoking or eating.

7. Under these circumstances I would recommend the total prohibition of opium.

8. If the licensed opium shops be closed, it is evident that the consumers of opium may suffer for three or four days, but I am of opinion that this drug can be conveniently done away with.

9. I have to recommend strongly that all opium licenses may be cancelled.

10. I have framed this report after consulting luyis on the subject.

From Lieutenant F. D. MAXWELL, Deputy Commissioner, Tharrawaddy, to the COMMISSIONER OF THE PEGU DIVISION.—No. 1756-3—30, dated the 17th October 1891.

With reference to your No. 166-55E., dated the 10th September 1891, forwarding extract from the proceedings of the Chief Commissioner, No. 10E., dated the 29th August 1891, concerning the prohibition of the possession of opium by Burmans in Lower Burma, I have the honour to report as follows:—

2. In 10 days 1,149 men and women attended five dispensaries in this district for outdoor or indoor relief. Of this number, nine were opium-eaters and 11 opium-smokers. The 20 men and women thus addicted to opium appeared to have suffered physically or mentally, or both. In three towns in this district there were estimated to be 5,839 inhabitants, of these 75 were opium-smokers and 30 opium-eaters. Of the 75, 51 appeared to have suffered physically, or mentally, or both. Of the 30 opium-eaters, 29 appeared to have so suffered. In another town in this district in which there are few Chinamen the population is estimated at 1,770, and the opium-eaters and smokers at 69. The Mycök does not report how many of these appeared to have suffered from the use of opium.

3. The next point on which a report is asked is whether it will be possible to enforce the prohibition of the possession of opium by Burmans.

It must, I think, be admitted that the most incorrigible opium smuggler is the farmer. Government opium in large and small quantities all over the province is constantly being seized, and can come from nowhere but the licensed opium shops. In the last four or five months in this district several large seizures have been made.

Fifteen seers were imported from Rangoon in a bag of rice by a Chinaman to Thônzè. Fifteen seers were imported from Rangoon in a box labelled "condensed milk" to Ôkpo.

Three seers were found in a railway carriage coming from Prome in a Huntley and Palmer's 2 lb. biscuit tin so cleverly closed and papered that but for the weight of the box no suspicions would have been aroused.

Three seers were seized on a Chinaman at Minhla. Two were imported by a Chinaman into Letpădan.

One seer was found in a Chinaman's house at Thônzè.

Thirteen seers were recently seized at the Prome railway station booked to Ôkpo. While the number of seizures of Government opium of quantities of less weight than one seer is very large.

I have only mentioned the actual seizures. To estimate the amount of opium actually imported into the district at 10 times this quantity would not, I think, be a stretch of imagination. I go even further than saying that the Government farmer and his agents are the biggest smugglers in the province, and assert that the high prices farmers pay for their licenses are practically paid for the privilege of being put into a position to smuggle.

To reduce the quantity of opium issued to a farmer yearly would be to enhance the value of the opium, but it will not stop smuggling. Smuggling will exist and flourish as long as the opium farmer is in existence. As long as there is smuggling so long will the Burman get hold of opium.

In this district, where there is no licensed shop, about 90 per cent. of the opium consumed is smuggled opium. To prohibit the possession of opium by Burmans would be to reduce, but not to stop smuggling.

4. It must be admitted that opium is specially deleterious to Burmans as a race, but there are a few perfectly respectable and honest Burmans, and the offspring of Chinamen and Burmese women and others who consume small quantities of opium with no deleterious effects whatever.

The Burman has for years past been allowed to buy opium. There are many confirmed opium-smokers and eaters in the province. To suddenly stop the supply of opium to Burmans, whether under or over 40 years of age, would seem to me to be cruel. It is not an uncommon thing to hear of a Burman dying in police custody owing to his being deprived of his favourite drug. I can recall to mind an instance of a well-known Burman opium smuggler and smoker who was shadowed by the police for 10 days when he died.

5. Assuming then that it is considered proved—

- (a) that opium is specially deleterious to Burmans as a race;
- (b) that there are nevertheless a few Burmans and men of half blood who can and do consume opium with no deleterious result;
- (c) that the opium farmers and their agents are invariably successful and habitual smugglers;

I would make the following suggestions for gradually putting an end to the consumption of opium by Burmans.

6. Let every person desirous of consuming opium take out a license from the Deputy Commissioner to do so. The license would permit the holder, if a Chinaman or member of a cognate race, to purchase 10 tolas of opium every 21 days, and a Burman the same quantity once a month. Each time the licensee purchased opium the amount bought and date of sale would be noted on the license, which would expire with the financial year. For such a license I would impose a fee of Rs. 25 for the first year my proposed rules were in force, Rs. 35 the second, Rs. 50 the third, Rs. 65 the fourth, Rs. 80 the fifth, Rs. 100 the sixth and succeeding years.

I would further abolish the farmer altogether, and have opium sold retail in the treasury at the head-quarters of every district, and in some districts in which travelling is difficult, at the head-quarters of sub-divisions.

To this proposal there is the sentimental objection of a great Power selling opium direct to the consumer,

but inasmuch as India has been dealing wholesale in opium for many years past I think this objection of not much weight. The wholesale and retail dealer are first cousins.

I claim for this scheme that it will raise the maximum of revenue from the minimum of opium-smoking, and that opium smuggling in the interior will be stopped.

I also claim that opium-smoking will gradually die out except amongst those who can both work and smoke opium, for the man who cannot do both will not in 999 cases out of 1,000 be able to afford to take out a license at Rs. 100 a year.

The price at which opium should be sold would be fixed from year to year. R. 1 a tola seems a reasonable price, but it might be found necessary to raise the rate.

The question of the increase of price to the consumer can be seen at a glance. A Burman will be able to purchase 120 tolas in the year, for that he now pays Rs. 120. As a matter of fact, for smuggled opium, in which designation the greater part of that consumed in this district comes, he pays considerably more—

	Rupees.
For the first year he will pay	20 + 25 = 145
„ second year „	120 + 35 = 135
„ third „ „	120 + 50 = 170
„ fourth „ „	120 + 65 = 185
„ fifth „ „	120 + 80 = 200
„ sixth and succeeding years he will pay	120 + 100 = 220

If this scheme were introduced it would be necessary to strengthen the preventive establishments at those places where foreign opium can be imported into the province. Those points are definitely known. An active and zealous establishment would, no doubt, be able to entirely suppress illicit importation.

At head-quarters of most districts it would be necessary to give the treasurer an assistant. This, however, is a minor detail that need not be considered now.

From Colonel G. A. STROVER, Commissioner of the Pegu Division, to the SECRETARY TO THE CHIEF COMMISSIONER, Burma (through the Financial Commissioner, Burma).—No. 417-55E., dated the 19th December 1891.

IN continuation of this office letter, No. 497-55E., dated the 30th November 1891, I have the honour to forward herewith in original letter, No 13-9, dated the 9th December 1891, from the Deputy Commissioner, Prome, and No. 578-25, dated the 7th December 1891, from the Deputy Commissioner, Hanthawaddy, on the measures to be adopted to prevent the use of opium and opium smuggling in Burma.

From Major C. A. CRESSWELL, Deputy Commissioner, Prome, to the COMMISSIONER OF THE PEGU DIVISION.—No. 13-9, dated the 9th December 1891.

I HAVE the honour to acknowledge extract from the proceedings of the Chief Commissioner, Burma, in the Financial Department, No. 10E., dated the 29th August 1891, calling for opinions on the advisability of either—

- (a) prohibiting altogether the consumption of opium on the premises of licensed shops, or
- (b) prohibiting the use of such shops to Burmans only.

In paragraph (1) it is noted that in Upper Burma the sale to and possession by Burmans has been prohibited.

The Chief Commissioner proposes to extend this to Lower Burma.

If Burmans can be effectually deprived of opium by measures which will not make the whole country a

nest of smugglers, I believe every officer in Burma will agree with the recommendation of the Chief Commissioner. We could make it difficult for a time only, but I am afraid that is all. Possibly in that time a good many would perforce have given it up, only, however, to take to it again when an opportunity occurs. There is a demand for opium in every district in Lower Burma, and as long as the prices demanded are paid there will be a supply forthcoming, and if it only pays well enough, every nationality will join in the trade.

2. The Governor-General in Council has asked for facts showing that the use of opium is specially deleterious to the Burmans as a race. The best opinions on these points, no doubt, will be those of the superintendents of jails, who are, as a rule, medical men, and have opium-smokers under their charge from the day they are placed in jail till they leave, and they can give a real opinion on the permanent effect of the drug on the Burmese, and can even compare its effect with that on other races. I have had a return drawn up of certain towns in this district, and append it to this report.

3. A report of the number of opium-eaters and smokers has been drawn up, and it will be seen that opium-smokers are more numerous than opium-eaters, with few exceptions. Paungdè stands first. Opium-eating can, of course, be done secretly.

4. The Chief Commissioner proposes not to interfere with the use of opium by Chinese, Shans, and cognate races, but to entirely prohibit it to the Burmese. Every one with whom I have consulted—my subdivisional officer, Myoboks, and Burmans—are of opinion that the use of opium should be made illegal to the Burman, and that if the opium shops are closed, the difficulty of obtaining the drug will be so great and the price so heavy that the Burmans will have to drop the use of it; that the immediate stoppage of the supply will compel many Burmans to break off the habit, and that they will not take to it again. They tell me we shall be assisted everywhere by men in authority, men of influence, and by the pôngyis. They say that the mere fact of Government having licensed opium shops takes away the disgrace of being an opium-smoker and encourages a great many to take to the use of the drug. My own opinion is that we shall not for any long time be able to prevent the Burman from getting opium if he wants and chooses to pay for it.

The returns of opium-smokers for Kyaukpnyu and Sandaway will probably give some idea of the result of the doing away with opium shops in those districts.

Smuggling from all the surrounding districts has been, I am told, going on there to a very great extent, and the same would occur in Lower Burma generally.

6. There is no necessity for the police being the only preventive agency in cases of this sort. Ywathugyis and other respectable men would also give assistance. Of course a good deal turns upon the penalty for being in possession of or using the drug. If they are to be punished under the Opium Act, the courts, for a time at least, will be flooded with cases, and no doubt the police and others will be paid not to report cases, and more persons will go in for opium-eating than smoking. Which is more deleterious or fascinating I do not know; I expect the opium-eating, and there is less trouble about it.

I have had one proposition from the Subdivisional Officer, Maung Ba Tu, to make the offence one of bad livelihood, and punish under section 109, Criminal Procedure Code, and this method would take matters very much out of the hands of the police.

7. With regard to this point I suppose it is a matter for medical opinion. From jail experience they would probably prescribe a certain time, after which the further use of the drug could be done away with. If it is to be stopped at all, I think this would be the best plan, namely, to stop it entirely for all Burmans.

8. I doubt very much whether the doing away of opium shops for consumption on the premises will have any effect at all, as the men who consume their opium in the shops at present bear a very small proportion to those who are opium-eaters and smokers.

I regret the report being late. It is entirely due to the delay on the part of Maung Shwe Hme, Extra Assistant Commissioner, of Shwedaung. His excuse is that he did not understand the first orders, but this he never said a word about till called on for the report.

From J. K. MACRAE, Esq., Deputy Commissioner, Hanthawaddy, to the COMMISSIONER OF THE PEGU DIVISION.—No. 25, dated the 7th December 1891.

In continuation of my Judicial Department letter, No. 565-25, dated the 30th November 1891, on the measures to be adopted to prevent the use of opium and opium smuggling in Burma, I have the honour to state that I omitted one suggestion which will have the effect of making officers issuing opium more careful, as it will serve to place the blame of their negligence on the right shoulders.

2. The usual and proper practice, when delivering opium from a treasury, is to open every case, count the balls, remove the outside wrapper, and cut each ball in half with a da. The farmer then (if he likes) replaces the outer wrapper and takes the opium away.

The police and excise officers frequently come upon balls of smuggled opium just in the same form as when they left the treasury, but as the cuts are made in much the same way, in all Burma treasuries, it is impossible to tell from what district the smuggled balls have emanated. It is therefore very desirable to have a separate mark for each district, and the simplest way of doing this is to stamp each ball on the inner wrapper (which adheres to the drug and cannot be taken off) with the date seal of the issuing district at the time the opium is delivered.

3. The consequences of an order to this effect would, I think, be immediately beneficial by making district officers more alive to their responsibilities.

From D. NORTON, Esq., Commissioner of the Irrawaddy Division, to the SECRETARY TO THE CHIEF COMMISSIONER, Burma.—No. 17-41Ex., dated the 25th December 1891.

I HAVE the honour to submit the report and statistics called for in your Financial Department Proceedings, No. 10E., dated the 29th August 1891, on the subject of checking the use of opium by Burmans. I send the reports and statements of the district officers in original, as this seems to be desired, but at the same time I shall make the fullest use of them for the purposes of my own report.

2. There is nothing in the district reports bearing directly on the question of the difference in the effect of opium on non-Burmans and Burmans respectively. I have, however, made some personal inquiries into this matter. Intelligent Burmans tell me that there is no physical or constitutional reason why the use of opium should be specially deleterious to Burmans as a race, but that it is so partly because the Burman takes to it late in life without acquiring a habit of restraint and partly because by using opium he breaks one of the five commandments of Buddha. A Chinaman does not, by the use of opium, forfeit, as a Burman does, either his self-respect or the good opinion of his fellows. No doubt, in addition to these reasons we have the fact that Burmans are a peculiarly impulsive people who take nothing, except work, in moderation.

3. The statistics collected through headmen and luggies of the number of Burmans who have taken to the use of opium and the number of such who have been physically wrecked thereby or have taken to crime

APPENDIX L.

scarcely bear close examination. For instance, the figures for the 12 large villages selected in Yandoon and Dannbyu show that opium-eating and opium-smoking has had a deleterious effect on all who use the drug. On the other hand, in Thayetmyo, excluding Minhla, only three persons appear to have suffered physically or mentally from among 363 opium-eaters and smokers, of whom 50 had taken to crime. The figures for Minhla show that out of a total of 41 opium consumers one has taken to crime, while 25 have been physically ruined thereby. Upon this point the following information taken from the second report of Major Butler, Deputy Commissioner of Henzada, is interesting. In Henzada township out of 1,423 opium consumers 592 have been in jail, and out of 200 opium consumers in Kyangin 59 have been in jail, and for all the towns and villages dealt with the Deputy Commissioner says that of 3,589 opium consumers no less than 1,348 or one-third of them have been in jail. Major Butler, who has spent years in Henzada, considers that his figures prove that the terms "opium-eater" and "jail bird" are almost synonymous. Instances might, of course, be cited in which the commission of crime has preceded rather than followed opium-eating. Outlaws who take refuge in malarious jungles almost invariably consume opium. Again, it must be remembered that Burman magistrates would, if they could, and sometimes do, demand security for good behaviour from opium consumers. The Deputy Commissioner of Thongwa writes that his figures show that 52 per cent. of the opium consumers in his district have been ruined by its use. My own opinion is that these statistics reflect the opinions of the luyis who supplied them as well as the actual facts.

4. There is no doubt that eating is the common form of consumption of opium in this division; but exactly the reverse is the case in the large towns, where appliances for smoking are more readily available. The Deputy Commissioner of Thongwa, despite his statistics, which are for towns, says that the vast majority of the consumers of opium eat it. I am informed that fishermen, a very numerous class in Thongwa, as a rule eat opium; but I cannot assert that the use of the drug is necessary for them in the exercise of their occupation.

5. The Deputy Commissioners of Bassein, Henzada, and Thayetmyo are of opinion that it would be possible to enforce the suggested prohibition; but the Deputy Commissioner of Thongwa thinks otherwise and asserts that no middle course short of absolute prohibition is practicable. All admit that authorised consumers will smuggle on a larger scale than they do now and that they will supply Burmans with the drug. No Deputy Commissioner wants an opium shop in his district, and Bassein suggests that Chinese, Shans, and cognate races should draw their supplies from Rangoon, Mandalay, and Bhamo only. In my opinion it will be easier, leaving the question of cost out of consideration, to enforce the suggested prohibition than it is to work the law as it now stands. And it would be easier still of enforcement if the prohibition, for the sake of the good of the greatest number, were extended, except perhaps in the case of very large towns, to non-Burmans as well as Burmans. Of course smuggling on a more or less extensive scale would be carried on, as in the case of ganja, but the quantities of the drug consumed would decrease largely instead of increasing enormously as has been the case of late years. In Burmese times the use of opium was absolutely prohibited, and it was proclaimed through the streets of Henzada that to use opium was an offence punishable with death. All the same opium was then easily procurable at 12 annas a tola. But the Government now is stronger than it was then, and, if the suggested prohibition has worked fairly well in Upper Burma, it should, even at a great present sacrifice of revenue, be given an honest trial in the older and richer districts of the delta.

6. The objection of the Government of India to the proposed prohibition, described in the 6th paragraph of your letter, applies with equal or greater force to the law as it now stands in Lower Burma. There will be no uncertainty about the proposed prohibition, while the element of uncertainty comes in now and it is this very element which encourages blackmailing. Now a police officer who finds a small quantity of opium in the possession of a Burman can send him up for trial unless the Burman can satisfy the policeman by a show of evidence or of blackmail, or of both, that he obtained the opium lawfully. But not one consumer in 10 does actually obtain his opium licitly; the large majority of the consumers never visit the licensed opium shops at all. The licensed vendors who now smuggle wholesale

—they must do so in order to dispose of their large drawings from the Government treasuries—do bribe the police, and they can afford to do so better now than they will be when their minimum fees are fixed and when the issues of Government opium to them are restricted to the approximate requirements of the non-Burman population. I attach the utmost importance to the restricting of the issues of Government opium to licensed vendors.

I am sorry to say that Deputy Commissioners do not seem to expect any very substantial help in the enforcement of the suggested prohibition from Burman elders. I know, however, that many ywathugyis or village headmen are most anxious to have powers to deal with petty opium cases, and I am distinctly of opinion that blame would largely attach to any district officer who might fail to utilise in this particular the strong anti-opium feelings which undoubtedly exist among carefully selected and influential village officers. It is neither necessary nor desirable that the regular police should be the only preventive agency. There should not only be carefully selected excise establishments, but also selected headmen of villages should be invested with powers to deal with petty offences against the proposed law; they might, for instance, dispose of first offences where the quantity possessed was one tola or less. The employment of the village officials in such petty cases would utilise their anti-opium feelings without dragging them away from their villages too frequently to give evidence before distant courts, and it would also form an important check on any action of the regular police in the direction of blackmailing.

7. The means suggested by the district officers in this division of alleviating the proposed prohibition in the case of Burmans who have become accustomed to the use of opium do not disclose much sympathy for the habitual consumers. Henzada deprecates all palliative half-measures and suggests—somewhat reluctantly—that opium might be sold as medicine at dispensaries to persons who could not get on without it. Bassein would prepare final lists of confirmed opium-smokers and would supply diminishing quantities of the drug to them through township officers. Thayetmyo is in favour of absolute prohibition, allowing temporary sufferers to resort, as they often do now, to the local hospitals in order to wean themselves of the habit. Thongwa would not allow consideration for the degraded minority to stand in the way of a reform which is necessary in the best interests of the overwhelming majority. Mr. Courneuve would, however, give opium consumers' two years' notice of what was to about happen. It seems to me that the way for absolute prohibition could be prepared in a year or two by limiting the supplies of opium issued to the licensed vendors, by fixing the minimum retail price of the drug, by isolating the opium shops and placing excise officers in joint charge of them, and by reducing the amount that may be sold to or possessed by any one consumer from three to two tolas. It is as essential that an Excise officer should be maintained at an opium farm as it is that one should superintend the working of a distillery or of a liquor dépôt.

8. None of the Deputy Commissioners attach much importance to the question of whether opium shops should be closed to consumption on the premises. I have myself visited several opium shops at various times, and I am inclined to agree with the district officers in thinking this matter of comparatively little importance. It is, however, undoubtedly of some moment, especially when taken in connexion with the systematic efforts made to put down private opium dens. It would, I think, involve little or no hardship to any non-Burman to close the licensed opium shops against all consumption on the premises, and at any rate Burmans should be forbidden the use of such shops. A point, if not a very important one, would be gained if we could thus prevent beginners from associating with bad characters and from obtaining the drug in the mild and attractive forms in which it is now prepared for their special benefit in opium shops and dens.

From Lieutenant G. E. T. GREEN, Deputy Commissioner, Bassein, to the COMMISSIONER OF THE IRRRAWADDY DIVISION.—No. 906-B—7, dated the 29th October 1891.

I HAVE the honour to reply to your Financial Department, No. 3,068, dated the 14th September 1891.

2. The Subdivisional Officer, Ngathainggyaung, has enumerated the number of men addicted to the use of opium in the towns of Ngathainggyaung and Yegyi; the number is 135. Out of these 81 eat opium and 54 smoke it.

3. The ages of these men vary upwards from 16 years of age.

4. There exists a very general consensus of opinion that the use of opium is greatly on the increase. The fact cannot, in my opinion, be denied, and, moreover, the old feeling which formerly existed and which stamped an opium-smoker as an outcast of society seems to be dying out. There is no doubt that many young men consider opium-smoking a manly vice.

5. A curious fact regarding the returns I have received is that the occupation of all the opium consumers has been returned as "cooly."

6. I am in favour of prohibiting the use of opium to Burmans and of restricting sales to such an extent that the drug will not be obtainable in any but small quantities.

7. The question of how to arrange for the requirements of confirmed opium-smokers is a complex one.

I would suggest that if sales are eventually either prohibited or restricted, the number of confirmed opium-smokers in every township be enumerated and that the township officer issue to each man a supply monthly. The amount would be gradually reduced until within a period of a year or two no issues to Burmans would be necessary.

I believe that this plan is practicable and that the carrying of it out would not involve very much labour.

8. As regards the Chinese and other opium-consuming races I would provide licensed shops through Government agency in large towns like Rangoon, Mandalay, and Bhamo, but in the districts I would have these people to make their own arrangements for the purchase of the drug.

9. If licensed shops are to exist, I see no reason why smoking should not be carried on on the premises.

From Lieutenant G. E. T. GREEN, Deputy Commissioner, Bassein, to the COMMISSIONER OF THE IRRRAWADDY DIVISION.—No. 932-8—7, dated the 11th November 1891.

I HAVE the honour to reply to your Financial Department, No. 3,636-41Ex., dated the 9th November 1891.

2. The common form of consumption of opium in this district is by eating it.

3. As regards the Bassein district I do not think that the illicit trade in foreign opium has at any time been serious. The great profits which the Chinese licensees have derived have accrued from the illicit retailing of opium by agents of the former in distant tracts. If the sale of opium be prohibited generally, then foreign opium will of necessity be smuggled in large quantities all over Burma and the illicit trade must prove lucrative. A well organised police should be able to oppose this trade to some extent, but the police force alone will not suffice. A carefully selected Excise Department for each district will be necessary. Those districts more nearly situated to the frontier, from which smuggling is to be expected, will require, of course, a more extensive establishment than those more remote.

4. The opium sales since the establishment of the Excise Department in this district fully testify to its value in checking the illicit trade formerly existing.

5. I look for no support from Burman luggies. Those capable of strong convictions will rarely have the moral courage and desire to assist in any measure for their being carried out.

From D. J. A. CAMPBELL, Esq., Deputy Commissioner, Thayetmyo, to the COMMISSIONER OF THE IRRRAWADDY DIVISION.—No. 1,015-4—12, dated the 27th November 1891.

APPENDIX L.

I HAVE the honour to submit the report on opium called for in the Chief Commissioner's Financial Department, No. 10E., dated the 29th August 1891.

1. Tables are attached giving statistics of opium-eaters and smokers in selected villages in the districts. From these figures it would appear that opium-eaters are more numerous than smokers. I should have thought that the reverse would be the case, but smoking is more in evidence, while eating can be carried on more secretly.

A considerable number of opium consumers have taken to crime, but only three are given as having suffered physically or mentally from the use of the drug.

More reliable conclusions will probably be obtained from the returns called for from the jails. Opium-smoking, &c. is more common in the towns than in the district. With regard to the towns of Thayetmyo and Allammyo the Deputy Superintendent of Police says: "The male population of Thayetmyo is 6,500 and the per-centage of those who indulge in opium in either form is at the lowest 6 per cent. In Allammyo, Yataung, with a male population of 4,000, the per-centage is about 25 to 30 per cent. and is said to be on the increase." The District Superintendent of Police further says that in every police guard in the district there is an average of at least two opium-smokers who, in the majority of instances, become so after leaving the force.

The above facts sufficiently prove the large consumption of opium, but the proportion of those physically or mentally wrecked by its use is small.

2. The opium habit has got such a strong hold of the people that the prohibition will not be an easy matter. What with smuggling and obtaining it from authorised consumers, Burmans are sure to get hold of opium. At the same time I believe the prohibition can be enforced, and I think an attempt ought to be made to do so.

3. Paragraph 6.—This objection exists now, as the Chinamen can and do pay the police higher sums for conniving at illicit sales than the latter get in rewards on convictions. This evil has already been pointed out. I do not think it will be any the worse under the proposed arrangement than it is now.

Notwithstanding the strong feeling of the Burmese against opium, I doubt whether much help can be looked for from the luggies to suppress it. Thugyis and ywathugyis in the exercise of their powers as excise officers could do much to stop the use of opium if they are really in earnest about it.

4. With regard to paragraph 7 I think the prohibition to be effective should be complete; the making of exceptions would render it easy for opium to be introduced into villages by the excepted persons. It is quite possible to break people of the use of opium, and if opium-eaters cannot do this for themselves they can be treated at the hospital.

In the Allammyo Hospital I came across cases of Burmans who came in voluntarily to be cured of using opium, and Mr. Thomas, the hospital assistant, informed me he had made many cures.

5. Paragraph 8.—As far as this district is concerned I would recommend the closing of the opium shop altogether. It has only been open for about three years and could well be dispensed with. Smuggling could then be more thoroughly coped with. If this is not approved, then I would recommend the suggestion (b) being adopted, namely, to make it punishable for a Burman to be found in an opium shop or in possession of opium or indulging in it in any form.

I regret I have no statistics from the Pyapōn sub-division. From the above figures it will be seen that opium-smoking is the more common form of consumption in the villages selected. Amongst the places selected were the towns of Ma-ubin, Pantanaw, and

Danabyu. These swell the total of smokers against eaters. Facilities in the shape of the friendly pipe exist in large centres, but it would be found, if a census of the whole district could be taken, that the vast majority of the people who consume opium eat it.

Really, without absolute abolition of opium, the question is so surrounded by difficulties that it is a very difficult matter to form any opinion or to offer any practical advice. I am strongly in favour of abolition, as I see no middle course which will effect the object in view. It is a mistaken sympathy to feel for the degraded wretches who have made themselves slaves to the drug. The entire abolition, or the absolute prohibition, of opium to Burmans would not take immediate effect. It might come into force two years hence and be publicly notified, so that Burmans addicted to its use might wean themselves by degrees. I know many instances in which men have had the strength of will to break off the habit, and if it was known that after a specified time supplies could not be procured, many would adapt themselves to circumstances and break of the habit. It is reasonable to suppose that the majority would do so, and as for the residuum I do not think they are to be considered when the welfare of the majority is at stake. There are many arguments that the use of opium is not deleterious, in fact that its use in moderation is stimulating to Eastern races, as liquor is to Europeans in this climate. Applied to many races no doubt this is correct, but I think the few figures adduced by the limited inquiries instituted show that this does not apply to Burmans. The figures show that 52 per cent. of the opium consumers have been ruined by its use, which speaks for itself. The fact is that a Burman cannot do anything in moderation; it is not his nature. He will take opium and drink till he kills himself, and he will gamble his all—even down to pawning himself.

4. With reference to the opinions called for in paragraph 8, I agree with the views expressed, namely, that it is not desirable to prohibit the consumption of opium on the premises, but I would prohibit the use of the shops to Burmans, that is to say, no Burman should consume the opium he purchases on the premises. With the Burman gregariousness of vice means gregariousness in crime, and many a crime has been hatched in the opium den. This at least we can put a stop to by closing them to Burmans.

5. I do not know whether this is the proper place to put forward suggestions on the opium question, but I venture to submit the following. If figures are to be believed—it is a generally admitted fact that they are incontrovertable—the consumption of opium is enormously on the increase despite our efforts to the contrary. These efforts have been in the direction of closing the majority of shops and raising the price of the drug. I attach a table showing the opium sales in this district since its formation in 1876-77. In that year there were three shops and the issues from the treasury were 1,613 seers. In the four years following the number of shops increased to six and the average annual issue rose to 4,774 seers. In 1881-82 the number of shops was reduced to three and the issue fell to 2,561 seers. In 1882-83 the shops were reduced to two and the issue was 3,498. The same number of shops were continued up to 1886-87 and the issue rose to 5,599, the average for the five years being 4,652 seers. In 1887-88 the shops were reduced to one and the issue fell to 4,010. In 1888-89 the number of shops was again two and the issue rose to 6,758. In 1889-90 the number was again reduced to one and has remained at that figure since, the issue of opium in 1889-90 being 6,386 and in 1890-91 6,380. Up to the 1st December this year the issues have been 5,536, and as we have still a third of the year to run, and that the busiest time, I estimate that the total issues will reach 8,000 seers, or roundly speaking 200 maunds. It will thus be seen that the issues to one shop is now nearly double of that to the former six shops. To suppose that this enormous quantity is retailed according to law in the Yandoon shop would be folly. It is issued broadcast all over the country, and with a venal police and excise department it is utterly hopeless to prevent it; even with an immaculate agency at our command, such is the cunning and ingenuity of the Chinaman that I very much doubt whether we should be able to contend against illicit issue. The only course which suggests itself to me is to restrict the issue. For easy calculation, take the license fee at Yandoon to be Rs. 30,000 (it is actually Rs. 28,900), and the issues to be 200 maunds. The proportion of issue to license fee is one maund for every Rs. 150. Suppose, therefore, we fix the license fee at Rs. 6,000 and restrict the issue to 40 maunds. By doing this a considerable revenue would be sacrificed, but we should show the world that we are earnest in our endeavours to suppress or restrain within proper limits the opium traffic. I have never yet met a member of the general public who believed in the sincerity of our intention with regard to this traffic; the taunt is always that Government intend to sacrifice the revenue.

6. Another plan suggests itself to me. At present the retail price of opium is its weight in silver. In disposing of the licenses I would fix a minimum fee for the license, but that minimum should be so high as to force the retail price of opium up to its weight in gold. I simply throw this out as a suggestion which may or may not be thought worth considering. It certainly does not commend itself to me in the same manner as the proposal for restriction does. I shall have more to say on this point when reporting on the minimum to be fixed for the Yandoon fee for the forthcoming year.

[illegible]

From Major J. BUTLER, Deputy Commissioner, Henzada, to the COMMISSIONER OF THE IRRAWADDY DIVISION.—No. 253-774, dated the 5th December 1891.

In reply to your Financial Department, No. 3068, dated the 14th September 1891, regarding the opium question, as to the possibility of enforcing the prohibition of possession of opium by Burmans in Lower Burma, I have the honour to state that I see no reason against it being totally prohibited on the following grounds:—

1. The use of it is not a national custom, having been always prohibited by their own Government, and being only used by tribes on their frontier, such as Chinese, Shans, Kachins, Chins, &c., over whom they could exercise little, if any, control.

2. That its use is looked down on by all the leading men of position and influence in the country.

3. That its use by any Burman is at once synonymous to the man being a bad character, and is only made use of by bad characters and their associates, thieves, gamblers, &c.

4. That its continued extension in use is rapidly increasing and likely to lead to a great demoralization of the people.

As to the mode in which it should be prohibited, whether (a) by prohibiting the consumption on the premises of licensed shops only or (b) prohibiting the use of such shops to Burmans, neither of these measures would appear to me to hit at the root of the matter, for if he is allowed to use it at all, it seems to me quite immaterial whether he uses it in the shop or in his own house.

The shop is generally a small room of 20 by 10 feet and could not possibly contain one quarter of the men who go to buy.

From statistics furnished by the magistrates attached, it is shown that the number of opium consumers, that is, of those who eat the drug in the district, is far greater than those who only smoke it; but the reverse in town. Taking the township of Zalun, in a total of 137 villages containing a total of 8,935 houses there are 414 men who use opium; of these only 113 smoke it, whilst 301 eat it, and of these 414 opium consumers 180 have been in jail.

The Henzada township shows that in a total of 203 villages containing 17,629 houses there are 1,423 opium consumers, of whom 512 eat it and 911 smoke it. Out of these 1,423 persons who use opium 592 have been in jail. Here the smokers are more numerous than the eaters, probably because the farm is in the Henzada township and they can there find pipes to use it in.

In the Kyangin township there are 101 villages, 4,624 houses, and 200 opium-smokers, of whom 98 are

eaters and 102 are smokers, whilst 59 of them have been in jail.

In the other four townships of Lemyethna, Ôkpo, Kanaung, and Myanaung, they have not separated the smokers from the eaters, and made other mistakes in their returns which prevents me quoting details in them. But the general return for the district comes to that in 976 villages in the district there are 3,589 opium consumers, giving an average of three in each village, and of these 3,589 opium consumers no less than 1,348 or one-third of them have been in jail, would go far to show that beinza or opium-eaters and jail-bird are nearly related.

All palliative or half measures hitherto made use of have not only failed in their object, but have had a result totally the reverse intended. For example, the reduction of the number of the shops in 1881 was hoped would have reduced the amount consumed, whereas it led to a direct increase in the consumption, for in 1880-81, when there were two shops, the license sold for Rs. 13,460 and the sale of opium came to Rs. 48,917 or a total of Rs. 62,377. The next year, with only one shop, the license fee went up to Rs. 21,900 and the sale of opium came to Rs. 70,084, or a total of Rs. 91,984 against Rs. 62,377 in the previous year; and in 1890-91 the license fee realised Rs. 39,000 and the sale of opium came to Rs. 233,984, nearly four times the amount of 1880-81. In a period of 10 years the sale has been quadrupled according to the figures, but taking into account that the price of opium had been raised after 1880-81 by one-third of its price would yet show that the amount had trebled in the space of 10 years, which can hardly be called to be supplying a demand; it looks more like creating one.

If total prohibition is not approved of, then the only plan I can suggest would be to abolish the farm altogether and let the opium be sold as a drug at all dispensaries at such an enhanced rate that it could only be purchased by men very urgently in need of it, that is, if opium sells now at Re. 1 a tola, I would sell it at the dispensary at Rs. 10 a tola. A register could be kept of all persons to whom it is sold and the quantity sold.

From statistics obtained from the jail it appears that in 1882 only 37 opium-smokers were admitted, whereas in 1890 the number had risen to 173 and the per-centage of opium-smokers in jail had risen from 6.9 in 1882 to 29.3 in 1890, or nearly four times, which is exactly in the same proportion of increase of opium sold for those years. Now the population in 1880 was 318,077 and by 1890 had only risen to 436,326, that is, about one-fourth or 25 per cent., whereas the amount of opium sold had been trebled and the number of opium-smokers in jail was four times the number of the former year 1880.

From Lieutenant-Colonel C. B. COOKE, Commissioner of the Tenasserim Division, to the SECRETARY TO THE FINANCIAL COMMISSIONER, Burma.—No. 5549-1116, dated the 9th November 1891.

With reference to the Chief Commissioner's Resolution, No. 10E., dated the 29th August 1891, regarding the checking of the use of opium by Burmans, I have the honour to submit, in original, the following reports received to date from district officers:—

- (i.) Letter, No. 495-25, dated the 26th October 1891, from the Deputy Commissioner, Toungoo, and enclosures.
- (ii.) Letter, No. 1634-29, dated the 5th November 1891, from the Deputy Commissioner, Shwegyin, and enclosures.
- (iii.) Letter, No. 672, dated the 29th October 1891, from the Deputy Commissioner, Tavoy.
- (iv.) Letter, No. 6-12-7, dated the 21st October 1891, from the Deputy Commissioner, Mergui.
- (v.) Letter, No. 1874-3, dated the 29th October 1891, from the District Superintendent of Police in charge of the Salween district.

2. The report of the Deputy Commissioner of the Amherst district, and my reply to the Chief Commissioners suggestions will follow.

From G. M. S. CARTER, Esq., Deputy Commissioner, Toungoo, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 495-25, dated the 26th October 1891.

With reference to your letter, No. 4479-1116, dated the 12th September, forwarding copy of the Chief Commissioner's Resolution, No. 10E., dated the 29th August 1891, on the proposal to prohibit the sale of opium to Burmans, and also of the possession of the drug by Burmans, I have the honour to submit a return showing to what extent in certain selected towns and large villages opium is consumed, and the number of Burmans who have been physically wrecked or have taken to crime.

These statistics are only fairly accurate. All Burmans are ashamed of being known to be opium-smokers or eaters, and are most careful to keep their taste for the drug from the knowledge of their relations and neighbours as long as possible. As long as the Government allow the sale of opium by licensed vendors to Burmans, and receive revenue from such licenses, we cannot expect much help from the elders and pôngyis.

It would be very difficult to make them understand that, while receiving a large revenue from the sale of opium, we really wanted to check the use of it. But pro-

hibit the sale of opium to and possession by Burmans, and the elders and respectable men will at once side with us, and without doubt it would be much more easy to check illicit sale. As long as possession of opium is allowed it does not make much difference to the elders where the consumers get it from. They think that attempts to put down illicit sale by Government is to protect the farmers; but I do not think they would allow illicit sales in their villages otherwise. That they know exactly who the vendors in their respective villages are there can be no doubt. Burmans do not learn to smoke in licensed opium shops, but are taught to do so in their own villages by the agents of licensed vendors—Chinamen, two or three of whom may be found in nearly every large village in Lower Burma. I am certain that the large majority of consumers buy their opium illicitly. If the possession of opium in Upper Burma is prohibited I do not see why we should not have a similar rule in Lower Burma.

From my own personal knowledge I know that a large proportion of the population in Upper Burma were addicted to opium when we annexed the country. In Mandalay, in 1885, I found enormous stores of opium amongst the Chinese population, and they admitted that they sold largely to Burmans.

I am of opinion that the only way to check the consumption of opium by Burmans is to enforce the prohibition of sale to and possession by Burmans of the drug.

As regards paragraph 6, I am not of opinion that blackmailing to any extent would not be indulged in

by the police. If they tried it they would very soon be brought to book by the village headmen and elders. As I said before, I am certain that the luyis would help to put down illicit traffic were possession by Burmans illegal.

Paragraph 7.—It would not be possible to suddenly stop the use of opium, but anyone can break himself of the habit in a year, as experience in jails has, I think, shown. Let the Government cease to sell the opium shops by auction, and for, say, two years put in some trustworthy person on good pay to conduct the sales on behalf of Government. The officer in charge would see that no person bought more than he could himself consume within a certain time, say, half a tola a day, and that he was allowed no more until reasonable time for the consumption of the amount bought had expired, it would be found that the opium farmer's agents would be unable to procure opium for illicit traffic.

Burmans in this district would find it too great a tax to have to come in to head-quarters every time they wanted opium, and would give it up and break themselves of the habit.

At the end of two years make possession of opium by Burmans illegal, and restrict the issues to Chinamen and others to a certain amount annually.

Paragraph 8.—Very little opium is consumed on the premises in Burmese opium shops by Chinamen and non-Burmans. It would be no hardship to them to prohibit the consumption of opium on the premises of licensed shops. The use of shops to Burmans should be prohibited.

October 27, 1891.

G. M. S. CARTER,
Deputy Commissioner, Tanguoo.

From D. WILSON, Esq., Officiating Deputy Commissioner, Shwegyin, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 1634-29, dated the 5th November 1891.

IN obedience to your No. 4478-1116, dated the 12th September, and with reference to the Chief Commissioner's Resolution, No. 10E., dated the 29th August 1891, I have the honour to enclose in a tabular form such information as it has been found possible to collect in the time allowed.

The information may be relied on as pretty accurate. The subdivisional officers and myoòks did not give me figures but names, which put fudging out of the question.

The variations in the return between the different villages are partly due to differences of opinion (1) as to when a man may be called physically wrecked and (2) as to when he may be said to have taken to crime.

On the former point the obscurity was inevitable, and each officer had to follow his own opinion. On the latter point, I have decided to include as having taken to crime (1) all convicted offenders, and (2) all persons habitually reputed thieves.

Burmans, I am told, smoke opium whenever they can afford it. They eat, generally, not opium, but opium-ash, and drink even the water used in cleaning the opium pipes of well-to-do people when unable to afford to pay for "smokes."

If the use of opium by Burmans is prohibited, the first practical question will be: are half-Burmans—sons of Burmese mothers and Chinese or Indian fathers—to be classed as Burmans, and what of their children? These questions being settled in advance, the proposed prohibition would probably be practicable. The experience of Upper Burma should be decisive on this point.

The Burman elders are apprehensive of police extortion if the proposed prohibition is put in force. There is no doubt the mischief thereby occasioned would go

far to counteract and even prevent any good likely to be done by the prohibition. Any checks on the police action, however, would go far to render the prohibition nugatory. To utilise the strong anti-opium feeling of the lugyis, the ywathugyis might be fully empowered to act under the Opium Act and section 15 of the Opium Act extended to "any persons duly authorised "by any magistrate having jurisdiction in the "locality."

Any Burmans who have been accustomed to the use of opium should be put on the registers, and not merely men over 40. I knew a case of a man under 30 who died when deprived of his usual supply.

If the licensed opium taverns are closed to Burmans, they will simply have recourse more and more to the illicit dens, which abound in every district of Burma. A general "prohibition of consumption on the premises" would do unmixed evil. The "temptation of gregariousness" is a small matter to the opium consumers—a fundamental difference between opium and alcohol. The real remedy would be to have large well supervised shops and encourage consumption there.

The other extreme recommended by the District Superintendent of Police of allowing consumption only in licensed shops would also do harm in the same way. We must allow for the idiosyncrasies of human nature. Persons allowed to consume opium should be allowed to choose where and how to enjoy it.

The little fact well known to all officers that in Burmese an "opium-eater" or "opium-smoker" is almost synonymous with "an habitual thief" will, more than any other known to me, indicate how mischievous opium is to the indigenous races.

Mr. Snadden, District Superintendent of Police, Shwegyin, has gone into this matter with great pains. I enclose a copy of his report on the matter.

The subdivisional officers and myoòks have likewise shown considerable zeal in collecting these statistics about opium. It is considered a respectable thing to be hostile to opium-eating and opium-smoking.

APPENDIX L.

This fact greatly discounts the force of much that the Burman luyis say. Whatever they think on such a matter, they will never *openly* avow any sentiments but those of antipathy to opium. This is partly, I believe, the result of the policy of the native Government, which made other sentiments dangerous, and partly the result of the tendency in human nature to—

"Compound for sins we are inclined to,
By damning those we have no mind to."

Personally, I must confess I am glad there is no necessity for me to express an opinion on the whole subject, having reported on the points referred.

STATEMENT showing the NUMBER of BURMANS who have taken to OPIUM in certain selected VILLAGES in SHWEGYIN DISTRICT.

D. WILSON,
Officiating Deputy Commissioner,
Shwegyin, Shwegyin.
November 5, 1891.

From W. G. SNADDEN, Esq., District Superintendent of Police, Shwegyin, to the DEPUTY COMMISSIONER, Shwegyin.—No. 1020-11, dated the 2nd November 1891.

With reference to your office docket, No. 1310-29, dated the 10th September 1891, undersigned has the honour to attach a statement showing the number of Burman opium-smokers and eaters in certain selected towns and villages in this district.

From the statement it will be seen that over 50 per cent. of the Burman opium-smokers and eaters are known to have taken to crime, the majority of whom have become incapacitated for manual labour on account of the deleterious effects of opium.

The 17 opium-smokers shown as physically wrecked are those who have been so affected by the use of opium that they cannot even move about.

With reference to paragraph 4 of the Chief Commissioner's Resolution, undersigned sees no reason why the prohibition of the possession of opium by Burmans in Lower Burma could not be enforced, provided that all Chinese, Shans, and other non-Burman races using opium were properly registered and only sufficient opium sold to them for their daily use.

With regard to paragraph 6 of the Chief Commissioner's Resolution, undersigned is of the opinion that if all opium-smokers and eaters of non-Burman races were registered, and licensed opium vendors were only allowed a sufficient quantity of opium for the use of their registered customers, illicit sales of opium to unregistered persons would practically cease for lack of opium, and there would be no object for the licensed vendors of opium bribing the police to overlook illicit sales of opium.

Ywathugyis might with advantage be appointed to act as full-powered officers under the Opium Act,

With regard to paragraph 7 of the resolution, undersigned cannot suggest any other measure to mitigate the effect of a sudden stoppage of opium on Burmans who are too old to break themselves of the habit than that proposed in the resolution.

With regard to paragraph 9 of the resolution, undersigned is of the opinion that all opium should be consumed on the premises of the licensed shop and that no opium should be taken out of the shop for the following reasons:—

1st.—That the frequenters of the opium shop could be more easily supervised by the police and ywathugyis and the presence of a non-registered opium-smoker or eater detected at once.

2nd.—The presence of a number of persons would deter the police from blackmailing or taking bribes from the licensed vendor of opium.

From Major T. M. JENKINS, Deputy Commissioner, Tavoy, to the COMMISSIONER OF THE TENASSERIM DIVISION,—No. 672, dated the 29th October 1891.

With reference to your No. 4480-1116, dated the 14th September 1891, I have the honour to report that the consumption of opium in this district is not great and that only in the town of Tavoy and the villages of Lèwè-gyun and Thayetchaung. The opium farmer has on different occasions informed me that the consumption is falling off greatly, and this is shown by the return forwarded by the superintendent of the jail. From that return it will be seen that in 1884 the percentage of opium-smokers and eaters was 118 per cent., whereas for the last two years the per-centage has been only 6 per cent. of persons admitted to the jail.

As directed in paragraph 2 of the Chief Commissioner's Resolution, I called on township officers to send me a return showing the number of opium consumers there were in the town of Tavoy and villages of Thayetchaung, Inzauk, and Nabulè (the head-quarters of township officers). In Tavoy, out of a population of 2,720 adult males, there are 74 Burmans, 29 non-Burmans, and 170 Chinamen; and in Thayetchaung and surrounding villages, out of 1,737 there are 76 Burmans and 9 Chinamen who take opium. There are no opium-smokers in the other two villages. The men who smoke opium are chiefly fishermen and men who are out working during the rains and stormy weather.

As Burmans and others have never had any restrictions placed on their obtaining opium I do not think it would be advisable to prohibit those who have been in the habit of using the drug from continuing the same, but I think that difficulties might be put in their way, which would limit its consumption by these men.

I would propose that these men should be granted passes free once in six months by a magistrate or village headman, and that opium farmers be directed to keep a daily register of persons to whom they sell opium and the quantity sold to them (these registers to be open to inspection by a magistrate or district superintendent of police) and that they sell only to persons holding passes, and that passes be not granted to any new opium-smoker under 30 years of age.

From Assistant Surgeon OMERTO LAL MUNSHI, Superintendent of Jail, Tavoy, to the OFFICIATING INSPECTOR-GENERAL OF JAILS WITH CIVIL MEDICAL ADMINISTRATION, Burma.—No. 146, dated the 1st October 1891.

With reference to circular, No. 5196-92-300, dated the 11th September 1891, I have the honour to annex statement showing the number of prisoners in the jail during the last seven years who were addicted to the use of opium. It will be seen, firstly, that the population of Burmans to non-Burmans is considerably high; secondly, that the number of opium-eaters were more than that of the smokers; thirdly, that almost all of them were admitted in impaired state of health; and, lastly, that the health of nearly all of them considerably improved on the discontinuance of the drug as shown by the state of their health at the time of release from the jail. That abuse of opium has deleterious effects on the human constitution, is an axiomatic truth which none will gainsay, but that it will produce more injurious effects on the constitution of a Burman than a

non-Burman I have no facts to prove. My humble experience has taught me that the effects of the use of opium will be the same on the health of a Burman as well as on that of any other alien race; perhaps difference in the mode of living would produce some modification in the intensity or otherwise of the after-effects. People in good circumstances, consuming good and rich food, will enjoy better health than the people in opposite circumstances. The physical ailments which these opium consumers have suffered from, during their stay in the jail, were mostly of the nature of bowel complaints and debility therefrom. I have not as yet met with a single case of mental aberration arising from habitual use of opium. Perhaps its physiological effects (it being more a cerebral sedative than a cerebral excitant as gunja) has something to do with its non-production of mental derangements.

From H. G. BATTEN, Esq., Deputy Commissioner, Mergui, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 6-12-7, dated the 21st October 1891.

WITH reference to your Financial Department, No. 4481-1116, dated the 14th September, I have the honour to submit a return from the civil surgeon showing the number of convicts in the Mergui Jail addicted to opium and the number of convicts who were opium consumers during the years 1839, 1890, and 1891.

The jail returns have not distinguished between eaters and opium-smokers, and there are no statistics in the hospital as to opium consumption by patients.

I also submit a return showing the number of opium-consumers in four selected areas. This return is only approximate, as many opium-eaters and smokers do so quietly, and are not openly known as such.

I enclose memoranda by Mr. J. H. Merrifield, B.A., and A. Shwè Kyu, Akunwun.

Mr. Merrifield has gone fully into the question and lives amongst a people who are universally addicted to the use of the drug.

In the Mergui district the use of opium is very common. I may say that all the Chinese and Siamese use the drug in some way or other, and all the fishermen Burmese, or Tavoyans are habitual opium-eaters. A good many Burmans, other than fishermen, are addicted to the bad habit, and I regret to say that some Karens and most of the Selongs of the archipelago have been inoculated with a liking for the drug by the Chinese who trade amongst them.

The Malays are, as far as I can learn, the only race in the district who have avoided opium except for medicinal purposes.

In a district like Mergui, which is composed of so many different races, all inter-marrying, it will be almost impossible to prevent the Burmese who wish for it from obtaining opium, and all that can be done is to make it as difficult and expensive to him as possible, and also at the same time discourage his use of opium by general opprobrium.

"Beinsa" has always been a term of reproach, and amongst village elders is considered sufficient reason for dealing with a man under the preventive sections of the Procedure Code. It has, however, been carefully ruled by the several judicial commissioners that a man cannot be prosecuted under sections 109-110, Criminal Procedure Code simply because he is addicted to opium, and consequently in all such prosecutions the witnesses have not been allowed to give evidence on this point, and naturally have come to the conclusion that the Government encourage the vice.

With respectable villagers, the fact that a man is an opium-eater or smoker is equivalent to everything that is vicious, and opium consumers are classed with thieves and robbers.

I have always been of opinion that the only way to restrict the use of opium is by forcing the opium-eater or smoker to consume the drug at the opium farm. I know that this is against the general opinion; but I make bold to state that this is my opinion, gained after some experience in this country.

Burmans who are opium-smokers will have the drug illegally if they cannot get it legally, and what we have

to do is to make it as inconvenient and expensive a luxury to him as is possible, and force him to declare himself an opium consumer, and thereby bring public opprobrium to bear upon him. I would only allow opium to be smoked or eaten on the licensed premises and make the possession of it elsewhere absolutely illegal.

The opium farms should be restricted in number, and where sanctioned, they should, as recommended by Major Adamson, be placed in a conspicuous place separate from other buildings, with only one entrance and a sufficiently large room inside for the use of the consumers. The rules as to hours and barter should be made exceedingly strict, and a careful supervision kept on the premises and occupants. The result of this would be to drive all persistent opium consumers to move to the neighbourhood of the farm, where they would soon become known, and could be looked after by the police.

I would not confine the restrictions to Burmese only but to all classes, as otherwise it would be a farce in a district like this, where two out of every four persons are non-Burmans.

If persons do not care to visit the opium farm and wish to be allowed to take their opium home, I should advise that a personal license should have to be taken out, the fee for which should be so stiff as to only allow of the special luxury to those who could afford to pay.

The question remains as to the passes for opium for use of tin-miners and fishermen and others whose employment necessitates their absence from the neighbourhood of the farms and most of whom are Chinese and Siamese. If passes are not granted to these persons for purchase of opium from the farm they will procure it from the Siamese side, and the district is so placed that it is almost impossible to prevent the illicit traffic. I know that the privilege of these passes is much abused and that the mines and fishing villages are but retail opium shops. Stricter rules as to granting of these passes and a sharper supervision may prevent breaches of the law; but, as I have said before, the impossibility of looking after the traders amongst the heavy forests and amongst the islands without a special staff makes the whole question a difficult one.

The whole Selong race have become addicted to the use of opium and spirits, the Chinese and other traders bartering these for the shells, &c. gathered by the tribe.

The Government has lately sanctioned the monopoly for pearls, pearl-oysters, mother-o'-pearl, and béche-de-mer, and this, to a great extent, will prevent illicit trading; yet, at the auction, held on the 24th October the Chinese bidders, when they were informed that the sale or barter of opium or spirits to the Selongs would cause the lease to be cancelled, held aloft, and, rather than give in to what they consider an infringement of their immemorial rights, let the lease fall into other hands at a price much below that which they had been prepared to pay.

The statistics required in the latter part of paragraph two of the resolution are given below:—

Selected Villages or Towns.	Opium-smokers or Users.	Physically Wrecked or taken to Crime.	Remarks.
Kyaukpyu -	2	—	
Kalwin -	—	—	
Mergui Town -	55	20	Of this number 15 have taken to crime.
Palaw Village -	50	20

S. G. JACKSON,
Superintendent of Jail,
Mergui.

Mergui,
September 25, 1891.

MEMORANDUM by J. H. MERRIFIELD, Esq., Subdivisional Officer, Maliwun, dated the 24th September 1891.

In accordance with your orders I have attentively considered the correspondence to which my attention has been called.

My experience of opium, which is not confined to Burma, leads me to regard opium-smoking, where either the comparatively pure drug is employed or a mixture in which opium plays a more important part than that of a mere flavouring ingredient (as in the case of certain Turkish tobacco), as infinitely more deleterious than opium-eating. The Burmans do not generally, outside the towns and perhaps in Arakan, where they are hardly a pure race, smoke much, and when they do usually employ some of the weaker mixtures. I would point out, however, my belief that the habit is by no means general among the Burmans, being principally confined to the disreputable class among whom neither shame nor self-restraint in indulgences are hardly to be expected. I do not consider opium drives many of its victims to crime, at least, not to crimes of the more violent type, such as are undoubtedly induced too frequently by alcohol, but it undoubtedly does not improve the physical or moral tone of those who use it. The Burman is not gifted with much power of self-restraint, and evil habits grow on him with wonderful rapidity. He is influenced to an extraordinary degree by environment and is easily led especially into bad habits. At the same time he can be easily led the other way, and a declaration, such as would be conveyed by the proposed amendment, would undoubtedly have a moral effect.

I thoroughly agree with the fears expressed in paragraph 6. Besides the dangers to which reference is therein made there is the further one that an over-zealous magistrate, especially a Burman, might overstrain the law, though with the best intention. I would constitute the offence as (1) non-cognizable, (2) not to be tried without previous sanction of district magistrate, (3) only to be taken by the first class magistrates or those of the second class specially employed. I would limit the penalty to Rs. 50 or one month. The stocks would be a splendid deterrent, but I believe there are objections to their use.

I do not approve of the age limit, as opium-eating obtains largely among foresters, hunters, boatmen, and fishermen, who use the drug in large quantities without any apparent ill-effects. They say it is necessary to them, as they are not so liable to fever when using it, and that it enables them to stand unusual exertion,

exposure, or hunger, the better. I would suggest passes might be issued in genuine cases by Deputy Commissioners and subdivisional officers without any age limit. The publicity attendant on taking out a pass will deter other than *bona fide* applicants. I should like to abolish consumption on the premises altogether as many of these opium dens are regular little hells, where bad characters congregate and weak men are led astray. These opium dens are notoriously used for the transfer and disposal of stolen property. I do not see that this involves any undue interference with Chinese; as a matter of fact they do most of their smoking at home, and the more respectable Chinese never enter the licensed houses. I would prohibit all smoking on the premises. Further, with a view to checking illicit trade, I would insist (1) on no uncooked opium being sold by the vendor, except on pass, and (2) on his occupying isolated buildings. Except on pass, I should prohibit sales to Burmans.

Many of the clan and society lodges are used as opium dens, and in them illicit opium is supplied to Burmans. This, however, is a matter concerning less the present discussion than the general Chinese question in Burma, on which, however, I should like to report at some subsequent date.

It must be remembered that any action such as above suggested will most seriously affect the local and Imperial revenues. I do not myself think the moral gain commensurate with the principal loss, as with an undermanned executive it will be difficult to enforce the penal clauses strictly, and there is always the danger that a subordinate's feelings as a revenue officer, especially if his superiors are strong on the revenue side, will mitigate his ardour as a social reformer.

MEMORANDUM by A. SHWE KYU, Akunwun, Mergui, dated the 21st October 1891.

With reference to the Deputy Commissioner's orders on letter, No. 4,481-1,116, dated the 14th September, from the Commissioner, Tenasserim Division, I beg to submit my views on the Chief Commissioner's Resolution on the use of opium by Burmans.

From personal experience gained I am led to think that Burmans, Karens, Siamese, Chinese, and cognate races are the chief consumers of opium and that opium-eating is more common amongst them than opium-smoking owing to it being cheaper.

I presume that every educated Burman, Karen, and Siamese will readily assist Government in reducing, if not preventing, the use of the drug except for medicinal purposes.

If taken for granted that the habitual use of opium can by degrees be stopped, I beg to suggest that as an alternative to the Chief Commissioner's proposal, and as a tentative measure, an allowance of two years' grace, or more if desirable, be given before the law is enforced prohibiting the sale and possession of opium by Burmans.

I consider that a Burman should be prohibited from making use of licensed opium shops.

From W. N. BAINES, Esq., District Superintendent of Police, in charge Salween District, to the Commissioner of the TENASSERIM DIVISION.—No. 1874-3, dated the 29th October 1891.

With reference to your letter, No. 4,482-1,116, dated the 14th September, regarding the Chief Commissioner's Resolution No. 10E., on the proposal to prohibit the sale of opium to Burmans, and also the possession of the drug by Burmans, I have the honour to inform you that I am unable to furnish the statistics called for as there are no Burmese villages in this district. In fact the Burmese population in the district is very limited, consisting chiefly of higher grade police officers and office clerks.

No doubt it would be an excellent thing if the consumption of opium amongst Burmans could be stopped entirely, but I cannot see how this is to be done so long as Chinamen and Shans are allowed to possess opium. If a Burman opium-smoker is unable to procure opium from a licensed vendor he will be provided with the drug by Chinamen or Shans, who will derive a handsome profit by the transaction, as when a Burman really wants a thing price is no object.

I would suggest that the use of opium shops be prohibited to Burmans and that nobody, except a licensed vendor, be allowed to possess opium.

As regards Burmans of over 40 who are confirmed opium-smokers I do not think they are worthy of any consideration.

From Lieutenant-Colonel C. B. COOKE, Commissioner of the Tenasserim Division, to the SECRETARY TO THE FINANCIAL COMMISSIONER, Burma.—No. 5765-1116, dated Camp Tavoy, the 28th November 1891.

In continuation of my letter, Financial Department, No. 5549-116, dated the 9th November 1891, I have the honour to submit, in original letter, Revenue Department, No. 1753-14—29, dated the 13th November 1891, from the Deputy Commissioner of the Amherst district, regarding the Chief Commissioner's proposals for checking the use of opium by Burmans.

From Captain T. G. JOHNSON, Deputy Commissioner, Amherst and Moulmein Town, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 1753-14—29, dated the 13th November 1891.

With reference to resolution of the Chief Commissioner, No. 10E., dated the 29th August 1891, I have the honour to report as follows:—

1. *Effects of the use of Opium on Burmans and Statistics to establish the Conclusions arrived at.*—The townships of Wagara, Kawkareik, Gyaing, Salween, Martaban, and Pagat were selected by me to collect statistics of the number of Burmans who have taken to the use of opium. The total number for these five townships is 916, of which 792 are eaters, and 184 only smokers of opium. Of the number of those who use opium, 769 are reported to have been physically wrecked thereby, and 202 persons have taken to crime. The annexed table shows details for each of the five townships. I am inclined to believe that 10 per cent. at least might be added to these figures to make them more nearly correct. As they stand they are sufficient to justify the conclusion that the effect of opium on the Burman's mind and constitution can be defined as nothing less than disastrous.

I had also selected Moulmein Town for collection of statistics, but the figures given by the subdivisional officer, Moulmein, are unreliable, and I cannot believe that the opium-smoking Burman population of a town which supports two flourishing shops is as small as he puts it at. I quote his figures, however, below:—

Opium-eaters - - -	109	} 158
Opium-smokers - - -	49	
Physically wrecked - - -	108	

Nearly all may be said to be addicted to crime. It will be seen that the practice of eating is more prevalent, popular, and fascinating than that of smoking. I fear that this can only be ascribed to the fact that opium-smoking is an expensive luxury, which can only be afforded by the few, while eating refuse opium is within reach of the poorest. The Burman opium user often commences with smoking, but as the habit grows the purse becomes attenuated and the constitution enervated, and the *bein-sa* has at last to fall back on eating the refuse opium from the pipes of his more fortunate countrymen or of the ever ready and handy Chinaman.

These figures, such as they are, show by their alarming proportions that a Burman's constitution is, as a general rule, undermined and enfeebled by the use of opium to an extent not noticeable in the case of other nations who use opium, the Chinese, Shans, and others; that the number addicted to opium is small when compared with the population, does not meet this charge against opium, for none but the very blindest official can urge that the use of opium is not increasing throughout Burma. I have personally had the advantage of being several years in one district (the Thongwa district) of Burma: I learnt to know villages and villagers well, and in the course of four or five years I was able to mark and see the sure, but steady increase in the use of opium going on around me; respectable luggis who, when I first entered the district, would have been insulted at the mere suggestion became addicted to the habit, and the stigma attached to the

word *bein-sa* gradually lost its force and its full significance. The conclusion, based on my close experience and on the figures now before you, can be but one, namely, that the use of opium is highly deleterious to the Burman race, and that it will only be a matter of time for the entire race to be enfeebled and gradually effaced in the same manner as the Zulus of Natal are being enfeebled and effaced by the use of drink as a necessary sequence of their contact with civilisation.

2. *Whether it would be possible to enforce the suggested Prohibition.*—The answer to this question must, as regards the Amherst district, be in the negative. In Moulmein town there would be little or no difficulty, but in the Amherst district Burmans and Talaings are so intimately mixed up with Shans, Taungthas, Karens, and natives of India that the prohibition by law would be a dead letter. The use of opium is forbidden by Buddhist law, and the pongsyis and elders of a village invariably *speak* against its use, but this engine is a powerless piece of machinery which never works and never will work. The pongsyis do sometimes preach or talk in their kyaungs or on certain public occasions against the use of opium, but the elders do nothing and are often themselves addicted to it. The good-will of the majority of the population is already against the use of opium, but that good-will cannot be roused into action, and, as far as I know of the Burmans, it seldom can be roused into action to assist the law and its practical working. Nevertheless, in spite of the weak supports on which the law must rely for its good effects, the consensus of opinion of all the Burmese officers consulted in the Amherst district is that the prohibition would be welcomed everywhere, and the majority of the respectable population would be delighted to hear of any law prohibiting the use of opium, and might in time be induced to make that law effectual. The common-sense argument of the elders I have so frequently consulted on the subject in more than one district is this, what is the use of us exerting ourselves to put down the use of opium when Government maintains standing shops for its sale to our villagers and its diffusion throughout our villages. They ascribe the ruin of their lads not to the unruly habits of youth, but to the temptation placed before it by the Government. This is an argument that cannot, in my opinion, be met or reasoned away.

3. *The preventive agency to be Employed.*—The measure proposed would no more place in the hands of the police an engine for the general blackmailing of the Burman population than the engine provided by the present law, whereby any and every person in possession of opium, no matter how small the quantity, is liable to be arrested and sent up for trial. In large towns there might, however, be blackmailing, but I can suggest no remedies unless it be that no action should be taken by a police officer against a Burman except on the report of a recognised elder or committee of Burman elders appointed for the suppression of the habit among Burmans. In the district the best agency, that is, preventive agency, would be the village headman and elders. The township officer could group his village headmen into committees, who could then better enlist the aid and the sympathies of village elders and pongsyis and teachers of religion. I know an instance where a township officer formed such an association without the aid of village headmen, and it proved most effectual. It would be still more so if there was a standing committee of village magistrates. I can suggest no other agency than this.

4. *Measure necessary to mitigate the effect of the sudden stoppage of Opium in the case of Burmans of the present Generation.*—The stringent measure now proposed should not suddenly be adopted in Lower Burma. The Burmans and Karens who have become confirmed users of opium cannot, without endangering their lives, suddenly give up its use; and even if proclamation were made that, after a certain date, the use of opium would be forbidden, there would be persistent use to the last moment of liberty. Young smokers experience inexpressible joy while indulging, that would make them cleave to the habit or use as long as the law permitted, but old and confirmed smokers and eaters say that there is not that delightful sensation after long use, but there is a certain inability to abstain from the drug, a longing which no other substitute can gratify.

Although the use of opium by Burmans ought not to be suddenly prohibited, yet there is, in my opinion, a simple and efficacious way of checking the use. I do not think we can say to the Burman: "We will bring

APPENDIX L.

"into the country a drug which is not good for you; it is only good for those foreigners whom we bring into your country. If you use or handle the drug we will punish you." But after the example of the Arms Act, we can say: "We will bring an intoxicating drug into the country. We cannot trust you with its use. We know by experience that you will, if allowed, take it to excess and ruin your constitution or join the criminal class, or both, and disturb the peace and prosperity of the country. We will, therefore, only permit those of you who wish to take or possess the drug to do so by taking out a license, and of course we control the issue of the license."

In other words, I would say that all opium-smokers should be licensed. I would make no distinction between Burman and foreigner. Chinese and Indians come into the country to make money with their eyes open, and they should be made to conform to its laws, no matter how they may affect them as species of a different race. I would suggest a fee of Rs. 10 for a perpetual license, payable in cash to the township officer in the district. The township officer would keep a register of such *bein-sas*, and send a copy to each village headman for publication in his village. Any *bein-sa* could apply to have his license cancelled and name removed from the list on reforming or giving up the habit.

This compulsory taking out of licenses would not be harsh on or oppressive to foreigners, for if they wish to enjoy a luxury in a foreign country they should pay for it; this is a maxim of economy acted up to the hilt by all European nations. It would not be an infamous act on the part of a Chinaman or Indian to be registered opium-smoker; the odium attached would be like

the proverbial water on or off a duck's back; but I think there would be serious disgrace attached to the Burman opium-smoker; the finger of scorn would be pointed at him by every village urchin, and he would scarcely have the face to attend prayer meetings, or keep his duty days, or take part in any religious or social ceremony in his village. Those who would be bold enough to face public opinion would take out a license; but I venture to say that the rising generation would bow to public opinion, and would think seriously before they paid Rs. 10 to be enrolled in the ranks of *bein-sa* helots.

This licensing of opium *habitués* would also give effect to the Chief Commissioner's suggestion of controlling the supply; the number of consumers being so accurately known it would be much more easy to check illicit sale, when the only authorised consumers are registered as a class, village by village, township by township.

5. Is it desirable either—

- (a) to prohibit altogether the consumption of opium on the premises of licensed shops; or
- (b) to prohibit the use of such shops to Burmans only?

I am of opinion that it is perfectly immaterial to the Burman where and when he has his smoke or his opium to eat. I think it is only strangers to a place that frequent an opium shop. The poor opium user is now taking largely to swallowing it, and this he can do anywhere. I do not think that the prohibition to the Burman to smoke or consume opium in a licensed shop would act as a check on him.

TABULAR STATEMENT A.

Township.	Number of selected Villages for which Statistics are given.	Total Number of the Houses in the Villages given in Column 2.	Opium-eaters.	Opium-smokers.	Totals of Columns 4 and 5.	Physically wrecked of Column 6.	Number who have taken to Crime of Column 6.	Remarks.

Total -	405	23,293	792	184	976	769	202	

From G. D. BURGESS, Esq., C.S.I., Commissioner of the Northern Division, to the SECRETARY TO THE CHIEF COMMISSIONER, Burma.—No. 1134-38, dated the 31st December 1891.

WITH reference to paragraph 9 of extract from the proceedings of the Chief Commissioner, Burma, No. 10E, dated the 29th August 1891, I have the honour to forward the reports and returns of district officers concerning the use of opium in their districts.

These reports could not be sent by the time desired because they had not then been all received, and even now some of the information required is still incomplete.

The Deputy Commissioner, Bhamo, speaks of the untrustworthiness of his statistics, and no doubt all the figures are open to question.

The numbers of opium consumers who are Burmans are given as—

Mandalay	-	-	-	111
Shwebo	-	-	-	8
Ruby Mines	-	-	-	26
Katha	-	-	-	24
Bhamo	-	-	-	94
Total	-	-	-	263

The Bhamo figures are only for certain places, but the others apparently profess to be for the whole of each district.

Whatever reliance may be placed upon them it is certain that the number of pure Burmans in this part

of the province who use opium is altogether insignificant, and there can be no real difficulty in restricting the consumption of opium among this class of the population. Very likely many of those put down as Burmans are not, strictly speaking, Burmans at all. The Subdivisional Officer, Pyinulwin, wanted, it seems, to include Danni as Burmans although they belong to a different race.

When any Burman absolutely needs to use the drug it will be easy enough for him to obtain a special license for its possession.

The difficulties which have been placed in the way of obtaining opium and the enhancement of its price have unquestionably reduced consumption. It was ascertained that among the Chinese residents of Mandalay a considerable number, who were accustomed to take opium in moderate quantities, gave up the habit in consequence of the stringency with which the law was enforced, and if such was the case among the Chinese it may be imagined that the Burman opium consumer would be still more affected.

In regard to the moral and physical effects of opium on the Burman the information is meagre in the extreme, but it may safely be said that the Upper Burman, who takes to its use, is of a degraded type, though it may be that his consumption of opium is as likely as not to be a result as a cause of his deterioration.

It is certainly not the Burman only who suffers from the abuse of opium; the Shan, the Kadu, and the Kachin are also the victims of over-indulgence.

If such people are to be protected against themselves and preserved from the results of lack of self-control by the enforcement of total abstinence, it will be necessary to treat opium like ganja, and exclude it from the country altogether. Perhaps the acquisition of further information may show that this is the only useful plan to be pursued. As regards opium-smoking and opium-eating, the former practice is the more prevalent, the latter being probably resorted to more for the sake of convenience than from preference.

In regard to oppression by the police being promoted by the introduction of restrictive rules regarding the use of opium, I do not think the danger is a serious one. As one officer points out, the Burman opium-smoker does not generally belong to the wealthy class, and, as another observes, the addition of another engine of extortion to the present collection will make little appreciable difference.

Concerning the consumption of opium in licensed shops, I am of opinion that it should be freely allowed as long as shops are allowed. The non-Burman opium smoker requires such accommodation, and as to the Burman smoker the more distinctly he is marked and known for what he is, the more likely is he to be cut off from his better-behaved countrymen and from the opportunity of corrupting others.

From Captain L. E. ELIOTT, Deputy Commissioner, Ruby Mines, to the COMMISSIONER OF THE NORTHERN DIVISION.—No. 624-11F., dated the 5th November 1891.

With reference to your No. 434-38, dated the 11th September 1891, I have the honour to forward herewith the statistics called for. As regards the remaining points noted in the letter forwarded by your endorsement under reply, I would state as follows:—

- (1.) Opium-smoking is more common than opium-eating in this district.
- (2.) I think it would be possible to enforce the suggested prohibition of the possession of opium by Burmans in Lower Burma. In Upper Burma the prohibition promises to become more effectual year by year, and there is no reason to anticipate any different result in the lower province.
- (3.) As regards the police using the measure proposed as an engine for the general blackmailing of the Burman population, it is not necessary that the police should be the only preventive agency. The village headmen have now been made excise officers and have certain powers under the Opium Act. In this district it is thought that really good results in this respect can only be effected through the agency of village headmen, under the direction of European officials. The police are not in nearly such a good position to cope with the evil as the village headmen.
- (4.) As regards paragraph 7 of the letter under reply, I think it would be desirable to give some months' notice of the date on which the prohibition would be enforced. During this time any Burman, who thought fit might apply to register himself as an opium-smoker. He would then be examined by the civil surgeon before the date of enforcement of the prohibition. At some fixed time, after the prohibition had been enforced, he might again be examined by the civil surgeon who, if satisfied that his health was impaired by enforced abstinence from the drug, might recommend that his application be granted.
- (5.) As regards paragraph 8 it seems very necessary to close these shops to Burmans. I do not think it would be desirable to interfere with the Chinese in their national methods of opium-smoking. It would only irritate them without effecting any good.

No.	Number of Burmans taken to the Use of Opium.	Number of such who have been physically wrecked thereby.	Number who have taken to Crime.	Remarks.

From E. C. S. GEORGE, Esq., Deputy Commissioner, Bhamo, to the COMMISSIONER OF THE NORTHERN DIVISION.—No. 2707-15, dated the 25th November 1891.

With reference to your Financial Department, No. 534-38, dated the 11th September 1891, I have the honour to remark that it does not appear that the use of opium is more deleterious to the Shan and Chinaman than to the ordinary Burman. I make this remark because I wish to point out that the introduction of opium among the Kachins by Chinamen has been of quite recent growth, indeed, almost within the last generation. But the use of the drug has spread like wildfire, and now the vast majority of Kachins are opium-smokers, while the cultivation of the poppy in small patches is almost universal throughout all the hill tracts. There is no question that smoking in excess has tended in some cases to the detriment of the Kachins, but I cannot agree with the Subdivisional Officer, Myitkyina, in considering that "but for the interference with their customs the absolute prohibition of the consumption of opium by them would be a good thing for the country." The Subdivisional Officer, I think, confounds cause with subsidiary attendant circumstances when he alleges that opium is at the root of most of the raids, because, whenever a man wishes to start a raid the surest way of rallying volunteers to his standard is a lavish distribution of that drug. The Kachins are a drunken set, and it is at their drinking bouts that most of their feuds originate. Such prohibition as is suggested would be purely inoperative. The custom has taken too strong a hold on the Kachins to be lightly shaken off, and we could not be constantly sending expeditions to seize offenders. Besides, so far as my experience goes, it has not been shown that either for Burmans or any other race the use of the drug in moderation is at all deleterious any more than in the case of any ordinary sober drinker. Either opium or liquor in excess is deleterious, but why should the moderate consumers lose a joy in life by legislative enactment? The ordinary inhabitant of these parts has a cheerless enough struggle to try and simply live as it is with but few possibilities of intellectual or æsthetic enjoyment, and the use of opium (of course, I am not speaking from actual personal experience) fills with dreamy

APPENDIX L.

complacency an otherwise dull void in his daily routine of grinding labour. I must say, in reference to the Burman that there is a remarkable and unanimous consensus of opinion on the part of all Burmese inhabitants of the district that the prohibition of possession by the Burmans is a move in the right direction. The success of this prohibition depends simply and solely on the active and intelligent co-operation of the elders, and in actual practice it does not yet seem that although they are willing enough to offer an opinion that the rule is an excellent one, that they actually care to go to the trouble themselves of moving the legal machinery to put it into operation. However, the issue of the recent rules prohibiting possession, but chiefly the increased cost of the drug, owing to our restrictive policy, have already operated to a large extent inducing the gradual discontinuation of its use. The Sub-divisional Officer, Bhamo, who is special excise officer, reports: "I do not think much real help in bringing to notice offences will be obtained from the luygis. They know that if they bring to light offences that they will have to come forward as witnesses to court. The only help the Government will get from them is an occasional report to the thwegyi and prohibition in their own families. I called a meeting of the Burmese elders of the town, and asked them to form themselves into committee to ensure the drug not being used in their vicinity."

The result of all this was that it was finally reported that there was only one Burman opium-smoker in the whole of the Bhamo Municipality, and, contrary to all expectation, his health is reported as unimpaired, and he has not taken to crime. The Sub-divisional Officer, Shwegu, reports that he knows personally, owing to the dearness of the drug and the difficulties in procuring it, three young Shan-Burmans of Shwegu are taking medicines to break off the habit of smoking, and, from information and inquiry, he has reason to believe a great many more are following the example, but he too agrees that we are entirely in the hands of the elders in the matter, and that no amount of police force or legislative interference will successfully stamp

out the habit without respectable Burman society imposing a stigma on all those who give way to it. This they have been exhorted to do, and time alone will show how far they accept the responsibilities of the situation. The police have such general opportunities for blackmailing that I really do not think one channel more or less will really matter, nor do I think they will make very much, as the ordinary sober smoker hitherto will rather give up the drug altogether, as many have done, than pay bribes with the always present risk of detection, while the confirmed opium-smoker will have nothing to fear, having received a special certificate under section 18 of the new rules from the Deputy Commissioner to possess and smoke as much as he likes. It will be in the power of everyone to apply for a special license. Such application I would be inclined to refer to local luygis for report as to whether applicant can be justly regarded as a confirmed opium-smoker who could not well dispense with the use of the drug. If they report so he would get a special license and be a marked man. On the other hand, if they reported against him he would not get his license. He would be a marked man for police supervision, and he would also be a marked man for the luygis, who would bring social pressure on him to discontinue the use of the habit. The fact of a committee sitting to decide about this case would be a sufficient publication of his proclivities to the rest of the neighbours. I do not see why any special rules are required as suggested in paragraph 7 of the circular letter. Rule 18 seems broad enough, except that it might be amended as follows, "buy and possess" for the word "possess." As to paragraph (8) of the circular letter, all officials here are agreed that it is unadvisable to entirely prohibit consumption in licensed shops. The ordinary Shan-Chinese cooly has no other place but the shop where he can enjoy a comfortable smoke. But it will be a good thing to prohibit its being thus used by Burmans. The object is to emphasize the fact of the habit carrying a social ban with it, and compelling the smoker to indulge only in shame-faced privacy. An unreliable set of statistics is attached.

From C. A. SOPPITT, Esq., Deputy Commissioner, Shwébo, to the COMMISSIONER OF THE NORTHERN Division.—No. 1104-63, dated the 27th November 1891.

With reference to your Financial Department, No. 434-38, dated the 11th September 1891, I have the honour to state that there are very few opium-eaters or smokers in this district. With the exception of eight Burman opium-eaters, two non-Burman smokers,

as shown in the attached statement, I can find no others. There are, of course, a few more, but Shwébo never was an opium-consuming district. Their being so few smokers it is not possible in this district to collect the statistics asked for.

From G. G. COLLINS, Esq., Deputy Commissioner, Katha, to the COMMISSIONER OF THE NORTHERN DIVISION.—No. 3320-22R., dated the 4th December 1891.

IN reply to your Financial Department endorsement, No. 434-38, dated the 11th September, forwarding extract of proceedings of the Chief Commissioner, Burma, in the Financial Department, No. 10E., dated the 29th August last, I have the honour to submit the following remarks.

In the first place the inhabitants of this district are mostly Shans and Kadus and cognate races. My inquiries show that among the Burmese population there are only 14 persons in Katha and 12 in Myedaung. No Burman consumers are reported from Kawlin, Pinlèbu, and Mansi. Of the above the majority are eaters.

It is more expensive to eat than to smoke, as undoubtedly more of the drug is consumed by them that eat.

The reason that eating is more prevalent is that the consumer has not time for smoking. He has to make journeys, and it is more convenient to swallow a small quantity; smokers here invariably eat opium on this account.

Of those quoted above it is reported to have affected the health only of four at present.

At present the non-Burmese consumers do not frequent the only shop for purpose of smoking and they live principally on smuggled opium at present. It is not either difficult to procure the drug for smoking.

There are a few Chinamen who, as far as I have learnt, almost entirely smoke in their houses.

For these reasons I am in favour of prohibiting the consumption in shops entirely.

No doubt village elders can do much to reduce opium consumption, but they are generally apathetic. They are in favour of the prohibitions, and think consumers could get over the necessity of using opium in a few months.

The Subdivisional Officer, Katha, states, in making his inquiries in Mawlu, that several consumers had given up the habit some 10 months ago on the order of the Myothugyi and that they had overcome the craving for the stimulant and were well.

I would not license any Burman consumers in this district to use the drug. If they are found in possession, they could be sent to the Civil Hospital, where for a time they could be medically treated; they would be discharged when the medical officer considers they could live without its use.

If certain persons are to be exempted the Deputy Commissioner and subdivisional officers could be authorised to grant exemptions. It is usually the poorest classes who take to opium. These are not

usually in a position to bribe the police and the police and village headmen should be able in this district to enforce the excise laws satisfactorily.

From K. G. BURNE, Esq., Deputy Commissioner, Mandalay, to the COMMISSIONER OF THE NORTHERN DIVISION.—No. 3247-29Ex., dated the 15th December 1891.

I HAVE the honour to submit the report called for in your Financial Department endorsement, No. 434-38, dated the 11th September last.

The orders were circulated to each subdivisional officer with explanatory instructions as to points on which special information was required, and all have replied except the subdivisional officer of Amarapura, to whom several reminders have been sent. To prevent further delay I submit the report without information for that subdivision, except that furnished by the District Superintendent of Police for the whole district.

District officers have been called upon to furnish information showing (a) the number of Burmans who have taken to the use of opium and (b) the number of such who have been physically wrecked thereby or have taken to crime.

The return of Burmans convicted under the Opium Act in this district submitted by the different officers gives the following result:—

1888 -	-	-	-	-	Nil.
1889 -	-	-	-	-	Nil.
1890 -	-	-	-	-	Nil.
1891 -	-	-	-	-	10

Of these 10 Burmans nine were convicted in Mandalay and one in Pinyinlwin.

No cases came before the Madaya or Cantonment Courts.

As to point (a) the following figures are given as the number of Burmans who have taken to the use of opium.

Mandalay Town 111. Of this number 89 are said to be smokers and eaters and 29 smokers of opium only.

Of the total number given, 30 reside in the Chinese quarter, six in the Chanethazan quarter, and the rest are spread over the town; and in no quarter the number of those addicted to opium is said to exceed five.

Pinyinlwin Subdivision.

In Letya South	-	-	-	-	42
In Letya North	-	-	-	-	17
In Thondaung	-	-	-	-	9
In Onkun	-	-	-	-	8
Total	-	-	-	-	76

Out of this number 49 are Shans, 12 are Chinese, and 15 Danus. The latter are of Burmese extraction, but not pure Burmans. The subdivisional officer supposes that for the purposes of the Opium Act these Danus are

APPENDIX L.

to be considered Burmans. I do not think so; they do not form a very large community, and as they are not pure Burmans I would entirely exclude them from consideration in respect of this report, and do not see how they can come within the term Burman as defined in the Act.

Madaya Subdivision.—The subdivisional officer and both his township officers give blank returns and confidently assert that there are no known opium consumers in their respective charges.

The fact that there have been no prosecutions gives support to their statements.

Each officer has made very full inquiries and gives a long list of names of headmen and respectable persons through whom inquiries have been made.

I do not believe that opium is at all largely consumed by Burmans, except those from Lower Burma, who have acquired the taste there. In fact it has been authoritatively stated that the Upper Burman pure and simple does not take to opium in any shape or form.

The District Superintendent of Police (Mr. Martin) considers from his experience here that opium-smoking and opium-eating amongst Burmans is by no means extensive, though, of course, in large towns where there are opium shops and Chinese inhabitants, a small proportion of the population take to opium, but even then it is chiefly confined to the indolent and those suffering from rheumatism and other disorders. In such cases the District Superintendent considers that the constitution becomes undermined.

Upon point (b) the Subdivisional Officer of Mandalay, who has given much attention to the matter and obtained a variety of opinions as to the extent of opium-smoking and the effects therefrom, finds that no instances are known here of any Burmans who have taken to opium becoming physically wrecked, and of the 111 reported to be smokers or eaters only 20 are known to have taken to crime in consequence. Of these 20 consumers 14 live in the Chinese quarter.

In Pinyinulwin only one of the 15 consumers is reported to have become physically wrecked thereby. Further, that 10 of the 15 consumers are said to be able to break off the habit, whereas the remaining four would probably die if suddenly deprived of the drug altogether. These four persons, however, are able, notwithstanding the habit, to follow satisfactorily their usual avocations.

Mr. Moore's inquiry shows that there were more opium-smokers in his subdivision previous to the annexation than exist now, and the reason given is that these persons, on the annexation, took part in the general disturbance and some got killed and others disappeared. A number have given up the use in consequence of the prohibition in respect to Burmans. These persons, who only took to the habit mildly, have found no difficulty in since discontinuing the use. Mr. Moore says he has been unable to obtain figures to support this statement and believes that figures, if given, would be of little real value, in which I agree, as the native officials and headmen could not be depended upon to give any figures approaching accuracy. Mr. Moore gives two instances, much talked of in Pinyinulwin, of complete cure from the habit of opium-smoking—one a Shan and the other a Danu (half Burman, both over 40, and who were cured of the habit in jail, one after a sentence of two years for theft, and the other after three months for an offence under the Opium Act. The Subdivisional Officer of Madaya makes no report upon the information required on point (b).

With respect to paragraph 4 of the Chief Commissioner's Resolution as to whether it would be possible to enforce the suggested prohibition with regard to the possession of opium by Burmans of Upper Burma, each officer in this district considers that such prohibition could be made effectual, but each officer also considers that it will be necessary to make an exception in favour of those who are known to be confirmed smokers and eaters, and who cannot live without it. With the above exception I see no objection to the present rule absolutely prohibiting the sale to or possession by Burmans. Such a rule cannot be expected to work a reform all at once, but if continued inquiries are made to ascertain the Burmans who cannot give up the habit, and passes are granted to such persons, there can, I think, be no doubt but that the rule will be found to tend more and more towards

the discouragement of the practice among Burmans until the taste for opium becomes a thing of the past.

How to work such a system is a matter for consideration. The feeling amongst the respectable Burmese, numbers of whom have been consulted and given their opinions, is in favour of this system of passes to prevent the prohibition in respect to such person becoming either a death-warrant or a farce by its becoming better observed in the breach than in the observance. I think the rule now in force might be effectually worked in the following manner,—whenever a Burman is brought up for possession of opium he should be given the opportunity of pleading that opium for him is an absolute necessity. The magistrate trying the case will make every possible inquiry as to the length of time the accused has acquired the habit, his age, occupation, and whether his parents before him were known to be opium-smokers or eaters, as to any disease accused says he is suffering from to necessitate the use, &c., and, if the magistrate is satisfied from such inquiry that the case is one for a pass, he shall remand the accused to jail to remain for a period not exceeding 15 days under medical observation, at the end of which period the medical officer shall certify whether a pass should issue and, if so, for what quantity of opium per diem and for what period. On receipt of this certificate the accused will be discharged or acquitted, as the case may be, but his name to be entered in a register to be known as a "Register of Burmans granted opium passes," and such register to contain the following heads in English and Burmese :

1. Serial No.
2. No. of case.
3. Name of accused and description.
4. Section.
5. Village.
6. Occupation.
7. No. and date of pass granted and period for which granted.
8. Date, if for a limited period, on which pass is to be handed back to the magistrate by accused.
9. Orders of the magistrate.

The orders will give the reason for granting such a pass.

A copy of the entry to be sent to the District Superintendent of Police, Township Officer, Thugya of the accused's village, and opium vendor.

To make the prohibition with this exception thoroughly effectual prosecutions must be vigorously carried out, and I do not consider that this can be done without a special and well paid agency, such as recommended before by a meeting of Deputy Commissioners here. I do not think the police agency has of itself proved sufficient to meet the evil complained of in Burma generally. Such agency as recommended will be expensive; but if anything is to be done to thoroughly check any taste for opium spreading for want of an efficient agency, expenditure should not be a matter for much consideration if the object to be attained is one which will benefit the people at large.

The agency recommended is intended to deal a death-blow to smugglers. It will be a sort of detective department working secretly, backed by ample funds for information and rewards for good work done. I believe such an agency would prove more valuable than the police in securing the sympathy and co-operation of the Burmese luggies. The officers would wear no uniform and move about secretly and quietly, appearing to the villagers as one of themselves and not one whose usual work is to arrest with or without warrants, &c. When an offender is found, the actual arrest would be made by the police and the case prosecuted by them, otherwise the special agents would become too well known.

If, however, as will probably be the case, the expense of a special agency is not considered necessary in addition to the prohibition and ordinary means of dealing with offenders, I would still urge a system of passes and the absolute necessity for secret service money being placed at the disposal of the District Superintendent of Police for payment to informers in opium cases.

As nothing can be done without information, and information cannot be got without payment, and it is

not fair that officers who have to detect such cases should have to pay money in advance out of their own pocket, as how often to their permanent loss, as the rewards granted are either frequently inadequate or from the fines not being realised never received the proper working of the opium law is likely to suffer in consequence of the necessary pecuniary encouragement.

In conclusion I do not think that any hardship can arise from the granting of passes on the system proposed. The burden of proving that opium is necessary to the person accused is upon him. He can show by evidence that he has by length of time acquired the habit to such an extent as to make it necessary that he should be subjected to the observation and opinion of a medical officer. Having obtained a pass, his case is registered and known to all whom it concerns, such as the police, thugyi, and opium vendor.

Some Burmese gentlemen consulted on the point advocate the age system, but I do think age should be a test alone. Medical opinion and local evidence will be the best guide.

As regards paragraph 8 (a) the proposal to prohibit the consumption of opium on the premises of licensed shops does not commend itself to officers consulted.

I doubt whether it encourages the taste, and the present system certainly assists the police in getting hold of persons wanted as the opium den is not an unusual resort for bad characters. It would be better to prohibit the use of the shops to all Burmans who cannot produce a pass from a magistrate.

ENDORSEMENT by Lieutenant-Colonel C. B. COOKE, Commissioner of the Northern Division.—No. 1026-38—91, dated the 23rd January 1892.

COPY of the following forwarded to the Financial Commissioner, Burma, in continuation of this office letter, No. 1134-38, financial, dated the 31st ultimo.

ENDORSEMENT by K. G. BURNE, Esq., Deputy Commissioner, Mandalay.—No. 240-29Ex.—91, dated the 21st January 1892.

COPY of the following submitted to the Commissioner, Northern Division, in continuation in my report (*vide* letter, No. 3247-29Ex., dated the 15th December 1891).

MEMORANDUM by C. A. E. G. ADAMS, Esq., Sub-divisional Officer, Amarapura, to the DEPUTY COMMISSIONER, Mandalay.—No. 11 (Excise), dated the 31st December 1891.

His endorsement, No. 2,277-29 Excise, dated the 15th September last, to the Chief Commissioner's Resolution in the Financial Department, No. 10E., dated the 29th August preceding.

REPLY.

The report called for is herewith submitted. The Lamaing Myoök reports on 2nd instant only that no names have been given of Burmese opium consumers in his township by his thugyis. The Amarapura Myoök on the 22nd instant submitted at list of 26 persons (24 Burmans), all opium-eaters, distributed over five circles as follows:

Amarapura, 11; Ywegyabauk, 4;
Pöndawnaingngan, 4; Myothit, 3;
Myobyngyi, 4;

and beyond expressing the general opinion entertained by respectable Burmans everywhere of the evil consequences to body, character, and state engendered by the use of the drug, has not addressed himself to the subject on the lines laid down for him.

The opinions of the thugyis and luygis of the circles named have been invited to the points to which attention was called, and statistics are now submitted showing the effect on the opium consumers. The thugyis and luygis consulted have offered no opinions, but express and readiness on their part to co-operate with Government in suppressing the use of opium by Burmans.

REPORT AND OPINION.

With reference to the Chief Commissioner's Resolution, No. 10E., in the Financial Department, dated the 29th August last.

1. (a.) The number of Upper Burmans who use opium in the Amarapura subdivision is 24 and confined to five circles, all in the Amarapura township.

There are 11 in Amarapura town, four in Pöndawnaingngan, three in Ywegyabauk, two in Myothit, and four in Myobyngyi. Two others are Chinamen.

(b.) The number of those who are already physically or mentally wrecked from observation is a solitary unit, a Talaing living in Pöndawnaingngan, who acquired the habit at Danubyu and has been an opium-eater for 15 years. He is emaciated and mentally enfeebled, if one is to consider his keeping a piece of red chalk overlaid with gold leaf to attract beauties any criterion of his mental calibre.

The Leiksangun thugyi reports that in Burmese times one Maung Lat, a weaver, aged 35, smoked only three years and becoming incapable of weaving, which is a sedentary occupation, took to field coolie labour but succumbed after three months' illness to an attack of fever.

2. In Burma it is a common opinion of those who are in a position to know, headmen and elders who are acquainted with villagers, that in Upper Burma opium-eating is more prevalent than the smoking on the score of economy, but that eaters are smokers as well, a minority only being smokers exclusively men of some means.

3. There can be no question that the prohibition of the sale of opium to Lower Burma and of the possession of the drug by him would be beneficial to him in every respect. Under Burmese rule the consumption at least of the drug was regarded as penal. Any one detected using it was subjected to the humiliating ordeal of being marched through his village, and as he was made known to persons passed by as an opium consumer a gong was struck, and when this was finished he was subjected to a whipping for the first offence, but committed to prison for a subsequent one. The first humiliation was a sufficient deterrent to the inclination to continue the use of the drug and become a confirmed consumer. This mode of treatment of the opium consumer may seem puerile, but it is said to have been

APPENDIX L.

generally if not always effectual. That some clandestinely continued to practice the use of the drug till they became habituated to it there is no wish to deny, but the evil was reduced to a minimum. Why the village thugyis and elders should not expose the novice to the ridicule and so at least endeavour to check the rising propensity, more Burmans, there seems no good reason, even though the Burmese mode of restraint may appear somewhat puerile.

4. The effect of opium on Burmans and non-Burmans is dependent on statistics as to the physical consequences and conduciveness to commit crime, a matter that lies almost exclusively within the cognizance of jail administration.

5. How far the prohibition of sale to the Upper Burman and of his possession of the drug by the amended rules have been or promises to be effectual may be gauged by the statement that accompanies showing the length of time each Upper Burman consumer in the subdivision has indulged in the use of the drug.

The thugyi of one circle states that of the four opium-eaters in his jurisdiction one has been addicted to the indulgence for about 15 years, but has within the past two years initiated three disciples, and they admitted, as did others, that they got their supplies from no where else but the Chinese licensee in Tawottan in Mandalay. These four persons live on the industry of their wives and expend what they earn in the consumption of opium refuse, which is procurable at small cost. All in Amarapura use the refuse opium.

Under a suitably devised scheme there seems good reason to think that the enlistment of the thugyis and elders in the cause of prohibition, both as to purchase and possession by the Upper and Lower Burman of the drug, would conduce to the effectual operation of the amended rules. Under the scheme certain powers of inquiry and adjudication in breaches of the rules might be delegated to them. In fact they might be appointed special magistrates under the Act and be paid out of the fines levied up to a certain maximum.

All or a proportion of the villagers of respectability might under their selection be enrolled as special excise constables under the Act, and a fair proportion of the fine inflicted might be awarded to the constable who brought an offender to justice and on due conviction. Excise officers, inspectors, and sergeants might be employed as now to conduct operations and inquiries.

The consensus of Burmese opinion against the use of opium is so strong that the scheme need but be tried to prove effectual.

Judging from what is known of the consumption of opium by opium consumers of the subdivision there is but one conclusion, and it is there is illicit sale to and possession of the drug by Burmans, notwithstanding the prohibition of purchase and possession, and the rules under the Opium Act have not been effectual and under existing circumstances hardly promise to be operative.

6. How the police could be checked from blackmailing the Burman population, and how the licensed vendors could be prevented from bribing the police to overlook illicit sales to Burmans in Upper Burma or in Lower Burma, are objects that might be effected by licensing the shops to be opened a certain number of hours daily within which all sales should be effected during each day and at no other times. Those whose names would come on the list of licensed consumers would then be compelled to make their purchases at a specific time. To conduct this effectually and prevent sales to non-consumers a special opium constable appears to be necessary wherever there is a licensed shop, a man who should receive a fixed salary and be selected by the lugyis as a person of honour and probity. This would at least tend to prevent non-consumers getting drawn into smoking or eating in the licensed shops which should be exclusively places for sale and not consumption. If licensed smokers do not know how to prepare their own opium they might be taught and soon learn to do so.

Under this scheme the police need have nothing to do in opium cases and if they were to be retained as informers in cases of smuggling or illicit sales they might receive a reward, but the information they might have to give should be given to an elder who would depute one or more of the special opium constables to make the seizure required.

These views are put forward in the hope that they might be suggestive of some mode by which the police need have little or nothing to do with opium cases, but they need not exclude police officers of the superior staff from supervising the working of the rules.

7. In the above sketch the means of alleviating the proposed prohibition in the case of Burmans who have become accustomed to the use of opium have been indicated.

8. And it has been suggested, too, how the shops might be closed altogether to consumption on the premises, while under the plan propounded of having a specific time for sales the non-Burman could avail himself equally of the opportunity for his purchase as the licensed or registered Burman consumer.

APPENDIX L. From Major C. H. E. ADAMSON, C.I.E., Commissioner of the Central Division, to the FINANCIAL COMMISSIONER, Burma.—No. 776-2E., dated the 26th February 1892.

With reference to the resolution of the Chief Commissioner in the Financial Department, No. 10E., dated the 29th August 1891, I have the honour to report that I have now received the replies of the Deputy Commissioners on the subject.

With reference to the final portion of paragraph 2 of the resolution I selected altogether eight villages in the division which I considered typical of the rest for special inquiries. The result shows that after careful inquiries it has been found out that the use of opium is most uncommon among Burmese in this division. I was aware that the use of the drug was not common in the plains of the Central Division, but I had no idea that it was so singularly absent. The statistics have been carefully collected, and though I do not believe them to be absolutely correct, yet they do show that opium is not used to any extent by the Burmese population in this division; that it is the duty of Government to do everything in its power to prevent its use spreading; and also that if it does spread it will be owing to the action of our Government in respect to its sale.

Number of Consumers.—As far as can be made out the consumers of opium in the plains are principally residents of the larger towns.

There are 22 in Ye-u, of whom 20 are Burmese.

There are 55 in Mònywa, of whom 23 are Burmese.

It is strange, however, that in Sagaing town there is said not to be a single person who uses the drug.

In Ava subdivision there are said to be 12 consumers. In Myinmu and Sagaing none. According to the last census the Burmese population of the Sagaing and Ye-u districts, and the towns of Mònywa, Budalin, and Paungwa amounted to 337,297, and out of the whole population only 89 were known as opium consumers. Of these 89 only 55 are Burmese. The proportion therefore of ascertained opium consumers of Burmese race in the plains to the population is 1·63 per 10,000 population. In Upper Chindwin, where the population is largely composed of Shans and other hill tribes, the proportion of opium users is much greater.

The villages in which statistics were taken were Kindat, Mingin, and Paungbyin. The population of these three villages amounts to 5,271. Of these there are 56 consumers of opium, of whom 31 are Burmese.

The ratio of opium consumers increases towards the north of the district.

In Mingin there are three, in Kindat there are 18, and in Paungbyin there are 35.

Physical and Moral condition of Consumers of Opium.—The effect of opium on Burmese is, I think, bad physically and morally, though the statistics obtained hardly prove this in so striking a manner as I anticipated.

In Ye-u, of those consumers of the drug examined by the Deputy Commissioner and Civil Surgeon, only one or two are described as being of an inferior physique. Of the 23 Burmese consumers in Lower Chindwin district 20 are said to be in a state of debility and one is a convicted thief. In Ava subdivision of Sagaing they are reported to be as healthy as ordinary men. In Upper Chindwin nine are reported to be decrepit or debilitated. In Kindat, out of the 18 consumers of the drug, six are returned as doing no work and as gamblers.

From this it appears that out of the whole of the Burmese consumers which are reckoned 86 in the division, about 31 are more or less debilitated.

Opium-eating and Smoking.—Opium-eating appears to be almost unknown among the Burmese in this part of the country; smoking seems to be the ordinary habit.

Possibility to enforce suggested Prohibition.—In the Upper Chindwin I am of opinion that there are practical difficulties in the way of distinguishing Burmese from Shans which would render the working of such a prohibition impossible. It is impossible for any person to say who is a Shan and who is a Burman. At and near the frontier the two races are indistinguishable. They gradually merge into each other and their dress, language, and habits are exactly similar. With regard to the plains I think the total prohibition of the possession of opium by Burmese can be carried out without any more difficulty and without so much corruption of police as now exists.

I agree with the Deputy Commissioner in thinking that the police should not be the only preventive agency. In Upper Burma certainly, and to the best of my belief, in Lower Burma, we should have the priesthood and all respectable men on our side in enforcing the prohibition. I believe thugyis and gangs would be backed up by public opinion of their villages in putting down opium-smoking; and that they should be held responsible that it was not permitted in their villages. A section to this effect might be added to the Upper Burma Village regulation. I would further suggest for consideration the advisability of a Burmese opium-smoker being liable to be called on to give security for good behaviour.

Any officer who has been in Burma must be aware of the ordinary Burma luggi's definition of a suspicious character and one who should be called on to give security for good behaviour.

"He is an opium-smoker and a gambler" is their mode of expressing that a man is a worthless character, a rogue, and a vagabond. If some provision of this description were put in force against all known opium-smokers, I believe the habit would be much checked. With regard to practical difficulties in distinguishing between Shans and Burmese in the plains of Burma, I would treat all Shans who adopt Burmese dress as Burmese and only allow a Shan who was a *bonâ fide* traveller and wearing his native dress to be in possession of opium. If a Burmanized Shan comes to settle in the plains I would treat him as a Burman. He is a Buddhist and I see no reason for making any distinction between him and those with whom he daily associates on terms of intimacy in all social and religious observances. At present it does not appear that there is any large illicit importation of opium into this division. There is, it would appear, not a sufficient demand for the article to render its illicit importation a profitable trade. No doubt a small quantity is produced up the higher reaches of the Chindwin river; but Mr. Tilly's late inquiries have proved that the quantity produced there has been exaggerated, and it is probable that the whole produce is purchased by the Chins and other hill tribes or exchanged with them for India-rubber. With regard to the Burmese who have in this division become accustomed to the use of opium, they are so few that they may be left out of the question.

Special facilities should, however, I think, be given for procuring opium medicinally. It is much used as a medicine among Burmese, and every Burman, when being tattooed is, I believe, given opium to soothe the pain.

STATISTICS showing the NUMBER of BURMANS in the DISTRICTS of the CENTRAL DIVISION who have taken to the use of OPIUM.

	Lower Chindwin	22	1	20	1	
	Hills—Upper Chindwin	28	3	9	—	
	Total	78	8	31	1	

From R. C. STEVENSON, Esq., Officiating Deputy Commissioner, Ye-u, to the COMMISSIONER OF THE CENTRAL DIVISION.—No. 1137—40., dated the 8th October 1891.

WITH reference to your Financial Department, No. 36C.—7E., the number of opium-smokers in this district is very small. Outside Ye-u town I do not think there are half a dozen opium-smokers.

The total number of smokers and eaters in Ye-u town is 22. Of this number 20 are Upper Burmans and two natives of India. Five of the Burmans have been addicted to smoking 10 years; one of the natives of India 20, and the other three years.

None of the Burmans eat opium. The native of India who has been 20 years addicted to the use of the drug both eats and smokes it.

In the district the only two opium smokers are the Myothugyi of Lhuttaik and a man named Nga Thet Shay, Ywagaung, of Innyashya, both villages being in the Indaing township.

The civil surgeon and I have seen about half the opium-smokers here, and we both came to the conclusion that, although one or two of them were of deteriorated physique, the majority were not. All of them assured me that they had eschewed the drug, but their eyes and general appearance betokened otherwise.

2. I am of opinion that so long as the people see that Government every year realises a large revenue in Lower Burma by selling opium shops, that, strenuous as Government endeavours may be, they will fail to convince nine out of ten Upper Burmans that they wish "to utilise the strong anti-opium feeling of the Burmese luggis as a preventive agency," and that among themselves they will be apt to deride such efforts and say, "practice what you preach." I submit with the greatest deference that the British Government are attempting a Sisyphean labour by licensing (and thereby to the ordinary mind encouraging) opium shops, and on the other decriing the evils necessarily attendant on the consumption of the insidious drug.

I am of opinion—and I expressed my opinion officially to that effect in a letter to the Deputy Commissioner, Sagaing, in January 1888—that Government would be inflicting a mighty and grievous wrong if they attempted to set up opium shops in districts like this and Sagaing where the use of the drug is, to all intents and purposes, unknown. Those who may have followed the *pros* and *cons* of opium-smoking and eating in the columns of the "Times" can easily recall to mind that Sir George Birdwood and Sir William Moore have always maintained that opium-smoking and eating are by no means necessarily injurious. This may be doubtless true as applied to races who are not very self-indulgent and in whom the acquisitive instinct is not the predominant one in their natures, but to the self-indulgent, thriftless Burman, I say this in a comparative sense, for many Upper Burmans are anything but thriftless, who, like the daughter of the horse-leech, is ever crying, "give," "give," when in the search of pleasure. I consider that opium-smoking and eating (especially the latter) causes a paralysis of his moral faculties.

I think it would be best in all parts of Upper Burma to close opium shops to Burmans and to make it penal for anyone to sell opium to a Burman and also for a Burman to buy it.

I also think it would be an excellent thing to have the opium shops at least 50 yards from any human habitation on every side. I believe that one of the reasons opium-smoking has increased is because its votaries can slink into shops without being observed, because Chinese licensees seem to delight in having their shops surrounded by houses—the nearer the houses the more they like it—and this is, I think, due to the fact that were the shops in a public place and subject to the gaze of everyone, the *habitus* of their shops would soon dwindle down in number.

I find that I have overlooked one point in the proceedings of the Chief Commissioner, namely, to "consider further the means of attenuating the proposed prohibition in the case of Burmans who have become accustomed to the use of opium." In my opinion it would be well nigh impossible to ascertain the Burmans who had and who had not been accustomed to the use of opium. Every opium-smoker would endeavour to get himself thought as too far accustomed to be able to give it up. I believe that nine out of ten opium-smokers could give up the habit if they choose,

and the greater the difficulties put in their way of getting opium the fewer the smokers would become. I think it would be far better to compel every Burman who eats or smokes opium to register himself irrespective of age, and impose a penalty for not doing so. Though so generally prevalent, a certain stigma still attaches itself to the epithet "beinsé." Any Burman would indignantly refute it if he were not one, and even if he were, would feel it anything but a compliment if he were taunted with the failing. If in some way—I can think of no plan at present—the luggis were encouraged to look upon it as a work of merit (which they would readily consider it to be provided Government were consistent) to induce opium-smokers to abjure the habit and have their names erased from public registers, it would, I think, produce an excellent and lasting effect.

From Major G. S. EYRE, Deputy Commissioner, Lower Chindwin, to the COMMISSIONER OF THE CENTRAL DIVISION.—No. 3294—4, dated the 27th October 1891.

IN reply to your letter, Financial Department, No. 36C.—7E., dated the 16th September, I have the honour to submit the returns and reports called for. I have added Paungwa in Eastern Pagyi to the list of towns in which inquiries were directed to be made, as I am aware that some opium consumers reside there.

Opium-smoking in Lower Chindwin.—There are only 22 known Burmese opium-smokers in Mònywa and Paungwa; of these all but three are in a state of debility from excessive use of the drug.

The sale of opium to Burmans in Upper Burma having been prohibited from the early days of the annexation, no chance was afforded for an increased consumption of the drug.

Opium has been and is bought by Upper Burmans, but the risk of detection has been too great to admit of any extension of the opium habit. There were opium smokers in the King's time, and there are some now. I do not consider that the use of opium has extended under our rule. The recent change in the law, which makes the mere possession of opium illegal, will render it extremely difficult for the few persons who have acquired the opium habit to procure supplies.

Prohibition of possession in Lower Burma.—I do not believe that this prohibition could possibly be enforced at once. Should such a prohibition become law it would, however, tend directly to reduce the number of opium-smokers and to prevent fresh accessions to their ranks. I am, therefore, strongly in favour of a law which would, I believe, in a few years reduce enormously the number of habitual opium-smokers.

Some provisions should, however, be made to meet the wants of special classes who use, but do not abuse, the drug, as for instance fishermen, large numbers of whom consume opium in small quantities. These men's calling compels them to be in the water off and on for many hours together, and they say that without opium they could not exist.

Preventive Agency.—That with the prohibition of possession of opium the police will have great opportunities of levying blackmail is certain; where searches are conducted as required by the provisions of the Criminal Procedure Code there will be witnesses whose presence will effectually prevent the police taking money to let the accused go.

Where the police will make money is by taking bribes not to make searches or by making searches without witnesses. In such cases money transactions between the police and offenders under the Opium Act will not be disclosed by either party willingly. The only remedy seems to be the exemplary punishment of such cases as do come to light.

To reduce the powers of search of police officers would not, I believe, mend matters for an offence against the Opium Act coming to light; it would still be open to them to take bribes not to report it to the authorities who could act in the matter.

Village headmen appointed under the Village Regulation are invested with the powers under sections 14 and 15 of the Opium Act, and should get their information as to the offenders against the Act from the village luggis, who would give their information willingly enough. Headmen who failed to seek for and act on such information should on its being proved that

APPENDIX L.

persons in their villages possess illegal opium be summarily dismissed. Luyis should be questioned by township and subdivisional officers as to whether opium-smoking goes on in their villages, and in this way a check would be obtained over the headman's conduct. If the village headmen did their duty under the Opium Act efficiently the action by the police would be chiefly confined to large towns.

Exception of habitual Opium Consumers.—If the possession of opium is to be prohibited I see no alternative but to grant exemptions to such persons as are considered to be too wedded to the opium habit to be able to break it off.

Instead of fixing an age limit alone, I would suggest fixing such a period of continuance of the opium habit

as would, in the opinion of medical men, render it difficult for the indulgence to be given up. Age should also be considered, for it might be easy for a boy of 20 to give up a habit which might be indispensable to a man of 30. At what age, and after how long, continuance of the opium habit a man could give up opium are questions for medical experts.

Some sort of inquiry will be necessary before certificates of exemption are granted, and it would be easy to inquire into both age and continuance of the opium habit at the same time.

Opium saloons should certainly be closed to Burmans. I would not interfere with the consumption of opium on licensed premises by non-Burmans.

STATISTICS showing the NUMBER of BURMESE and NON-BURMESE in the principal TOWNS of the LOWER CHINDWIN DISTRICT who have taken to the use of OPIUM.

From B. K. S. McDERMOTT, Esq., Deputy Commissioner, Sagaing, to the COMMISSIONER OF THE CENTRAL DIVISION.—No. 2576-5E., dated the 26th November 1891.

IN reply to your Financial Department, No. 360-7E., dated the 16th September 1891, I have the honour to report on the result of the inquiry which has been made throughout the entire district.

2. In the books of the hospital here there are no cases of opium-smoking or eating.

3. The District Superintendent of Police reports that there has been only one man arrested in this district. This man was a Burman, resident of Mandalay Town, and was an opium-eater.

4. The Subdivisional Officer, Sagaing, reports that there are no opium-smokers or eaters in his subdivision.

5. In the Myinmu subdivision the subdivisional officer reports that Burmans are not known to use opium in any form.

6. The Subdivisional Officer, Ava, says that there are eight Burman opium-smokers and four eaters within his subdivision, and that they are quite as strong as any ordinary man, as they are too poor to indulge in it daily.

7. I certainly am of opinion that the use of opium by Burmans should be strictly prohibited. So far as my knowledge goes opium does not at all agree with the Burmans.

8. The Burmans, as you will see from my report, are at present innocent of the folly of the use of opium. The prohibition will, therefore, stop the spread of the folly.

9. To prevent illicit sale to Burmans I am of opinion the ayathugyis in large towns and thugyis in the dis-

tricts together with the police should be the preventive agency.

District.	Number of		Number who appear to have suffered Physically or Mentally from Opium.	Remarks.
	Opium-smokers.	Opium-eaters.		
(a.) <i>Burmese.</i>				
Sagaing - -	8	4	Nil	
(b.) <i>Non-Burmese.</i>				
Not required.				
See concluding portion of paragraph 2 of Chief Commissioner's Resolution.				

From H. L. TILLY, Esq., Deputy Commissioner, Upper Chindwin, to the COMMISSIONER OF THE CENTRAL DIVISION.—No. 855-14, dated the 1st December 1891.

I HAVE the honour to forward in original the statements and reports of the subdivisional officers of Legayaing, Kindat, and Mingin from which it will be seen that there are very few Burman opium-smokers in this district.

2. The Burman population of the three villages of Kindat, Mingin, and Paungbyin amounts to 5,271, in which there are only 31 opium-smokers, and of these nine are confirmed in the habit and are completely undone.

3. Of the 31 opium consumers discovered only three eat the drug.

4. Now as to the possibility of enforcing the proposed prohibition in Lower Burma, it is admitted that the Burmese as a nation desire that the custom of opium-smoking be penalized and crushed out. When the whole weight of a nation is for any measure, information comes irrespective of police action or inaction.

I think, however, the proposed prohibition acts too indirectly.

It is easy to prove a man is an opium-smoker, it is less easy to prove he is in possession of opium; it is difficult to prove where he bought it, and it is exceedingly difficult to prove the smuggling into the hands of the vendor.

The legal formalities of search and the virulence of cross-examination increase directly as the probability of heavy fine and consequent reward.

A village elder does not mind, as a matter of duty, deposing to the fact that he saw Maung Pyu smoking opium, but he naturally objects to being made out to be a liar and cross-examined about his previous character, simply because he makes a mistake as to whether a sergeant or a constable first entered a room which was being searched for opium.

The preventive agency of the province has failed in stopping smuggling and illicit sale, because those are not matters of which respectable people have any cognizance. The only information on the subject must be obtained from informers.

It would be different were Government to penalize opium-smoking by Burmans. It is a vice which cannot be long concealed from neighbours. There should be no reward for giving information which should be supplied by village elders.

I feel quite confident that many officers of my acquaintance could work the proposed section.

5. If the issue of opium is limited to the amount which can be legitimately used it would stop much of the opium-smoking in Burma.

When Assistant Commissioner at Yangoon I had the opium shop secretly watched for some time. Allowing that each person who entered consumed the maximum dose, I found that 87.5 per cent. of the opium sold to the vendor was smoked out of Yangoon. It is said that if we do not sell the opium the Chinese will smuggle it. But imagine the difficulties in the way of opium smuggling if the Government sales were limited to the consumption by non-Burmans.

The Chinese would then be obliged to smuggle all their opium through the sea and frontier customs, and then run further risks during transports to out-districts. Now we very kindly give them as much opium as they want in the centre of the areas they work.

6. In reply to paragraph 5 of the Chief Commissioner's Resolution, I would point out that 31 smokers in a population of 5,271 is small, but the answer to the question will probably be most easily answered by a comparison of Upper and Lower Burma statistics.

7. As already hinted I would not employ the police at all in working this prohibitive clause. It should, I think, be worked like the Bad Livelihood sections. The police would certainly lose the greater portion of the salaries they now receive from opium vendors if the issue of opium were limited to that consumed by non-Burmans.

8. I fail to see why it would not be desirable before enforcing the prohibition to call on all confirmed Burman opium-smokers to come forward to be registered. I think our efforts should be confined to preventing the spread of the evil habit. In Lower Burma the opium vendors employ men to go about the district selling or giving opium to children and young people in order to induce the craving. This is the part of the question which is rightly considered most serious by parents and elders.

Maung Po Hla mentions another phase of the same custom. I would strongly advise this to be made penal.

9. I cannot imagine any objection to the registration of confirmed Burman smokers as "foreigners."

The Government of India admits that the Burman people desire to stop opium-smoking. This cannot be done without a prohibitive section, but in working the section it is necessary to be just to present smokers. I can think of no other way of alleviating their position.

10. To close opium shops to anyone would decidedly be an unwarrantable interference with the rights of our Chinese, Shan, and Indian population. It would cause great irritation and would alienate the sympathies of many. I cannot see what object would be gained except that it might be a convenient fact to be quoted in answer to a question in Parliament.

11. If the prohibitive clause is not made law it would be a gain to close the licensed shops to Burmans. The effect of this measure would be small, and is not worth accepting as a compromise to the prohibitive clause.

12. Before closing I would remark that the present is a good time for bringing in the proposed clause. There is a very decided opinion in England that the Government of India is not exactly sincere in the matter of opium. It would be at least unfortunate were the public to imagine that Government was resisting the Burmese people in their demand for a prohibitive clause. It would be still more unfortunate were it thought that this demand was refused for monetary considerations, that is, for fear of a deficit.

There is no doubt the opium revenue of Burma would fall to about half if the Chief Commissioner's proposals were carried out, but there is equally no doubt that the British public will stand no nonsense on this question, so that, if the measure is refused, the reason for that refusal must be given and must be strong enough to stand hostile criticism.

REPORT.

Effect on Burmans of Opium.—(a.) Public opinion in Legayaing is generally opposed to the habitual use of opium, even by Shans. They say that its continual use produces derangement of the digestive organs and disinclination to, and incapacity for, work, and general slackness, both physical and moral. At the same time, the occasional indulgence in opium is supposed to do no harm, and is held to be beneficial to the health, particularly in the rains. The population under my charge is mainly Shan. There are a few Burman settlers, mostly traders from below, and a few of mixed breed, but the majority of the people are Shan by birth and profession.

Possibility of enforcing Prohibition.—They wear the Burman dress, however, and can except in very wild parts talk Burmese. It is thus impossible to distinguish Burman from Shan in this part, and any prohibition against possession of opium by Burmans would for this reason be difficult to enforce.

Desirability of Prohibition.—That such a prohibition is desirable is, I think, very doubtful. The cases in which opium-smoking in excess becomes a confirmed habit I believe to be very rare.

The prohibition is in itself an evil as being an infringement on the liberty of the subject. It requires to justify its proof that a greater evil will thereby be avoided.

Opium-smoking may be, to an appreciable extent, diminished. A new offence will be certainly created.

Prohibition how far Effectual.—So far as Legayaing is concerned the Opium Act and rules have been in very rare instances enforced. This is owing to—

(a.) The fact that the police being mostly Shans are themselves offenders.

(b.) The large area under the control of a very inadequate police force.

It is difficult to prevent wholesale smuggling. Possession and consumption in small quantities by Burmans has not been much regarded.

Blackmail.—The police have abundant means of blackmailing already, and I do not think the prohibition of possession of opium would increase their powers of doing so to any appreciable extent, if the power to search for opium without a warrant is restricted to officers of and above the rank of inspector.

Alteration in case of confirmed Smokers.—Should the possession of opium by Burmans be prohibited I do not think any provision need be made to enable confirmed smokers to continue to obtain supplies. If it is medicinally necessary for them they can get it at a dispensary without any special enactment. The numbers of confirmed Burman opium consumers are so small, speaking for this subdivision, that I think no legislation necessary about them whatever.

APPENDIX I.

8. *Consumption on premises* should, I think, be prohibited. The Chief Commissioner appears to be too tender of the feelings of the riff-raff of Chinese and other foreign opium-eaters, who, I think, should be altogether disregarded.

E. A. MOORE,
Assistant Commissioner, Legayaing.

Paungbyin,
November 18, 1891.

(b.) <i>Non-Burmese.</i>				
446 non-Burmese	24*	1	Five of these are stupid. I do not know if opium is the cause.	

* 20 Shans.

REPORT ON OPIUM IN KINDAT.

IN order to obtain statistics on this subject without frightening the luygis into reticence I told the myothugyi that I had no present intention of prosecuting any people he might report to me as being opium consumers.

2. I then summoned him and his three gaungs and made them after consideration give in a list of all the Kindat Burmans who habitually use opium, each gaung reporting for his own quarter.

3. I then inquired separately into the circumstances of the men contained in this list. The result I append in the form of a second statement.

4. This statement contains the names of those Burmans only who are or have been confirmed users of opium.

Those who are marked * Besides these there is an ill-defined class who occasionally smoke or chew, but have not as yet yielded themselves up as slaves to the narcotic. Of the determinate class, although only five are put down as seriously affected, there is not the slightest doubt that no Burman who habitually uses opium retains his vigour either of body or of mind. The myothugyi states that the same applies to all smokers. My own experience is not wide, but I am inclined to think that he is wrong, as there is certainly a strong idea that the Chinese are able better than other nationalities to withstand this poison.

The luygis I consulted were agreed that opium is a great evil in Burma, and did not even understand the suggestion that it was hard on Burmans not to be allowed the same freedom as foreigners in Burma.

Another point I noticed with regard to this statement was that six of the opium-smokers are also well known as gamblers. Whatever may be said about gambling in other countries and among other peoples, there can be little doubt in the mind of anyone who has lived among the Burmans that with them it is one of the most frequented high-roads to crime.

I do not think it necessary to enlarge on the physical effect of the use of opium, as the fictitious appearance of health and spirits under its influence, the incapability of digestion, and consequent lassitude, pain, and mental despair, are well known symptoms whether in Burmans or others.

Kindat is not an opium centre, and comparatively little opium is consumed by Burmans, so the people cannot see all its evils. Nevertheless, the opinion of the luygis and religious men is with us even here; how much more will that be the case in Lower Burma, where the ill-effects are so much more apparent.

5. I think I have said enough with regard to the evils of opium-smoking for Burmans. I now turn to the practical difficulties of stopping it, remarking in passing, with regard to paragraph 3 of the circular, that in Kindat the opium-smokers also chew tobacco occasionally; there are not two distinct classes of consumers. Taking paragraphs 4 and 5 together the new rules have not been strictly enforced in Kindat as yet, but I do not think there will be much difficulty in altogether suppressing consumption by Burmans here.

6. I do not see the force of this objection. Any law applying to large classes of people gives the police an opportunity of blackmailing, but that in itself does not seem a good reason for not passing the law if it is in itself expedient. The police always require a little looking after, but I do not see that any special necessity would arise in this case. From thugyis and gaungs it could easily be ascertained whether a habitual smoker continued to smoke, and after that it would not be difficult to stop his supplies.

7. With regard to paragraph 7, I myself see no objection to the Chief Commissioner's scheme. If that is not carried out, in very bad cases the men might be put under the civil surgeon's care and given small doses under his orders until they were cured, which in mild cases I believe takes one month up to six months in very hardened cases.

J. B. WINGATE,
Assistant Commissioner.

Kindat,
October 24, 1891.

IN COURT OF SUBDIVISIONAL OFFICER, KINDAT.

Inquiry into Opium-smoking in Kindat.

Present:

J. B. Wingate, Esq., Subdivisional Officer.
Maung Kyaw Din, Myothugyi.
Maung Shwe Thit }
Maung Sa In } Gaungs.
Maung Po Min }

Maung Kyaw Din states: The list submitted by me only contains the names of confirmed opium-smokers. There are also a few men who will smoke when they meet with opium-smokers and are offered opium, but it is difficult to say how many belong to this class.

In my experience I have found no difference between the Chinese and Burman smokers. All habitual smokers become quite incapacitated for work, they also lose interest and the wish to work. They are always very ill and low, unless they have opium, and can do no work at all. After they have a smoke they obtain a fictitious sort of strength, and are able to do a little. The men whom I state to be well, I mean well for an opium-smoker, but a habitual smoker is never like another man, when they leave off, their stomachs refuse to act and they are altogether laid up.

The men in this list both smoke and chew. I do not know any difference between smokers and chewers. All the men in my list do both.

It is contrary to our religious law to smoke opium and men who smoke very often indeed gamble and take to crime. Luygis and good men do not consider it hard that Chinamen and other foreigners should be allowed to smoke and Burmans should not; but too sudden a stoppage is apt to kill the patient, I do not think the police could make money by blackmailing. I never heard of a case in Kindat.

A smoker can be cured in from a month in a mild case, to four or five in a bad case.

No.	Name.	Age.	Occupation.	Effects.
1	Maung Bien	45	Small trader	Has smoked whole life; ill and weakly.*
2	Maung Myo	40	Small trader	Has smoked whole life; gambler; no serious effect.
3	Maung Chin	35	Goldsmith	Left off and began again; no serious effect.
4	Maung Tha	45	Water-carrier	Smoked from 15 now a decripit.*
5	Maung Shwe Lón	20	Small trader	No effects.
6	Maung Lun Hla	22	Coolie	Now left off; no serious effect.

No.	Name.	Age.	Occupation.	Effects.
7	Maung Tan Gin	28	Small trader	Can do no work; gambler.*
8	Maung Lu Gale	20	Coolie	No effect.
9	Maung Shwe Beik	25	No work	Not much effect; gambler.
10	Maung Kyan Zéya	38	Sawyer	No effect.
11	Maung Shwe Kyun.	30	—	Now given it up; no effect.
12	Maung Se Yan	38	Mohout	No effect.
13	Mi Ein	38	—	No effect.
14	Maung Shwe Lhang.	35	Coolie	Quite in good health.
15	Maung Chit Tun	36	—	Was ill; now left off and recovered.
16	Maung Lu Gyi	30	Twasan	Can do no work; gambler.*
17	Maung Lun We	35	—	Can do no work; very ill; gambler.*
18	Maung Shwe Wa	36	—	Can work, but does not; gambler.

Total Number of Inhabitants in the Village of Kindat.	Number who admitted that, previous to Admission, they had been		Number who appear to have suffered Physically or Mentally from Opium.	Remarks.
	Opium-smokers.	Opium-eaters.		
1,400	18	(a.) <i>Burmese.</i>	Six affected seriously physically all more or less.	See other statement.
		(b.) <i>Non-Burmese.</i>		

From MAUNG PO HLA, Subdivisional Officer, Mingin, to the DEPUTY COMMISSIONER, Upper Chindwin.—No. 627-2, dated the 28th October 1891.

I HAVE the honour to submit the statement which accompanied your No. 649-14, dated the 26th September 1891. There are only three Burmans in Mingin who use opium, and all of them are suffering physically since they have been accustomed to the drug.

Their constitutions are unusually broken down and are said that they would do any meanest job to get a little of the drug or a few annas for it if the job is of a lightly easy task, than doing a little hard work for a considerable amount of money.

With reference to paragraph 8 of the Chief Commissioner's Resolution accompanying the letter, I am of opinion that the consumption of opium on the premises by Burmans should be prohibited. The reason is, I am told, that in Lower Burma the opium licensees keep a special man who goes round collecting as subscription by turns from school, and other boys to come and feast in their shops which includes drink, and the boys are after the feast, taught to smoke opium, and when they have taken it for some time, they cannot leave it off.

Total Number of Inhabitants in the Village of	Number who admitted that, previous to Admission, they had been		Number who appear to have suffered Physically or Mentally from Opium.	Remarks.
	Opium-smokers.	Opium-eaters.		
3	—	(a.) <i>Burmese.</i>	3	All three of them look very thin and dirty and seem to be very weak; in fact they are mere skeletons.
		(b.) <i>Non-Burmese.</i>		

From F. S. COPLESTON, Esq., Commissioner of the Southern Division, to the FINANCIAL COMMISSIONER, Burma, No. 5275-32E., dated the 10th December 1891.

WITH reference to the Chief Commissioner's Resolution (Financial Department) No. 10E., dated the 29th August last, I have the honour to submit a report on the points connected with the opium question which are discussed in the resolution above quoted. I also submit copies of the reports received from the Deputy Commissioners. That from the Deputy Commissioner, Myingyan, was only received three days ago, the delay being due, it is stated, to the Subdivisional Officer, Myingyan, being engaged in supervising relief works.

2. There are seven points on which report is asked for, and I will deal with them in order, briefly mentioning the opinions of Deputy Commissioners and then giving my own.

(1) and (2). *Statistics as to numbers using opium and numbers physically wrecked thereby or who have taken to crime, and whether (2) smoking or eating is most common.*

Myingyan.—Three hundred and four consumers are returned from 11 towns and villages. Of these 169 are smokers, while 135 eat opium. Seventeen have been convicted of crime and 2 appear to be physically wrecked. Nothing is said as to who examined the consumers or classed the wrecked and not yet wrecked. I consider the figure "2" as unrelatively low. The number of opium consumers at Yözingyi, a village 28 miles from Myingyan on the road to Meiktila, is astonishing. Singu is a great boat station, and this accounts for the high figures there.

Pakökku.—In Gangaw, Pauk, and Yawdwin subdivisions there is little or no opium used. All the opium consumption is in the Pakökku subdivision (including Yesagyo). The figures are not very clear. The statement appended to the Deputy Commissioner's report appears to give district superintendents of police figures for the first four figure columns and the township officer's figure for the number of persons physically wrecked. Both the sets of figures are stated in the report to apply only to Pakökku town, which they evidently do not, since I am aware that Kywèdè Kunywa, and Myitchi are entirely distinct villages, the latter being 20 miles from Pakökku. Pakökku town may include all but these three villages. The total number of opium users shown in the statement is 73, of whom 21 eat and 52 smoke the drug. Eleven have been convicted. The numbers of those convicted and not convicted do not make up the total, but there has been no time for reference. The number of persons physically wrecked is given as 21, the township officer's estimate being accepted against that of the District Superintendent of Police, who considers all to be wrecked. No figures are given for the Yesagyo or Myaing townships. The Subdivisional Officer apparently has done nothing in the matter.

Minbu.—The Deputy Commissioner shows 59 Burmese opium consumers in the towns of Minbu and Sagu, of whom 30 or half are physically wrecked. Most of the consumers are eaters, and eating opium ends in dysentery and death. The Deputy Commissioner gives a number of instances of physical and mental deterioration. Out of 54 such cases 35 are classed as eaters, 17 as smokers, and two as both smoking and eating.

Magwe.—The Deputy Commissioner enumerates 130 opium consumers in four large villages or towns of the district. In Magwe out of 48 men only one smokes. In Taungdwingyi, deducting Chinamen, nine smoke and 15 eat opium. The large majority of the consumers eat opium. About half the men have contracted the habit since the British occupation. No statistics of crime are furnished for this district. The Deputy Commissioner apparently does not consider that any persons are physically wrecked, though, except in the case of fishermen, the use of opium enfeebles their bodies. Both the Deputy Commissioners of Minbu and of Magwe are agreed that eating is most common, because the raw drug is cheaper and more effective at the price. Well-to-do people smoke rather than eat opium. The Deputy Commissioner, Magwe, might have stated whether any of the consumers have been convicted of crime or not.

The population of some of the towns mentioned above are as follows:—

APPENDIX L.

Myingyan (Municipality)	-	-	17,261
Pagan (Municipality)	-	-	7,142
Pakòkku (Municipality)	-	-	18,783
Magwe	-	-	6,647
Yenangyaung	-	-	4,317
Taungdwingyi	-	-	7,143

It will be observed that the numbers of opium consumers do not bear portentous proportions to the population. Nothing is said in the reports regarding females, but, I believe, consumption of opium by women in this division is almost non-existent.

Where statistics are given, they show that the proportion of convicted persons among opium consumers is high, but not so high as some would expect, 17 out of 304 in Myingyan and 11 out of 73 in Pakòkku. Probably more persons partially support themselves by petty theft and escape conviction.

The number of persons physically wrecked may, I think, be taken at from one-third to one-half of those at present using opium. A large majority eat opium because it is cheaper to do so. The process is less pleasurable and is probably, to a Burman who luxuriates in idleness, more physically harmful than smoking, though I can believe that smoking may have a greater effect in causing deterioration of the mental powers. The statistics now furnished, however, form no basis for any sound opinion.

3. *The possibility of enforcing the Prohibition of possession of Opium by Burmans in Lower Burma.*—The Deputy Commissioner, Pakòkku, agrees that "it would be easier to check illicit sales when the only authorised consumers were members of easily identifiable 'races.' Other Deputy Commissioners do not offer special opinions on this point. My own opinion is that it is quite possible to enforce the prohibition of the possession of opium by Burmans in Lower Burma. I do not, of course, mean to say that within any period that one can foresee no Burmans will anywhere possess opium, nor do I suppose that even approximate abolition will be reached very rapidly. The law, if altered with this view, will, however, at once cause a great diminution in the use of opium by Burmese, and its effect will be gradual like that of any other law. The spread of the habit of using opium would at once receive a great check. The practically complete stamping out of the consumption of opium by Burmese is only a matter of time, and I should say might be effected in five years. To bring about this result all practicable means must be employed to make it difficult to obtain opium through the indirect agency of licensed, as well as the direct agency of unlicensed vendors.

4. *Results of Prohibition in Upper Burma.*—The Deputy Commissioner, Myingyan, says consumers in Kyaukpadaung and Pagan subdivisions now find it almost impossible to procure opium, and he appears to think the existing rules likely to be successful.

The Deputy Commissioner, Pakòkku, offers no opinion.

The Deputy Commissioner of Minbu considers that the rules as in force heretofore have merely raised the price of opium, and that a Burman can obtain opium through Chinamen and other foreigners as easily as before the annexation. The recent alteration in the rules will, the Deputy Commissioner considers, only throw the Burmans more completely into the hands of the alien go betweens. He would restrict the supply of opium issued to licensed vendors to the quantity really required to supply legitimate wants, which can be calculated.

The Deputy Commissioner, Magwe, thinks the rules have not yet been successful, but that "if properly worked they will put a stop to opium-eating, smoking, and smuggling."

In my opinion the rules as worked hitherto have had a considerable measure of success in Upper Burma. There would be vastly more opium consumers if Burmans had been able to purchase opium openly. There has, it may be, been an increase of opium-eating since the annexation, though this is not certain; but it has not been by any means proportionate to the increase of trade, facilities for communication, &c. The rules as they now stand will have a further effect; but I have no doubt that the supplies to licensed vendors should be strictly limited if shops are still kept open at all in the places where they now are.

5. *The preventive Agency.*—The Deputy Commissioner, Myingyan, believes that headmen will assist the police in detecting offenders, and has no fear of the police

blackmailing the population. Neither the Deputy Commissioner of Minbu nor Mr. Todd-Naylor anticipates any assistance from the luggies, who at present give little or no assistance in detecting crime, and wish to avoid injuring their neighbours unless their own interests are directly injured. The Deputy Commissioner, Magwe, does not feel afraid that blackmailing by the police would be common.

I agree that we cannot build much on the hope of receiving material assistance in the matter of detection of offenders from elders or headmen, but I do think that public opinion will be strengthened and indirect support would be given to prohibitive rules. I see no reason to fear systematic blackmailing by the police, nor do I see that, except on account of the demoralizing effect on the police, the blackmailing of offenders against the opium laws, if we are in earnest about stamping out the use of opium, need be any strong objection to stringent rules. A man who is not an opium consumer cannot be blackmailed, and the offender would find in the need to fee his neighbours or the police an additional difficulty in his way.

A headman who knowingly allowed opium-eating by Burmans to go on would, of course, be liable to punishment.

6. *Means of alleviating the proposed Prohibition.*—The Deputy Commissioner, Pakòkku, would have a register of certificated opium consumers. The Deputy Commissioner, Myingyan, offers no opinion, nor does the Deputy Commissioner, Minbu. The Deputy Commissioner, Magwe, would register habitual consumers, who cannot easily break off the habit as foreigners, not fixing an arbitrary age limit.

This, I think is the only practicable measure. The civil surgeon should decide in each case whether a man could abandon the habit or not, and if he could not, for what period he should be registered and what quantity of opium should be allowed him. After such period he would be obliged to abstain. Doubtful cases should be refused certificates and given the option of entering the jail as civil prisoners to be treated and broken off the habit. It would be practically impossible to fix an arbitrary age limit. In Upper Burma, of course, no such alleviating rule is necessary.

7. *Prohibition of Consumption on the Premises.*—The Deputy Commissioner, Myingyan, would not prohibit consumption on the premises entirely, as this would not benefit the Burman population. The Deputy Commissioner, Pakòkku, would abolish shops in Upper Burma altogether and require registered consumers to purchase their opium from a Government agency. The Deputy Commissioner, Minbu, considers it "unnecessary to close the opium taverns to non-Burmans," as there is no reason to suppose the present custom facilitates the illicit supply to Burmans. He agrees with the views expressed by the Chief Commissioner in paragraph 8 of the resolution.

The Deputy Commissioner, Magwe, holds the same views.

It is, it appears, considered that shops are necessary. Assuming that they are so, and that the prohibition now in force in Upper Burma is not extended to Lower Burma, I do not think anything will be gained by prohibiting the consumption of opium on the premises by Burmese altogether.

If Burmans are to consume opium, the more they go to recognised places and the more they can be forced to do so the better. If the prohibition of possession by Burmese is adopted, then I think consumption on the premises by any person should be prohibited.

Not many Chinese or natives of India use the shops and the shops would then become merely places of preparation and of vend.

In Upper Burma the authorised consumers of all classes should be registered, the amount of opium to be issued should be calculated, and it should be issued from the treasury in monthly quantities not exceeding in any month half of the whole allowance for the year.

The vendor should keep a register of all sales and note on the registered person's ticket the quantity issued and the date of issue. If it were not for the difficulty of preparing opium for smoking, I would recommend that the sales should be conducted at the court-house by a vendor licensed either by tender or at fixed fee, the balances unsold being each day replaced under the vendor's key in the strong room. If I may go further, I would say that I should be content to have all sale and all possession prohibited throughout this division. It is very doubtful if opium is a necessity to

Chinese, natives of India, or any other class, and I do not think that Chinese or natives of India would be unable to support the privation.

From A. T. A. SHAW, Esq., Deputy Commissioner, Myingyan, to the COMMISSIONER OF THE SOUTHERN DIVISION.—No. 703-33R., dated the 2nd December 1891.

I HAVE the honour to submit the report and statistics asked for in your Revenue Department, No. 3904-32E., dated the 19th September.

It will be seen that in the Pagan and Kyaukpadaung subdivisions the per-centage of those who have been wrecked or taken to crime is from 10 to 12. The per-centage in Myingyan subdivision is only one. In the latter subdivision opium-smokers slightly exceed opium-eaters; in Pagan opium-eaters predominate, while in Kyaukpadaung the per-centage of opium-eaters to opium-smokers is 10.

In Kyaukpadaung and Pagan proceedings have been taken against those who were suspected of selling opium to Burmans. There has been one conviction in each subdivision and six months' rigorous imprisonment

was imposed. This has had the effect of stopping the consumption of opium to a great extent in these subdivisions. The consumers find it almost impossible to procure the opium.

In this district all headmen have, according to the orders recently issued, been all appointed excise officers and will assist the police in the detection of offenders. There is no fear, I think, of the police blackmailing the population.

The statistics give details of persons who have got into the habit of smoking opium and are well known as such. When they are detected smoking opium they will be prosecuted, but I daresay they will find it difficult to break themselves off the habit and will smoke opium secretly.

I would not recommend the prohibition altogether of the consumption of opium on the premises of licensed shops as I do not see that any benefit would be derived thereby to the Burman population.

I regret that this report is submitted so late. The Subdivisional Officer, Myingyan, through press of work in supervising relief works was late in submitting statistics for his subdivision and I was therefore unable to send in this report before.

From H. P. TODD-NAYLOR, Esq., C.I.E., Deputy Commissioner, Magwe, to the COMMISSIONER OF THE SOUTHERN DIVISION.—No. 1827-20N., dated the 31st October 1891.

WITH reference to your Revenue Department, No. 3904-32E., dated the 19th September 1891, I have the honour to make the following report.

2. I have made or caused to be made inquiries in the following towns and large villages—Magwe, Yenangyaung, Myingan, Taungdwingyi, and Natmauk.

Opium-eaters

In Magwe there are	-	-	48
„ Myingan	-	-	14
„ Yenangyaung	-	-	41
„ Taungdwingyi	-	-	27 and in
„ Natmauk none.			

3. In Magwe about half the consumers say that they have begun the habit in the last five years for fun or because their friends gave them some opium to try. Only one of them smokes; the rest are eaters. The reason of this is that one anna of opium is sufficient for an opium-eater; but eight annas can be smoked. There poverty and not their will consents to the former.

4. The opium-eaters are mostly between 30 and 40. There is one man of 47, another of 60, and the youngest is 20. They were not noticeably debilitated as a lot, though one or two of the older ones were enfeebled. The habit disinclines them to work and probably induces them to steal.

5. In Yenangyaung the large majority of the men eat opium. They are, as a rule, fishermen or musicians. The former takes it because it enables them to resist

the damp and fever and diarrhoea which attend their occupation, the latter because they are idle folk.

6. In Taungdwingyi, of the 28 men 13 smoke and 15 eat opium; of the former four are Chinamen. The people being better off here can afford to smoke. The Myoök examined the men, who candidly admitted that they were the worse for the habit, that it made them lazy and caused loss of appetite, and that they would like to break it off. Two of them did so for some years, but took to it again.

7. In Myingan half the men have taken to the habit in the last five years.

8. These facts are got from the statements of the men themselves, who have exhibited no diffidence in coming forward. I have examined some myself and the Myoöks and Assistant Commissioners have examined the rest. Their statements seem to show that the habit of opium-eating has increased under English rule and that is only what might be expected.

9. The evidence shows that the men are reduced in strength and power of work, except the fishermen, who say they are thereby better enabled to resist cold. We are naturally unable to get evidence of opium-eaters taking to crime.

10. The prohibition in Upper Burma has not been successful at present. The rules were much more lax than in Lower Burma and the effect of the new rules has not yet been shown. They should if properly worked, put a stop to opium-eating, smoking, and smuggling. In fact when I explained them to the eaters and the luggies, the former asked that they should be left alone for one month and they would leave off the habit.

APPENDIX L.

11. I do not myself see what other preventive agency but the police can be employed. The Burmans disapprove of the habit, but so they do of stealing, yet can never be induced to give evidence against an habitual thief. Some of the police will no doubt blackmail the people, but I do not suppose the blackmailing will be general, nor do I see that it is any reason for abstaining from putting down a custom if it is harmful. Cattle-theft offers an engine of oppression. Yet I never heard of that being used as an argument for the police not to put down cattle-theft. The fact is that under careful supervision the police oppression will be inconsiderable, but with a careless Deputy Commissioner, District Superintendent of Police, and Subdivisional Officers, it will be heavy, whether there be opium rules or no.

Opinions are called for on the suggestion of preventing sales to Burmans entirely. I am strongly in favour of such a course. The half-hearted measures taken in Lower Burma did not prevent numbers of Burmans from becoming opium-eaters, and I had numerous complaints from respectable luyis when I was in Lower Burma. I see no middle course between total prohibition and absolute license to all Burmans to smoke and eat. It appears to me to be mere hypocrisy to pass a rule that Burmans should not use opium, and then open shops where in fact they can buy it extensively. Absolute prohibition of the possession of opium is the only course I see open. I have no doubt myself of the bad effects of the drug on the Burmans in general, though some particular trades, such as fishing and dacoiting, may require its use. As, however, certain persons cannot easily break it off, I would register such as foreigners, but I would not fix the age arbitrarily at 40. It should, I consider, be left open to the officer to decide from inquiry and the appearance of the man whether he was an habitual.

I would close license shops to Burmans and not Chinese or men of other nations. If Chinese are to come to Burma they will use opium, and it is better that they should do so openly.

From Lieutenant F. H. ELLIOTT, Officiating Deputy Commissioner, Pakókku, to the COMMISSIONER OF THE SOUTHERN DIVISION.—No. 3521-20, dated the 28th November 1891.

I HAVE the honour to acknowledge your No. 3904-32E., dated the 19th September, and subsequent reminders, and to report as follows :—

1. The Subdivisional Officers of Yawdwin, Gangaw, and Pauk report that both opium-smoking and opium-eating are unknown in their subdivisions. The Yaw division Subdivisional Officer states that Chins do not take to opium and that Chinese traders do not pass that way. Inquiries were made in the following villages in Yawdwin—Laungshè, Chaungu, Natgè, and Kyi.

2. The Subdivisional Officers of Pauk and Gangaw have not made inquiries in specially selected villages, but they both state that the Burmans in their subdivisions have not taken to the use of opium.

3. The opium consumption in this district seemed confined to the townships of Pakókku and Yesagyo.

4. The Superintendent of Police has submitted a list of all the opium-smokers and eaters in Pakókku town. There are 73 persons who consume opium, of whom 21 are opium-eaters, and 52 opium-smokers. Out of these 73 men 11 have been convicted. The per-centage of opium-eaters who have been convicted is 33·33 and of opium-smokers 7·40. The District Superintendent of Police describes them all as physically wrecked. I am doubtful as to this statement. The Myoók's estimate seems more correct.

The District Superintendent of Police is of opinion that the consumption of opium is increasing as it prevails chiefly among the younger men. The following table gives the ages of consumers :—

Age 20 and under 30	-	-	-	35
" 30 and under 40	-	-	-	25
" 40 and under 50	-	-	-	12
" 50 and under	-	-	-	1
Total	-	-	-	73

The figures of the Township Officer, Pakókku, show 70 opium consumers in Pakókku and Myitkaing, which are in municipal limits, and nine consumers in villages in the neighbourhood. Of the whole 79 he shows 21 as

physically wrecked, which seems a more reasonable proportion.

I append a statement showing the particulars required in paragraph 2 of the resolution.

I concur with the opinion expressed in paragraph 4 that it would be easier to check illicit sales when the only authorised consumers were members of readily identifiable races.

The Township Officer, Pakókku, has consulted the luyis of the town and makes the following suggestions :—

- (a.) That the opening to the public of a licensed opium shop should be abolished and no new license should in future be sold by public auction for sale to the public.
- (b.) That a register of the opium consumers of all nations should be kept up and the quantity of opium which might be required for their consumption may be estimated.
- (c.) That a certificate should be given by Government to each Burman consumer and consumption of opium by non-certificated Burmans should be prohibited.
- (d.) That Government may import only the estimated quantity of opium quarterly and sell it to an approved person for a small sum of fixed fee for sale to the certificated Burman and the registered persons of other nations. The sale to unregistered persons should be treated and prohibited as the sale to an unauthorised person.
- (e.) That every Burman consumer should apply for a certificate, and no certificate should be granted to a person who will not be certified by the civil surgeon that he will not live or will be wrecked if he is not allowed to use opium. When he possesses the certificate he must be registered.
- (f.) That every person of either nation should apply on his arrival at Pakókku to an officer to have his name registered, if he is a Burman, for a certificate too. The certificate must be issued and the register should be kept by the officer who may always be in the station and who is authorised by the collector in his behalf. The register may show description of each person, and a copy of it signed by the officer must be kept in the place fixed for vendor's shop. One shop only should be opened in a district in the largest town in Upper Burma.
- (g.) That Burman consumers should only eat and smoke opium in the daytime in the shop which should be built out of the town, and possession and consumption of opium by Burmans elsewhere must be prohibited. Allowing Burmans to use opium in other places and giving opium of any description to a Burman by any person should be prohibited.
- (h.) That the vendor must not sell opium in the night; the sale must be made from 8 a.m. to 2 p.m. The vendor must keep an account book of the sale and he must daily settle the account with the officer at 4 p.m. He must not sell to a person more opium than the daily estimated quantity required for a day's consumption.
- (i.) No person of other nation other than a traveller should possess more than 9 tolas of opium.

All Chinamen or men of respectable class (not Burman) should be allowed to purchase the estimated quantity for three days' consumption, and the vendor should also be allowed to sell in such cases.

With regard to these suggestions I think in Upper Burma it might be desirable to have a register of certificated opium consumers. I should abolish shops in Upper Burma altogether and require the Chinese and other foreigners to purchase their opium direct from a Government agency.

The amount of opium required could be estimated and the purchasers might receive passes for their purchase, which would only be valid for a time stated in the pass.

This might be a hardship to the Chinese who are accustomed to consume opium in shops, but it must be remembered that before the annexation they had no shops at all, and the well-being of the majority of the population must be considered.

With regard to paragraph 8 of the resolution I would prohibit the consumption of opium in licensed shops in Upper Burma altogether.

It would be necessary to make rules prohibiting the purchase of opium by uncertificated persons and also to make the possession of opium in excess of the pass illegal.

STATEMENT OF BURMAN OPIUM-EATERS AND SMOKERS.

APPENDIX L.

From D. H. R. TWOMEY, Esq., Deputy Commissioner, Minbu, to the COMMISSIONER OF THE SOUTHERN DIVISION.—No. 2071-11E., dated the 17th November 1891.

WITH reference to your endorsement, No. 3904-32E., dated the 21st September 1891, I have the honour to submit in tabular form a collection of authentic instances of mental and physical deterioration caused by the use of opium by Burmans in the towns of Minbu, Sagu, Legaing, Salin, and Sinbyugyum. I have not received from Salin statistics of the numbers of Burmans in Salin and Sinbyugyum who have taken to opium and have been physically wrecked, &c. from this cause. I have asked the Subdivisional Officer again for these statistics, but do not wish to delay the report on this account. The numbers for the towns of Minbu and Sagu, so far as can be ascertained, are as follows:—

Name of Town.	Burman Opium-eaters.	Number of Consumers who appear to have been physically Wrecked, &c.
In Minbu - - - -	26	7
In Sagu - - - -	33	23
Total - - - -	59	30

2. It will be seen from the tabular report annexed that in this district eating is the *more common form* of consumption, as it is also the more deleterious, *resulting eventually in death from dysentery*. The reason of the preference for eating as opposed to smoking is that a little opium goes a longer way with an eater than with a smoker, who loses a considerable quantity in the process of preparing the “beinsa.”

3. With reference to paragraph 5 of the Chief Commissioner's Resolution it is my own opinion, as well as the opinion of all persons, official and non-official, with whom I have discussed the subject, that prohibition in its present form in Upper Burma is ineffectual so far as it is aimed at checking the use of the drug, except indeed so far as it has enhanced the price of opium for the Burman consumer and has thus placed it beyond the purchasing power of many. It is the general opinion that Burmans have now as little difficulty in obtaining opium through foreigners and Chinamen as before the annexation.

As regards the alterations made in the Upper Burma rules in August last, I doubt if it will have any effect except to throw the Burman consumers still more completely into the hands of the alien go-between. In my letter, No. 879-10, dated the 9th July 1891, to your

address, I suggested that the normal requirements of the total Chinese and Indian populations of each district should be calculated and the issues of opium restricted to the maximum thus arrived at. This proposal seems to be acceptable to the Chief Commissioner (paragraph 4 of the resolution), and I still think that coupled with rigorous precautions against frontier smuggling, it is the only effectual method of enforcing prohibition in Burma. According to the present system of unrestricted issue, the Government on the one hand makes it unlawful for a Burman to possess a scrap of opium, and on the other permits the vendors to take out for sale such a quantity as is manifestly far in excess of the possible consumption of the alien elements of the population. For example, in this district there are less than 800 persons of non-Burman races (including women, children, and many others who are not presumably addicted to opium) and yet the licensees at Minbu and Sinbyugyum have between them received from the treasury since 1st April last the comparatively prodigious quantity of 24 maunds and 30 seers of opium. These figures alone indicate the extent to which the opium licensees depend for their profits on satisfying the wants of Burman consumers.

4. In reply to the question put in paragraph 6 of the resolution, I doubt whether the Burmese luyis, with all their antipathy to opium consumption can be induced to act as a subsidiary preventive agency. The “strong anti-opium feeling” recognised by the Chief Commissioner has always existed, but it has never taken the shape of assistance to the district authorities in bringing the opium consumers to judicial punishment. Information in opium prosecutions is in 9 cases out of 10 furnished not by the respectable luyis but by men of the classes that themselves consume and retail the drug. As a rule, the luyis show little aptitude enough in assisting the authorities to detect and punish even ordinary offences against person and property. Their religion engenders in them a rooted dislike to becoming the direct instrument by which physical suffering is caused to their neighbour and tribulation to his family. This dislike is all the more powerful in cases where the offender has merely sinned against himself by the use of a pernicious drug, and where there is no direct apprehension of danger to person or property. I think that the hope of assistance from the luyis may be put aside as illusory.

5. With reference to paragraph 8 of the resolution the view expressed therein is generally believed to be correct. There is no ground for thinking that the consumption of opium by aliens on the premises of licensed vendors tends to facilitate the illicit supply to Burmans, and it accordingly appears unnecessary to close the opium taverns to non-Burmans.

APPENDIX L.

Name of Thugyi, Gaung, or Elder who furnishes the Information.	Instances of Physical or Mental Deterioration in Burmans from the use of Opium; instances to be set down in serial order with full Particulars.	Whether Eater or Smoker.
Maung An Taw Ni, Maung Baw, of Legaing; Maung Po Aung of Zigaing.	1. Age 50, was clerk to the Legaing Myothugyi in Burmese times; has been quite unfit for work of any kind for many years; is supported by his wife.	Eater.
Maung An Taw Ni, Maung Pay, Maung Po Aung.	2. Age 60, held office in Burmese times as a police officer under the Legaing Wun; took to opium before the annexation and is now unfit for work; is supported by his son.	Do.
Do. do.	3. Maung Thet Ta Ya, age about 35; has never had any occupation; has taken to opium lately; is supported by his sister.	Do.
Do. do.	4. Maung Tha Bo Gyi, aged 40; was formerly cultivator; took to opium about four years ago; is still fit for light work, but unfit for hard work of any kind; is supported by his sister.	Do.
U Myat Kaung, elder of Sagu	1. There was one of my uncles who ate and smoked opium when he was 25 years of age. He was very strong and healthy before. He had landed property, about 70 seiks of paddy-land, valued Rs. 2,000. After four years he sold the land because he could not perform his ordinary work. He lived on the proceeds of the sale without doing any work and he got weaker and weaker until he died. At length, when he was 40 years of age, his wife divorced him and he was being supported by his relations. At the time of his death his relations had to bury him at their own expense.	Both eating and smoking.
Do. do.	2. Nga Law began to eat opium when he was 20 years old. He was a healthy man. He had about 20 seiks of paddy-land, valued Rs. 600; four years after he sold his land and he was unable to work for his living. His wife divorced him and he had to be supported by his relations. He became a gambler. When he was 33 years old he died of dysentery caused by constant eating of opium. He was buried at the expense of his relations.	
U Po Byu, elder of Sagu	Nga Chein was formerly a clerk to the Myothugyi; he began to eat and smoke opium when he was 20 years of age. He was before this healthy and strong. Two years after he had taken opium he could not perform his duties so he was discharged by the Myothugyi and he was supported by his wife. He became a beggar and died of opium dysentery after 10 years and was buried at the expense of the villagers.	
U Yit, ex-Damanaing thugyi	The Sèhnayat thugyi began to eat opium when he was 25 years of age. He was healthy and strong and had about 200 seiks of land, valued Rs. 5,000. Five years after he sold half of his land and he left the work with his clerk, and 10 years after he sold the remainder of his land. He died when he was 50 years of age from opium dysentery.	
Do. do.	2. His son succeeded him in the Sèhnayat thugyiship. The son began to eat opium when he was 17 years old. He became thugyi in 1250 B.E. Two years after he misappropriated revenue and he was dismissed from the appointment. He was healthy and strong, but after taking opium he was unable to do his work, and he has now absconded to Lower Burma because he has no means of livelihood.	
U Tun Mya	1. Nga Kyi, an actor, was noted for his pleasant voice. He had about 100 seiks of land worth about Rs. 3,000. He began to eat opium when he was 30 years old. Three years after his constitution had become mined and he could not perform his duty. He was obliged to sell his land. He died of opium dysentery when he was 45 years old. He was supported by his wife.	
U An Ko	1. One Shan Galè had about 50 seiks of land, valued Rs. 2,000. He was a very powerful wrestler. He began to eat opium when he was 25 years. After five years he was not able to do any work and he was obliged to sell his land and he stole some property in the town. He was imprisoned very often and finally he was shot dead by the owner of a house which he had attacked. He was then 35 years old.	
U Thaing	2. Myat Byu was a peon to the Myothugyi. He began to eat opium when he was 30 years old. A year after he could not perform his duty and he was discharged. He then associated with thieves and committed theft himself. He was often imprisoned and died of opium dysentery when he was 50 years old. He was buried by the charity of the villagers.	
U Po	1. One Nga Twe was healthy and strong. He began to eat opium when he was 27 years old. He was a cultivator, but three years after he could not do his work and he committed thefts. He was often imprisoned and finally he attacked a house in which he was stabbed with a spear by one of the villagers and was killed. He was then 35 years of age.	
U Lauk, Lugyi	1. A former Kywèdi thugyi, was healthy and strong, and had paddy-land about 60 seiks, valued Rs. 1,500. He began to eat opium when he was 25 years old. Shortly after he could not do his work and he associated with dacoits and thieves. He was imprisoned and finally he was concerned in a dacoity case and was crucified to be killed by the Wun and his life was only saved, as some póngyi begged a pardon for him. He died of opium dysentery when he was 40 years old, leaving no property.	

Name of Thugyi, Gaung, or Elder who furnishes the Information.	Instances of Physical or Mental Deterioration in Burmans from the use of Opium; instances to be set down in serial order with full Particulars.	Whether Eater or Smoker.
Minbu Luyi U Ni Ta, Member of Committee of Minbu.	1. One Nga Bo Nga of Minbu, had some landed property to the value of Rs. 1,500. He was healthy and strong and he carried on trading. He began to eat opium when he was 25 years of age. After 10 years he began to lose his property and was not able to carry on his work; had to be supported by his friends. He died of dysentery. 2. One Nga Shwe Thi came of a respectable family. His father gave him about Rs. 4,000 as a gift, and he inherited about Rs. 10,000 after the death of his father. He had about 200 seiks of land. He began to eat opium when he was 30 years old. About 10 years ago he was obliged to sell some of his property and 10 years after he disposed of the remainder. He died afterwards from dysentery.	
U Waik, Member of Committee	Formerly there was a Wun of Minbu, called U Baik, who was very wealthy. His son Maung Shwe Maung ate and smoked opium. After U Baik's death Maung Shwe Maung inherited all his property to the value of Rs. 10,000. Maung Shwe Maung ate opium when he was 15 years old. He was formerly strong and healthy. He began to lose his property gradually and had nothing left when he was about 40 years old. He died of dysentery. He was supported by his daughters and wife.	
Ko Shwe Kin of Minbu -	There were two men called Maung San Tha and Maung San Ya, sons of wealthy parents. They smoked opium and drank liquor and squandered all their fortune. They married the daughters of two wealthy people in Minbu and they inherited about Rs. 4,000 after the death of their father-in-law. They smoked opium and gambled away all this money and had nothing left, and they had to give some of their children to other people to bring up. Subsequently they left Minbu.	
Ko Shwe Gòn, Luyi of Minbu	U Yón Aung was one of the richest men in Minbu. He had a son by the name of Shwe Gè. Shwe Gè began to eat opium when he was about 25 years old. When he was 30 years old his father died and he inherited about Rs. 4,000. He was healthy and strong, but after taking opium his health declined and he lost all his property after 10 years. He died of dysentery.	
Maung Aung Tha, Minbu, Myothugyi.	A man called Thet Twa who was a good artist and was healthy and strong, began to eat opium when he was about 25 years old. Three years after taking opium his health declined and he was unable to perform his trade and got very poor. He gave up opium-eating about a year ago and he is now getting stronger.	
Maung Shwe Mya, village elder of Sagu.	One man began to take opium when he was 30 years of age. About seven years after became unfit for ordinary labour. He lived upon the estate of his parents. He died through the effects of opium when he was 45.	Eater.
Maung San Dun, village elder of Sagu.	One man, aged 40, was a strong man. He took to opium and is now unfit for ordinary labour. He depends upon the large estate which he inherited from his parents.	Smoker.
Maung Hlauk, village elder of Sagu.	One man, aged 44, began to take opium when he was 25 years of age. He became unfit for ordinary labour about 10 years after. He is supported by his wife, who sells in the bazaar.	Eater.
Maung Aung Thu, village elder of Sagu.	One man, aged 55, took opium when he was 25 years of age; became well eight years after. He supported himself as a drummer (saingthama).	Do.
Maung Shan O, village elder of Sagu.	One man, aged 50, took opium when he was 25 years of age and became feeble and unfit for ordinary labour about 10 years after. He is supported by his wife who sells in the bazaar. Took opium when 20 years of age, and became unfit for ordinary labour about 10 years after. He was supported by his master, who is also a great opium-eater and who is one of the leading cultivators of Sagu. He died through the effects of opium when he was about 48 years of age.	Do.
Maung Lan, village elder of Sagu.	One man, age 25, was a strong man; five years ago he began to take opium and is now unfit for ordinary labour. He is supported by his wife, who sells in the bazaar.	Do.
Maung Tha Gywè -	One man began to take opium when he was 20 years old and about 10 years after became unfit for ordinary labour. He was first supported by his parents and then by his wife. He died when he was 45 years of age through the effects of opium.	Do.
Maung Kywet, Gaung of Kyón-byit quarter, Salin.	1. Age 27, was a strong man five years ago; then took to opium and is now unfit for ordinary labour. 2. Age 33, was a strong man 13 years ago; then took to opium and is unfit for ordinary labour and is a skeleton. He is supported by his wife a weaver.	Smoker.
Maung Po, Gaung of Kyaungya, Salin.	3. Age 50, was a strong man 20 years ago; then took to opium and is now unfit for ordinary labour and out of his mind. He is supported by his wife, bazaar-selling in Salin.	Eater.

APPENDIX L

Name of Thugyi, Gaung, or Elder who furnishes the Information.	Instances of Physical or Mental Deterioration in Burmans from the use of Opium ; instances to be set down in serial order with full Particulars.	Whether Eater or Smoker.
Maung Po Tha, Gaung of Myindin, Salin.	4. Age 39, was a strong man 10 years ago ; then took to opium and is now weak and unable to move about. He is supported by his wife, bazaar-selling.	Eater.
Maung Saw Gaung of Kuni-daung, Salin.	5. Age 48, was a strong man 20 years ago ; then took to opium and is now unfit for ordinary labour and begs for food.	Smoker.
Maung Tha Dun Zan, Gaung of Paungbenzin, Salin.	6. Age 38, was a strong man eight years ago ; then took to opium and is now unfit for ordinary labour. He is supported by a pôngyi who employs him at odd jobs.	Do.
Do. do.	7. Age 50 ; was a strong man 20 years ago ; then took to opium and is now unfit for ordinary labour and mad. He is supported by his wife, bazaar selling.	Eater. This man told he can take as much as any opium-eater could, if he got it.
Maung Thaw thugyi of Sun -	8. Age 38, was a strong man eight years ago ; then took to opium and is now unfit for ordinary labour through strength failing him. He is supported by his wife, bazaar-selling.	Smoker.
Do. do.	9. Age 41, was a strong man 13 years ago ; then took to opium and is now unfit for ordinary hard labour. He is supported by himself selling rice in the bazaar.	Do.
Do. do.	10. Age 34, was a strong man three years ago ; then took to opium and gambling and is now unfit for anything. He is supporting himself by getting odd jobs.	Do.
Do. do.	11. Age 45, was a strong man 20 years ago ; then took to opium and is unfit for cooly-work, and his hands are unsteady and he wanders in his mind. He is supported by his wife, bazaar-selling.	
Maung Po Saung, thugyi of Sinbyugyun.	1. Age 38, was a strong man 10 years ago ; then took to opium and is now unfit for ordinary labour. He is supported by his wife bazaar-selling.	Eater.
Do. do.	2. Age 37, was a strong man 12 years ago ; then took to opium and is now unfit for ordinary labour and begs now.	Do.
Do. do.	3. Age 46, was a strong man 12 years ago ; then took to opium and is now unfit for ordinary labour. He is supporting himself.	Smoker.
Do. do.	4. Age 43 last year, was a strong man 18 years ago ; then took to opium and was unfit for hard labour. When he died he was supported by his wife.	Do.
Do. do.	5. Age 38, was a strong man 10 years ago ; then took to opium and is now unfit for ordinary labour. He is supported by himself as a cooly.	Do.
Do. do.	6. Age 50, was a strong man 19 years ago ; then took to opium and is now unfit for ordinary labour. He is supported by his uncle, bazaar-selling. He is a little gone in his mind.	Do.
Do. do.	7. Age 35, was a strong man three years ago ; then took to opium and is now a thin beggar man and always ill ; has quite changed in the three years.	Do.
Maung San E. gaung of Anau-kywa.	8. Age 33, was a strong man 10 years ago ; then took to opium and is now unfit for ordinary labour. He is supported by his wife, selling in the bazaar ; all he does is to long for opium.	Do.
Do. do.	9. Age 36, was a strong man four years ago ; then took to opium and is now in bad health and unable to earn his own living through smoking opium.	Do.
Maung Chet, thugyi of Nwet-ame circle.	10. Age 37, was a strong man 13 years ago ; then took to opium and is now unfit for ordinary labour. He is supported by his parents and does nothing.	Eater.
Do. do.	11. Age 35, was a strong man five years ago ; then took to opium and is now unfit for ordinary labour. He is supported by his wife, selling in the bazaar.	Do.
Do. do.	12. Age 35, was a strong man 10 years ago ; then took to opium and is now unfit for ordinary labour. He is supported by his parents.	Do.
Do. do.	13. Age 35, was a strong man five years ago ; then took to opium and is now in a mad state, his mind wandering. He is supported by his wife.	Do.
Do. do.	14. Age 57, was a strong man 30 years ago ; then took to opium and is now quite unfit for ordinary labour. He is supported by his son selling in the bazaar and the man himself is not expected to live long.	Do.

From J. E. BRIDGES, Esq., Commissioner of the Eastern Division, to the FINANCIAL COMMISSIONER, BURMA.—No. 175 (Excise), dated the 21st January 1892.

WITH reference to the Chief Commissioner's Financial Department Resolution, No. 10E., dated the 29th August 1891, I have the honour to submit in original the reports of the Deputy Commissioners with the following remarks:—

All the Deputy Commissioners except Pinyinana have endeavoured to give the number of opium consumers in their districts instead of restricting their inquiry to a few villages, and it is very doubtful whether the figures they give are accurate. The Deputy Commissioner, Pinyinana, took statistics in four villages and found that out of 4,785 men 104 consumed opium (75 eating it and 29 smoking it); out of these 104 men only six have been convicted of criminal offences, but the health and capacity for work of the majority of them have been affected by the use of the drug.

In Kyauksè the Deputy Commissioner states that none of the opium consumers have taken to crime or been physically wrecked.

In Meiktila nearly all have been affected by the use of the drug and several have taken to crime.

In Yamethin the opium consumers are said to be of weak physique, and to live on the earnings of their wives.

The figures of the different districts give the number of opium-eaters and smokers as follows:—

District.	Opium-eaters.	Opium-smokers.	Total.
Kyauksè - - -	4	3	7
Meiktila - - -	30	28	58
Yamethin - - -	2	28	30
Pinyinana - - -	75	29	104
Total - - -	111	88	199

The number of eaters exceeds the number of smokers in all districts except Yamethin, and in Pinyinana, where the statistics have been most accurately collected the number of eaters is more than double that of the smokers.

2. I am of opinion that the prohibition of the use of opium by Burmans in Upper Burma has been effectual. It is difficult to give accurate figures on the subject, but the figures supplied by the Deputy Commissioners show that the number of Burmese opium consumers is exceedingly small, and if there has been any increase in opium consumers since our occupation it is very small. It must be remembered that Burmans were not aware of any defect in our opium rules, and that many Burmans were convicted by magistrates for transporting opium. The people then generally believed that the possession of opium by Burmans was contrary to our rules. I have no doubt that the restrictions imposed on the consumption of opium by Upper Burmans can be effectually enforced, and they will prevent the spread of opium consumption to any great extent.

3. I do not think that we can expect any co-operation from the people themselves in putting down the opium

traffic; they are too much afraid of exposing themselves to the revenge of any person they might report, and they take too little interest in anything that does not concern them personally. The only method of preventing blackmailing by the police is strict supervision on the part of their superior officers.

4. I do not see any objection to the proposal that Burmans should register themselves as foreigners and be exempted from the provisions of the opium rules, and think, with the Deputy Commissioner, Pinyinana, that the limit of age might be fixed lower, say, 30 for the present.

5. I think it would be sufficient to prohibit the use of opium shops to Burmans only.

From D. ROSS, Esq., Deputy Commissioner, Kyauksè, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 1343-3—100R., dated the 12th November 1891.

WITH reference to your Revenue Department, No. 3155, dated the 18th September 1891, I have the honour to submit the following report:—

1. Inquiries made by subdivisional and township officers have elicited the fact that there are seven opium consumers—three smokers and four eaters—in the Kyauksè subdivision and none at all in Myiththa. Mr. Wall reports that of these seven men none have been physically wrecked or taken to crime.

2. The above statement of the number of opium consumers is to some extent borne out by the fact that the opium licensee has recently obtained permission to close his Kyauksè shop. This will, it is believed, do more to prevent the spread of opium consumption than any prohibition against its possession, but the two together, will, it is believed, entirely prevent the spread of this vice. Up to the present no Burmans have been prosecuted for possessing opium.

3. It is very difficult to advise as to the best method of preventing the police from blackmailing the Burmans. Strict and close supervision by European officers seems to be the only one. Although respectable Burmese sympathise with the Government aims, I doubt if their services could be enlisted as a preventive agency, but an effort might be made to do so; it might be successful and is well worth trying.

4. The officers who have been consulted by me think that all opium consumers should be registered, and that the consumption of opium on the premises of licensed shops should be altogether prohibited.

From Captain J. J. CRONIN, Deputy Commissioner, Meiktila, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 1998-8, dated the 21st November 1891.

I HAVE the honour to reply to your letter, Revenue Department, No. 3155, dated the 18th September 1891, inquiring about the use of opium among Burmans.

1. Statistics of Burmans in the district, as far as I can ascertain addicted to the use of opium are shown in the following table:—

Township.	Place.	Adult Male Population.*	Opium-eaters.	Opium-smokers.	Total.	Remarks.
Meiktila (population 51,553).	Myoma - -	1,171	2	12	14	Two; both smoke and eat opium; three have used it for 15, 20, and 21 years respectively, and are weak and sluggish; the rest have used it for periods varying from two to eight years, and have not yet become much affected; two of the 12 are in jail, three more on surety for good behaviour; the rest are well-behaved.
	Total -	—	2	12	14	

* The adult male population is taken as one fourth of the total population.

APPENDIX L.

Township.	Place.	Adult Male Population.	Opium-eaters.	Opium-smokers.	Total.	Remarks.
Wundwin (population 45,650).	Myoma - -	625	4	—	4	All are said to have suffered physically but not mentally.
	Thedaw - -	102	1	—	1	
	Ngwelebin - -	52	1	1	2	
	Tawma - -	50	—	2	2	
	Hlaingdet - -	200	—	2	2	
	U-yin - -	50	2	—	2	
Total		—	8	5	13	All have suffered physically. Two taken to crime.
Mahlaing (population 55,765).	Myoma - -	785	7	5	12	
	Tandaw - -	322	8	2	10	
	Panaing - -	634	1	—	1	
	Nanlu - -	90	1	—	1	
	Nyaungbintha - -	52	1	—	1	
	Kangyi - -	105	—	3	3	
	Sedo - -	175	2	1	3	
Total		—	20	11	31	Two ; both eat and smoke (see above).
Pindalè (population 20,852).	—	—	—	—	—	
Total for the district.		—	30	28	58	

I doubt whether all the villages in Meiktila (excluding Mahlaing) containing opium-eaters and smokers are composed in the above list, but the statistics are the best I have been able to obtain, and I think, for the places to which they refer, are accurate. There are not many large villages excluding Myoma in Meiktila, but I should think that Shanmangé and one or two other villages must in reality contain a few Burman opium-eaters and smokers. Pindale township is much smaller and less populous than any other, but I hardly think that it can be absolutely from Burmans addicted to the use of opium, though the Myoók has reported to that effect. It is difficult to get exhaustive statistics on the point, but I think that the above are altogether fairly accurate. They show that the number of opium-smokers and eaters is about equal; very poor people generally eat it as less is consumed than in smoking. I think that on the whole the number of opium-smokers has increased since the British occupation (in Meiktila Myoma there are said to have been only seven at the annexation), but not to a great degree, the prohibition of the sale of opium to Burmans, which has all along been in force has prevented any extensive increase which would certainly have taken place had the sale been unrestricted.

As it is, Burmans who want opium have to beg or secretly buy it from Chinamen. This involves a certain amount of trouble and risk, and I do not think that they can get any large quantity. There is no opium shop in this district, so I cannot say how far illicit sale by licensees may go on.

2. It is as yet too early to estimate the effect of the new rules prohibiting the possession of opium by Burmans. But in my opinion if they are to be really successful it will be necessary to employ some special detective agency. There can be no question that the opinion of all respectable Burmans is entirely against the possession or use of opium by their fellow-countrymen, and I think that we might very well take advantage of this feeling. I would suggest that all ywathugyis and one or two respectable luyis in every large village should be appointed excise officers.

Under sections 28, 29, Excise Act, read with sections 14 and 15 of the Opium Act, be able to arrest persons in possession of opium and to search for it. Probably they would be willing enough to aid in carrying out the law without remuneration, but if their antipathy to opium and sense by right and wrong were not a sufficient stimulus they might be allowed to draw rewards as other ex-excise officers. With the above agency in operation we should, I think, have a most powerful engine in preventing the possession of the drug. Persons addicted to opium must be known at least in their own village and would be constantly under the eye of the luyi, and if we took care only to appoint respectable men, there would not be anything to fear from abuse of their powers on the part of these excise officers.

3. The village headmen and luyis appointed would also, I think, do much to prevent any blackmailing on

the part of the police. If the work of detecting and preventing the possession of opium were left to these latter alone, they would almost certainly at times take advantage of their position.

Without some such measure as the above, I doubt whether the new rules will prevent the possession of opium more effectually than the old.

4. There are, of course, a certain number of habitual opium-smokers and eaters who have become unable to do without it. Three of the Meiktila opium-smokers are said to be such. I think that the plan of making these men register themselves as foreigners in order to get opium would be a good one. The mere idea of being regarded as a foreigner would involve a certain amount of shame, for the Burman is in a sense very proud of his nationality, and would itself act as a deterrent in all but the most hopeless cases. But some restriction would have to be placed upon the amount of opium sold to one man in a given time; otherwise he might buy a large quantity, but evade the law by selling it as fast as he got it, and so never have more than 10 tolas in his possession. I would suggest that a register of these men should be kept, that the average consumption of an ordinary opium-smoker and eater per month should be roughly ascertained, and that the licensee should be forbidden to sell more than this amount to anyone in that time. If the opium-smoker could not get more than sufficient to gratify his own appetite he would not be likely to sell any.

From W. N. PORTER, Esq., Deputy Commissioner, Pyinmana, to the COMMISSIONER of the EASTERN DIVISION.
—No. 1005, dated the 28th December 1891.

In reply to your Revenue Department, No. 3155, dated the 18th September 1891, and with reference to the proceedings of the Chief Commissioner, No. 10E., dated the 24th August 1891, I have the honour to submit the report called for.

2. The statistics required by the Chief Commissioner have been carefully compiled in four villages in each of the Taungnyo, Wanwègon, and Paunglaung townships; in five villages of the Pyinmana township and in eight quarters of the Pyinmana town. The result shows that out of a total of 4,785 men over 18 years of age, 75 eat opium and 29 smoke it. Of these 104 men only six have been convicted of criminal offences. The health and capacity for work of the majority have been affected by the use of the drug. I attach a table which gives the information in detail. The use of opium undoubtedly leads to association with bad characters and in consequence to crime, but the offences committed by the average opium consumer are usually of the meanest and most petty descriptions. Few of them have the energy or nerve to take part in violent crime. My experience in the Promé, Shwegyin, are other districts where violent crime and cattle theft and or rather were rife is that offences of the kind were

planned and carried out under the influence of liquor rather than of opium. Many of the bad characters in Upper Burma who have been convicted of dacoity and rebellion were it is true opium-eaters and smokers, but before lending any weight to the returns from jails in respect of such persons it would be well to ascertain whether the opium habit induced the commission of crime or whether it was indulged in to mitigate the hardships they had to undergo, and to drown the care and misery they experienced consequent on the knowledge that by their misdeeds they had placed themselves beyond the pale of pardon. Burmese pongsis and elders all profess the greatest abhorrence of the consumption of opium, and their gratification at the Government taking measures to prohibit its use. They promise to lend whatever assistance lies in their power to support the policy of Government. I do not doubt the sincerity of their professions, but I question whether they will ever put them into practice. For a good Buddhist to give information which would lead to the punishment or injury to his fellow man is against the Buddhist canon, and for an apathetic Burman to trouble himself about any matter which does not very nearly concern his own interest is against all experience. In this district where the use of opium is limited to a very small per-centage of the population no great difficulty should be experienced in carrying out the policy of prohibition, but in other parts of Burma and especially Lower Burma where the opium habit is much more common and has gained a hold on a large mass of the population, as in Akyab and Kyaukpadaung, it would be practically impossible to enforce it. Something towards this end might be done by a regularly organised, expensive, and widespread excise department, assisted by the police and village headmen agency, but the two last named have their hands full of other and equally onerous duties, and I venture to think that in spite of them any Burman who determined to obtain opium would always be able to get it, perhaps with greater inconvenience to himself and probably at a slightly enhanced price, but neither drawback would be sufficiently deterrent to break him of the opium habit. I hesitate to suggest one means which, I think, if strictly carried out, might be effective in time in bringing about the result desired, because I doubt whether the necessity for enforcing the prohibition is sufficiently urgent to justify its adoption. My proposal is that the village community should be held responsible for the illegal possession of opium by any of its members, or within the village limits, much in the

same way as it now is for the presence of dacoit gangs or stolen cattle. Whatever measures may, however, be adopted hereafter, I consider the police should be allowed a free hand, for they will require their best energies to enforce the prohibition. To hamper them with restrictions and to invent safeguards against extortion and bribery, other than those provided by the ordinary law, would be fatal to their successful action. If absolute prohibition be determined upon, I certainly think some merciful consideration should be shown for persons who, having been opium consumers for many years, have become so accustomed to the use of the drug that sudden deprivation would, in some cases, mean death, and in many irreparable injury to health. "The registration" proposal of the Chief Commissioner, setting aside the restriction as to age, appears to me to be workable. It would offer a means of escape to habitual opium consumers from ill-health and perhaps, worse on the one hand and a systematic breaking of the law on the other, and would also act as a very successful check on the opium habit.

The limiting the age at which names may be placed on the register appears to me to be an unnecessary restriction, and to in a great degree nullify the practical value of the proposal. The reasons for my opinion are that notoriously a very large proportion of habitual opium consumers are men under 40 years of age, with their health already so much affected by the habit that the consequences of total abstinence would be as serious in their cases as in those of men much older; further, that the very idea of "registration" will be found in practice so distasteful to Burmans that none but those who are compelled, whether young or old, will avail themselves of it. I would respectfully submit that the measure of grace offered to the unfortunates who have already fallen victims to the use of opium should be, for the present, if prohibition is to be enforced, as wide as possible, not only from motives of common humanity, but also because the Government, which has for many years in Lower Burma raised a large revenue from opium, cannot afford to act otherwise.

Finally, if opium consumption is to be permitted it should, so far as possible, be centered in licensed opium hells much in the same way as gambling is in the Straits and China. To drive it by the closing of these hells into out-of-the-way nooks and corners where the police would find it difficult to exercise supervision would be to aggravate the very evils which it is sought to reduce.

APPENDIX L.

From G. CARMICHAEL, Esq., Deputy Commissioner, Yamèthin, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 1318-4-4R., dated the 28th December 1891.

I HAVE the honour to forward herewith a copy of a report from Mr. Thurston, Assistant Commissioner, in

reply to your Revenue Department, No. 3,155, dated the 18th September 1891. The following statement is a summary of the result of the inquiries made in three of the larger towns or villages :—

Village.	Male Population over 18 Years of Age.	Opium-smokers.	Opium-eaters.	Per Cent.	Remarks.
Yamèthin - - - - -	1,207	12	—	1	
Pyawbwè - - - - -	410*	8	2	—	
Theingón - - - - -	834	8†	—	1	
Yindaw township - - - - -	—	Nil	Nil	—	

* Apparently incorrect.

† One is a boy of 14 years of age who was taught by his father to smoke three or four years ago.

These figures are those collected by the subdivisional officers. The police give the number of Burman opium-smokers at Pyawbwè at about 24. Their figures for Yamèthin and Theingón are the same as the subdivisional officer's. The opium-eaters and smokers in Pyawbwè have not been convicted of any offence, but four are at present under security (section 109, Criminal Procedure Code).

As the numbers are so small, I do not think it will be difficult to prevent the further spread of opium-smoking amongst Burmans. As regards closing the licensed taverns, I do not agree with Mr. Thurston. By closing the taverns it would, in a great measure, nullify the effect of any orders that may be passed allowing the use of opium to confirmed consumers only. They must be allowed a supply, and unless they are made to consume it on the premises it is certain that others who have not been so favoured will obtain opium through them. The men whose names are registered should be made to consume the opium in the shop. They are usually men who have not much respect for themselves, and would not, like Chinamen, find a provision of this sort much of a hardship. If they carry away no opium the police could not blackmail them.

drug suffer a good deal at first, I consider that it would be a good thing to allow all such to register themselves as foreigners under the Act.

From MAUNG HLA PAW U, Honorary Secretary, Young Arakan Club, Akyab, to the SECRETARY TO THE FINANCIAL COMMISSIONER, Burma, dated the 16th November 1891.

With reference to an extract from the proceedings of the Chief Commissioner, Burma, in the Financial Department, No. 10E., dated the 29th August 1891, regarding opium traffic in Burma, I am directed to forward a copy of the proceedings of a meeting of the Young Arakan Club held on the 10th ultimo.

A meeting of the Young Arakan Club was held on Saturday the 10th October 1891, to consider the extract from the proceedings of the Chief Commissioner, Burma, in the Financial Department, No. 10E., dated the 29th August 1891, regarding the opium traffic in Burma.

PRESENT :

Maung Chan Htoon Aung, President.
Maung Tha Nu.
Maung Khyen Kaing.
Shaik Inoddin.
Maung Shwè Tha Aung.
Maung Paw Tun.
Maung Hla Paw U, Honorary Secretary.

The following resolutions were passed after long discussions :—

1. That stringent and specific measures are absolutely necessary to prohibit the use of opium among the Burmans for the following reasons :—

(a.) Opium-eating among them means social degradation, and is associated with thieving, gambling, and other concomitant vices.

(b.) That the use of opium has a widely different effect on a Burman from that which it has on a Chinaman or Shan.

(c.) Burmans do not as a rule indulge in rich food, their diet for the most part being of an astringent nature, and their habits and occupations are such as to give little exercise to their bodies, hence they suffer materially in physique. Most of the Burman opium-eaters it will be found have completely ruined their constitution and are totally unfit for any honest work.

(d.) The Buddhist religion being strongly against the use of opium, a Burman addicted to this evil practice necessarily falls in the opinion of his co-religionists, loses self-respect, and is compelled to seek the company of the profligate.

(e.) A Chinaman on the other hand suffers no social degradation, though he be a confirmed opium-eater; and his habits and occupation being different does not suffer to the same extent physically.

2. That licensed opium shops be abolished—

(a.) There being no doubt that they are one of the sources from which opium finds its way as an illicit article.

(b.) The licensed vendor himself conniving in illicit sales, and in fact enlisting the sympathy of the police towards this end, and devising means to further the nefarious but lucrative trade.

REPORT made by J. N. O. THURSTON, Esq., Assistant Commissioner, on special duty, to the DEPUTY COMMISSIONER, Yamèthin, dated the 14th December 1891.

In compliance with Revenue Department, No. 3,155, dated the 18th December 1891, from the Commissioner, Eastern Division, I have the honour to submit the following report on the questions raised in the proceedings of the Chief Commissioner, No. 10E., dated the 29th August 1891.

After a very careful inquiry in has been ascertained that the number of Burman opium-eaters and smokers in this district are as follows :—

Yindaw township - None.
Pyawbwè - - - Two eaters, eight smokers.
Yamèthin - - - Twelve smokers.

With the exception of two men in Pyawbwè, who have been opium-smokers for 24 years, the rest are said to have learnt the habit from the Chinese and Shan traders.

These men are generally of a very weak physique, and do no work but live on the earnings of their wives. In Yamèthin eight of the smokers have been convicted of criminal offences.

The póngyis and Burman lugyis are very keen on the total suppression of the use of opium, and I consider that the latter will be ready to assist Government in suppressing it, but the póngyis are forbidden by their "Wini" to do any act which will bring anyone into trouble, and so are not to be depended on to render any active assistance. I consider that now that the opium rules have been altered, that it is only a question of time for the use of this drug to be stamped out in the Upper Province, and it would greatly facilitate this if the opium dens were closed to everyone, as it would render it so much harder for a young Burman to get away and have a smoke, a thing he would be ashamed to do in his own house. If the shops were closed to everyone it would do away with one of the great means of blackmailing by the police.

As the total suppression of the use of opium would make persons who are accustomed to the use of this

(c.) If the licensed shops are not abolished, it will be little use registering opium-eaters, as they will become the medium for the passing of the opium into other hands.

3. That all opium-eaters, other than Burmans, be registered, and that opium be sold by well-paid and trustworthy men appointed by the Government.

4. That prior to being registered every opium-eater obtain a certificate from a Government medical officer, showing the quantity of opium necessary for the applicant.

5. That a medical officer be deputed for a few months to travel through the district and grant the necessary certificates.

6. That confirmed Burman opium-eaters be dealt with under medical advice.

7. That in district villages the responsibility of checking the use and illicit sale of opium be thrown on the villagers.

8. That village rules receive official recognition; and that fines inflicted under these rules be spent by the villagers on works of public utility. Fines so disposed will meet with general approval, and will create a feeling of confidence in the system.

9. That in town a central committee, composed of representatives of villages in town and district, under a district officer as president, be organised to control village committees.

10. That certain well-defined privileges be conceded to the iugies forming the committees.

From Surgeon-Major P. W. DALZELL, Officiating Inspector-General of Jails, Burma, to the FINANCIAL COMMISSIONER, Burma.—No. 6966-300, dated the 2nd December 1891.

With reference to the proceedings of the Chief Commissioner in the Financial Department, No. 10E., dated the 29th August last, I have the honour to submit, as directed, a statement showing the number of opium consumers who were in jail at the time of the inquiry.

Of the total, the Upper Burma jails return 115 Burmans and 71 non-Burmans, and the Lower Burma

jails 1,045 Burmans and 101 non-Burmans. Owing to the transfer of Upper Burmans to Lower Burma and *vice versa* the Lower Burmans to Upper Burma, these figures cannot be relied upon as indicating even approximately the relative extent to which the opium consuming habit may be said to exist; but it may safely be assumed that the drug is not nearly as commonly used in Upper Burma as in Lower Burma. As regards the effects of the drug, it is certain that where the conditions are the same, the results on the human being, whether Burman or Chinaman, must also be the same. The variation noticed in the effects of opium is therefore entirely due to the different physical and moral idiosyncracies of the people resorting to the drug, and these being duly noted, general deductions may be drawn, certain results being associated with certain characteristics. There are many instances of Burmans who have suffered neither physically nor mentally in consequence of their addiction to the vice; but it is unquestionable that in the majority of cases they fall a readier prey to the seductive influences of the drug than do Chinamen.

In the majority of cases the Chinese opium consumer continues his daily business and avocations with his usual assiduity, and enjoys unrestricted social freedom. He is consequently able to feed and clothe himself, which largely counteracts the baneful tendencies of the opium. The Burman, on the other hand, as soon as his leaning towards the drug is known, becomes a social outcast and is obliged to consort with those who are themselves addicted to the vice. He thus places himself under the worst influences and the appetite quickly develops. With the love of ease that is a characteristic of the race, the listlessness induced by the drug is intensified, and in process of time honest labour is given up, nourishment is irregularly taken, the appetite for proper food abates, while that for the drug is stimulated, and thus the downward course is hastened.

As regards the effects produced by the stoppage of opium in the case of those who have habituated themselves to it, there can be no doubt that considerable suffering is entailed; but this in by far the majority of cases is short-lived; the natural functions are soon brought into play, and where physical recuperation is possible, the patient soon begins to regain strength and lose the unhealthy craving for the accustomed drug.

From Major S. C. F. PELLE, Officiating Inspector-General of Police, Burma, to the CHIEF SECRETARY TO THE CHIEF COMMISSIONER, Burma (through Financial Commissioner).—No. 532-109M., dated the 22nd January 1892.

In obedience to the orders contained in Chief Commissioner's Financial Department Resolution, No. 10E., dated the 29th August 1891, I have the honour to report that I have called on certain selected police officers for their opinions on the questions discussed in the resolution and have been in consultation with the Deputy Inspector-General of Civil Police on the opium question. From amongst the reports received the most valuable are from Mr. Fanshawe, District Superintendent of

Police, Henzada; Mr. Jardine, District Superintendent of Police, Bassein; and Mr. Snadden, District Superintendent of Police, Shwegyin, and copies of these reports I am forwarding as appendices.

2. All the above officers are of opinion that the drug is most harmful to Burmans both physically and mentally, and that in too many instances one has only to scratch the opium-eater or smoker to come on the criminal. They believe most thoroughly in the axiom that opium and gambling are "the root of all evil" in Burma; in this I most fully agree. Such then being the case, I recommend that the sale of the drug be prohibited to Burmans and its possession by them declared illegal. Should so drastic a step not be

APPENDIX L.

possible, measures should be devised to make its sale as difficult as possible to them by ordering that sales be confined to licensed shops alone, and that all opium be consumed on the premises only. Possession of the drug outside the shop limits should be rigidly repressed. Opium-eating, I am of opinion, is the more common form of indulgence in the drug.

3. With regard to paragraph 6 of the resolution, I am of opinion that agency other than that of the police should be employed to stop illicit sales and that a secret detective force remunerated on the system of "payment by results" be started. This force should be auxiliary to the regular police, and the two forces should be a mutual check on one another for the prevention of blackmailing. In large towns it would be necessary to start an excise establishment.

4. With regard to the last portion of the same paragraph, I fear that but little help can be expected from the Burman luyis. Whilst loud in their expression of abhorrence with regard to the use of the drug, they are on the other hand equally apathetic about giving practical proof of this abhorrence by putting themselves out in any way or taking any real steps to prevent the spread of the evil.

5. If opium in Burma be prohibited, I entirely agree with the proposals for registering consumers of the drug as laid down in paragraph 7.

6. Regarding paragraph 8, I strongly recommend that Burmans be on no account allowed to take opium away from the shop for consumption at home or in a private den. It is the private and secret exercise of the vice which is most harmful, and it is in private dens that young men acquire the evil habit. The more publicity that attends opium consumption the less using of the weed will there be, for an opium-smoker or eater is universally looked down upon, and many a Burman would pause before he allowed himself to be stigmatised by the contemptuous epithet "bane sa."

From R. A. S. FANSHAWE, Esq., District Superintendent of Police, Henzada, to the DEPUTY INSPECTOR-GENERAL OF CIVIL POLICE, Burma.—No. 1394, dated the 9th October 1891.

In reference to Chief Commissioner's proceedings, Financial Department, No. 10E., dated the 29th August, regarding the checking of the use of opium among Burmans, and in reply to your letter, No. 6415-109M., dated the 6th October 1891, and received by me on the 8th October 1891, calling on me for an expression of opinion thereon, I have the honour to forward the enclosed report.

EXTRACT from the PROCEEDINGS of the CHIEF COMMISSIONER, FINANCIAL DEPARTMENT, Burma.—No. 10E., dated the 29th August 1891.

Subject.—Regarding the checking of the use of opium by Burmans.

Paragraph 2.—I forward certain statistics (Tables 1 and 2 attached) which may simplify those called for from civil surgeons and officers in charge of jails.

From my figures it would appear that the per-centage of opium-smokers in the jail population has increased over 22 per cent. in the past eight years. Possibly defective registration in former years may partly account for the extraordinary increase, but I would point out that during same period the sales from the treasury have increased by 51 maunds or 30 per cent. The per-centage of men addicted to opium consuming out of the total number convicted, sections 109 and 110 Criminal Procedure Code, namely, over 40½ per cent. goes a good way to prove that the use of the drug has not a beneficial effect.

Paragraph 3.—From information gathered in the town I find that the Chinaman almost invariably smokes opium, and an ordinary consumer of that race would take about 5 or 6 annas worth of opium in the day.

The Burman smoker consumes about double that quantity if he can afford it; but if his funds are low he will eat 4 to 5 annas worth. I think it will be allowed that taken internally the drug has a more direct effect than if smoked. The more popular form of consumption (when it can be afforded) is no doubt smoking, but the

object to be attained is to get under the influence of the drug; so eating is resorted to by the poorer class.

Paragraph 4.—I will take it for granted that from statistics and facts collected the conclusion is arrived at that the use of the drug is deleterious to the Burman race. The questions then arise—

- (a.) Is it necessary to protect them by law from taking opium?
- (b.) Is it possible to enforce the prohibition when alien races are allowed to indulge in the drug.

If it is necessary to stamp out the vice, would it not best be achieved by rendering the possession of opium by any persons in Burma penal? It would certainly be the most effectual means, and the principal of its doing good to the majority of the community at the expense of the minority would support the measure.

Probably such a sweeping restriction would not commend itself to Government. But it will be difficult, indeed, next to impossible, to prevent Burmans from obtaining opium if persons of other races can buy it; the only thing, therefore, is to render the purchase of the drug as difficult as possible.

The following suggestions are put forward for consideration. They are based on the presumption that opium must be allowed to alien races and to the confirmed Burman opium-smoker:—

- (1.) No sales to be made to Burmans other than to men of that race who enrol themselves during six months following the passing of the rules as opium-smokers.

N.B.—I think the stigma attaching to the name "beinza" or opium-eater, will prevent many Burmans from openly registering their names. The restriction as to age is, I think, unnecessary.

- (2.) All sales to be made by Government servants and a record kept of each sale in detail.

- (3.) All opium to be consumed on the premises and the possession of it outside the shop rendered penal.

N.B.—As regards the last suggestion, I am convinced that the habit of taking opium is much more frequently, in fact, I may say almost invariably, contracted in small dens in the town, and not in the opium shop.

Paragraph 6.—As regards the danger of blackmailing the Burman population by the police and the bribing of the police by the licensed vendors, the latter objection is at once met by Government vending the drug and the former danger reduced by having additional preventive agency. The Burman luyis would certainly, I think, render assistance if a certain number of them in each village were specially empowered under the Act, but it is doubtful whether they would act singly or unless specific authority was given to them to do so. Probably a circular order from the head of the Buddhist religion in Mandalay enjoining the pōngyis to strengthen the hands of Government by preaching on the evils of opium consuming would have the effect of inducing the luyis to render more assistance than they otherwise would.

STATEMENT OF SALES OF OPIUM for 1882 and 1890.

Year.	Quantity.	
	Maunds.	Seers.
1882	114	244
1890	165	2711

From H. S. HILL, Esq., Assistant District Superintendent of Police, Bassein, to the PERSONAL ASSISTANT TO THE DEPUTY INSPECTOR-GENERAL OF CIVIL POLICE, Burma.—No. 7133, dated the 18th November 1891.

In accordance with your letter, No. 5874-109M., dated the 14th September 1891, and subsequent reminders, I have the honour to submit my report on the points called for.

2. I attach a statement herewith which shows the figures as regards use of opium by Burmans, the number of opium-eaters who have taken to crime, and those physically wrecked thereby in three of the largest towns in the Bassein district, but I am afraid these figures are not reliable as it is very difficult to get correct statistics on these points. This statement shows that in Bassein town out of 346 opium-smokers only two have been physically wrecked (a very small percentage) and 69 have taken to crime. In Ngathainggyang the type of opium-eater is evidently worse: out of 73, 44 have become physically wrecked and 23 only taken to crime. In Myaungmya the opium is evidently not so noxious, as only one man is said to have become a physical wreck; out of 107 consumers only 23 of them have taken to crime. These figures are for Burmans only.

3. As regards paragraph 3, amongst Burmans opium-eating is the common form of consumption and smoking amongst Chinese and natives of India.

4. With reference to paragraph 4, I would suggest that the use of opium should be prohibited to Burmans and that Burmans found in possession of opium, however small the quantity, should be prosecuted for illegal possession. But to allow for confirmed opium-eaters to whom the stoppage of opium might mean death, I would allow it to be issued under the following restriction. Township officers to submit lists of number of such consumers within their jurisdiction, and a certain amount of opium to be sent to the township officer weekly or monthly, according to the numbers submitted at a fixed amount per man to be issued by him on certain days and in public at his court. Those whose names are not registered on the township officer's roll within a month, after due notice, not to be supplied. Chinese and other races to be allowed to purchase and consume opium only on the premises of a licensed shop. Amount of sale to each person to be limited to maximum amount actually consumable in a day of 12 hours. Licensed to have register of Chinese and men of other races who frequent his shop; possession anywhere else to be criminal. This would, I think, check smuggling to a great extent and make it easier for the police to check. It is a common thing now for Chinamen and others to buy three "tolas" at a time and sell it in small quantities on the quiet, and these illicit sales are very difficult to detect. But if possession is made illegal for all, I think it will be not so hard to check illicit sales, and it is, after all, no hardship for those who take opium to smoke or eat it in a shop. It is granted everywhere that the use of opium leads to crime. Therefore if all opium-smokers had to congregate at the shops it would strengthen the hands of the police and they could always be watched and supervised, and criminal opium-eaters if wanted would be sure to find their way to the shop sooner or later. The best preventive agency against smuggling, in my experience, both in India and Burma, is not the police, but specially selected detectives paid by the job, that is, given rewards according to the amount they seize. The system of rewards as at present worked, so far as I have seen, affords no encouragement to the police and they can do far better by taking a monthly stipend from the Chinese dealers and license holders to simply keep their eyes and ears shut and also run very little risk. Informers in the same way find they can get better paid

to refrain from giving information thereby assisting the Government.

APPENDIX I.

5. Anent paragraph 6 I doubt that the measure proposed would increase the police blackmailing, and whilst in Upper Burma I do not remember noticing the blackmailing being any more than it is in Lower Burma; as I said in my last paragraph I think to deal successfully with opium smuggling and illicit sales a special detective agency is far better than the regular police, any way it pays for itself and cannot injure the working of the police. I would suggest three or four picked detectives, according to the size of the district and number of opium shops, to be under the District Superintendent of Police and paid only by the job, that to say, up to at least 50 per cent. of the value of the opium seized. I have had opium detectives under me in India paid by the month and found them an utter failure. I dismissed them and when they found they had to work for their keep, &c. more cases were detected and they made more money in a month than they could in a year on the old system.

6. As regards utilizing the strong anti-opium feeling of the luyis, I am afraid it is useless. What have they done up to date, and what is there to show they will be any more zealous or energetic to support Government now.

7. As regards paragraph 7 I have made proposals for confirmed Burman opium-eaters or smokers in my paragraph 4.

My views with reference to paragraph 8 are that a Burman if not yet a confirmed opium-smoker does not like and is ashamed of going to and smoking or eating opium in a public shop but much prefers consuming it on the quiet, and that if bound to go to these public dens of vice he would more probably give it up than otherwise. I would as stated before herein—

- (1.) Make consumption and possession of opium by Burmans illegal, except for those registered as confirmed consumers.
- (2.) For Chinese and other races make possession and consumption illegal, except within the premises of a licensed shop, and limit the amount to be sold to the maximum quantity consumable in 12 hours.
- (3.) Licensed vendors to keep a register showing—
 - (a.) Amount received from depot.
 - (b.) Name of purchaser and amount sold.
 - (c.) Amount sold daily up to 9 p.m.
 - (d.) Daily balance at 9 p.m.

In conclusion I must apologise for not submitting this report before, but owing to my not getting the statistics called for till the 17th, I was unable to do so till now.

From W. G. SNADDEN, Esq., District Superintendent of Police, Shwegyin, to the DEPUTY INSPECTOR-GENERAL OF CIVIL POLICE, Burma.—No. 103-111, dated the 4th November 1891.

With reference to your letter, No. 5876-109M., dated the 14th September 1891, I have the honour to attach a statement showing the number of Burman opium-smokers and eaters in certain selected towns and villages in this district.

From this statement it will be seen that over 50 per cent. of the Burman opium-smokers and eaters are known to have taken to crime, the majority of whom have become incapacitated from manual labour on account of the deleterious effect of opium.

The 17 opium-smokers shown as physically wrecked are those who have been so affected by the use of opium that they cannot even move about.

With reference to paragraph 4 of the Chief Commissioner's Resolution, I see no reason why the prohibition of the possession of opium by Burmans in Lower Burma could not be enforced, provided that all Chinese, Shans, and other non-Burman races using opium were properly registered and only sufficient opium sold to them for their daily use.

With regard to paragraph 6 of the Chief Commissioner's Resolution, I am of opinion that if all opium-smokers and eaters of non-Burman races were registered, and licensed opium vendors were only allowed a sufficient quantity of opium for the use of their registered customers, illicit sales of opium to unregistered persons would practically cease for lack of opium, and there would be no object for the licensed vendors of opium bribing the police to overlook illicit sales of opium.

Ywathugyis might with advantage be appointed to act as full powered officers under the Opium Act.

APPENDIX L.

With regard to paragraph 7 of the resolution I cannot suggest any other measure to mitigate the effect of the sudden stoppage of opium on Burmans who are too old to break themselves of the habit than that proposed in the resolution.

With regard to paragraph 9 of the resolution I am of opinion that all opium should be consumed on the premises of the licensed shop and that no opium should be taken out of the shop for the following reasons :—

- (1.) That the frequenters of the opium shop could be more easily supervised by the police and ywathugyis, and the presence of a non-registered opium-smoker or eater detected at once.
- (2.) The presence of a number of persons would deter the police from blackmailing or taking bribes from the licensed vendors of opium.

Enclosure No. 3.

BURMA.

Financial Department, No. 429-1E.

From W. F. NOYCE, Esq., Secretary to the Financial Commissioner, Burma, to the SECRETARY TO THE CHIEF COMMISSIONER.

SIR, Rangoon, January 22, 1892.
WITH reference to your letter, No. 277-24E., dated the 14th April 1891, and in continuation of this

1. From Commissioner, Southern Division, dated 8th June 1891, with enclosure.
2. From Commissioner, Central Division, No. 2145-9E., dated 13th June 1891.
3. From Commissioner, Central Division, No. 2041-12E., dated 6th June 1891.
4. From Commissioner, Pegu, No. 159-42E., dated 10th July 1891, with enclosures.
5. From Commissioner, Northern Division, No. 24-2C., dated 13th July 1891, with enclosure.
6. Endorsement, No. 261-42E., dated 16th July 1891, from Commissioner, Pegu, with enclosure.
7. From Commissioner, Eastern Division, No. 2103E., dated 4th August 1891, with enclosures.
8. From Commissioner, Pegu, No. 17942E., dated 10th August 1891, with enclosure.
9. Endorsement, No. 851-14-91, dated 10th August 1891, from Commissioner, Arakan, with enclosure.
10. Endorsement, No. 353-42E., dated 19th August 1891, from Commissioner, Pegu, with enclosure.
11. Endorsement, No. 2822, dated 24th August 1891, from Commissioner, Eastern Division, with enclosure.
12. From Commissioner, Tenasserim, No. 13-13, dated 17th October 1891, with enclosures.

office letter, No. 46-4E., dated the 4th January 1891, I am directed to forward copies of the letters cited in the margin, together with a note by the Financial Commissioner, on opium dens in Burma.

I have, &c.

(Signed) W. F. NOYCE,
Secretary to the Financial Commissioner.

NOTE by the FINANCIAL COMMISSIONER on Opium Dens in Burma.

1. *Lower Burma*.—No reports have been received for the districts of Kyaukpnyu, Sandoway, Salween, Arakan Hill Tracts. No figures are given in the Hanthawaddy and Thongwa reports. The statistics for Bassein are incomplete. The Deputy Commissioner of Pegu reports that there are no opium dens in the district. The report of the Deputy Commissioner, Akyab (outside of the town), was forwarded to the Secretary to the Chief Commissioner with Secretary to Financial Commissioner's letter, No. 4-64E., dated the 4th January 1892.

2. In the districts and places marginally noted attempts have been made with varying success by the Deputy Commissioners to ascertain the number of opium dens. The inquiry appears to have been most thorough in Henzada, Tharrawaddy, Shwegyin, Prome, and Amherst. The total number of opium dens reported in these 12 districts is 1,236, or an average of 103 in each district. In Henzada there are 192, in Tharrawaddy there are 350, in Prome there are 105, and in Amherst 273; giving a total of 920 for these four districts, or an average of 230 for each district. The Deputy Commissioner of Shwegyin has gone into considerable and instructive details regarding the importers and vendors of opium, but he has not reported the number of opium saloons. The people of the Kyaukpnyu and Sandoway districts are notorious opium-eaters and smokers. The Deputy Commissioner of the former district reports that "the people of this district are poor as a class because they smoke and

"eat opium to excess," and that "illicit traffic (in opium) is carried on briskly." The Commissioner of the Arakan Division is of opinion that there are 20,000 opium-smokers and opium-eaters in the three districts of his division. The Deputy Commissioner of Thongwa reports that the Chinamen in villages "almost all sell opium." The Deputy Commissioner, Bassein, reports that "there is an opium den in nearly every large village." The Deputy Commissioner of Shwegyin reports that there are 42 habitual importers and 51 habitual vendors of opium, although there is no licensed opium shop in the district. In Tharrawaddy 350 opium dens have been found to exist, although there is no licensed shop. Taking these facts into consideration I am of opinion that the extent to which opium is consumed can only be adequately estimated by adopting the average of the four districts of Henzada, Tharrawaddy, Prome, and Amherst. If that average be adopted for the 17 districts (excluding Salween and Arakan Hill Tracts), we arrive at a probable total of 3,910 opium dens in Lower Burma. I believe this is under the mark. The reporting officers have not been able, in most cases, to ascertain the number of persons who habitually frequent these dens. If the figures given for the Prome district be taken as an indication, there would be about 10 to each den, or 39,100 such persons in Lower Burma. But on the other hand the Commissioner of Arakan reckons that 5 per cent. of the population of his division smoke or eat opium. If his estimate be accepted and applied to the rest of Lower Burma, we arrive at a total of nearly 200,000 opium-smokers and eaters; and I regret to say that, in my opinion, this startling number represents more nearly the extent to which opium is at present consumed in Lower Burma than the 39,100 given above. One of my reasons for this belief is the extraordinary prices fetched by opium licensees and the large transactions of the licensees in places where the Chinese,—who are always held up as the most inveterate opium smokers,—are comparatively few in number. Take, for instance, the license in Yandoon, in the Thongwa district. This license was sold in 1890-91 for Rs. 20,100; in 1891-92 (the present year) it fetched Rs. 28,900. The issues of opium from the treasury to the licensee in 1890-91 amounted to 6,380 seers, or nearly six tons, for which he paid Rs. 204,160. There are only 260 Chinese—men, women, and children,—all told in and near Yandoon. If each man, woman, and child of this Chinese community uses one tola of opium each day in the year, their aggregate consumption is about 1,200 seers. Where do the remaining 5,180 seers go? They unquestionably find their way into the surrounding villages and townships, and are there consumed greedily and secretly. This is only one of many similar cases (for instance, Akyab, Prome, Bassein) which I could cite. But even these give but an imperfect idea of the extent of the consumption; for they only refer to licit opium and take no account of the large quantities of opium that are smuggled into the province by sea from India.

3. So far as the figures and reports of the Deputy Commissioner go it appears that a considerable number of the opium saloons are kept by Chinamen, but that the majority are kept by Burmans. It seems to be beyond doubt that the keeper of almost every den sells opium to his guests, and receives and disposes at a profit the refuse opium left at the bottom of the pipes by the smokers. In most of the saloons "kunbôn," a seductive preparation of betel leaves fried in opium, is sold and smoked. Opium-eating goes on at home; it requires no pipes and other appliances, and can be carried on unobserved.

4. The general opinion seems to be that the licensed opium farmers not only wink at but directly encourage these opium dens. I agree in this opinion. The object of the opium farmer is to encourage a taste for the drug. He is invariably a Chinaman, and a member of a secret society or masonic lodge. He has at call a number of fellow members who are engaged in trade all over the country. Members of a rival lodge will not interfere with his operations or inform against him because next year they may secure the license, and they know that they will then have to depend on the silence of the present licensee and his friends for safety in their opium transactions. The licensee sends out his emissaries, who start saloons, entice young Burmans with the seductive "kunbôn" and get some of the habitual Burmese smokers to set apart a quiet smoking chamber for the Burmese beginners. So the taste spreads year by year and the profits of the farmers

increase. In Shwegyin and Tharrawaddy there are no licensed shops, and yet in the former district there are 42 importers and 51 vendors of opium, and in the latter district there are no less than 350 opium dens.

5. It has been said in certain high quarters that the injurious effect of opium is open to question. Upon this point I shall have occasion to say something hereafter when the results of inquiries now being made reach me. A parallel has been drawn between liquor drinking and opium-smoking and eating; and it has been said that the latter does no more harm than the former. I have seen a good many liquor-drinking and opium-eating and opium-smoking Burmans; and I have spoken to a great many respectable Burmese, both men and women, about liquor and opium. Whatever may be the effect of opium on other races there can be only one opinion as to its effect on a Burman. It is damnation to him body and soul. He is an outcast from the moment he takes to the drug. His own parents say of him, when he comes to his home, "He only comes to steal." He knows that he is an outcast, resigns himself to his fate, rarely if ever attempts to recover himself, takes to pilfering, is a pest and byword in the neighbourhood, and frequently ends in jail. A Burman is naturally excitable; a Chinaman is cold-blooded. A Chinaman can apparently take opium in moderation without hurt. A Burman is floored at once by the drug, even taken in moderate quantity; but he no sooner feels its soothing effects than he takes to it in excess. The difference (which is often overlooked I think) between the effect of liquor drinking and the effect of opium-smoking or eating on a Burman, seems to be that whereas liquor in a *satisfying* quantity does not injure him, or indeed anybody else, opium in however small a quantity produces immediate, permanent injury. I mean by this that a Burman, like a Chinaman or a European, is satisfied with, say, a quart of beer and it does him no harm. But if he takes a quarter tola of opium he becomes a changed man, while the Chinaman beside him who has smoked a tola is not a whit the worse. Tharrawaddy and Shwegyin were the most disturbed districts in Lower Burma during 1886-1888. These are the two districts in which the consumption of opium appears to be most prevalent. The coincidence may be unimportant, but it is worth noting.

6. *Upper Burma.*—In Upper Burma there was evidence, till lately, to show that the Burmese were taking to opium. The law, however, now happily makes possession of opium by a Burman in Upper Burma penal; and, if the law is vigorously enforced, there is every likelihood that the tendency will be nipped in the bud. But there are a considerable number of opium dens in Upper Burma. In Mandalay town there are 40, in the district of Bhamo there are 20. These are largely frequented by Chinese and Shans. In Meiktila district there are 30, in Yamethin eight, and in Minbu 11 opium dens. In Ye-a there is one. In Pyinmana there are said to be 30 Burmese opium-smokers. So far therefore as these reports go, and my experience leads me to think that they are accurate, opium has not made much head in Upper Burma as yet. But the change in the law was only just in time. The wily Chinamen were beginning their operations and ere long would have brought numbers of the younger Burmans into their toils. The risk is now too great. A Burman in possession of any opium may now be arrested; once under arrest he is pretty certain to disclose the name of the person who sold it to him, and the law swiftly overtakes the vendor.

7. I would only remark in conclusion that it appears to me to be a grievous wrong to the Burmese of Lower Burma to permit the free sale of opium. The damning effects of the drug on the Burman are known and admitted on all hands. The people are unanimous in their condemnation of the use of opium in any form. Their religion and their religious teachers prohibit it. Their elders admonish and remonstrate against the use of the drug. Surely they have a right to be heard in a matter which vitally concerns the well-being of their race. They wish opium in any form or quantity to be forbidden to Burmans because they consider indulgence in it to be a sin, and in my opinion they are perfectly right.

DONALD SMEATON,
Financial Commissioner.

January 5, 1892.

From F. S. COPLESTON, Esq., Commissioner of the Southern Division, to the FINANCIAL COMMISSIONER, Burma, dated the 8th June 1891.

APPENDIX I.

IN compliance with your letter, Financial Department, No. 631-64E. (Opium), dated the 23rd April last, I have the honour to submit the following report.

In Myingyan district there are no opium dens of the kind found in Akyab. The Deputy Commissioner, Pakókku, reports that he has made inquiries and has heard of no such places in his district. I subjoin a copy of part of the report submitted to me by Lieutenant Aplin, in charge of the current duties of the Deputy Commissioner, Minbu. It is believed that there may be four or five opium dens in Minbu, one in Sagu, three in Salin, and two in Sinbyugyun. It is hardly credible that in so small a town as Minbu there should be at one time as many as four opium dens. Having, however, regard to the facts detailed by the Deputy Commissioner, Minbu, it appears to me probable that there may be dens in Myingyan and Pakókku, though unknown to the police officers and district officers; and I shall instruct them to make careful inquiry. No pains will be spared to suppress any such institutions as the dens under report.

I ought to add that the District Superintendent of Police, Myingyan, an able officer, says he is certain that there are no opium dens in Myingyan town. In Magwe district there are believed to be no opium dens.

EXTRACT from Report of Lieutenant S. L. APLIN (for Deputy Commissioner), MINBU, dated the 29th May 1891.

* * * *

There are now in existence in the town of Minbu four or five opium dens. The owners of the houses provide their customers with a mixture of opium and betel leaves which is called "kumbôn." This mixture is sold at the rate of one anna for two annas weight. These dens are habitually resorted to by opium-smokers who are mostly Burmans, though a few natives of India are among the number. The owners of opium dens, similar to these, were arrested, tried, and convicted a short time ago, and as the police are on the alert and are making every effort, I hope that very soon further arrests and convictions will follow.

In the town of Sagu it is suspected that there is at least one of these opium houses now in existence. One was discovered and the owner of it tried and convicted a short time ago, but although there is the suspicion that this was not the only opium den in the town, as yet nothing is actually known to prove the existence of any others.

In the town of Salin there are three dens kept and frequented by Burmans. The owners of these dens buy opium from the Sinbyugyun licensee through middlemen, and retail it at a profit in Salin, where there is no shop. They supply pipes, lamps, &c. to the smokers free of charge, and allow them to smoke in their houses.

They take the residue of the opium left in the pipes, doctor it, and sell it to opium-eaters. The number of persons daily visiting these dens are in one case from six to eight persons, and in the others from three to four each. The police have been instructed to watch these houses carefully, and to make frequent and sudden descents upon them at all times. Since this order has been issued the owner of one of these dens has been arrested, convicted, and sentenced to four months' rigorous imprisonment.

In Sinbyugyun there are two opium dens owned by Chinamen, who buy their opium from the licensee and retail it to Burmans. The opium is smoked in the dens, and no fees are charged for the use of the house or the pipes. The only source of profit seems to be the sale of the residue left in the pipes to the poorer opium-eaters in the town.

The same instructions have been given to the police here as in Salin, and as so much concerning these dens and their frequenters is known, arrests should very soon be made.

From the above report it will be seen that, exclusive of the Môn sub-division, there are in the district no less than nine opium dens, which are known to exist. It is not improbable that there are others in existence which are not known. There is no doubt that if the police make continual descents on these opium dens, and if seizures are made from time to time, opium-

APPENDIX L.

smoking will become a risky habit, and the number of these dens will be reduced.

From Major C. H. E. ADAMSON, C.I.E., Officiating Commissioner of the Central Division, to the FINANCIAL COMMISSIONER, Burma. No. 2145-9E., dated the 13th June 1891.

WITH reference to your confidential, No. 631-64E. (Opium), dated the 23rd April 1891, I have the honour to submit the following remarks. The Deputy Commissioners of Upper Chindwin, Lower Chindwin, and Sagaing report that they have made inquiries and that they are of opinion that there are no such opium dens, such as those mentioned as existing in Akyab, in their districts.

The Deputy Commissioner, Sagaing, reports that he has not come across a single Burman in his district who is known to be an opium-smoker.

Major Eyre reports from Mònywa that he believes there are only some 60 opium-eaters in his district, and that about one-half of these live in Mònywa itself. He reports that being personally aware of the existence of opium dens in Paungdè and Rangoon he made personal inquiries some time ago and satisfied himself that they did not exist in Lower Chindwin. I may mention that there is one opium shop in Mònywa from which the revenue is steadily falling off.

The shop sold in 1888-89 for Rs. 3,630, in 1889-90 for Rs. 3,050, and in the present year for Rs. 2,360.

In Ye-u Mr. Stevenson reports that there are no opium dens in Ye-u town or district, but that there is one house in Ye-u town where opium-smokers or eaters congregate, but that the owner of the house receives no fee. He estimates the number of Burmese smokers in Ye-u town at about 20 only; and there are also a few Chinamen and one native of India. In the district he thinks there are very few smokers.

The opium which is consumed in Ye-u town is brought from Shwebo, whence it is said to be brought from Malt, Mògok, and Mandalay. It is also said to be obtained from Wuntho. A Chinaman living in Ye-u is said to bring it to Ye-u and retail it to a Burman. I have asked the Deputy Commissioner to use his utmost endeavours to arrest the Chinaman in the act.

From these reports and from my own observation I am of opinion that among the agricultural population in the plains that the use of opium is by no means common, and that were it not for the action of Chinese smugglers there would be no difficulty in keeping its use well within bounds; but wherever the Canton Chinaman settles, he introduces the drug and teaches the Burmese to indulge in it. The report of Mr. Stevenson suggests that in Ye-u this teaching has already begun.

I beg to refer you to my letter, No. 2041-12E., dated the 6th June 1891, which should have been written in this connexion instead of in connexion with my revenue report, and I ask you to be good enough to consider it as a portion of this report. I quote below a paragraph of Mr. Stevenson's report, and I have to state that it was he who first suggested to me the advisability of having open spaces round all opium shops:—

"I would beg to suggest that, if licensed opium shops were compelled to have a clear space of 30 yards round their premises, it would act as a considerable check on illicit opium selling. It will have been observed by many besides myself that Chinese opium licensees *love* to have their shops very often in dark and crowded parts of a town. I feel quite sure that this greatly facilitates the sale of illicit opium. It would also act as a check on opium-smokers themselves if they had to run the gauntlet of public observation every time they entered an opium shop, which they would be liable to do if the shop had clear spaces round them."

In the hills joining the Shan States and in the Chin country of course opium is extensively used, and no doubt a certain quantity is smuggled through the country to the large towns.

From Major C. H. E. ADAMSON, C.I.E., Officiating Commissioner of the Central Division, to the FINANCIAL COMMISSIONER, Burma.—No. 2041-12E., dated the 6th June 1891.

IN connexion with the Excise Administration Report which has lately been sent to your office, I have the honour to observe that it has been suggested by me, with reference to the illicit traffic in opium to retail license-holders, who are accused of being the chief offenders in this respect, that it would be a very great check on them if each retail licensed vendor was obliged under the terms of his license to have his licensed premises in a place entirely unconnected with all other buildings. This idea seems to me to be worthy of consideration before the licenses are sold for the ensuing year.

In towns like Rangoon and Moulmein, where land, especially in the busy parts of the town, is scarce and very expensive, there will probably be found difficulties in carrying out this suggestion, but in Upper Burma, even in the town of Mandalay, I do not think that these difficulties are insuperable. I would suggest that in all towns in Upper Burma, where it is considered advisable to establish a shop for the retail sale of opium, that Government should acquire a piece of land of certain dimensions, which should be set apart for the opium shop, and that on this piece of ground Government itself should either erect a building which would be rented year by year to the purchaser of the retail license, or that the purchaser of the license be compelled under the terms of his license to build a house after a plan to be approved of by the Deputy Commissioner, which house, at the end of the year, Government would take over at a valuation to be repaid by the succeeding license-holder. This house should stand in a fenced compound with either one or more gates, and a space of 50 feet at least on the outside of this fence should be kept clear of obstructions of any sort.

At present a Chinaman prefers to have his opium shop in the narrowest streets and as much as possible surrounded with houses and outhouses. The reason of this is that it affords him facilities for illegally removing opium from his shop without detection. If the house were to stand by itself apart from all other houses and open to inspection from all sides, these facilities would be greatly curtailed. Such a plan as the one I have sketched out would be most unpopular among the license-holders. They would allege that they suffered heavy losses because the people who wished to purchase opium would not like to come openly to their shops, and possibly there would be a considerable loss on the sale of licenses, but I am of opinion that legal sales would not be much affected. No Chinaman is ashamed of being seen buying opium, nor are the natives of India who use the drug of the class who, away from their own country, would have any scruples about being seen entering the opium shop for a lawful purpose.

The people whom it would keep away are those Burmese, police among others, who use the drug furtively, knowing if they are seen entering the shop that they will be lowered in the estimation of respectable Burmese. The license-holders will also object to the position chosen by the Government for the shop. They will say that it is not in the proper quarter, and that people will not frequent their shop in such a place.

I submit that this is the object of the Indian Government. It does not want to encourage a taste for opium, but it wishes by controlling the sale to render it possible for persons to whom it has become a necessity to obtain a supply legally. To persons of this class the fact of their having to walk one mile or half a mile further will not be a hardship.

If it is found a hardship, or if, rather than walk a mile to get the drug, they would rather do without it, then I submit that these are the people to whom it is a luxury, not a necessity, and whom it is our object to keep away from it. If due notice is given before the sale of the licenses of these terms, the persons who purchase the licenses will do so at their own risk, and, if they lose money, they will have no claim for compensation.

If there is any great falling off in the prices paid for the licenses, it will only go to prove that the licenses are now held as a cloak for providing opium to people who would not indulge in the use of the drug except for the attractions and convenience caused by the opium shops.

It will be at once apparent that it will be useless to try the scheme in one or two places only to be effective. Every shop, at any rate in Upper Burma, must be placed on the same footing.

To originate this scheme will not at present be attended with nearly as much loss now as it will be some years hence, when the growing revenue from opium shall have greatly increased. I feel confident that the police will be much assisted in putting a stop to the illicit sales which now go on if this or some similar arrangement be made.

From Colonel G. A. STROVER, Commissioner of the Pegu Division, to the FINANCIAL COMMISSIONER, Burma.—No. 159-42E., dated the 10th July 1891.

WITH reference to your letter, Financial Department, No. 631-64E. (Opium), dated the 23rd April 1891, forwarding a copy of letter, No. 630-64E., of the same date, addressed to the Commissioner of Arakan regarding opium dens in the Akyab town and district, and calling for a report in detail in respect of such houses or places in this division, if they exist, I have the honour to state that it would appear from the reports of district officers similar opium dens are to be found more or less.

2. I annex copies of reports as per margin. The Deputy Commissioner, Tharra-waddy, informs me that he will not be in a position to submit a report for some little time as his inquiries are not completed. I think it unnecessary to delay my report. In Rangoon town there are reported to be 111 such dens. They are maintained by the owner or occupier, who so far as is known receives a small fee for the use of pipes and for the use of the room. Both Burmese and natives of India resort to these places. They at times bring their own opium and at times it is obtained for them in small quantities. Steps have been taken to suppress the illicit sale of opium at these dens, but, as remarked by the district magistrate, "the keepers of these dens are men of cunning, old in the business, and know the state of the law on this point and are ready to prove that opium has been obtained at the licensed shops." In Prome town there are said to be 25 such houses, and in the Prome subdivision 68. In the Paungdè subdivision there are 40 such places, and in the Shwedaung subdivision 12. It is reported that the owners of these dens do not receive fees. This I should say is open to question. In the Pegu district no such dens have been discovered.

3. It may, I think, be generally accepted that opium-smoking places exist in all districts, and that they are generally resorted to by opium-smokers, Burmese as well as natives of India; but that they are not resorted to in such numbers as to excite particular suspicion or to be a public nuisance. It may also be accepted that these dens are in a manner countenanced by the farmers of Government opium, who are invariably Chinamen, and who for reasons best known to themselves do not give information against the owners or occupiers of such places. There can be not the slightest doubt that considerable quantities of Government opium are consumed elsewhere than in the licensed opium shops, or in other words are surreptitiously disposed of and smuggled away for sale in obscure places, whether in a town or in the interior of a district. The very large sums realised for opium licenses are sufficient proof of this, not to mention the large seizures of opium which occasionally occur. The profits on illicit sales must be very considerable in order to make it worth the while to run the risk of detection. Then it has to be remembered that the secret societies of the Chinese deal amongst other matters with punishments in connexion with their own race for criminal offences. Fines can be paid from general funds, and compensation be awarded to those who have to undergo personal punishment, if such is decreed by those who are entrusted with the management of the societies.

4. The mere fact of smoking opium in the house of another man is not illegal, provided that the law in other respects is not infringed. Opium is presumably sold or farmed for the purpose of being consumed. There is no law to the effect that opium is not to be consumed elsewhere than in the licensed opium shop, or that a man may not smoke opium in his own house and allow his friends to come in and smoke with him, provided he does not by so doing create a public nuisance. The only really effectual remedy then appears to me to be to declare by law the mere possession of opium in any quantity whatever without the limits of a licensed opium shop, illegal and punishable, and to provide that all licensed shops shall be so situated as to be well under the supervision and control of the police, and to have accommodation for a reasonable number of opium-smokers at any one time. There are, of course, objections to such a drastic law. There are many well-to-do men who smoke opium in moderation in their own houses, and who would not care to resort to an opium shop and mix with all shades of characters. A law prohibiting the use of tobacco except in a licensed smoking divan would scarcely be justifiable and would certainly not be appreciated. Opium-smoking, however, is somewhat different. Nevertheless to prohibit mere possession would constitute a hard law, and would probably not suppress illicit dealing in opium. The opium revenue would also without doubt fall off to a large extent.

5. On the whole the best plan will perhaps be to suppress by law all opium-smoking dens, and to declare that any house or place which is resorted to by the public for the purpose of smoking opium, whether fees are paid and pipes supplied or not, will be considered as an opium den and the owner and occupier thereof be liable to punishment accordingly. This would not affect the smoking of opium in private dwelling-houses by the owner or occupier thereof, or his friends, &c.

From Major CRESSWELL, Deputy Commissioner, Prome, to the COMMISSIONER OF THE PEGU DIVISION.—No. 1 A.X. dated the 8th June 1891.

I HAVE the honour to acknowledge your confidential No. 478, dated the 25th April 1891, forwarding Financial Department, No. 631-64E. (Opium), dated the 23rd April 1891, from the Secretary to the Financial Commissioner, in which he refers to No. 630-64E., dated the 23rd April 1891, directed to the Commissioner of Arakan asking about opium dens in the Akyab town and district.

The questions are—

- (1.) Do houses or places of the sort exist in your district?
- (2.) If so, how many and how maintained?
- (3.) Whether the owners get fees as discovered in the case of Akyab?
- (4.) Whether the places are habitually resorted to by opium-eaters and smokers?
- (5.) If so, to what races and classes they belong?
- (6.) Whether there is any reason to believe that opium is sold in them?
- (7.) What steps have been taken to detect and suppress the sale of opium in them?

Answers.

(1.) There are no houses in the district where opium smokers are received on payment of a fee for the use of the pipes, room, &c. but there are houses in which men assemble together after dusk to smoke opium together, and there is little doubt that opium is supplied on sale if a man comes there without his opium.

(2.) A list is given as sent in by the Superintendent of Police, Prome Town, and also by subdivisional officers of Prome, Paungdè, and Shwedaung. These houses are the meeting-places of friends and relations; outsiders are not received. They are used by men who have no place in their own houses to smoke, and do not want to have it generally known that they smoke opium. The owner of the house is probably a respectable man and, as before remarked, supplies the opium and makes a recognised profit in return for allowing the opium-smokers to assemble in his house, or possibly it may be done for general convenience.

A respectable man, an opium-smoker, will not go to the opium shop to buy opium, but will commission some one else to buy for him.

(3.) House-owners do not get fees as discovered in Akyab.

(4.) Only friends and relations are received, not outsiders.

(5.) Confined to Burmese.

(6.) There is reason to believe that opium is sold in them.

APPENDIX L.

(7.) To detect and suppress the sale of opium in these shops will be a very difficult matter. As has been above remarked they are generally houses kept by respectable people, who do not wish their vices to be generally known, who have a convenient place for smoking and who allow their friends to come and smoke in these places. Illicit sales of opium are not, says the Superintendent of Police, carried on to any extent in this district; in fact, with opium shops at Thayetmyo and Prome there is no necessity for it; still as a matter of convenience and profit the house-owner does find his guests with opium at a price.

A house like this kept by bad characters would be overhauled by the police at once, but to act effectually in these cases is far more difficult; people in Prome are well up in the Opium Act. To search these houses at night for opium will require the collector's warrant; no opium above 3 tolas will be found and no evidence of sale will be forthcoming. One of my subdivisional officers recommends as a remedy that the police be allowed to search for opium by night as well as by day, but I cannot recommend that this change in the Act

be made. It would be a fertile source of oppression and blackmailing. Orders will be given to suppress these houses as far as possible and run in the owners if information can be obtained to prove the sales. If the presumption was that a man who received opium-smokers into his house also sold them opium, these places could be broken up at once. Let that be made a legal presumption and the thing is done. But as remarked above all the opium found in the Prome district will be Government opium.

The people know the opium law well and, if the cases against the owners of these houses are not carefully managed, we shall have the police continually prosecuted under section 18 of the Act. I have one case before me at present. The only method to stop opium-smoking is that mentioned in paragraph 3, making the mere possession of opium punishable, and, of course, shutting up the opium shops. This would for a time cut off the main body of the people from opium, and many, no doubt, would give it up entirely. The advance of education must be left to do the rest.

MAUNG HME,
Subdivisional Officer, Shwedaung.

From S. H. T. DE LA COURNEUVE, Esq., Deputy Commissioner, Pegu, to the COMMISSIONER OF THE PEGU DIVISION.—No. 91-1, dated the 15th June 1891.

WITH reference to your confidential, No. 478, dated the 25th April, I have the honour to report as follows:—

2. I have made extensive tours since the receipt of your letters and have been in a position to inquire from all sources on the subject.

The result of my inquiries establishes in my mind that no such opium dens as described in the Financial Commissioner's letter exist in this district.

Opium-smoking outside the licensed house in Pegu is almost unknown in the district, the opium consumed being principally taken raw. That this is correct I believe, and I am supported in my belief when one considers that in the many searches for opium and other property, the pipes and paraphernalia requisite for opium-smoking are seldom found.

Amongst the Burmans the preparing of the opium for smoking purposes is too much trouble and I believe they prefer taking it raw.

From J. S. D. FRASER, Esq., Deputy Commissioner, Rangoon Town district, to the COMMISSIONER OF THE PEGU DIVISION.—No. 642-33-3R., dated the 20th June 1891.

WITH reference to your Department, No. 478, dated the 25th April 1891, I have the honour to say that on inquiry it is found that there are 111 such houses as those referred to supposed to exist in Rangoon.

2. They are maintained by the owner or the occupier who so far as is known receives a small fee for the use of pipes and for the use of the room. The smoker sometimes brings his own opium, which may or may not have been obtained at the licensed shop, but it is taken to these houses only in small quantities; perhaps, in some instances, in the mild form of *kaubon*, a preparation of dried betel leaf steeped in opium and cut up like tobacco.

3. After the process of smoking is over the residue is left as the perquisite of the house-owner and in some cases as the sole fee for the use of the pipes and the room. It is probable this refuse is worked up and disposed of to other frequenters of the den and is included in the hire of the pipe and the room usually to those who cannot afford to use the purer form of the drug.

4. It is true that opium is otherwise illicitly sold in these dens and in some cases the owner of the den gets it for the smoker from the licensed shop.

5. It may be that these dens are resorted to instead of the licensed opium shops because the latter have not sufficient accommodation and because the smokers prefer a more quiet place where they can go with their friends or where they can obtain the services of an experienced friend to assist them in filling the pipe.

6. On this point the Superintendent of Police writes as follows: "The process of opium-smoking is well known. Still I give a short account to recall the facts. A small piece of opium is placed on a wire and held over a lamp till roasted to the proper stage; it is then placed on the pipe, the smoker gives a deep inhalation; this process is continued several times. As the smoker becomes more and more under the influence of the drug he becomes less capable of attending to his pipe, so that at that stage the services of an experienced attendant are required. I mention these facts to show the natural tendency to use smoking dens."

7. The assistance found necessary to the confirmed opium-smoker is not always obtainable at the licensed shops, so the smoking dens are resorted to, where the smoker finds quiet and comparative luxury.

8. These dens are habitually resorted to by Burmans and natives of India, who have acquired the habit of using the drug, and I understand that they have existed for a good many years.

9. Steps have been taken to suppress the illicit sale of opium at these shops from time to time, and recently a case arose in which two men went to one of these dens; they had no opium, so the house-owner or keeper of the den was given 8 annas; he went to the licensed shop and purchased the opium, which was smoked by the two men, the residue was left as the remuneration. On the case being sent to trial the magistrate held that no offence was committed, so the accused were discharged.

10. In many instances have men been sent up found in these places with illicit opium, generally very small quantities, say, about a *tola*, but there is nothing illegal in a man keeping a smoking den of the kind referred to so long as he does not actually sell opium, and so long as no more opium than 3 *tolas* is kept at one time, and provided such opium has been lawfully acquired.

11. The keepers of these dens are men of cunning, old in the business, and know the state of the law on this point, and are ready to prove that opium has been obtained at the licensed shop. It is therefore a matter of difficulty to deal with them in the ordinary way.

12. I quote the opinion of the District Superintendent of police on these points as follows:—

"The sellers only sell to persons they know and only then to one person at a time, and when no one is present; these purchasers are opium-smokers, and generally men of indifferent character. Magistrates naturally look upon them with suspicion; very many cases are consequently thrown out; it must not be supposed that the police take no notice; they do a considerable amount of work, but they have to contend against difficulties. In the first instance it would appear that there is nothing illegal in a man keeping a smoking den whether he receives actual fees in coin or in compensation by the residue opium. When once a smoking den is started great facilities are given for petty sales of opium. The suppression of these dens is

the principal matter for consideration, but till they be declared illegal by enactment or otherwise, I fear that they cannot legally be abolished in a place like Rangoon, where there are so many members of the legal profession, and but very few of them overworked. It behoves the police to be careful and not exceed their powers laid down by law."

13. The fact that the licensees of the licensed opium shops raise no objections to these dens is ominous, and raises the impression that they may be in practice off-shoots of the licensed shops, but this leads into another phase of the question. However, it seems to me that if these dens are to be effectually suppressed, some such measure as to make it penal to possess or use opium of any sort or kind, except within certain defined premises, is necessary.

From G. D. BURGESS, Esq., C.S.I., Commissioner of the Northern Division, to the FINANCIAL COMMISSIONER, Burma.—No. 24-2C., dated the 13th July 1891.

In reply to your Financial Department letter, No. 631-64E., dated the 23rd April, I have the honour to report that opium saloons exist in the town of Mandalay and in the Bhamo district. There are said to be none in the other districts of the division. This may be so in the Katha and Ruby Mines districts, where, if there are any such places at all, they would probably be on a very small scale. About Shwebo I have doubts and I have instituted further inquiries. In Mandalay the number of opium saloons now or formerly in existence is given as 40 or 35.

The Deputy Commissioner reports—

"They are, it is said, resorted to chiefly by the better class of Chinese and Shans who do not care to be seen at an opium shop, and they either smoke their own opium paying a small fee to the owner of the house for the use of the place, or they obtain the opium, by purchase, of course, from the owner, who obtains it from the opium shop. Some also who make use of these places obtain opium from Shan coolies who bring in small quantities from across the frontier."

In Bhamo town the case is very much the same. There are about 18 saloons including the Shan village of Paukkôn, south of the town. Most of the saloons are small shops and some are eating-houses. The practice is that the owner obtains a small fee for supplying pipes and opium which he gets from the opium shop, and the *beinche* or refuse opium is afterwards sold to a poorer class of men.

The District Superintendent of Police says—

"These houses are constantly resorted to by opium-smokers and eaters, in the case of Paukkôn village by Shans and Burmans, and in China Street by Burmans, natives, and Chinamen of a poorer class who cannot afford to smoke opium in their own houses, and therefore resort to these houses for a cheap luxury * * * The sale of *beinche* in some of these houses is carried on on a small scale, and in a number of them men are sent out to buy opium from outsiders for use in these houses, and for which they receive money, this being a cheaper way of procuring opium consumed in these houses, and in which men have been discovered in possession for which they have been prosecuted under the Opium Act."

The houses in China Street have been constantly visited by the police to trace Burmans and natives of India, and to hunt for bad characters who have occasionally been arrested in them. Measures have also been taken to suppress these places through the several headmen in China Street.

There are also said to be two houses in Shwegu resorted to occasionally, and it is believed there must be similar places in Mogaung.

In Mandalay the police are required to keep a watch over the opium saloons of which a list has been procured, and to act under the provisions of the opium law when need be.

In one Mandalay report it is stated that the majority of the persons frequenting the opium saloons are Burmans, but this assertion requires corroboration and the point is now under inquiry.

If the saloons were properly managed and were used solely as places for the accommodation of opium-smokers, who supplied their own drug, there would be no good reason that I can see for interfering with them. An opium-smoker, it seems to me, is as much entitled as another man to make arrangements for his

own comfort. But probably the number of well-managed establishments is few, and most of the saloons are apt to encourage illicit dealings in opium and breaches of the law. The saloons must therefore be strictly looked after.

In Mandalay the provisions of the opium rules are now being so stringently enforced that a number of the Yunnanese have already quitted the town, and of the remainder hundreds are said to have abandoned the use of opium altogether. These are persons who were only moderately addicted to the consumption of opium before. Of the whole Yunnanese community there are said to be only 50 habitual opium consumers left. This is what the Yunnanese say themselves, and if it is correct, it shows that the law has been given effect to with a stringency which could not be carried much further.

P.S.—I append copy of a report by the District Superintendent of Police, Mandalay, on the subject of opium saloons.

REPORT by R. MARTIN, Esq., District Superintendent of Police, Mandalay, on the subject of opium saloons.—No. 867-59A., dated the 6th July 1891.

As long as a licensed opium shop is allowed to remain in Mandalay I fail to see how private individuals can be prevented from smoking in their houses. These so-called dens (saloons) are nothing more than private houses, where persons acquainted with the occupants go and smoke, and the house-owner is compensated in turn for the loan of his pipe with the smoked refuse opium; this is again boiled down and a small quantity of second-class opium extracted, which apparently sufficiently compensates the opium-smoker. Men prefer going to these houses as they are private, and the accommodation in the opium shop is very limited and totally unsuited to those who do not wish their relatives and friends to know they are opium-smokers. I dare say there are occasionally instances where small quantities of opium sufficient for a smoke or so pass hands between the house-owner and the visitors, but these cases are very difficult to detect owing to visitors being adverse to giving evidence against their host.

In Rangoon similar places exist, and several smokers are obliged to go to these places so as to secure a seasoned pipe, which all persons cannot afford to possess.

The population of Mandalay is purely Burmese, consequently Chinese and natives of India who smoke opium are very limited. Before the British occupation of Mandalay, Shans and Burmese were in the habit of using opium and the practice still continues, and although Burmese are prevented from purchasing opium, still there is nothing in the Act which renders their being in possession of less than 10 tolas illegal. This makes it all the more difficult to bring home breaches of the law committed in these smoking dens.

ENDORSEMENT by Colonel G. A. STROVER, Commissioner of the Pegu Division.—No. 261-42E., dated the 16th July 1891.

COPY of the following forwarded to the Financial Commissioner, Burma, in continuation of this office letter, No. 159-42E., dated the 10th July 1891.

From J. K. MACRAE, Esq., Deputy Commissioner, Hanthawaddy, to the COMMISSIONER OF THE PEGU DIVISION.—No. 331-25, dated the 16th July 1891.

WITH reference to your endorsement, No. 478, dated the 25th April 1891, I have the honour to report that from inquiry the number of dens or places to which persons occasionally or habitually resort to smoke opium in the district of Hanthawaddy is small and constantly fluctuating. None of them are of much importance, or keep more than one or most two opium pipes for use.

2. It is usually a miserable shanty, a little retired from the other houses, and occupied by an abject wretch, whose whole property consists of a few ragged mats. This is the agent of the village Chinaman, who is in turn the agent of the opium farmer, or buys opium wholesale from the farmer on his own account.

APPENDIX I.

3. The introduction of opium into rural districts in the Pegu, Tenasserim, and Irrawaddy Divisions of Lower Burma is entirely effected by the Chinese, one of whom is resident in every village. Although notoriously dealing in opium it is very difficult to get evidence against him. Such a person's house may be searched and nothing discovered in excess of the 3 tolas weight of opium which he may legally possess. No sales are conducted in the presence of witnesses. The use of marked money to obtain evidence is prohibited.

He generally marries and forms connexions in the village, and being plausible, persuasive, and everybody's friend, no person will inform against him, and he gets respectable people to let him keep his opium in their houses, paying them for doing so, perhaps, Rs. 3 per ball. He gets his opium conveyed from town in the same way, so that it is generally useless to search a Chinaman's boat. Seizures are seldom made except on information.

4. In Arakan the same system prevails, but there the traffic is in the hands of Bengalis, Hindus, and Arakanese.

5. This sort of thing has been going on as long as I can remember, even when the quantity which could be legally possessed outside an opium shop was 8 annas weight only; but a great impetus was given to it when that quantity was raised to Rs. 5 weight, and facilities for procuring it extended the taste for this drug so that it is more difficult now than before to suppress the illicit traffic.

6. In order to stop the spread of opium-smoking the first step is to watch the opium shops. The building must be perfectly closed at the back, without door, windows, or openings of any kind. Care should be taken that all opium received from the Government treasury is conveyed direct to the opium shop. The shop should be watched by the police during the day (the policeman on this duty being frequently changed), and closed at sunset.

The stock of opium should be frequently examined and checked with the accounts. The next step is to suppress the local opium dealer. This can be effected by a simple modification of section 16 of the Lower Burma Village Act, so as to include the habitual sale of opium in the list of offences for which a person may be required to leave.

7. The Chinamen who sell opium, gamble, and are generally an undesirable element in a district are the Amoy or long-jacketed Chinamen, and are not to be confounded with the industrious steady Cantonese or short-jacketed.

8. One other point is frequently to change all the subordinate excise establishments. No excise officer should remain more than one year in a district.

From J. E. BRIDGES, Esq., Commissioner of the Eastern Division, to the FINANCIAL COMMISSIONER, Burma.
—No. 2103E., dated the 4th August 1891.

WITH reference to your letter, No. 631-64E., dated the 23rd April 1891, I have the honour to submit copies of reports of the Deputy Commissioners of this division on the opium dens.

I think that a special establishment is required to watch the Shan caravans who pass through all the districts of this division and often bring down opium with them. I will direct Deputy Commissioners to submit proposals on the subject if there is any prospect of such establishment being sanctioned.

I have pointed out to district magistrates that Burmans who have opium in their possession can be prosecuted for transporting it under section 9, Opium Act. I would be glad of instructions on the point if my views are not correct.

I feel some doubt regarding the Kyaukse report as it is strange that there should be opium dens in all districts except this one. I am asking the Deputy Commissioner for further report, and will submit copy of his letter if further information is forthcoming.

From D. ROSS, Esq., Officiating Deputy Commissioner, Kyaukse, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 754-3—56R., dated the 11th June 1891.

IN reply to your No. 1081, dated the 28th April last, I have the honour of reporting that no opium dens can be found in Kyaukse. The demand for the drug is small.

From Captain J. J. CRONIN, Officiating Deputy Commissioner, Meiktila, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 1343-4, dated the 28th July 1891.

IN reply to your endorsement, Revenue Department No. 1011 (Excise), dated the 28th April 1891, on Financial Department, No. 631-64E. (Opium), from the Secretary to the Financial Commissioner, calling for a report on opium dens, I have the honour to inform you that I have had careful inquiries made as secretly as possible through the police and subdivisional officers regarding the existence of such houses or places in the towns and villages of this district.

As a result of these inquiries I find on enumeration that there are in Meiktila town 14 houses in which opium is smoked or eaten. These houses are visited secretly at night by but few persons. No fees are charged, nor is anything paid for the use of the pipes or house. The District Superintendent of Police reports "that there is good reason to believe that opium in small quantities is sold in these houses." These houses are secretly resorted to by a few Burmans, Shans, Chinese, and natives of India of a low class.

In the Mahlaing subdivision the subdivisional officer reports that in 11 houses in Pindale and five houses in the Mahlaing township, of which the owners are chiefly Chinese, opium is smoked or eaten. The refuse of the pipes is smoked by the Burman servants and relatives of the house-owners. No gratification is taken. There is reason to believe that the owners of these houses, who trade chiefly with Myingyan, import and sell opium. Illicit sale and transport of opium, there is reason to believe, goes on to a considerable extent in the towns of Wundwin, Thedaw, Thazi, and Hlaingdet of the Wundwin subdivision, and is carried on chiefly by Chinamen. The opium brought into Hlaingdet comes from the Shan States. The District Superintendent of Police recommends that a special excise officer should be appointed to detect cases under the Opium and Excise Acts as the Burman police are deficient in detective ability.

I would strongly recommend that such an officer be appointed, with head-quarters at Thazi, with a view to the suppression of the traffic in opium from the Shan States and at the towns above mentioned. In the other towns and villages of the district the police are well able to cope with and suppress the traffic. Stringent orders have been issued to all officers to enforce the provisions of the Excise and Opium Acts with the greatest rigour, while at the same time all known houses and suspected persons are being carefully supervised and watched. As a result of these orders, within the last few days opium has been found in the first raid made by the police on the suspected houses. It is confidently hoped that now that all officers have been instructed in their duties under the Acts that the illicit sale and transport will be considerably checked, or will be attended by such risk that but few will engage in it. Rewards are given in every case of a conviction. The police have been ordered to make constant raids on all suspected houses at all times.

The District Superintendent of Police and the Assistant Superintendent of Police have been requested to search the Shan caravans passing down the Hlaingdet road themselves from time to time.

The thugyis have also been instructed regarding their responsibilities in the suppression of opium smuggling in their respective daings.

The present rules under the Act give ample powers for the suppression of the evil if the police carefully carry out the orders issued to them on the subject. The District Superintendent of Police and myself are now seeing that these orders are obeyed and enforced throughout the district.

From J. N. O. THURSTON, Esq., Officiating Deputy Commissioner, Yamèthin, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 578R., dated the 8th June 1891.

WITH reference to your endorsement, Revenue Department, No. 1081, dated the 28th April, forwarding letter, Financial Department, No. 631-64E. (Opium), from the Secretary to the Financial Commissioner to all Commissioners (except Arakan), I have the honour to submit the following report:—

1. There are eight houses in the district which are used as places of resort for opium-smoking, and the owners appear to be small traders or bazaar sellers. In some of these houses opium in small quantities is sold without doubt, but in most cases the person going there takes his own opium, and the person keeping the house makes his profit by the residue of opium left in the pipe (after smoking). I can find no cases in which fees are paid, though I have no doubt that it is done in some cases.

2. The eight persons who keep houses for this purpose reside as follows:—

Two natives of India	} in Yamèthin.
One Chinaman	
Two Chinamen	} in Pyawbwe.
One Burman	
Two Burmans in Theingôn.	

From inquiries made it appears that no such houses are kept in the villages out in the district. The houses above-mentioned are habitually resorted to by natives of India, Shans, and Burmans given to opium-smoking. These houses have no connexion with the licensed shop.

3. A strict watch is now being kept on these places and the provisions of the Opium Act will be rigorously enforced.

4. In conclusion I would like to point out what I consider is a weak point in the Opium Rules. The sale of opium to a Burman is made illegal under the rules and yet the possession of 10 tolas by a Burman is not illegal. The method, therefore, adopted by Burmans, opium-eaters, and smokers, is as follows:

They get a native of India or Chinaman to buy the opium for them and to hand it over to them quietly.

In Lower Burma, where it is legal to sell to Burmans, the possession of more than 3 tolas is illegal, whilst in Upper Burma, where it is illegal to sell to Burmans, they are allowed to possess 10 tolas. I would suggest that a new rule be added to the rules under the Opium Act making possession by a Burman of opium in any quantity an offence under the Opium Act, but if this suggestion is considered too sweeping I would strongly recommend that the limit be reduced to 3 tolas. I may mention that every endeavour is being made to put down opium-smoking and eating, and every Burman found in possession of opium is at once called upon to show how he became possessed of it, and if he cannot satisfactorily explain his possession the opium is confiscated under section 10, Opium Act.

From W. N. PORTER, Esq., Deputy Commissioner, Pynmana, to the COMMISSIONER OF THE EASTERN DIVISION.—No. 559, dated the 7th July 1891.

IN reply to your docket, No. 1081, dated the 28th April 1891, forwarding Financial Department, No. 631-64E. (Opium), dated the 23rd April 1891, with enclosures, I have honour to say that opium-eating and smoking is not common in Pynmana town and district. It is confined to Chinamen, of whom there are a great many, a few natives of India, and Burmans who have, as a rule, contracted the habit in Lower Burma. In Pynmana town itself there are something less than 30 Burman opium-smokers and eaters who are known to be so, and who resort to five opium dens in order to indulge in their favourite drug. These dens are occasionally raided by the police and the offenders punished. The police have also been ordered to put the bad livelihood sections of the Criminal Procedure Code in operation against each person when practicable, and this in some instances has been done.

From Colonel G. A. STROVER, Commissioner of the Pegu Division, to the FINANCIAL COMMISSIONER, Burma.—No. 179-42E., dated the 10th August 1891.

IN continuation of my letter, No. 261-42 E., Revenue Department, dated the 16th July 1891, I have the honour to submit a copy of letter, No. 1311-3-21, Excise Department, dated the 7th instant, from the Deputy Commissioner, Tharrawaddy, on the subject of opium-smoking dens in his district. It appears that no less than 350 such dens exist, and in which, the Deputy Commissioner states, opium is sold, but that no steps have been taken to suppress the illicit sale beyond perhaps an occasional raid. It is not explained why no steps have been taken to suppress the sale.

The Deputy Commissioner will be requested to report.

From Lieutenant F. D. MAXWELL, Officiating Deputy Commissioner, Tharrawaddy, to the COMMISSIONER OF THE PEGU DIVISION.—No. 1311-3-21, dated the 7th August 1891.

WITH reference to correspondence ending with your letter, No. 442-42E., Revenue Department, dated the 27th ultimo, I have the honour to state that there are in this district, as reported by circle thugyis, 350 opium dens resorted to by 2,064 persons, mostly Burmans, though sometimes Chinese and Karens visit and use these places. In most of those dens opium is sold; in some the owner gets a fee, in some cases opium is sold as well as fees taken. No steps have been taken to suppress the sale of opium, except, perhaps, an occasional raid, followed by a conviction for illicit possession of opium.

A conviction for selling is impossible to obtain, as it is not likely that those who buy will split against the sellers.

From Major W. F. H. GREY, Deputy Commissioner, Akyab, to the COMMISSIONER OF THE ARAKAN DIVISION.—No. 1242-14 R., dated the 8th August 1891.

WITH reference to my letter, No. 1221-14R., dated the 31st ultimo, I have the honour to point out that the figures given in the statements forwarded therewith do not represent the consumers of opium in the district, but merely the frequenters of opium dens. As already pointed out in a former letter on Akyab town, opium-eaters do not as a rule: are opium eaters and not smokers.

ENDORSEMENT by Major B. A. N. PARBOTT, Officiating Commissioner of the Arakan Division.—No. 854-14-91, dated the 10th August 1891.

COPY of the above submitted to Financial Commissioner, Burma, in continuation of this office letter, No. 841-14-91, dated the 1st instant.

ENDORSEMENT by Colonel G. A. STROVER, Commissioner of the Pegu Division.—No. 353-42E., dated the 19th August 1891.

COPY of the following forwarded to the Financial Commissioner, Burma, in continuation of this office letter, No. 179-42 E., dated the 10th instant.

From Lieutenant F. D. MAXWELL, Officiating Deputy Commissioner, Tharrawaddy, to the COMMISSIONER OF THE PEGU DIVISION.—No. 1372-3-21, dated the 17th August 1891.

WITH reference to your Revenue Department letter, No. 200-42E., dated the 11th instant, I have the honour to state that the suppression of the illicit sale or possession of opium is fraught with difficulties. These difficulties have been well known for several years. To prove the sale of opium is almost an impossibility, the purchasers will not give evidence against the sellers, and the purchasing of opium by informers:

APPENDIX L.

with marked money has been more than once denounced by the Judicial Commissioner (*see* Circular, No. 24, of 1881). Opium is, as is well known, almost universally smoked only at night.

Searches at night can only be made under a warrant. To satisfactorily and effectually suppress these dens would require several extra sergeants and constables of police. During the day the drug is invariably stowed away in inaccessible corners and hiding places, where it cannot be found.

ENDORSEMENT by J. E. BRIDGES, Esq., Commissioner of the Eastern Division.—No. 2822, dated the 24th August 1891.

COPY of the following submitted to the Financial Commissioner, Burma, in continuation of this office letter, No. 2103, dated the 4th August 1891.

ENDORSEMENT by D. ROSS, Esq., Officiating Deputy Commissioner, Kyaukse, to the COMMISSIONER OF THE EASTERN DIVISION—No. 972-3—56R., dated the 22nd August 1891.

COPY of the following submitted to the Commissioner, Eastern Division, with reference to his No. 2114, dated the 4th instant.

From J. M. LAW, Esq., District Superintendent of Police, Kyaukse, to the DEPUTY COMMISSIONER, Kyaukse.—No. 425-88M., dated the 17th August 1891.

WITH reference to your Revenue Department, No. 941-3—56R., dated the 11th instant, I have the honour to inform you that though I have made careful inquiry I cannot find that any opium dens exist in this district.

From Lieutenant-Colonel C. B. COOKE, Commissioner of the Tenasserim Division, to the SECRETARY TO THE FINANCIAL COMMISSIONER, Burma,—No. 13E., dated the 17th October 1891.

WITH reference to your letter (confidential),

1. Letter, No. 1,007-14—19, dated 4th August 1891, with enclosure, from Deputy Commissioner, Amherst.

2. Letter, No. 1,086, dated 6th August 1891, from Deputy Commissioner, Shwegyin, with enclosure.

3. Letter, No. 12-345, dated 3rd July 1891, with enclosure from Deputy Commissioner, Tounkoo.

4. Letter, No. 245-25—11, dated 12th June 1891, with enclosure from Deputy Commissioner, Tavoy.

5. Letter, No. 9-8—2, dated 26th May 1891, from Deputy Commissioner, Mergui.

letter (confidential), No. 631-64E., dated the 23rd April 1891, on the subject of opium dens, I have the honour to submit copies of letters, noted in the margin, from Deputy Commissioners, furnishing all the information they can collect on this subject.

2. It is unnecessary for me to reiterate what is said in the enclosures. Opium dens exist in the Amherst and Shwegyin districts in very considerable numbers. In Amherst, owing to the present state of the law, it is almost impossible to deal with the keepers of opium dens. Nearly every case that has been prosecuted has fallen through. In Shwegyin the difficulty is to get

information, owing to the ramifications of the influence of the Chinese secret societies. An informer in an opium case is boycotted, and no one will sell him any opium; usually he is an opium-smoker, and no reward will compensate him for the loss of his favourite drug. The letters from the Deputy Commissioners of Amherst and Shwegyin are interesting, and contain much useful information.

3. I need not, I think, discuss this question at any length in this letter, as I shall have occasion again to address you on this subject of opium in connexion with the Chief Commissioner's Resolution, No. 10E., dated the 29th August 1891.

From Captain T. G. JOHNSON, Deputy Commissioner, Amherst, to the COMMISSIONER of the TENASSERIM DIVISION.—No. 1,007-14—19, dated the 4th August 1891.

WITH reference to your letter, Financial Department (Confidential), No. 13-2, dated the 29th April 1891, I have the honour to submit herewith tabular statements for each township in the Amherst district. These statements show the number of villages in which opium dens are maintained, the town or village in which these dens abound, and some of the particulars required by Financial Department, No. 631-64E., dated the 23rd April 1891, received with your above-cited letter.

2. It will be seen from these statements that houses resorted to by opium-smokers, otherwise called "opium dens," not only exist but abound in the Amherst district. The statements do not show the actual number of such dens, for it is not possible to ascertain them with any degree of accuracy.

3. As regards the question whether the owner of the opium dens gets fees or not, the answer has been, with one exception, in the negative; but this answer I cannot myself endorse. If the fees are not realised as fees for so much a visit, or an occasional fee, they are certainly realised either as advances of money from the opium-smokers, for whose benefit the keeper maintains the den, or as profits accruing from wholesale purchasers of 3 tolas and retail vends. I am fully convinced that the keeper of an opium den receives a remuneration for the trouble and risk he is put to, but the form of remuneration varies in each locality.

4. From what I have myself seen, and from inquiries made, I am of opinion that the habit of opium-smoking is first acquired in these opium dens, rather than in the regular licensed shops. The dens are resorted to by both opium-smokers and eaters, and by persons who are neither, but who accompany a friend, either to indulge in a quiet gamble, or for mere company, or for curiosity's sake.

5. The statement attached will show that the dens are not frequented to any appreciable extent by any one class or race.

6. The question as to whether opium is actually sold in these dens is somewhat difficult to answer. My inquiries lead me to believe that opium is sold in small quantities, but that, as a general rule, the opium is retailed in the shape of a pull at the pipe; this is more remunerative, and the opium goes further.

7. The attached statement shows some of the steps taken to suppress these dens. In Moulmein town efforts have not in a single instance been successful—(i) because it has been found almost impossible to detect any actual sales; (ii) because in each case the quantity found has been less than 3 tolas, and the possessor has been able to prove he purchased from a Government licensed farmer. Efforts are, however, now being made to crush and suppress the opium dens in and around Moulmein, Thaton, Mudon, Chaungzon, and other large towns and villages.

Township.	Number of Villages in which Opium Dens are maintained.	Number of Opium Shops in Township.	Name of Town or Village in which most Opium Dens are found.	Whether Owner or Den gets Fee or not.	Whether the Places are habitually resorted to by Opium-eaters and Smokers.	If so, to what Races and Classes these Persons belong.	Steps taken to suppress Sale of Opium in these Dens.
Moulmein Town	4	2	First Division, Second Division, Third Division, and Fifth Division.	Owner gets the refuse of opium left in pipes after smoking.	Yes	Chinamen and Burmans.	Opium farmer ordered to keep a register of names of persons to whom he sells opium, so that section 10 of Opium Act may be made effectual. Several opium dens have been entered, and keepers and frequenters sent up for trial, and opium pipes, lamps, &c. confiscated. The trials have invariably resulted in acquittals.
Yelamaing	7	-	-	No	Yes	Chinamen, Burmans, and Talains (low class).	Thugyis, kyedangyis, and police were directed to arrest and seize such sales, for which they were to send spies.
Wagaru	3	-	-	No	Yes	Talains, Burmans, Hindustanis, and Chinamen.	Police directed to arrest persons selling opium.
Zaya	100	1	-	No	Yes	Talains, Burmans Karens, and Taungthus (low class).	-
Bilugyun	16	1	Tagukano, Sebala, and Kalwi.	No, but they obtain profits on the sale of opium.	Yes	Burmans, Talains and Chinamen.	Police and other subordinates were directed to seize, but it is found difficult to do so as sales are made between Chinamen.
Gyaing-Ataran	27	-	Pathein, Kale, Nat-chaung, Kaw-bein, and Pab-yauk.	No	Yes	Burmans and Karens.	Thugyis, ywalugyis, kyedangyis, and ywagaungs directed to arrest all persons selling opium.
Haugtharaw	13	-	Pagandan	No, but they get the refuse of opium which is left after it has been smoked, the price of which is Re. 1 per rupee weight.	Yes	Chinese, Karens, Burmans, and Talains (low class).	-
Gyaing-Salween	43	-	Naunglón, Pa-an, Tanpadaing, Dónyin, and Lunnya.	No	Yes	Burmans, Shans, and Talains.	Ywalugyis concerned were directed to report persons selling opium in dens and keeping opium dens.
Salween-Hlaingbwè	15	-	Hlaing bwè, Tapaung, and Minzi.	No	Yes	Kalás, Chinamen, Karens, and Burmans.	Thugyis, ywagaungs, police, and village elders directed to arrest, but the sellers are very sharp in concealing opium.
Thatón	36	1	Leikin, Pwelisu, and Aukkyin. Zemaithwè, Naungkala, Ywagyi, and Kinbungyón. Tada-u, Kyaik-kaw, and Seik-kyun.	No	Yes	Burmans, Taungthus, and Chinamen.	-
Marfaban	4	-	Darein	Township Officer believes that fees are charged.	Yes	Burmans, Talains, Karens, natives of India, and Chinamen.	Police under impression that possession of opium under 3 tolas was not an offence; they were pointed out that any quantity found in possession is an offence unless such opium have been purchased from licensed vendor. Suggests that a rule may be made stating that the farmer gives a receipt to the buyer, with his name and that of the buyer and with the quantity sold entered therein.
Pagat	5	-	Wutkyi, Minbón, and Thè.	No, but they obtain the refuse of opium which is left after smoking.	Yes	Talains, Karens, and Chinamen.	Spies were sent by Myook himself, and the police and yaza-wutgaungs directed to arrest and seize.

APPENDIX L. From D. WILSON, Esq., Officiating Deputy Commissioner, Shwegyin, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 1086, dated the 6th August 1891.

In obedience to your No. 13-3, dated the 20th April last, I submit a detailed report setting forth the facts of the illicit trade in opium in this district. This report has been prepared by Mr. Snadden, the District Superintendent of Police, and he has excluded all persons merely suspected vaguely of consuming and dealing in opium. These facts and figures refer only to persons the police are pretty sure about.

As the police cannot possibly be sure about nearly all, it has to be inferred that the actual number of importers, sellers, and consumers of opium is much larger than is here reported. How much larger it is impossible to say.

To illustrate the extent to which the trade is carried on, I may mention that we have reason to believe that the consumption of opium in Kyaikto town "is two balls a day" and that the profits on opium smuggling there run up to much over Rs. 1,000 a month.

There is no doubt whatever that the police are heavily handicapped in their struggle with smugglers, and that any inference that may be drawn from the information now forwarded as to the inefficiency, &c. of the police of the district would be most unjust.

It is next to impossible for them to get evidence. To illustrate this I may mention that the Kyaikto Municipal Commissioner, whose name figures in Mr. Snadden's list of importers, is reported to have a "secret chamber." He is wealthy, and no native officer would dare do more than pretend to search his house. European officers have searched it often without success. The present Assistant Superintendent of Police, Mr. Tilly, once spent six hours searching his house without success.

To explain the difficulty of obtaining evidence I may mention that there is a kind of freemasonry among the smugglers. Any man who gave evidence against them would find it impossible to get opium for his own use afterwards anywhere. Now, the only persons able to give sufficient evidence against the smugglers are generally habitual opium-eaters. Hence they are not unwilling to supply secretly (and under strict promise of secrecy) such information as we now forward. But if called on to give evidence they would immediately deny everything and plead ignorance. Instances have come to my knowledge of informers being made to suffer that (to them) most terrible punishment of deprivation of their usual supply of opium.

It may not be amiss to point out that the number of convictions this year is already over the average.

The remedy is to recognise the facts. The only way to put down smuggling effectually is to—

- (i) supervise the opium shops; and
- (ii) open an opium shop;

wherever there is a real demand, such as will put a larger premium upon, and so necessarily lead to smuggling. This plan is substantially identical with the methods which have successfully regulated the trade in alcoholic liquor in England.

Mr. Snadden has drafted a set of rules for the supervision of the shops. To these I would add only three observations—

First.—The accounts and registers of the opium shop must be kept in Burmese.

Second.—The "opium shop" should be a Government building like, e.g., the ordinary district post office, combining a house for a resident European excise officer and a shop. It should be in the middle of a large compound so that the resident officer could easily see all who come and went to it. The necessity for these two things I have been taught by my own utterly unsuccessful attempts to supervise the Pegu and Thatôn opium shops.

Thirdly.—In selling the license the Deputy Commissioner should be authorised to set an upset price on the shops and refuse to sell the license if so much were not offered.

In the sale of liquor licenses we often find the Chinamen form a ring to keep down the price, and as the object of Government is to keep the price of opium as high as possible, that must be prevented.

Next we have to deal with the question whether the method now proposed by which, e.g., there would be one shop in Shwegyin and one in Kyaikto, would lead to an increased consumption of opium in the villages. I am

satisfied this could be prevented by the careful supervision of the shops, and by allowing the Deputy Commissioner to refuse to register any would-be purchaser of opium who did not reside near the shops. This would help to put a stop to the enterprising Chinamen selling in the villages and teaching the young Burmans the use of opium. No compulsion would be laid upon opium-eaters to be registered. But one condition of the license should be that the lessee would only sell to registered opium-eaters. This would make all opium-eaters ready and anxious to register themselves—

- (1.) Register as opium-eaters only persons living in the neighbourhood.
- (2.) Reduce the retail quantity to 1 tola.
- (3.) Offer a minimum fixed reward for information leading to any conviction under the Opium Act of not less than Rs. 50.
- (4.) Make opium offences punishable with flogging or, if that be thought too much, "imprisonment and fine."

By these or similar means and the careful supervision of the shops the use of opium can be successfully restricted. Great part of the existing Act and rules is practically a dead letter, and I am sure that if the matter were properly dealt with there would be the maximum of revenue with the minimum use of opium.

But as the Act and rules now stand we can do no more than is now done, i.e.—

- (i) offer rewards for information and try to retain the services of likely informers;
- (ii) watch and search wherever possible; and
- (iii) punish the offenders as severely as possible.

I would suggest that a minimum of Rs. 1,000 a year at least should at the District Superintendent of Police's disposal for rewards to excise and opium informers; these rewards not to be paid by the order of the court after public trial, but secretly and promptly. When the total of fines, &c. realised under the Opium Act and Excise Act exceeded Rs. 1,000, the amount available for rewards should be increased accordingly.

It would also help matters if searches between sunset and sunrise were permitted, but that would require an alteration of the Act.

By this means the number of convictions would be increased. The figures quoted by the District Superintendent of Police show that there has been no falling off in the diligence of the police lately, but the contrary. But, as already indicated, existing methods are inadequate, and the successful smuggling which the enclosed reports set forth, can only be grappled with and stopped by altering our methods.

2. Enclosures, namely, District Superintendent of Police's Report and District Superintendent of Police's draft rules for supervision of opium shops.

(Confidential.)

Report on the illicit Traffic in Opium in the Shwegyin District.

There is no licensed shop for the sale of opium in the Shwegyin district.

From a census recently carried out by the police, there are, it appears, 572 habitual smokers or eaters of opium in this district; the majority of these habituals belong to the criminal classes and are well known to the police.

To supply these habituals and occasional smokers or eaters with opium there are 51 persons doing an illicit retail business in different parts of the district.

These illicit retail vendors of opium may be classed as—

- (1) those who sell opium which is not consumed on the premises of the vendor, but is carried away by the buyer;
- (2) those who sell opium or a preparation of refuse opium and betel leaf known as kunbôn, which is smoked on the premises of the vendor, principally by the poorer of the habituals.

The price of a tola of opium is generally 100 per cent. above that of the licensed shops, but often rises above this when opium is scarce.

The price of a smoke is from 2 to 4 annas at a kunbôn shop; pipes are supplied free.

Class I. of illicit vendors of opium are generally Chinamen, who are themselves habitual smokers and who are engaged in different trades, such as tailors,

shoemakers, &c.; besides selling pure opium they sell the refuse opium remaining in their pipes at about half or one-third the price of pure opium per tola.

Class II. of illicit vendors of opium are generally Burmans who have become incapacitated from habitual opium-smoking to do manual labour, and take to this line to earn a living. A few sell pure opium, but the majority buy refuse opium and make a preparation of it with betel-leaf cut up into shreds and toasted over a fire till the leaf is well browned when the "kunbôn" is placed in a pipe and smoked as opium.

Importers of Opium.—The opium consumed in this district is imported from either the opium shops at Toungoo, Pegu, Rangoon, Thatôn, or Moulmein, generally by persons who are large traders. The opium is often sent up with large consignments of goods to avoid suspicion. There are 42 persons who are engaged in importing opium into this district, the majority of whom are Chinamen, a few Burman traders also being engaged in this business. These importers of opium do not do a retail business, but sell the opium to the keepers of opium shops; these transactions are carried out with the greatest secrecy and at nightfall, when the police cannot search their premises without a warrant; spies are engaged to watch the police, who give notice of the approach of the police and the opium is thrown away unobserved in the darkness.

Importers of opium seldom keep this drug on their premises; it is often buried in the ground near their houses or hidden in most unlikely places, such as in latrines, pig-sties, hollow trees, &c.; others have cunningly devised secret receptacles for opium in their houses which are seldom discovered when the houses are searched.

It is extremely difficult to obtain certain information of the existence of opium in the houses of the importers of opium. As the persons who can best give information are those living in these houses, are well paid and cannot be bribed by the police to give information, and without certain information the police are liable to prosecution for vexatious search, the importers of opium being men with ample means who would do their utmost to get into trouble any police officer who was interfering with their trade.

The retail vendors of opium generally sell opium after nightfall when their premises cannot be searched without a warrant; they only sell opium to approved customers, and it is very seldom that the police spies can purchase opium from these vendors who, knowing that their premises are liable to be searched by the police, only keep the authorised quantity of opium on their premises, this being always covered by a pass from one of the licensed vendors of opium.

It is said that signed passes from licensed vendors of opium are procurable from the illicit importers of opium at Rs. 1 8a. per pass, these passes, of course, stating that 3 tolas of opium had been sold to the bearer.

Class II. of retail vendors of opium are more liable to prosecution than others engaged in the illicit traffic in opium, but even against them it is often difficult to get sufficient evidence to prosecute them for sale of opium, the persons who could give the best evidence of sale, being the habitual customers of the shop, who are naturally unwilling to give evidence against the vendor.

The following are the number of convictions obtained under the Opium Act in the Shwegyin district during the year—

1888	-	25
1889	-	43
1890	-	45
Half-year 1891	-	27

Convictions.

which is, in my opinion, a very small proportion of convictions to the hundreds of offences against the Opium Act which must be committed annually in this district.

There is no doubt that the vice of opium-smoking and eating is spreading in this district, and this I attribute to the increase in the numbers of Chinamen who are now to be seen in nearly every village of important size in the district. They educate the younger generation of Burmans to take a liking to the drug by first giving it to them free and then selling it to them when they can no longer do without it.

To stop the spread of opium-smoking and eating in this district measures should be taken for the better supervision of the licensed opium shops at Toungoo, Pegu, Thatôn, Moulmein, Rangoon, and elsewhere. In order to prevent the sale of large quantities of opium to the persons who import opium wholesale into the district there is no doubt that all the opium that is seized in this district is opium manufactured by the Indian Government, and which must come from some of the licensed shops in the province. I have never seen or heard of any foreign opium which has been seized in this district, and my experience of this district extends off and on to 13 years back.

If these licensed shops were properly supervised and only the authorised quantity of opium sold to each person, it would not be worth the while of the large importers to engage in traffic. The small vendors of opium could not afford to leave their trades constantly to go out of the district to buy 3 tolas of opium, and the illicit trade in opium would, in my opinion, cease at once.

The measures I would suggest to be taken in this district to suppress the illicit traffic in opium are—

- (i) severe punishments;
- (ii) liberal rewards to police and informers in every case;
- (iii) that the passes (on certificate) issued by licensed vendors are not received as evidence of the purchase of the opium at a licensed shop as has hitherto been the case by the subordinate magistracy.

* Kyaikto Municipal Commissioner.

Draft Rules for the Supervision of Licensed Opium Shops.

1. There should be a resident excise officer on a salary of not less than Rs. 150 per mensem attached to each licensed opium shop.

His duties will be to supervise—

- that the authorised quantity of opium is only sold to each customer;
- that only one sale of opium to each customer is made per diem;
- that sales of opium are made only to registered opium-smokers or eaters.

2. The names of all opium-smokers or eaters shall be entered in a register kept in the office of the Deputy Commissioner, care being taken that none but genuine opium-smokers or eaters are entered in this register. No person under the age of 16 shall be entered in the register.

3. Every registered opium-smoker or eater shall be supplied by the lessee of the opium shop with a pass book in which will be entered his description, his father's name and residence, and in which will be noted the quantity of opium sold, and the date of each sale of opium.

4. A general register of all sales of opium shall be kept in the opium shop, in which will be entered—

- the name of each customer and residence;
- the quantity of opium sold to each customer.

It will be the duty of the resident excise officer to report daily to the Deputy Commissioner the number of purchasers and the quantity of opium sold the previous day.

5. The general register of opium sales shall be checked with the pass books at least once a month by the District Superintendent of Police. Copy of sales of opium made to registered opium-smokers or eaters residing in another district shall be sent to the District Superintendent of Police of the district concerned for check.

6. A list of the registered opium-smokers or eaters in each thanaship shall be kept by the police, and any sergeant of police shall be at liberty to call for and examine any pass book.

7. The quantity of opium which the lessee of a licensed opium shop is authorised to sell is 1 tola to registered opium-smokers or eaters living within a radius of five miles of his shop, 3 tolas to registered opium-smokers living in the district in which his shop

is situated, and 5 tolas to all registered opium-smokers or eaters living outside the district.

8. Any registered opium-smokers or eaters shall be liable to have his name struck off the register on conviction of any breach of the Opium Act and rules.

W. G. SNADDEN,

District Superintendent of Police.

Shwegyin, July 31, 1891.

From G. M. S. CARTER, Esq., Deputy Commissioner, Toungoo, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 12-345, dated the 3rd July 1891.

IN reply to your letter, No. 13-4, Financial Department, forwarding copy of letter, No. 631-64E., dated

the 23rd April 1891, from the Secretary to the Financial Commissioner regarding opium dens, I have the honour to forward list showing as far as I have been able as yet to ascertain the number and particulars of such dens in this district. The returns show that in Toungoo itself there are 20, nine of which are kept by Chinamen and 11 by Burmans.

In the Zayawaddi township 18, four of which are kept by Chinamen, the rest by Burmans.

In Thagaya two, both kept by Chinamen. It appears that in all cases the house-owner receives the refuse opium as a fee; this is again prepared and sold.

Rigorous measures will now be taken for the suppression of these dens.

LIST of PERSONS who keep OPIUM DENS.

No.	Township.	Circle.	Village.	Name of Person.	Number of Houses.	Race.	Remarks.
1	Toungoo	Lanmadaw, South.	No. 6 Street	Shawa	1	Chinaman	Visited by Chinamen and Burmans three to five in number. No fee in money is taken. But the refuse opium is given to the house-owner who again prepares and sells it.

From Major T. M. JENKINS, Deputy Commissioner, Tavoy, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 245-25-11, dated the 12th June 1891.

IN reply to your letter, No. 13-5, dated the 29th April 1891, I have the honour to forward to you a letter, No. 266-14 (Miscellaneous) from the District Superintendent of Police (in original), from which you will find that there are 12 dens where opium is constantly smoked in the town of Tavoy, and that there are very few outside of the town. There used to be a great deal of opium smoked in and near the village of Thayetchaung, but of late the supervision has been in that village so strict that most of the opium-smokers have come to live in the town, or have gone to Rangoon or Moulmein, where they can get their private drug with less difficulty.

I hope soon to send you a further report.

From J. M. LAW, Esq., District Superintendent of Police, to the DEPUTY COMMISSIONER, Tavoy.—No. 266-14 Mis.

WITH reference to letter, No. 621-64, Financial Department (Opium), from Financial Commissioner to all Commissioners, I have the honour to report as follows:—

- That opium dens do exist in this district.
- That these dens are habitually resorted to by opium-eaters and smokers.
- That they are few in number, and with a few exceptions are confined to the head-quarters of the district.

From personal inquiry and observation, I find that there are 12 of these dens in the town, five being in the northern, five in the southern, and two in the central portion.

These houses are regular resorts for opium-smokers, who there purchase a mixture of dried "pan" leaf and opium. They are provided with all the necessary paraphernalia for smoking, but no fee is paid for using it, as the profit made on the mixture sold in the house is sufficiently remunerative. The usual nightly attendance at each of these houses averages 8 to 10 men.

APPENDIX L.

I have only been a short while in the district, and have taken no action in the matter as yet beyond dropping in at unexpected hours at the houses known to be the usual resort of smokers of the drug.

I think that it may be accepted as a fact that practically no such dens exist in the district outside of the town. A good deal of opium, it is true, is consumed by the fishermen on the coast, who undoubtedly purchase it from some illicit vendor, who smuggles it to the district from head-quarters, but such opium is consumed by the purchaser at his own domicile.

I will give this matter my special attention, and will submit a further report to you later on.

From G. H. BATTEN, Esq., Deputy Commissioner, Mergui, to the COMMISSIONER OF THE TENASSERIM DIVISION.—No. 9-6--2, dated the 26th May 1891.

WITH reference to Financial Commissioner's circular forwarded with your Financial Department, No. 13-6, dated the 29th April, regarding opium dens, I have the honour to report that when I first came to Mergui I found several such dens in existence; houses were frequented by opium-smokers, who were supplied with kumbôn, a preparation of opium and betel-leaf, and pipes; and as these had not been interfered with before, I directed the prosecution of the keepers, and thus put a stop to the practice. One such house remains, and it is being carefully watched, and the owner will be prosecuted as soon as he is found at his old trade. I do not think these dens, known as "budaungs" in Rangoon exist elsewhere; but, as I have already pointed out in my report on the Chinese society lodges in Mergui, where-soever the Chinese have these lodges, they are used as opium dens, not only by their own members, but opportunity is taken to let in Burmese and Siamese.

The Chinese object to the police and officers entering these buildings; and till they are properly registered and regulated it will be impossible to prevent their being used for illicit purposes.

From the OFFICIATING SECRETARY TO THE CHIEF COMMISSIONER, Burma, to the SECRETARY TO THE GOVERNMENT OF INDIA, Finance and Commerce Department.—No. 192-30.—3, dated the 10th May 1892.

In continuation of my letter, No. 59-30.—3, dated the 3rd May 1892, I am directed to submit, for the information of the Government of India, a translation of a leading article which appeared in the "Mandalay Times," vernacular newspaper on the 29th April. The article indicates the strong feeling of the respectable classes among the Burmese against the present opium excise system of the province.

Leading Article in the "Mandalay Times," dated the 29th April 1892.

Some time ago we reported about the formation in England of a society whose object is to endeavour to bring about the suppression of the traffic in opium, which, though yielding a handsome revenue to Government, is detrimental to the spiritual and temporal welfare of those who are slaves to the drug. The efforts of the society have gained much strength from the opinion of over 5,000 learned and eminent physicians, who declare that indulgence in opium, which is almost universal in India, leads to emaciation and physical deterioration, and that opium should only be used medicinally, as in England.

We heartily endorse the opinion of these learned doctors. Those who indulge in opium become weak and emaciated, and are liable to suffer from diarrhoea, which may lead to premature death. Their intellect becomes torpid, and they are incapable of attention or concentration of mind. Such a condition of the constitution incapacitates them for exertion, and reduces them to poverty, although they may at first be possessed of some fortune. Poverty, again, leads on to crime, which they are obliged to commit to preserve their life, and to procure for themselves the accustomed quantity of opium. Crime ultimately leads to imprisonment or death.

Thus indulgence in opium is an evil habit when considered from both standpoints, namely, the spiritual and the temporal. The habit is discountenanced by all respectable Burmese elders, because opium is an intoxicating

and narcotic drug, and as such is one of the articles whose consumption is forbidden by Buddhism. Our Scriptures say that the consumption of any one of these articles is punished with suffering in hell. Owing to these circumstances no Burmese king ever legalised the traffic in opium or derived any revenue from it, because opium was regarded as a veritable poison.

To recapitulate what has been stated above. The traffic in opium brings in some revenue, but the medical experts are not in favour of its continuance, and the public opinion in Burma is decidedly against it. Consumers of opium suffer both spiritually and temporally. It has never been legalised by any Burmese king.

Therefore the British rulers, who should look after the promotion of the interests of their subjects as well as that of their own, are, in our opinion, justified to discontinue as soon as possible the traffic in opium, and totally prohibit indulgence in it.

From J. F. FINLAY, Esq., Secretary to the Government of India, Finance and Commerce Department, to the CHIEF COMMISSIONER, Burma.—No. Exp. 2670, dated Simla, the 28th June 1892.

I AM directed to acknowledge receipt of Mr. Bayne's letter, No. 59-30.—3, dated the 3rd May 1892, forwarding a minute by Sir A. Mackenzie, and other papers concerning the consumption of opium in Burma.

2. With reference to the postscript to Sir A. Mackenzie's minute, I am directed to request that you will prepare a detailed review of the whole case, such as Sir A. Mackenzie intended to prepare had not the circumstances mentioned prevented him. I am also to say that the Government of India desire to be favoured with your own opinion and recommendations in the matter.

From the SECRETARY TO THE CHIEF COMMISSIONER, Burma, to the SECRETARY TO THE GOVERNMENT OF INDIA, Finance and Commerce Department.—No. 341-30.—3, dated the 22nd July 1892.

In compliance with the request made in paragraph 2 of your letter, No. Exp. 2670, dated the 28th June 1892, I am directed to submit, for the information of the Government of India, a copy of a note, dated the 4th July 1892, by Mr. Fryer, Officiating Chief Commissioner, on the opium question in Burma.

NOTE by F. W. R. FRYER, Esq., C.S.I., Officiating Chief Commissioner, Burma, on the opium question in relation to Burma.

I HAVE carefully read Sir Alexander Mackenzie's Minute, dated the 30th April 1892, on the question, and also the Financial Commissioner's note of the 27th of April 1892, and its enclosures.

The inquiries on which Sir Alexander Mackenzie's minute is based were directed in a letter, No. 3166, dated the 29th of July 1891, from the Secretary to the Government of India, Finance and Commerce Department.

This letter contained the orders of the Government of India upon the Secretary to the Chief Commissioner's No. 1-10E., dated the 2nd of February 1891. In that letter Sir Alexander Mackenzie proposed to prohibit the sale of opium to, and the possession of opium by, Burmans throughout Burma. With reference to a proposal to check the consumption of opium by a reduction of the number of licensed shops, Sir Alexander Mackenzie said in paragraph 3 of his Secretary's letter that "if all shops were closed it is certain that illicit trade would be carried on to a great extent," and he did not advise the absolute prohibition of the possession or sale of opium in the case of persons of non-Burman descent, as he considered that "such a step would be an unjustifiable interference with the habits of a large section of the population and would be quite impossible to enforce." It was noted by the Government of India that the sale of opium to, and the possession of opium by, Burmans in Upper Burma had been made illegal by notification, No. 62, dated the 29th of August 1891.

The letter went on to say that the Governor-General in Council would be prepared to sanction the Chief Commissioner's proposal if he were satisfied—

(1.) That the evil to be removed was as great as it was depicted;

- (2.) That it would be practicable to enforce the prohibition; and
- (3.) That the enforcement of the prohibition would not entail and be accompanied by evils as great as that which it is desired to remove.

It was asked that the correctness of the generally adopted view as to the difference of the effect of the use of opium on non-Burmans and Burmans respectively might be tested by the collection of statistics, facts, and figures bearing on these questions. These might be gathered from the jail population, and also, though necessarily less completely, from statistics regarding the general Burmese population in a sufficient number of representative places.

It was asked that a distinction might, if possible, be made between opium-eating and opium-smoking, and that it might be stated which of the two is the common form of consumption in Burma.

Then it was asked whether the prohibition could be made effectual, and it was pointed out that it was not proposed to apply the prohibitory rule to non-Burmans, and also that the physical configuration of the country offered great facilities for smuggling, and that the present protective agency had failed to stop the illicit traffic in opium, and that it was easier to stop illicit traffic than to enforce a total prohibition of the use of the drug.

Then it was asked whether the prohibition of the use of opium by the people of Upper Burma had been effectual, and it was said that the police might abuse their powers. Further, it was inquired what means would be taken to alleviate the hardship of the proposed prohibition in the case of Burmans who have become accustomed to the use of opium. On the receipt of these orders Sir Alexander Mackenzie in a resolution, dated the 29th July 1891, desired that the statistics called for might be furnished by superintendents of jails, and that district officers would make similar inquiries through subdivisional and township officers. A certain number of towns and villages were to be selected in each district and an attempt made through the headmen and luggia (elders) or otherwise to get at statistics of the number of Burmans who have taken to the use of opium and the number of such who have been physically wrecked thereby.

Opinions were also called for on the other points on which further information was asked for by the Government of India. The Financial Commissioner, in his note of the 27th April 1892, summed up the result of the inquiries made by district officers and by superintendents of jails. He also stated that, except in two districts in Upper Burma in which Shans preponderate, consumption of opium on the premises of shops had been forbidden.

Taking first the statistics returned by district officers, I find that they are framed in the Arakan division on the examination of—

Akyab	- { 23 circles.
	- { 110 villages.
Kyaukpnyu	- The greater part of the district.
Sandoway	- Nineteen villages.

The population of the selected localities was 285,623, in which there were 8,668 consumers of opium. This gives a proportion of 3 per cent., of whom 2 per cent. had been morally or physically ruined, and one-fifth of the number or 6 per 1,000 had taken to crime.

Applying these figures to the whole division, there would appear to be 16,000 habitual opium consumers in the Arakan Division. The Financial Commissioner, however, puts aside this figure, and assumes that there are 21,320 habitual opium-smokers in the Arakan Division, because the Commissioner, Major Parrott, says that he is sure that there are at least 5 per cent. of the population who use opium, and, therefore, the Financial Commissioner says that he may safely assume the figure to be 4 per cent. of the whole population instead of 3 per cent. as shown by the statistics. Now I would observe that, if statistics are to be set aside in this way and the opinion of an observer taken instead of them, there was no particular object in collecting statistics at all. I am also persuaded that the official inquirers would naturally go to villages in which there were known to be consumers of opium. Any person told to examine a given number of villages in order to procure statistics as to the number of opium consumers in a district would proceed to inquire in what villages consumers of opium might be found, as he would consider it waste of time to go to a village which contained no consumers of opium. For this reason I think

that the number of opium consumers found in a given area is no criterion of the number existing in any particular district. The villages examined were those in which opium consumers were to be found, and villages in which there were no opium consumers were not, I feel sure, taken into account.

Passing to the Pegu Division I find that in that division the whole of the Rangoon town district, nearly the whole of the Hanthawaddy district, seven villages in Pegu, four in Tharrawaddy and 34 in Prome were examined. These contained a population of 459,121. The number of opium consumers was 5,509, or 1·2 per cent. on the number observed. This gives 15,672 habitual opium consumers in the whole division. These figures are, however, rejected by the Financial Commissioner, who says that an observation in a large area like the whole of the Hanthawaddy district must be wrong, and so he takes the observations in seven villages in Pegu, including the town of Pegu, in which there is an opium shop, and in four villages in Tharrawaddy to base his conclusions on, and at once raises the per-centage of opium smokers to 2 per cent., thus almost doubling them, and then proceeds to draw his conclusions on these premises, unmindful of the fact that in the Rangoon town, which is surrounded by the Hanthawaddy district, there are three opium shops, whilst in the Pegu and Tharrawaddy districts there is only one shop in Pegu.

In the Irrawaddy Division the area examined was—

Bassein district	- 2 villages,
Thayetmyo district	- 1 town and 97 villages,
Thongwa district	- 36 villages,
Henzada district	- 976 villages,

with a total population of 336,000. The number of the population was not given in Thongwa, Bassein, and parts of Thayetmyo; but in Henzada, where there is an opium shop, the per-centage of opium consumers to population examined is 1·3 per cent. The present Deputy Commissioner and a former District Superintendent of Police of Thongwa think this per-centage is too small, and therefore the Financial Commissioner raises it to 2 per cent. and then draws his deductions from that figure.

In the Tenasserim Division the area examined was—

	Villages.
Amherst district	- - - 405
Shwegyin district	- - - 11
Toungoo district	- - - 14
Tavoy district	- - - 4
Mergui district	- - - 2

and the towns of Shwegyin, Toungoo, Tavoy, and Mergui were included in the villages examined in each of these districts. There are five opium shops in Amherst, one in Tavoy town, one in Mergui town, and one in the town of Toungoo.

The population of the area examined is 143,000, and 1,215 opium consumers were found. The per-centage of opium consumers to population examined is in Toungoo 1 per cent., and in Amherst 8 per cent. The Financial Commissioner assumes 1 per cent., which is not perhaps excessive, and makes his calculations on that figure.

It will be seen that the Financial Commissioner has raised the per-centage of opium consumers in the Arakan Division from 3 to 4 per cent., in the Pegu Division he has assumed 2 per cent. to be the correct figure, though 1·2 per cent. is the figure for the town of Rangoon and the Hanthawaddy district, where the facilities for obtaining opium are much greater than they are in the Pegu, Prome, and Tharrawaddy districts. The proportion of shops is three to two. In the Irrawaddy Division the Financial Commissioner has almost doubled the per-centage of opium consumers relying on the opinions of two officers, one of whom has not served in Lower Burma since 1885.

I think then that the Financial Commissioner's figures may fairly be taken to be much exaggerated. I notice that he says in paragraph 19 that he has not attached any importance for the purpose of inference to variations in the proportion of opium consumers in towns and in rural tracts. His reason for this is that the figures given by Deputy Commissioners and the tenor of their reports go to show that the drug is just as popular in the interior as in the towns: that in fact opium-smoking and eating are if anything more common in certain villages of the interior than in large towns, because smuggling is easier and there is less fear of publicity or detection. In face of this statement I do

APPENDIX L.

not understand how the Financial Commissioner sees his way to enforce total prohibition, or why opium shops should be abolished as he recommended. The statistics obtained by superintendents of jails show—

ARAKAN DIVISION.

	Total Prisoners.	Opium Consumers.		Total.	Number who have suffered Physically or Morally.	Per-centage of Opium Consumers to total Prison Population.
		Smokers.	Eaters.			
Burmans	577	113	187	300	260	52
Non-Burmans	84	17	9	26	23	31

In the Kyaukpyu Jail 70 per cent. of the Burman prisoners are opium consumers, which is certainly startling, when it is considered that there has been no opium shop in the Kyaukpyu District since 1885.

In the Rangoon Central Jail, which is the only jail in the Pegu Division, the figures are—

Race.	Total Prisoners.	Opium Consumers.			Number who have suffered Physically or Mentally.	Per-centage of Opium Consumers to total Prison Population.
		Smokers.	Eaters.	Total.		
Burmans	3,137	14	54	68	48	2·2
Non-Burmans	228	23	8	31	16	14

The Financial Commissioner thinks these figures must be incorrect, because his figures for the general population show a large proportion of opium consumers in the Pegu Division who have taken to crime.

In the Irrawaddy Division the figures are—

Race.	Total Prisoners.	Opium Consumers.			Number who have suffered Physically or Mentally.	Per-centage of Opium Consumers to total Prison Population.
		Smokers.	Eaters.	Total.		
Burmans	2,300	109	364	464	271	18
Non-Burmans	130	10	7	17	8	13

The figures for the Tenasserim Division are—

Race.	Total Prison Population.	Opium Consumers.			Number who have suffered Physically or Mentally.	Per-centage of Persons addicted to Opium to total Prison Population.
		Smokers.	Eaters.	Total.		
Burmans	1,324	141	78	219	134	17
Non-Burmans	149	20	7	27	18	18

There were thus 7,628 Burman and 591 non-Burman prisoners in Lower Burma, of whom 1,051 Burmans and 101 non-Burmans were opium consumers. Fourteen per cent. of the Burmans and 17 per cent. of the non-Burmans in jail are thus opium consumers. In paragraph 20, clause 5, the Financial Commissioner says that there were 24,624 opium consumers in Lower Burma who are either convicted criminals or are known or believed to be pursuing a course of crime. Now there are only 7,628 Burmans in all the Lower Burma jails. About 14 per cent. of these or 1,051 men consume opium, so that allowing for short-term convictions it would take many years to recruit 24,624 convicted opium consumers, particularly as men convicted of offences against the Excise Acts are not included in the lists. The average annual jail population of all Burma is only 11,000, so it would take 17 years to recruit 24,600 convicted criminal opium consumers from this body. The number of opium consumers who are known or believed to have taken to crime cannot be easily determined, but it cannot possibly be so large as the Financial Commissioner states.

The Financial Commissioner assumes that all the opium consumers in Lower Burma are adult males. This is possibly true, but that they are all fathers of families does not seem consistent with the statement in clause 11 of the same paragraph, in which it is said that one of the effects of opium is to render men impotent. The Financial Commissioner gives his reasons for believing that impotence is an effect of the

use of opium. I am inclined to doubt whether the reasons given are sufficient to justify the conclusion come to. However that may be, opium consumers are generally improvident and many of them are, I have always understood, unmarried men.

As regards the value of the statistics of opium consumers among the general population the opinions of local officers of their value are as follows:—

Commissioner of Arakan.—"The statistics given for the Akyab District are, I think, not quite accurate." He thinks the figures are too low.

The Commissioner of Pegu says—

"The statistics given by district officers are, I fear, often not very reliable."

The Commissioner of Irrawaddy says—

"My own opinion is that these statistics reflect the opinions of the luyis (elders), who supplied them as well as the actual facts."

I think that the figures as to the general public are undoubtedly unreliable, and that no general deductions can be drawn from them. I have heard it argued that Burman elders would be inclined to understate the number of opium consumers, because the fact that a Burman consumes opium is considered shameful and is one which would usually be concealed. I doubt whether this argument holds good where the object of the inquiry was the prohibition of the use of opium.

The recommendations which Sir Alexander Mackenzie made on the Financial Commissioner's note were, as

he says in the *P.S.* to his note, written under great pressure at a time of grave domestic trouble, and on the eve of his sudden departure from the province. I think it may be inferred that Sir Alexander Mackenzie did not go very thoroughly into the figures given by the Financial Commissioner.

Sir Alexander Mackenzie proposes total prohibition of the supply of opium to men of all races throughout Burma. He would allow opium only to persons specially licensed by the Deputy Commissioner to possess it. He considers that the prohibition could be made effectual.

I am certain that it could not. Take the case of the Arakan Division. In 1885-86 the number of shops for the sale of opium in that division was reduced to one, and the shops in the Kyaukpyu and Sandoway districts were closed, and yet we find 3,832 reputed opium consumers in the Kyaukpyu district, and 294 in the Sandoway district. Opium was never much used in the Sandoway district. The Financial Commissioner says in paragraph 14 of his Excise Report for 1890-91—

"The Arakanese taste for opium appears to be very pronounced—to amount almost to a rage. The drug is smuggled across from Chittagong, and even received by parcel post from Calcutta."

And again—

"But when all has been said and done the Financial Commissioner is of opinion that, under the law as it stands, the task of preventing illicit traffic in opium is a hopeless one."

In paragraph 5 of my note, dated the 8th December 1890, which was written when I was Financial Commissioner, and which formed an enclosure to the Secretary to Chief Commissioner's No. 1-10E, dated the 2nd February 1891, I showed that in proportion as the issues of opium are reduced in the Arakan Division so they rise in Chittagong. It was, therefore, impossible to stop the use of opium in the Kyaukpyu and Sandoway districts by closing the shops in those districts; it would be equally impossible to stop it in the Akyab district by closing the shop in that district, and with supplies of opium at hand from India, the Straits Settlements, China, the Shan States and the Kachin hills, how opium is to be kept out of Burma I cannot conceive. It is suggested that the possession of opium by Burmans may be made illegal as it is in Upper Burma. It is already so far illegal that anyone in possession of opium must show that he bought it from Government or a licensed vendor (Rule 11 of the rules under the Opium Act for Burma, Finance and Commerce Department notification, No. 62, dated the 29th August 1891, and section 10 of the Act). This, it is said, is not enough—make it altogether illegal as it is in Upper Burma under Rule 10 of the rules. This, I think, may be agreed to as there is no doubt that Burmans are better without opium. I would, however, allow any Burman who has been in the habit of using opium to get it at the present shops and at the present price, provided that he registers himself as an opium consumer and obtains a certificate from the Deputy Commissioner that he is allowed to purchase opium. The certificate should allow purchase only from one particular shop, though transfers from one shop to another would be allowed for good cause. I would not raise the price of opium, because why should persons who have contracted the habit of opium consuming without any opposition being placed in their way now be made to pay penalties for indulging their taste or craving for the drug?

Non-Burmans I would allow to obtain opium as before, though they also should be registered and receive certificates binding them to purchase from specified shops as in the case of Burmans. This is necessary in order to enable us to check the consumption of shops. The Chinese will have it, prohibition or no prohibition; the Shans and Kachins consider it a necessary of life, and it does not apparently injure Indians. In feverish places, such as Bhamo and Mergui, opium acts as a febrifuge, and it is a necessary of life the people say. As to enlisting the village authorities on our side to put down the consumption of opium, the Burmans look upon the consumption of opium as contrary to their religion, but they are an apathetic race, and I doubt if we shall get any active support from them in a crusade against the drug. We could, of course, bind village headmen to report cases of illicit opium consuming, but I do not recommend this as I am opposed to the multiplication of petty offences and to increasing the powers of petty officials to harass the people.

The evils of proceeding too quickly in forbidding the use of opium may be illustrated by the facts which came to my knowledge that as a result of temporarily closing the Bassein shop three men died, and in the Shwegyin district two men died because they were arrested by the police for opium-smoking and temporarily deprived of the drug. As for what the Chinamen of Pegu said, I do not believe they meant it, and as to Mandalay the Chinamen there do not mind the shops being closed because they can smuggle opium to any extent. Mr. Carter at page 1 of the Tenasserim Division Report, which formed an enclosure to Sir Alexander Mackenzie's Minute of the 30th April last, said—

"From my own personal knowledge I know that a large proportion of the population in Upper Burma were addicted to opium when we annexed the country. In Mandalay in 1885 I found enormous stores of opium amongst the Chinese population, and they admitted that they sold largely to Burmans."

This was in spite of the prohibition of the drug by the King, and I am afraid that what Mr. Carter saw in 1885 still holds good, though to a very modified extent, as there is no doubt that the use of opium by Burmans in Upper Burma has been restricted since we took the country.

As regards Upper Burma it is shown that there is no necessity for further interference there, and if the present system works well, why alter it? To close all the shops in Upper Burma would simply mean that non-Burmans would get their supply by smuggling, and that the control of the opium trade would pass from the hands of Government into those of desperate adventurers.

There is one point which I desire to notice here.

The whole number of opium consumers in Lower Burma is divided into opium-eaters and smokers. There are 10,973 eaters, and 8,901 smokers so far as is known.

Opium-smoking is said by an eminent authority, Sir William Moore, K.C.I.E., to be less injurious than opium-eating, though the medical officers consulted by the Financial Commissioner, see paragraph 6 of his note, say the reverse. It seems to me that opium-smoking must be less noxious to the human frame than eating the undiluted drug. It is certainly more expensive as a greater quantity of the drug is consumed in smoking than in eating. It has been pointed out to me by the Commissioner of the Irrawaddy Division that the preparation of opium pipes is not easy, and that, therefore, by forbidding the consumption of opium in shops the smoking of opium will decrease and the eating will increase, as people cannot prepare pipes for themselves. There is a great deal of weight in the argument, and I think that possibly I was wrong in proposing in 1890 that the consumption of opium in shops should not be allowed. There is much to be said on both sides of the question, and I do not think that the papers now before me afford any proper basis on which to come to a definite conclusion. There is danger that, now the smoking of opium on the premises of licensed shops is not allowed, more illicit opium dens will be opened. As to the question whether the interference of the police will not be a greater evil than the extended use of opium, as I merely propose to introduce the Upper Burma system into Lower Burma, the danger of police interference will not be so greatly extended. All interference by police in matters of everyday life is, I think, to be deprecated. The police do misuse their powers, and I think that to employ them to enforce a general prohibition against the use of opium would be to arm them with another weapon for extortion, the use of which would be keenly resented by the Burmans, who are very intolerant of such interference.

In addition to rendering the possession of opium by Burmans in Lower Burma illegal, as it is in Upper Burma, I would also limit the amount of opium to be issued from each shop. We shall know the number of non-Burmans in each area supplied by a shop, and we shall know the number of Burmans who have obtained certificates from the Deputy Commissioner permitting them to use opium, so that it will be easy to find the amount of opium which can be legitimately issued by each shop, and by limiting the issue to that amount unlicensed hawking of opium from licensed opium shops will be prevented. This is one of the chief evils of the present system.

What I propose, then, is—

- (1.) To render the possession of opium by Burmans in Lower Burma illegal, as it is in Upper Burma.

APPENDIX L.

- (2.) To prevent undue hardship to Burmans in Lower Burma who have become habituated to the use of opium by permitting Deputy Commissioners to grant them certificates that they are opium consumers and may be supplied with opium. A list of all certificates issued would be kept, and copies would be sent to the police and to the opium farmers. The certificates would be issued free of charge. It is, of course, understood that no man could get a certificate who could not show that he was an habitual opium consumer.
- (3.) To fix a maximum quantity of opium to be issued by each shop, based on the number of its legitimate customers, which would be ascertained from the registered number of Burman and non-Burman opium consumers.

In making these proposals I am going beyond what Sir Charles Aitchison or Sir Charles Bernard recommended. Their views are given in paragraphs 5 and 6 of the Secretary to the Chief Commissioner's No. 1-10E., dated the 2nd of February 1891, already quoted, and in the Financial Commissioner's note appended to that letter, paragraph 2. Sir Charles Crosthwaite's opinion is given in paragraph 2 of his review of the Excise Report for 1887-88:—

"The use of opium is condemned by public opinion no less in Lower Burma than in Upper Burma, and the Chief Commissioner agrees in the opinion that the more the consumption of opium is regulated and the more illicit consumption of opium is repressed the less will persons not already habituated to its use take to it for the first time."

All the three Chief Commissioners whose views I have quoted were opposed to the general closing of opium shops, and so was Sir Alexander Mackenzie in February 1891. The views expressed in his note of the 30th of April 1892 are, as he admits, not the result of deliberate consideration of the question. My own views are the result of long and close experience, as I had the immediate control of the opium administration of the province for nearly three years as Financial Commissioner.

The Government of India has, in paragraph 16 of the Secretary to Government of India's No. 3,166, dated the 29th July 1891, directed that any possible loss of revenue involved in the adoption of the measures discussed in that letter need not be taken into account in deciding whether the measures should be adopted. If the measures are shown to be desirable on general grounds and to be of a practical nature, the loss of revenue will not be allowed to stand in the way of their adoption. In this expression of the views of the Government of India I thoroughly concur. The abandonment of revenue for no corresponding advantage I cannot recommend, but it is not from considerations of revenue that I am opposed to the complete prohibition of the use of opium in Lower Burma, but simply because I am firmly convinced that such complete prohibition is neither desirable nor practicable.

F. W. R. FRYER,

Officiating Chief Commissioner.

R.I.M.S. "Irrawaddy,"

July 5, 1892.

TELEGRAM from the SECRETARY OF STATE FOR INDIA to his Excellency the VICEROY, dated the 24th January 1893.

My predecessor's Despatch 94 (Revenue), 17th December 1891. Paragraph 2, clause 8, Burma opium. Have you come to any conclusion? Please telegraph reply.

TELEGRAM from the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA, dated the 9th February 1893.

Your Lordship's telegram dated the 24th January 1893. The latest recommendation from Chief Commissioner, Burma, is to assimilate the rule in Lower Burma to those in force in Upper Burma, that is, to prohibit sale to and possession by Burmans, making special arrangements to prevent serious hardships to persons in Lower Burma who are habituated to use of opium. We fear this measure may be followed by extensive smuggling. It will create a new and artificial class of criminal offences, and will afford opportunities for police oppression to an extent constituting a very

serious evil. But we feel it may be difficult to defend the differential treatment of Lower Burma, and if your Lordship desire it we are prepared to authorise the Chief Commissioner to try what he proposes. Please telegraph reply.

TELEGRAM from the SECRETARY OF STATE FOR INDIA to his Excellency the VICEROY, dated the 21st February 1893.

Your Lordship's telegram of 9th February. Opium. Considering all the circumstances, I do not think that differential treatment of Lower Burma as to opium can be defended, and I therefore request your Excellency will authorise Chief Commissioner to assimilate rules in Lower Burma to those in force in Upper Burma.

TELEGRAM from the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.—No. 963Ex., dated the 7th March 1893.

Your Lordship's telegram of 21st February last. Burma opium. We have instructed Chief Commissioner, Burma, to assimilate rules in Lower Burma to those in force in Upper Burma. Arrangements to introduce new system will take some time, and Chief Commissioner says they cannot be complete by 1st April next. He hopes to introduce the change from 1st July next.

No. 104 of 1893.

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT.

SEPARATE REVENUE.—OPIUM.

To the Right Honourable the EARL OF KIMBERLEY, K.G., Her Majesty's Secretary of State for India.

MY LORD,

Calcutta, March 22, 1893.

We have the honour to acknowledge the receipt of your Lordship's telegram dated the 21st February 1893, in which we were informed that, in view of all the circumstances, the differential treatment of Lower Burma as to opium could not, in your Lordship's opinion, be defended, and we were accordingly requested to authorise the Chief Commissioner of Burma to assimilate the rules in Lower Burma to those in force in Upper Burma. We now desire to explain, for your Lordship's information, the manner in which we have dealt with this matter, and to state the steps we have taken to give effect to your Lordship's instructions.

2. In our despatch, No. 289, dated the 14th October 1891, we stated that Sir A. Mackenzie, then Chief Commissioner of Burma, had submitted proposals for the prohibition of the sale and possession of opium as regards Burmans in Lower Burma; and among the enclosures to that despatch was a copy of our letter, No. 3166, dated the 29th July 1891, in which we informed the Chief Commissioner that, notwithstanding the very serious interference with the personal liberty of the Burmans which would be involved, we would be prepared to sanction his proposal if we should be convinced—

- (1.) That the evil to be removed is as great as was represented;
- (2.) That it would be practicable to enforce the prohibition; and
- (3.) That the enforcement of the prohibition would not entail, and be accompanied by, evils as great as that which it was desired to remove.

We at the same time informed the Chief Commissioner that any possible loss of revenue involved in the adoption of more severe restrictions on the consumption of opium need not be taken into consideration.

3. On receipt of our instructions, the Chief Commissioner issued orders for the collection of statistics, facts, and figures bearing on the question of the difference in the effect of opium on non-Burmans and Burmans respectively. He also invited opinions as to the possibility of enforcing the prohibition of the possession of opium by Burmans and as to the best means of guarding against the abuse of the powers of the police and preventive establishments, and the measures necessary to mitigate the effect of the sudden stoppage of opium in the case of Burmans who had become habituated to its use.

4. The result of these inquiries was set forth in a note by the Financial Commissioner of Burma, dated the 27th April 1892, with which was forwarded a minute by the Chief Commissioner, dated the 30th idem. Sir A. Mackenzie, while not attaching undue importance to statistics collected at any precise point of time, considered that the figures which had been compiled afforded strong confirmation of the opinion commonly held in Burma, by both European officers and natives of the country, that opium is specially deleterious to persons of Burmese race; and indicated that the evil was one that was rapidly growing in many parts of the Lower Province. He further stated that the inquiries made had led him to the conclusion that, when originally proposing that the possession of opium should be prohibited to Burmans only, and not to non-Burmans, especially to the Chinese, he had not gone far enough. The total number of Chinese in both provinces of Burma was estimated at about 25,000 excluding children, and this number Sir A. Mackenzie considered to be too small to justify the maintenance of shops which must facilitate smuggling, and form centres of temptation to the indigenous races. He therefore proposed that every opium shop in both provinces should be closed to Burmans and non-Burmans alike, special arrangements being made for the supply of opium on medical certificate or special license to those who had become habituated to the use of the drug. He considered that, under this system of total closure, it would be easier to enforce the prohibition than if some of the shops were left open; and he doubted whether Burmans would at any time allow themselves to be severely victimised by the police.

5. Sir A. Mackenzie's minute was written hurriedly under pressure of time on the eve of his departure from Burma. We therefore called on Mr. Fryer, who had succeeded to the Chief Commissionership, and who, as a former Financial Commissioner of Burma, had acquired experience of the opium question as it affects that province, to submit a detailed review of the whole case which Sir A. Mackenzie had not had time to prepare, and also to favour us with his own opinion and recommendations in the matter. Mr. Fryer accordingly submitted to us a note, dated 4th July 1892, which forms an enclosure of this despatch. In this note he pointed out, in the first place, that the inquiry that had been made did not afford a sound basis for estimating the extent to which the consumption of opium prevailed. Mr. Fryer was, he said, "persuaded that the official inquirers would naturally go to villages in which there were known to be consumers of opium. Any person told to examine a given number of villages in order to procure statistics as to the number of opium consumers in a district would proceed to inquire in what villages consumers of opium might be found, as he would consider it waste of time to go to a village which contained no consumers of opium. For this reason I think that the number of opium consumers found in a given area is no criterion of the number existing in any particular district. The villages examined were those in which opium consumers were to be found, and villages in which there were no opium consumers were not, I feel sure, taken into account."

6. Mr. Fryer then pointed out that in three out of the four divisions of Lower Burma the Financial Commissioner had set aside the per-centage of opium consumers which resulted from the figures collected at the inquiry, and had assumed higher per-centages, the latter not being based on any recorded facts or statistics, but resting solely on the general observation or opinion of, in some instances, a single official. In this way the per-centage of consumers in the Arakan Division had been raised from 3 per cent. to 4 per cent., that of the Pegu Division from 1·2 per cent. to 2 per cent., and that of the Irrawaddy Division from 1·3 per cent. to 2 per cent.

7. It was then shown that the Financial Commissioner's estimate, prepared in the manner described, of opium consumers who had been "morally wrecked" by the habit, i.e., who were either convicted criminals or were known or believed to be pursuing a career of crime, could not be reconciled in any way with the jail statistics, the accuracy of which is beyond question. The Financial Commissioner had calculated that there were in Lower Burma 24,624 opium consumers of Burmese race who had taken to crime. The jail returns, however, show that at the time of the inquiry there were "only 7,628 Burmans in all the Lower Burman jails. About 14 per cent. of these, or 1,051 men, consume opium, so that, allowing for

"short-term convictions, it would take many years to recruit 24,624 convicted opium consumers, particularly as men convicted of offences against the Excise Acts are not included in the lists. The average annual jail population of all Burma is only 11,000, so it would take 17 years to recruit 24,600 convicted criminal opium consumers from this body. The number of opium consumers who are known or believed to have taken to crime cannot be easily determined, but it cannot possibly be so large as the Financial Commissioner states."

8. Mr. Fryer then expressed a very decided opinion that total prohibition could not be made effectual. He considered that the system in force in Upper Burma had worked well, and had had the effect of restricting the use of opium by Burmans. He was therefore averse from altering it. As regards Lower Burma, he thought that possession by and sale to Burmans might be made illegal, as in the Upper Province. His final recommendations were to the following effect:—

- (1.) To render the possession of opium by Burmans in Lower Burma illegal, as it is in Upper Burma.
- (2.) To prevent undue hardship to Burmans in Lower Burma who have become habituated to the use of opium, by permitting Deputy Commissioners to grant them certificates that they are opium consumers, and may be supplied with opium. A list of all certificates issued would be kept, and copies would be sent to the police and to the opium farmers. The certificates would be issued free of charge. It was to be understood that no one should get a certificate who could not show that he was an habitual opium consumer.
- (3.) To fix a maximum quantity of opium to be issued by each shop, based on the number of its legitimate customers, which would be ascertained from the registered number of Burman and non-Burman opium consumers.

9. An examination of Mr. Smeaton's note, and of the reports on which it is based, has convinced us that the statistics which have been collected are wanting in accuracy, and that the inferences which have been drawn from them are in some respects unsound.

10. From the date of the Chief Commissioner's Resolution instituting the inquiry and those of the reports submitted by the local officers in answer thereto, it appears that the time available for making the actual inquiries seldom exceed two months; and in several cases the time occupied was considerably less. The inquiries purport to have embraced widely different areas in different districts. In Kyaukpyu and Hanthawaddy they are said to have covered almost the whole district. In Henzada 976 villages were included, in Amherst 405 villages, and in Akyab 110 villages and 23 circles. The population (Burmans only) of the areas dealt with in these districts ranged between 120,000 and 280,000. In Sandoway, on the other hand, only 19 villages were examined, in Pegu seven villages, in Tharrawaddy, Tavoy, and Mergui four villages each, and in Bassein two villages only. We consider it quite impossible that, in districts where a large population is said to have been examined, the results reported can possess any statistical value. The time allowed was much too short for a personal examination of each individual by a responsible officer, or even for the testing of a considerable proportion of cases. The inquiries in these districts were necessarily entrusted to subordinates, mostly petty Burmese officials, who had the assistance of village headmen and thugyis. Such agents cannot be relied on for the conscientious performance of a delicate and laborious task in which they could not be subject to effective supervision.

11. Still less is it possible to regard Mr. Smeaton's estimate of the number of Burmans who have been "physically or morally wrecked" by the use of opium as possessing any claim to accuracy. It would be no easy task, even for trained and competent observers, having sufficient leisure, to ascertain the number of persons who have been "physically wrecked," or who have "taken to crime," as a consequence of indulgence in the drug. The terms are wanting in precision, and would have been liable to be misinterpreted and variously understood, even if the inquiring agency had been less imperfect than it was. The reports show that the local officers experienced this difficulty. The Commissioner of Arakan writes:—"It is very difficult to distinguish between 'physically wrecked' and 'morally wrecked.' In fact, many of the officers have not understood the question." The Deputy Commissioner of Kyaukpyu writes:—"It is very difficult for any but an expert to distinguish between persons who may be said

APPENDIX L.

"to be physically wrecked and those to whom such a term would scarcely apply."

It will be seen also that Mr. Smeaton has in each case added together the number of persons returned as "physically wrecked" and "morally wrecked," and rests his calculation on the sum of the two; although it is obvious that in many cases the effects of over-indulgence must be felt in both ways in the same individual. He has also obtained his per-centage of persons "physically or morally wrecked" to total consumers in each division by adding together the number of persons returned under these heads in each district, and comparing them with the sum of the persons returned as consumers in the areas brought under examination. In this way the per-centage obtained for each division depends mainly on the figures returned from those districts in which a large population is said to have been examined, i.e., those in which the inquiry was most superficial and inaccurate.

12. The following table, prepared from the Burma Jail reports, shows the number of convicts admitted into jail in Lower Burma and the number of opium consumers among them in each year since 1883, when orders for the systematic registration of opium consumers in jail were first issued:—

Year.	Number of Convicts admitted into all jails in Lower Burma.	Number of Opium-takers.	Per-centage Column 3 on Column 2.
1.	2.	3.	4.
1883 - -	10,129	1,823	17.9
1884 - -	10,942	2,417	22
1885 - -	12,468	2,891	23
1886 - -	13,844	2,167	15.6
1887 - -	11,800*	2,472	20.9
1888 - -	12,057	2,613	21.6
1889 - -	11,166	1,945	17.4
1890 - -	10,028	1,898	18.9
1891 - -	10,282*	2,330	22.6

* Four hundred and thirty-two Europeans in 1887, and 202 in 1891 excluded. In the other years Europeans are included.

These figures show that, although the number and proportion of opium consumers in jail have fluctuated during the last nine years within not very wide limits, there has been no special tendency to increase, and certainly no steady growth. They lend no colour whatever to the assertion that the prevalence of the opium habit is spreading in Burma, or that it especially leads to the commission of crime. The figures in column 3 are swollen by the inclusion of persons who have been imprisoned for offences under the Opium Act, who are almost all consumers of opium.

13. We find little in the reports which have been submitted to remove our doubts whether the enforcement of prohibition is practically possible. In the Arakan Division the attempt to restrict the consumption of opium has been carried further than anywhere else in Lower Burma; so far, indeed, that it has become in that division virtually an attempt to completely prohibit consumption by the bulk of the population. Since 1885-86 there has been only a single licensed opium shop in the entire division, which has an area of 14,526 square miles and a population of 670,000. For some years past, moreover, the quantity of opium which the single licensed vendor is permitted to sell has been authoritatively limited. Short of entire prohibition, therefore, everything has been done to make the procuring of opium difficult. Yet, during the last two years it has been found that almost one-half of the persons admitted to jail in this division were consumers of opium. The difficulty of preventing smuggling is even now almost insuperable; and we cannot think, with Sir A. Mackenzie, that we shall be in a better position to overcome it when all the shops are closed than when a few remain open. The magnitude of such a task is that a prudent ruler would shrink from undertaking it. The sea-coast line of Burma, from the Naaf estuary on the north to the southern boundary of Mergui which touches the Siamese Tributary State of Rennaung, is nearly 1,500 miles in length. There are lines of steamers running continually along this coast, and touching at Akyab, Kyaukpyu, Sandoway, Rangoon, Moulmein, Tavoy, and Mergui. In fine weather native craft run to and fro along the south coast below

Moulmein. The delta of the Irrawaddy is a maze of creeks and inlets from the sea. The profits of contraband trade are even now very large; and if the price of opium were raised to Rs. 400 a seer, as Sir A. Mackenzie suggests, or even to half as much, the incentive to smuggling would become so great that we could not hope to cope with it successfully.

On the land frontier our difficulties would be even greater. Towards Chittagong, Manipur, the Shan States, and Siam the boundary runs through wild and mountainous country covered with dense jungle, and in many parts almost unexplored. In the Shan States the poppy is extensively cultivated, and the opium produced, besides supplying the requirements of the people, which are considerable, goes at present mostly to China. If the price were enormously raised, as it would be were prohibition undertaken, this large supply would be attracted to Burma. We could not hope to keep it out, even with a customs line 1,000 miles long and an army of custom house officers. The cultivation could not be prevented unless we held the States with a very strong garrison. The compensation that would have to be paid to the chiefs and the cultivators would be no inconsiderable burden. We should drive a large portion of the population into armed resistance, and, if successful, we should bring ruinous loss upon some of the richest districts.

14. We are also of opinion that Mr. Smeaton and Sir A. Mackenzie have treated too lightly the evils which, we fear, will accompany the attempt to enforce measures of the stringency suggested by them. The reports of the local officers show conclusively that little active assistance is to be expected from the Burmese priests or headmen in putting down the use of opium, notwithstanding their verbal condemnation of it. In enforcing prohibition or restriction the Government would have to rely, as at present, on the police and the customs and preventive establishments. We are, therefore, the more reluctant to adopt a policy which would involve an extension of the scope of the penal laws relating to opium, or the creation of a new and artificial class of criminal offences. In Burma the excise and opium laws are already administered with extreme rigour. In the year 1891-92, 2,643 persons were convicted of offences against these laws in Lower Burma, 716 of them being imprisoned and the remainder fined sums amounting to Rs. 91,282. In the Arakan Division, within the last seven years 3,275 persons have been prosecuted and 1,196 imprisoned for similar offences. In this division, while the yearly average admissions to jail for all offences have been 1,207, the average for persons imprisoned for offences against the excise and opium laws—chiefly the latter—has been 162, or more than 13 per cent. The result of such severity in working a fiscal law is well understood. We invite attention to the following remarks, written by Major Grey, the Deputy Commissioner of Akyab, one of the districts of this division:—

"It is no exaggeration to say that hundreds of persons in the Arakan Division have been sent to jail or have avoided imprisonment by the payment of a fine which crippled their resources, for the offence of purchasing opium (which is a necessity to them) from a neighbour or a pedlar instead of taking long and frequent journeys, which they cannot afford, to the one licensed place of sale provided by the Administration. At a time when many advanced thinkers advocate the treatment of crime as a disease, these victims of a deleterious habit, for offences against a fiscal law so administered that it is practically impossible for them to obey it, are treated as and associated with criminals, and it can hardly be a matter for surprise if they become criminals themselves."

15. For these reasons, we are convinced that it would not be justifiable to adopt Sir A. Mackenzie's later proposals for the entire prohibition of the sale and possession of opium throughout both the provinces of Burma. We are satisfied that the extent of the evil has been exaggerated; that the enforcement of prohibition would be quite impracticable; and that the attempt to enforce it would be accompanied by harassment of the people and risk of oppression to an extent for which there can be no justification.

16. We have, however, again considered, in the light of the papers forwarded with this despatch, the original proposal put forward by Sir A. Mackenzie in his Secretary's letter, No. 1-10E., dated the 2nd February 1891, for the prohibition of the sale to and possession of opium by Burmans in Lower Burma. It will be seen that this proposal, with some modifications of detail, has now received the support of Mr. Fryer in his note,

dated the 4th July 1892, which is the latest communication received from the Chief Commissioner on this subject. These proposals are, in effect, that the rules at present in force in Upper Burma should be extended to Lower Burma, subject to special provisions to meet the case of Burmans who have become habituated to the use of opium. The reports from the local officers of Upper Burma, which accompanied and are summarised in Mr. Smeaton's note of the 27th April 1892, show that in that province the consumption of opium has been kept well in check, and the habit is not on the increase. On the contrary, there is evidence that the use of the drug has been curtailed since the annexation of the province in 1886. In Mr. Smeaton's opinion, "there appears ground for believing that the original prohibition of sale to Burmans and the recent prohibition of possession by Burmans, coupled with the restrictions placed on traffic and sale of opium and the rigorous measures taken against smuggling, have, at least to a great extent, arrested the progress which opium was certainly making among the people before and at the annexation." He has estimated that in Upper Burma there is only one consumer of opium to every six consumers in Lower Burma; and while we cannot attach much weight to a calculation based on such imperfect data, it is in some measure corroborated by the fact, ascertained from the jail returns, that in Upper Burma 4 per cent. of the Burmese convicts are addicted to opium as compared with 14 per cent. in Lower Burma.

17. The position of the two provinces is, no doubt, not quite the same. Upper Burma is a recent addition to the Empire, and presented what may be called a clean sheet to work on. Its Chinese population, which comprises not only the principal consumers of opium, but also the most active agents in the trade, is far smaller than that of the lower province. And its remoteness from the sea coast probably tended, under native rule, to cut off one source of supply. Moreover, we are not sure that the information which we possess as to the consumption of opium in Upper Burma is altogether accurate or complete, or whether the success which seems to have been attained in repressing consumption by Burmese is as real as it appears. Nevertheless, it must be admitted that our success has been greater in Upper than in Lower Burma; and we recognise that it may be difficult to defend the differential treatment of the two provinces. Our views were accordingly communicated to your Lordship in our telegram of the 9th February 1893, in which we intimated that, notwithstanding the doubts which we entertain, we were prepared, if your Lordship desired it, to authorise the Chief Commissioner to try the measures which he had finally proposed. Your Lordship's telegram in reply requested us to adopt this course.

18. Instructions to this effect were accordingly issued to the Chief Commissioner of Burma, and copies of the telegraphic communications which have passed between us and the local Government are enclosed. We are advised that it is not necessary to resort to legislation in order to give effect to the change. It will be sufficient to revise the rules framed under sections 5 and 13 of the Indian Opium Act so as to introduce one uniform system throughout both provinces of Burma, sale and possession of opium being restricted to non-Burmans; provision being also made for the registration of habitual consumers, for the issue to these persons of certificates authorising them to obtain opium, and for such other changes as the Chief Commissioner may think should accompany the main change which has been decided on. We hoped to be able to introduce the changes from 1st April. But the arrangements will take a little time to mature, and the Chief Commissioner reports that it is not probable that he will be able to introduce them before the 1st July next. Until this is done no new settlements will be made, the existing licenses which expire on the 31st March next being extended from month to month in the meantime. We estimate that the adoption of these measures will result in an annual loss of revenue to the amount of 15 lakhs of rupees, of which 12 lakhs will appear under the head of Excise and 3 lakhs under Opium.

We have, &c.

(Signed) LANSLOWNE.
ROBERTS.
P. P. HUTCHINS.
D. BARBOUR.
A. E. MILLER.
H. BRACKENBURY.
C. B. PRITCHARD,

From the DEPUTY SECRETARY TO THE GOVERNMENT OF INDIA, Finance and Commerce Department, to the CHIEF COMMISSIONER, Burma.—No. Ex. 1167, dated Calcutta, the 21st March 1893.

IN continuation of my telegram of the 7th instant, which is noted in the margin, I am directed to forward herewith a copy of a despatch, No. 104, dated the 22nd instant, to the Secretary of State, in which the decision of the Government of India in regard to the use of opium in Lower Burma is stated. It will be seen that the Government of India have resolved to sanction the proposals made in your note, dated the 4th July 1892, for the restriction to non-Burmans of the sale and possession of opium, subject to the special provisions which you recommend, with a view to avoid causing hardship to those Burmans who have become habituated to the use of the drug.

2. A draft of the revised rules under sections 5 and 13 of the Indian Opium Act, which will be necessary in order to give effect to this change, should be submitted without avoidable delay. It is desirable that they should come into force not later than the 1st July next, if possible, and the Governor-General in Council would be glad to be favoured with a report stating the action which you propose to take to give them effect. Your proposal to extend existing licenses in the meantime from month to month until the new system is ready for introduction has already been approved by telegraph.

From the REVENUE SECRETARY TO THE CHIEF COMMISSIONER, Burma, to the SECRETARY TO THE GOVERNMENT OF INDIA, Finance and Commerce Department.—No. 299-30.—4, dated the 18th April 1893.

WITH reference to the correspondence ending with your letter, No. Ex. 1167, dated the 21st March 1893, on the subject of measures for the restriction of opium consumption in this province, I am directed to submit, for the information of the Government of India, a copy of the papers cited in the margin, which contain the instructions issued to district officers by the Financial Commissioner, under the Chief Commissioner's orders, for the purpose of introducing the new system.

2. A reply to your letter, No. Ex. 1167, dated the 21st March 1893, will be submitted on receipt of a report from the Financial Commissioner, which is now awaited.

From W. F. NOYCE, Esq., Secretary to the Financial Commissioner, Burma, to the REVENUE SECRETARY TO THE CHIEF COMMISSIONER, Burma.—No. 346-59E., dated the 13th March 1893.

REFERRING to your letter, No. 129-30.—4, dated the 9th March, I am directed to forward, for the Chief Commissioner's information, a copy of letter, No. 330-59E., dated the 11th March 1893, with enclosures, which has been addressed to all Commissioners in Lower Burma, prescribing the procedure to be adopted in the registration of habitual opium consumers.

2. Draft rules under the Opium Act to give effect to the prohibition of consumption of the drug, and draft instructions for continuance of registration of non-Burman consumers of opium who may come to the country, and of persons of Burmese race who may hereafter take to the profession of doctor or tattooer, will be submitted hereafter.

3. I am to suggest that if there be no objection the Financial Commissioner's orders to Commissioners, with enclosures, be published in the Gazette to ensure the widest publicity.

BURMA.

FINANCIAL DEPARTMENT.—No. 330-59E.

(Opium.)

From W. F. NOYCE, Esq., Secretary to the Financial Commissioner, Burma, to all COMMISSIONERS in Lower Burma.

SIR,

Rangoon, March 11, 1893.

I AM directed by the Financial Commissioner

to refer you to the Chief Commissioner's Resolution, No. 10E., dated the 29th August 1891, and to the replies thereto cited in the margin regarding consumption of opium in Lower Burma. The

Right Honourable the Secretary of State for India has now finally decided to assimilate the regulations in regard to possession and use of opium in Lower Burma to those in force in Upper Burma; that is to say, to prohibit the possession and use of opium by Burmans in Lower Burma. The enforcement of this prohibition is to be accompanied by a strict limitation of issues of opium from each treasury to that quantity and no more which is required for the use of registered habitual consumers as herein-after explained.

1. Letter, No. 1223-25-91, dated the 3rd December 1891, from the Commissioner of Arakan.

2. Letter, No. 497-55E., dated the 30th November 1891, from the Commissioner of Pegu.

3. Letter, No. 17-41Ex., dated the 25th December 1891, from the Commissioner of Irrawaddy.

4. Letter, No. 5765-1113, dated the 28th November 1891, from the Commissioner of Tenasserim.

Right Honourable the Secretary of State for India has now finally decided to assimilate the regulations in regard to possession and use of opium in Lower Burma to those in force in Upper Burma; that is to say, to prohibit the possession and use of opium by Burmans in Lower Burma. The enforcement of this prohibition is to be accompanied by a strict limitation of issues of opium from each treasury to that quantity and no more which is required for the use of registered habitual consumers as herein-after explained.

2. In order to prevent real hardship to Burmans of mature age who have become thoroughly habituated to the use of the drug it has been decided that all habitual opium consumers of Burmese race of 25 years of age and upwards who may now register themselves as such shall be permitted to possess and use opium on the scale at present permitted; and that all non-Burman consumers of opium who may wish to continue using the drug shall be permitted to do so on condition that they too register their names as consumers of opium.

3. For the future, therefore, i.e., when the new rules come into operation, possession and use of opium in any form by any person in Lower Burma shall be lawful only if the name of such person is registered; the registered persons of Burmese race being habitual consumers of 25 years of age or upwards; the registered non-Burman consumers being any persons not of the Burmese race of 20 years of age or upwards, who may choose to register themselves. When the registers are complete and closed, it shall be under the new rules (which will shortly be notified) an offence for any unregistered person to possess or use opium in any form.

4. Burmese doctors and professional tattooers who according to custom habitually use opium in the ordinary course of their profession shall, if they desire to continue the custom, be required to register themselves.

5. When the registration, as herein-after described, has been completed, no new entries shall be made in the registers except—

(a.) The names of persons who in ordinary course may wish to take up the profession of doctor or tattooer. These, however, are not likely to be numerous and should be most closely scrutinised, and verified before registration is permitted;

(b.) The names of non-Burmans of 20 years of age or upwards who may come to Lower Burma after the present registration has been completed, and who may wish to register themselves.

Under no circumstances and for no reason whatever shall any Burman, not being a doctor or tattooer, be permitted to register himself after the registers have been closed.

6. The registration of Burmese habitual consumers and of non-Burman consumers will, of necessity, take some time, and it is not expected that it can be completed before, probably, the end of May. It is necessary that the fullest and widest information be afforded to the people of the coming radical change of the law and that the clearest warning be given to them of the obligation on every person who wishes to continue the use of opium to register himself. The new rules required under the Opium Act will not in all probability come in force till the 1st July next. Meantime the current opium licenses expire on the 31st March next. It is

therefore necessary to provide for the intervening period of three months, namely, April, May, and June.

7. In order to ensure that all opium consumers who wish to continue use of the drug may, subject to the conditions above set forth, have reasonable time and opportunity to register themselves, the following procedure shall be observed in each district. The notification appended to this letter, with translation in Burmese, shall be published conspicuously in every public office and in the places of public resort in every town in the district and shall also be issued to every village headman (ywathugyi) for the information of the residents of the villages under his charge. The Deputy Commissioner shall see that the notification is posted up in a conspicuous place in every public office and place under his control, and that it is read-out by each headman or by the gaungs subordinate to him to the residents of his village or circle and also posted upon some conspicuous place in each headman's village. In all towns a copy of the notification shall be issued to each thugyi or gaung in charge of a quarter and shall be placarded at each street corner. One thousand copies of the notification will be sent direct to each Deputy Commissioner, and more, if required, can be obtained by indent from the Superintendent, Government Printing, Rangoon.

8. Simultaneously with the publication of this notification the Deputy Commissioner shall issue, at the same places and with the same publicity and in the form appended to this letter, an order prescribing the places, dates, and conditions of registration. One thousand copies in Burmese of this form of order will be sent direct to each Deputy Commissioner, and more, if required, can be had, on indent, from the Superintendent, Government Printing, Rangoon. As will be seen, dates, hours, and places have been left blank. These must be filled in by the Deputy Commissioner before issue. Registration is to be carried on at every subdivisional and township head-quarters where there is a medical officer not below the rank of a hospital assistant or where such an officer can, for the time being, be made available, and also at the head-quarters of the Deputy Commissioner. It is necessary that every facility for registration be given and that no needless worry be entailed on intending applicants for registration by having to travel longer distances than is absolutely necessary. The Deputy Commissioner will parcel out the district into registration areas so as to utilise both subdivisional and township officers in order to ensure facilities and prevent worry. He will issue the needful instructions to the subdivisional and township officers concerned, and will enter in each Order Form the details of place, dates, and hours for registration.

9. The presence of the medical officer, where possible, is necessary in order to settle doubtful cases. Ordinarily the evidence of a respectable resident of a village given before the registering officer and supported by the personal inspection of the registering officer should be sufficient to justify registration. But in cases of doubt or where the headman (who should if possible always be present) objects, or where there is a question of age, the medical officer should be consulted and the registering officer should take the statement of the medical officer into consideration in deciding to grant or refuse registration. No oath should be administered to any witness or other person in any inquiry or examination connected with registration.

10. Registration throughout the entire district should ordinarily be made on one and the same date, just as enumeration for the census is made on one and the same date, in order to prevent double registration. It is conceivable that inveterate opium-smokers or eaters may endeavour to secure double registration. This must be prevented. The Deputy Commissioner should fix the date, under the Commissioner's orders, which will be most convenient for all persons concerned. The date should not be later than the 20th of April. But the Deputy Commissioner may, if he finds good cause, extend the time and permit registration to continue beyond the date advertised. If, however, the publication of the notification and order be made in good time, it should rarely be necessary to extend the time for registration, and the less it is extended the better.

11. The registers should be completed at each township, subdivisional, and head-quarter's office not later than the 1st May, and should all be in the hands of the Deputy Commissioner not later than the 10th May. Each registering officer should, in submitting his list,

report (a) whence the registered consumers have heretofore got their supplies of opium; (b) the annual quantity of opium requisite for supply of the registered consumers; (c) whence and how he proposes that the registered consumers should henceforward get their supplies. The Deputy Commissioner should then forward the lists to the Commissioner not later than 15th May with a report describing briefly the measures taken and the results. He should state the quantity of opium which, in view of the numbers of registered consumers, will require to be annually issued from the Treasury in order to supply the registered consumers of the district and the places and method of supply which he recommends. The Commissioner should forward copies of the lists, with the reports of the registering officers and the Deputy Commissioner's recommendations to the Financial Commissioner not later than the 25th May, as it will be necessary to issue final orders and the new rules before the 1st July.

12. The form of register to be adopted is attached to this letter. If Deputy Commissioners or Commissioners have any suggestions to offer for its improvement the suggestions should be reported.

13. To tide over the intervening period of April, May, and June, the opium licenses of existing licensees may be continued to them, month by month, on condition (a) that they pay for each month one-twelfth of the license fee paid for the year 1892-93; and (b) that more opium shall not be issued to them in each month than one-twelfth of the total issue of the year 1892-3.

This latter condition is necessary in order to prevent the licensees from buying large quantities of opium in the hope of disposing of them illicitly after the new regulations come into operation. If any existing licensee refuses these conditions the license may (if necessary) be sold by auction from month to month on these conditions.

14. Deputy Commissioners and Commissioners should also report what procedure they would recommend for registration of non-Burmans who may come to the district and of Burmans who may take up the profession of doctor or tattooer after the new regulations have come into operation. Immediate registration by all such persons appears to be necessary, as, under the new rules, which will probably come in force on 1st July, possession of opium by a non-registered person of whatever race will constitute an offence.

15. Great care and prudence, as well as reasonable expedition, are requisite in carrying out the important orders conveyed in the preceding paragraphs. I am to request that the greatest care and punctuality be observed. The Government of India wish the new régime in every detail to be in full operation from the 1st July next.

16. Copies of this letter have been sent to Deputy Commissioners direct to save time.

I have, &c.

W. F. NOYCE,
Secretary to the Financial Commissioner.

NOTIFICATION.

The Government has decided, after consultation with its officers and with the priests and most respectable persons, to prohibit the possession or use of opium in any form by Burmans in Lower Burma just as in Upper Burma. The use of opium is condemned by the Buddhist religion; and the Government, believing the condemnation to be right, intends that the use of opium by persons of Burmese race shall for ever cease. But, unfortunately, there are numbers of Burmese who have become addicted, by long habit, to the use of the drug. The Government does not wish to cause pain of body or distress or great hardship to these persons by requiring them immediately to stop using opium. Therefore it has been resolved to permit Burmans of mature age who, from long habit, cannot now live without opium and who are called habitual consumers, to continue using opium on condition that they register their names in the way and at the time ordered in the accompanying order. But as it is necessary to prevent continuance of the evil habit by young men who may

have commenced using opium, it has been resolved that no Burman under 25 years of age, even although he has become a habitual consumer of opium, shall be permitted to register himself. From the date mentioned in the accompanying order on which the registers are to be closed no Burman whose name is not borne on the registers shall be permitted to possess or use opium in any form, and any unregistered Burman who does possess or use opium shall be considered to have committed an offence.

Further, in order to prevent the spread of opium among non-Burmans it has been resolved that all non-Burmans of whatever race they be, who are consumers of opium and who wish to continue the use of the drug, shall register their names. Non-Burmans shall not be permitted to possess or use opium in any form unless their names are registered, and no non-Burman under 20 years of age shall be permitted to register himself. All persons are therefore required to carefully read and obey the accompany order.

DONALD SMEATON,
Financial Commissioner.

Rangoon,
March 11, 1893.

ORDER.

In accordance with the decision of the Government recorded in the accompanying notification the following orders are issued:—

- (1.) All Burmans of 25 years of age and upwards who are habitual eaters or smokers of opium and who wish to be permitted to continue eating or smoking opium shall present themselves at the office of the (township officer, subdivisional officer, or Deputy Commissioner) at (head-quarters of township officer, subdivisional officer, or Deputy Commissioner) on the (date) of (month) at (hour) in order to have their names registered.
- (2.) Any Burman who presents himself for registration in accordance with Order (1) must produce a respectable witness who is a resident of his village or quarter to prove that he is a habitual consumer of opium. Unless a respectable witness, who is a resident in the village or quarter, testifies, the application for registration will be refused.
- (3.) It is possible that some Burmans who are not habitual consumers of opium may nevertheless present themselves for registration and may persuade evil persons to testify on their behalf. In order to prevent this it is ordered that the headman of the village or quarter in which any applicant for registration resides, may object to the registration of such person; and, if the registering officer considers that the objection is right, he may refuse registration.
- (4.) Burmese doctors and professional tattooers who require and habitually use opium in their profession must register themselves. But no such person shall be registered unless the headman of the village or quarter and one respectable resident of the village testifies before the registering officer that he is by profession a doctor or tattooer and requires and habitually uses opium in his profession.
- (5.) All non-Burmans of 20 years or more who are opium consumers and who wish to be permitted to continue the use of opium shall present themselves at the place and time named in Order (1) in order to have their names registered.
- (6.) After (hour) on the (date) of (month) the registers shall be closed and no person shall then be permitted to register himself, unless, for special reasons, the Deputy Commissioner may see fit to grant permission. But when once the registers have been sent by the Deputy Commissioner to the Commissioner registration shall absolutely cease.

(Station) Deputy Commissioner.
Dated 1893.

FORM OF REGISTER OF HABITUAL OPIUM CONSUMERS IN

DISTRICT.

I.—BURMANS.

Sub-division.	Town-ship.	Village.	Name of each registered Habitual Consumer of Opium.	Father's and Mother's and Wife's or Husband's Name.	Age.	Trade or Profession.	Distinguishing Marks or Identification.	Whether the registered Person Eats or Smokes Opium or both.	Quantity of Opium habitually consumed by each registered Person in a Day, Week, Month, or other Period (to be named).	Quantity which each registered Person declares he or she requires Daily, or Weekly, or Monthly, or other Period (to be named).	Remarks.

BURMA.

SEPARATE REVENUE DEPARTMENT.—No. 22-30.—1.

(Opium—Miscellaneous.)

From C. G. BAYNE, Esq., I.C.S., Revenue Secretary of the Chief Commissioner, to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Finance and Commerce.

SIR, Rangoon, May 2, 1893.

IN continuation of previous correspondence, I am directed to submit a draft of revised rules under the Opium Act for Burma. For convenience of reference the rules at present in force and the proposed new rules have been printed side by side and new matter has been printed in italics. I am to make the following remarks in explanation of the rules.

Rule 1 (iii.), (iv.), and (v.)—Three separate definitions of opium are necessary under the new system which it is proposed to introduce. In Upper Burma the use of both Government and Foreign opium is contemplated. This is in accordance with the present practice, under which the opium sold by licensed vendors is procured partly by import from Yunnan or the Shan States and partly from the Government Treasury. In Lower Burma, in order to facilitate the repression of smuggling, it is proposed to permit the possession and sale of Government opium only. For convenience of drafting the two classes of opium are defined separately. The definition of "opium preparations" is inserted in order to prevent the possibility of illicit sale of raw or smoking opium under cover of medical licenses. Under the draft rules medical practitioners are to be permitted to sell "opium preparations" only.

Rule 1 (xi.) and Rule 10.—The distinction between the quantity of opium which may be possessed in Upper Burma and the quantity which may be possessed in Lower Burma has been abolished, and the present Lower Burma quantity, 3 tolas, has been adopted for the whole of Burma. The reason for the change is explained in the following remarks by the Financial

Commissioner, in which the Chief Commissioner concurs:—

"The ordinary limit of possession in Upper Burma has been reduced from 10 to 3 tolas as in Lower Burma, and possession by Shan travellers and horse-dealers is reduced from 15 to 5 tolas. The large quantities permitted under the present rules are really not required and have been found to encourage illicit traffic in the drug; and if these large quantities are permitted, there is little doubt that importation into Lower Burma will be much stimulated. Several experienced officers in Upper Burma have repeatedly urged the lowering of the limit of possession in Upper Burma which the Financial Commissioner now advises."

Rule 1 (xiii.) and (xiv.)—It is necessary to define "medical practitioner" and "doctor" separately because native doctors ordinarily use Government opium, and it is proposed, in order to facilitate the exercise of supervision over them, to permit them to deal with preparations of Government opium only. Medical practitioners, on the other hand, ordinarily use Turkish opium, and their dealings cannot, therefore, be restricted to Government opium.

Rule 1 (xv.)—It is necessary to provide for the supply of opium to tattooers in Burma. It is the universal custom for Burmese boys to be tattooed from the waist to the knees, and tattooing on other parts of the body is commonly practised. Tattooing is in Burma a regular profession which numbered 4,280 practitioners at the last census. Tattooers are in the habit of administering opium to their patients. As is remarked in the "Burma Gazetteer" (Vol. I., page 380):—

"The operation is painful, and is done in patches and not all at once, and on each occasion the child is put under the influence of opium."

It may be objected to the proposal to permit tattooers to possess opium that they are not at present permitted, if of Burmese nationality, to possess it in Upper Burma. This is the case. The necessity of enabling tattooers to procure opium licitly in Upper Burma appears to have been overlooked when

the Opium Act was introduced into that province, and Mr. Fryer has little doubt that they now procure it illicitly. As they use it solely as a medicine, administered to allay pain, he considers that it would be an act of inhumanity to place it beyond their power to procure it licitly.

Rule 1 (xix).—The definition of "Burman" has been amended so as to bring within the scope of the regulations the various indigenous races, such as Karens, Chins, &c., who have hitherto been excluded. It is not expedient that these races should be excluded as they do not ordinarily consume opium and it is desirable that they should be prevented from taking to the practice. Kachins are excluded for the reasons stated in the enclosure to my letter, No. 218-20.—3, dated the 18th October 1892.

Rule 1 (xxi.)-(xxiii.)—The definitions are necessary as a complement to the Rules (Nos. 23 to 34) concerning the registration of Burman consumers in Lower Burma.

Rules 8 and 9.—These rules have been modified in order to provide for the new provisions, the reasons for which have already been explained, concerning medical practitioners, doctors, and tattooers.

Rule 11.—This rule provides for the possession of opium by registered consumers in Lower Burma. The Rangoon Town district consists of the town of Rangoon only and it is consequently necessary to refer to it specially.

Rules 16 to 18.—These rules provide for the possession of opium by medical practitioners and doctors under the system already explained.

Rules 20 and 21.—These rules differ from the corresponding rules now in force in—

- (i.) Reducing the quantities of opium which travellers and horse-dealers may import to 5 tolas;
- (ii.) Limiting such import to Upper Burma.

The quantity, 15 tolas, provided by the present rules is generally considered to be too high and enables large caravans, of which many enter Burma from China and the Shan States every year, to introduce considerable quantities of opium into Burma. The Chief Commissioner considers 5 tolas per man or animal a sufficient quantity. The rule has been limited to Upper Burma because few caravans enter Lower Burma. The only part of the country from which such caravans occasionally enter are Karenni and Siam. Travellers do not, however, come from these parts in large caravans to the same extent as from China and the Shan States they are not, so far as is known, generally addicted to the use of opium, and there is no reason for granting them special indulgence.

Rules 23 to 34.—The scope and object of these rules is stated as follows by the Financial Commissioner:—

"The most important of the reforms which the new rules are designed to legalise is the restriction of permission to possess opium in Lower Burma to persons who are registered. The regulations under this head are contained in draft Rules 23-34. There are two Registers, A. and B. Register A. is for Burmans of 25 years or upwards only; Register B. is for non-Burmans of 20 years or upwards. Registration is now proceeding all over Lower Burma. It is proposed to keep Register A. open for a fortnight after the date (1st July 1893) when the revised rules come into operation. After that date it will be finally closed, and, except under special circumstances, which are described in the rules no Burman shall thereafter be permitted to register himself. The number of Burmans, therefore, who are permitted to possess opium will be an annually diminishing quantity. Register B. is to remain open to non-Burmans of 20 years or upwards who may apply for registration. Possession of opium by any person whose name is not borne on the registers will, after the rules come into operation, be an offence under the Opium Act."

Rule 35.—This rule has been inserted in order to legalise the action of a person who buys opium legally and takes it home. Such a person "transports" opium, but it would be impossible to require him to take out a transport license.

Rules 41 and 42.—Modifications have been made in these rules corresponding to the modifications made in Rules 20 and 21.

Rules 44 to 48.—Provision has been made for bringing imported opium to either warehouses or treasuries

in Upper Burma. Such opium is ordinarily brought to and kept in the treasury.

Rule 57 (i).—This rule provides for the sale of opium retail by Government officers. The object of the rule is to meet cases, which may possibly occur, in which it is necessary to provide some means for the supply of opium to registered consumers, but in which the number of such consumers is not sufficiently large to render it necessary to grant an ordinary retail license. It is not yet possible to say whether cases of this kind will occur. Registration is now going on, and until it is known how many persons have been registered and from what places, it is not possible to decide whether it is necessary to provide additional means for the sale of opium to registered consumers. Mr. Fryer desires to make as little change as possible in the arrangements for this purpose. There are at present 19 licensed opium shops in Lower Burma which supply all the licit demand of the province. When the new regulations have been introduced these shops will be maintained, if still required, the quantity of opium issued to them being limited to the quantity necessary to meet the needs of registered consumers. It is probable, however, that the registration which is now in progress will disclose the existence of groups of opium consumers in towns which are so remote from any licensed shop that it will be practically impossible for the consumers to obtain opium from such a shop. In cases of this kind two courses are open. Government may proceed on the principle that these persons have hitherto been provided with no legal means of procuring opium and may accordingly decide that no such means shall in future be given them; or Government may take into account the fact that they have hitherto procured opium illegally, that they may be able to procure it in future notwithstanding the new regulations, and that to refuse to enable them to procure it licitly is practically to promote smuggling. The action of Government in cases of this kind should, in Mr. Fryer's opinion, be determined by the number of registered consumers. If there is a large number of registered consumers in a town which is remote from an opium shop, and if Government refuses to provide any means by which these consumers can procure opium licitly, it is certain that to provide them with opium will be a very profitable undertaking. The inducement to smuggle will be so great that Government will almost certainly be unable to check it. In such cases it is clearly advisable to enable registered consumers to procure opium licitly. If such consumers can obtain it legally there will be no inducement, or only a very slight inducement, to smuggling, and Government will probably be able to suppress any attempts that may be made in that direction. The result will be that a known and yearly diminishing number of persons will procure opium legally. There being, *ex hypothesi*, no smuggling, the rest of the population will be unable to procure opium, and in course of time the vice will entirely die out. On the other hand, if Government refuses to enable registered consumers in such places to procure opium licitly, there is no object in registering them, and as it will probably be unable to suppress smuggling, the smugglers will supply opium not only to registered consumers but also to everyone whom they can induce to buy it, and the vice will be perpetuated. Accordingly, in places which cannot obtain supplies from licensed shops, and in which the number of registered consumers is considerable, the Chief Commissioner considers that it will be a wise policy to provide for the sale of opium. The number of consumers in such places would in most cases not be large enough to make it worth while to open a licensed shop. It will accordingly be necessary for Government to arrange to sell opium itself. It is proposed to entrust sales either to township officers or to officers in charge of dispensaries, as may be expedient in each case. In the case of places where the number of registered consumers is very small, it will not be necessary to take any steps to supply the consumers with opium even though the remoteness of the nearest licensed shop renders it practically impossible for them to procure it thence. The trade of supplying opium illicitly to a mere handful of people cannot yield a large profit, and Government is strong enough to suppress any attempts in that direction. These persons must either break themselves of the habit or go where they can get opium legally. I am to add that, as stated above, the Chief Commissioner is not yet in a position to state whether it will be necessary in any case for Government to arrange to sell opium by retail itself, but he thinks that such a step

APPENDIX L.

will probably be advisable in a few cases, and he has accordingly provided the means for taking it.

Rule 59 (i).—"May" has been substituted for "shall" in this rule because it is not necessary to impose on Government the obligation to establish shops in each district. As a matter of fact several districts in Burma contain no shops.

*Rule 61.—*This corresponds with previous rules, already commented on, concerning the sale of opium by tattooers, medical practitioners, and doctors.

*Rule 65.—*An addition has been made to this rule, giving Government power to fix the minimum price at which opium may be sold retail to the public. It is expedient that Government should possess this power.

Rules 48 to 55 of the rules at present in force have been omitted, as they provide for a system which is never likely to be introduced in Burma, and are there-

fore unnecessary. Corresponding corrections have been made in the rules regarding possession, sale, &c.

*Rules 66 and 67.—*These rules are necessary in view of the new arrangements made for selling opium.

2. I am to solicit the favour of very early orders on the draft rules now submitted. The new opium system is to be introduced from the 1st July, and it is desirable that the new rules should be published some weeks before that date in order that Government officers and the general public may become acquainted with their provisions

3. The draft rules have been examined and their drafting has been approved by the Government advocate.

I have, &c.

C. G. BAYNE,
Revenue Secretary.

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

Finance and Commerce Department Notification,
No. 62, dated Rangoon, the 29th August 1891.

THE following revised rules, made by the Chief Commissioner of Burma, with the previous sanction of the Governor-General in Council, for regulating the matters specified in sections 5 and 13 of the Opium Act, 1878, are published for general information.

(i.) These rules shall come into force on the 29th day of August 1891.

(ii.) On and from that day all rules previously made under the said Act shall cease to have effect, except as regards anything done, or any offence committed, or any fine or penalty incurred, or any proceedings commenced before that day.

(iii.) Save where a contrary intention appears, these rules apply to all territories for the time being administered by the Chief Commissioner of Burma except the Shan States.

Definitions.

1. In these rules, unless there be something repugnant in the subject or context—

(i.) "India" means the territory included within the British frontier lines on the extreme west, north, and east of British India.

(ii.) "Lower Burma" means the territories for the time being comprised in Lower Burma under sub-sections (1) and (2) of section 2 of the Upper Burma Laws Act, 1886; "Upper Burma" means the whole of Burma except Lower Burma and the Shan States.

*"Opium" means the inspissated juice of the poppy, preparations or admixtures thereof, intended for medical purposes, and beinsi and beinchi, but does not include poppy-heads nor kumbôn, nor beinye nor any preparation or admixture thereof, nor any other intoxicating or narcotic preparation of opium or of the poppy.

"Poppy-heads" means the capsules of the poppy plant.

(iii.) "Tola" means a weight of 180 grains troy.

(iv.) "Seer" means a weight of 80 tolas.

(v.) "Viss" means 3·65 pounds avoirdupois.

(vi.) "Pè" means 1·75 of an acre.

(vii.) "Opium," when sold in Lower Burma in any quantity not exceeding 3 tolas in weight, and when sold in Upper Burma in any quantity not exceeding 10 tolas in weight, shall be deemed to be sold by "retail," and when sold in larger quantities shall be deemed to be sold "wholesale." Poppy-heads, when sold in any quantity not exceed-

DRAFT REVISED RULES.

Definitions.

1. In these rules, unless there be something repugnant in the subject or context—

(i.) "India" means the territory included within the British frontier lines on the extreme west, north, and east of British India.

(ii.) "Lower Burma" means the territories for the time being comprised in Lower Burma under sub-sections (1) and (2) of section 2 of the Upper Burma Laws Act, 1886; "Upper Burma" means the whole of Burma except Lower Burma and the Shan States.

(iii.) "Opium" means the inspissated juice of the poppy, and beinsi and beinchi, but does not include poppy-heads nor kumbôn, nor beinye nor any preparation or admixture thereof, nor any other intoxicating or narcotic preparation of opium or of the poppy.

(iv.) "Government opium" means opium manufactured by Government and sold or issued by a Government officer empowered to sell or issue opium, and includes beinsi and beinchi made or prepared from such opium.

(v.) "Opium preparation" means any preparation or admixture of opium intended for medical purposes only.

(vi.) "Poppy-heads" means the capsules of the poppy plant.

(vii.) "Tola" means a weight of 180 grains troy.

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

APPENDIX L.

ing 5 seers in weight, shall be deemed to be sold by "retail," and when sold in any larger quantities shall be deemed to be sold "wholesale."

(viii.) "Farmer," used with reference to opium or to poppy-heads, means a person to whom the fees leviable in a district, or in part of a district, on licenses for the retail sale of opium or poppy-heads, or both, have been let in farm by the Deputy Commissioner under Rule 48.

(ix.) "Licensed vendor," used with reference to opium or to poppy-heads, means a person to whom a license for the retail sale of opium or poppy-heads, or both, has been granted by the Deputy Commissioner under Rule 41 or Rule 52.

(x.) "Medical practitioner" means a person to whom a license for the retail sale of opium or poppy-heads, or both, for medical purposes has been granted under Rule 43 by the Deputy Commissioner.

(xi.) "Import," "export," and "transport" have the respective meanings assigned to them in the Opium Act, 1878.

(xii.) "Upper Burma-grown opium" means opium manufactured from the poppy plant grown in those parts of Upper Burma in which the cultivation of the plant is permitted.

(xiii.) "Civil surgeon" means a civil surgeon or other principal medical officer of a district.

(xiv.) "Burman" means any person born of Burmese parents.

Every person who ordinarily wears Burmese dress and speaks the Burmese language shall be presumed to be a Burman until the contrary is proved.

(viii.) "Seer" means a weight of 80 tolas.

(ix.) "Viss" means 3.65 pounds avoirdupois.

(x.) "Pè" means 1.75 of an acre.

(xi.) "Opium," "Government opium," and "opium preparations," when sold in any quantity not exceeding 3 tolas in weight, shall be deemed to be sold by "retail," and when sold in larger quantities shall be deemed to be sold "wholesale." Poppy-heads, when sold in any quantity not exceeding 5 seers in weight, shall be deemed to be sold by "retail," and when sold in any larger quantities shall be deemed to be sold by "wholesale."

(xii.) "Licensed vendor," used with reference to opium or to poppy-heads, means a person to whom a license for the retail sale of opium or poppy-heads, or both, has been granted by the Deputy Commissioner under Rule 59.

(xiii.) "Medical practitioner" means a person who practices medicine according to European methods or who deals in European medicines and drugs as a means of livelihood, and to whom a license for the retail sale of opium preparations or poppy-heads, or both, for medical purposes has been granted under Rule 61 by the Deputy Commissioner.

(xiv.) "Doctor" means a person who practices medicine according to Asiatic methods as a means of livelihood and to whom a license has been granted under Rule 61.

(xv.) "Tattooer" means a Burman who practices tattooing of the human body according to Burmese methods, and to whom a license has been granted under Rule 61.

(xvi.) "Import," "export," and "transport" have the respective meanings assigned to them in the Opium Act, 1878.

(xvii.) "Upper Burma-grown opium" means opium manufactured from the poppy plant grown in those parts of Upper Burma in which the cultivation of the plant is permitted.

(xviii.) "Civil surgeon" means a civil surgeon or other principal medical officer of a district.

(xix.) "Burman" means any person born of parents both of whom belong to races indigenous to Burma, except Kachins in districts in which the cultivation of the poppy is permitted.

Every person who ordinarily wears a dress commonly worn by persons of any race indigenous to Burma, and speaks the Burmese language shall be presumed to be a Burman until the contrary is proved.

(xx.) "Non-Burman" means any person who is not a Burman.

(xxi.) "Village" means a village as defined in the Lower Burma Village Act, 1889, and the Upper Burma Village Regulation, 1887.

(xxii.) "Town" means a town to which the provisions of the Lower Burma Towns Act, 1892, or the Upper Burma Towns Regulation, 1891, have been extended.

(xxiii.) "Headman" in the case of villages to which the Lower Burma Village Act, 1889, or the Upper Burma Village Regulation, 1887, extend means a headman as defined in the said Act and Regulation, and in the case of towns to which the Lower Burma Towns Act, 1892, or the Upper Burma Towns Regulation, 1891, extend means a headman of a ward appointed thereunder.

APPENDIX L.

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

Cultivation.

2. Subject to the payment of the duty, and to the conditions laid down in the following rules, the poppy plant may be grown in the Kachin villages in the Katha, Bhamo, and Upper Chindwin districts, and in other local areas in which the Chief Commissioner may, from time to time, by notification in the "Burma Gazette," permit such cultivation.

3. A duty of 8 annas shall be levied for each quarter of a pè of poppy cultivation. A fraction of a quarter of a pè shall be charged as a quarter of a pè. The above duty may, with the sanction of the Commissioner of the division, be commuted to lump-sum payment by any village or tribe, or may be remitted entirely by the Financial Commissioner.

4. The local Government may, at any time by notification in the "Burma Gazette" giving six months' notice, enhance the rate of duty in any local area up to any rate not exceeding Re. 1 for a quarter of a pè or fraction thereof.

5. The measurement of the area under poppy cultivation shall be effected by village headmen under such rules as to supervision and otherwise as the Financial Commissioner may, from time to time, prescribe.

Manufacture.

6. Opium may be manufactured on account of Government.

7. In any local area in Upper Burma in which the cultivation of the poppy plant is permitted, Upper Burma-grown opium may be manufactured by any person from poppy grown in such area.

8. In Upper Burma Upper Burma-grown opium may be manufactured by—

- (i.) A farmer or a licensed vendor, subject to the conditions of his lease or license;
- (ii.) A person holding a license for wholesale vend under Rule 36;
- (iii.) A medical practitioner; or
- (iv.) Any other person for his own domestic use in any quantity not exceeding 10 tolas in weight from poppy-heads obtained from a farmer or licensed vendor.

9. In Lower Burma preparations and admixtures of opium for medical purposes may be manufactured by—

- (i.) A farmer or licensed vendor, subject to the conditions of his lease or license; or
- (ii.) A medical practitioner.

Possession.

10. In Upper Burma any person other than a Burman may possess poppy-heads not exceeding 5 seers in weight which have been bought from a cultivator in a local area in which the cultivation of the poppy plants is permitted, or from Government, or a farmer, licensed vendor, or medical practitioner, and opium not exceeding 10 tolas in weight which he has bought from Government, or a farmer, licensed vendor, or a medical practitioner.

11. In Lower Burma any person may possess poppy-heads not exceeding 5 seers in weight and opium not exceeding 3 tolas in weight, which he has bought from Government, or a farmer, licensed vendor, or medical practitioner.

DRAFT REVISED RULES.

Cultivation.

2. Subject to the payment of the duty, and to the conditions laid down in the following rules, the poppy plant may be grown in the Kachin villages in the Katha, Bhamo, and Upper Chindwin districts, and in other local areas in which the Chief Commissioner may, from time to time, by notification in the "Burma Gazette," permit such cultivation.

3. A duty of 8 annas shall be levied for each quarter of a pè of poppy cultivation. A fraction of a quarter of a pè shall be charged as a quarter of a pè. The above duty may, with the sanction of the Commissioner of the division, be commuted to a lump-sum payment by any village or tribe, or may be remitted entirely by the Financial Commissioner.

4. The local Government may, at any time by notification in the "Burma Gazette" giving six months' notice, enhance the rate of duty in any local area up to any rate not exceeding Re. 1 for a quarter of a pè or fraction thereof.

5. The measurement of the area under poppy cultivation shall be effected by headmen under such rules as to supervision and otherwise as the Financial Commissioner may, from time to time, prescribe.

Manufacture.

6. Opium may be manufactured on account of Government.

7. In any local area in Upper Burma in which the cultivation of the poppy plant is permitted, Upper Burma-grown opium and opium preparations therefrom may be manufactured by any person from poppy grown in such area.

8. In Upper Burma opium preparations may be manufactured by—

- (i.) A licensed vendor, subject to the conditions of his license;
- (ii.) A medical practitioner, doctor, or tattooer subject to the conditions of his license.

9. In Lower Burma—

- (i.) Opium preparations from Government opium may be manufactured by a licensed vendor, doctor, or tattooer whose name has been registered as herein-after provided subject to the conditions of his license;
- (ii.) Opium preparations may be manufactured by a medical practitioner subject to the conditions of his license.

Possession.

10. In Upper Burma any person other than a Burman may possess poppy-heads not exceeding 5 seers in weight which have been bought from a cultivator in a local area in which the cultivation of the poppy plant is permitted, or from Government, or a licensed vendor, or medical practitioner, and opium and opium preparations not exceeding 3 tolas in weight which he has bought from Government, or a licensed vendor, or medical practitioner, or doctor.

11. In Lower Burma—

- (i.) Any Burman of 25 years of age or upwards whose name has been registered and is borne on the prescribed register as herein-after provided, may, within the township in which his name is registered, or if registered in the Rangoon Town district, within that district, possess poppy-heads not exceeding 5 seers in weight, and Government opium and opium preparations made therefrom not exceeding 3 tolas in weight which he has bought from any officer of Government empowered to sell Government opium, or from a licensed vendor or medical practitioner, or doctor;
- (ii.) Any non-Burman of 20 years of age or upwards whose name has been registered and is borne on the prescribed register as herein-after provided, may, within the township in which his name is registered, or, if registered in the Rangoon Town district, within that district, possess poppy-heads not exceeding 5 seers in weight, and Government opium and opium preparations made therefrom not exceeding 3 tolas in weight which he has bought from any officer of Government specially empowered

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

DRAFT REVISED RULES.

APPENDIX L.

12. In any local area in which the cultivation of the poppy plants is permitted any person other than a Burman may possess any quantity of poppy-heads or opium, being the produce of poppy plant grown in such local area.

13. Subject to the conditions of his lease or license a farmer or licensed vendor may possess any quantity of opium and poppy-heads obtained by him from Government, or from a farmer, licensed vendor, or medical practitioner, or from other persons authorised to sell, and sold to him by such persons in accordance with the conditions of their leases or licenses.

14. Subject to the conditions of the pass a holder of a pass for transport, import, or export, may possess the poppy-heads or opium covered by the pass.

*15. Subject to the conditions of his license a medical practitioner may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of opium not exceeding 1 seer in weight.

16. A traveller or visitor entering Burma by land from the Shan States or from a country out of India may possess opium produced in the Shan States or out of India for the personal use of himself and attendants and not for sale or barter in any quantity not exceeding in weight 15 tolas for each person.

17. A horse dealer importing horses or ponies into Burma from the Shan States or a country out of India may, during the period of his sojourn in Burma, possess opium produced in Shan States or out of India in any quantity not exceeding in weight 15 tolas for each horse or pony for the time being in his possession.

18. Any person specially licensed in that behalf by the Deputy Commissioner of the district in which he resides or trades may, whether in Upper or Lower Burma, possess opium in such quantity and for such terms as may be specified in the special license.

* Financial Department Notification, No. 25, dated 27th October 1892.

to sell Government opium or a licensed vendor or medical practitioner or doctor.

12. In any local area in which the cultivation of the poppy plant is permitted any person other than a Burman may possess any quantity of poppy-heads or opium being the produce of poppy plants grown in such local area.

13. Subject to the conditions of his license a licensed vendor in Lower Burma whose name has been registered as herein-after provided may possess any quantity of Government opium and poppy-heads obtained by him from any officer of Government empowered to sell Government opium or from any licensed vendor authorised to sell, and sold to him by such persons in accordance with the conditions of their licenses.

14. Subject to the conditions of his license a licensed vendor in Upper Burma may possess any quantity of opium, and opium preparations, and poppy-heads obtained by him from Government or from a licensed vendor or medical practitioner or doctor, and sold to him by any such person in accordance with the conditions of his license.

15. Subject to the conditions of the pass a holder of a pass for transport, import, or export may possess the poppy-heads or opium covered by the pass.

16. Subject to the conditions of his license a medical practitioner may possess any quantity of poppy-heads not exceeding 10 seers in weight and of opium and of opium preparations not exceeding one seer in weight.

17. Subject to the conditions of his license a doctor in Upper Burma may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of opium or of opium preparations not exceeding 10 tolas in weight.

18. Subject to the conditions of his license a doctor in Lower Burma may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of Government opium, or of opium preparations made therefrom not exceeding 10 tolas in weight.

19. Subject to the conditions of his license a tattooer may possess in Upper Burma any quantity of opium and of opium preparations not exceeding 10 tolas in weight, and in Lower Burma any quantity of Government opium and of opium preparations made therefrom not exceeding 10 tolas in weight.

20. A traveller or visitor entering Upper Burma by land from the Shan States or from a country out of India may while in Upper Burma possess opium produced in the Shan States or out of India for the personal use of himself and attendants and not for sale or barter in any quantity not exceeding in weight 5 tolas for each person.

21. A horse dealer importing horses or ponies into Upper Burma from the Shan States or a country out of India may, during the period of his sojourn in Upper Burma, possess opium produced in the Shan States or out of India in any quantity not exceeding in weight 5 tolas for each horse or pony for the time being in his possession.

22. Any person specially licensed in that behalf by the Deputy Commissioner of the district in which he resides or trades may possess in Upper Burma opium and opium preparations, and in Lower Burma Government opium and opium preparations made therefrom, in such quantity and for such period as may be specified in the special license. Provided that no such special license shall be granted without the previous sanction of the Commissioner.

Registration of Persons in Lower Burma who are permitted to possess Government opium.

23. Two Registers, A. and B., in the forms prescribed in the Appendix to these rules shall be maintained in each township of every district in Lower Burma, showing the names of all persons resident in the township who are permitted to possess Government opium. An extract of the register for each village or ward, called the village register, shall be given to the headman of the village or ward, and shall be maintained by him. A combined register for the entire district, called the district register, shall be maintained by the Deputy Commissioner.

Register A. is for Burmans only of 25 years or upwards.

24. In the Rangoon Town district the Deputy Commissioner shall exercise the powers and perform the duties

assigned by these rules to a township officer in addition to those of a Deputy Commissioner.

25. On the 15th July 1893 Register A. shall be closed, and no name shall be added to it, except on transfer of any registered person from one jurisdiction to another as herein-after provided. But any Burman of 25 years or upwards who after Register A. has been closed desires to adopt the profession of doctor or tattooer may, on application in writing to the township officer or Deputy Commissioner, be registered if the headman of the village or ward in which he resides or intends to practice certifies that he is a respectable man, that he intends to adopt the profession as a means of livelihood, and that the residents of the village or ward have no objection to his possession of opium in quantity sufficient for the practice of his profession.

26. Any person whose name is borne on Register A. may at any time apply orally or in writing to the township officer to have his name struck off the register, and the township officer shall forthwith cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner, who shall strike his name off the district register. But no such person shall be entitled to have his name restored to the register. If any person whose name is borne on Register A. is sentenced to imprisonment for six months or more his name shall be struck off the register.

27. When any person whose name is borne on Register A. dies, the headman of the village or ward shall report his death to the township officer, who shall thereupon cause his name to be struck off the township and village register, and shall make report to the Deputy Commissioner, who shall cause his name to be struck off the district register.

28. When any person whose name is borne on Register A. intends permanently to leave the township or district he shall inform the headman of the village or ward. The headman shall make report to the township officer, who shall thereupon give the aforesaid person, free of charge, a certified extract of the register concerning him, and shall cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner. If the person aforesaid is leaving the district the Deputy Commissioner shall strike his name off the district register. If he is changing his residence to another township of the same district the Deputy Commissioner shall cause the district register to be corrected accordingly, and shall direct the person to report himself to the officer in charge of the township in which he intends to reside.

29. Any person whose name has been struck off Register A. under Rule 28 may apply to the officer in charge of the township to which he has changed his residence to have his name entered in Register A., and on production by such person of a certified extract granted under Rule 28, the township officer shall, after such inquiry as he may consider necessary cause his name to be entered in the township and village register, and shall report to the Deputy Commissioner, who shall cause his name to be entered in the district register. If a person produces before a township officer a document purporting to be a certified extract granted under Rule 28 the township officer shall, if he doubts the genuineness of the document, make such inquiries as he considers necessary and, if he finds that the document is not genuine, shall refuse to enter the applicant's name in Register A.

30. Any person whose name is borne on Register B. may at any time apply orally or in writing to the township officer to have his name struck off the register, and the township officer shall forthwith cause his name to be struck off the township and village register and shall report to the Deputy Commissioner, who shall strike his name off the district register.

31. When any person whose name is borne on Register B. dies, the headman of the village or ward shall report his death to the township officer, who shall therefore cause his name to be struck off the township and village register and shall make report to the Deputy Commissioner, who shall cause his name to be struck off the district register.

32. When any person whose name is borne on Register B. intends permanently to leave the township or district he shall inform the headman of the village or ward. The headman shall make report to the township officer, who shall thereupon cause his name to be struck off the township and village register and shall report to the Deputy Commissioner. If the person aforesaid is leaving the district the Deputy Commissioner shall strike his name off the district register. If he is changing* his residence to

Transport.

19.—(i.) A farmer, licensed vendor, or holder of a license for wholesale vend under Rule 36 may transport opium or poppy-heads—

(a.) From one district to another; or

(b.) From one township to another township of the same district, under a transport pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) A transport pass must be obtained for each consignment.

(iii.) The transport pass shall be granted—

In case (a.) by the Deputy Commissioner of the district; and

In case (b.) by the township officer of the township, from which, as the case may be, the opium or poppy-heads is or are to be transported.

20.—(i.) The transport pass shall specify—

(1.) The name of the consignor;

(2.) The name of the person in charge of the consignment;

(3.) The place from which the consignment is to be transported;

(4.) The name of the consignee;

(5.) The number of packages and the weight and contents of each;

(6.) The destination of the consignment; and

(7.) The period for which the pass shall remain in force.

Each packing in the consignment shall be stamped in the presence of the officer granting the pass with his official seal across the seams.

(ii.) Such transport pass shall be granted only on production by the person applying for it of a written permission to apply for such pass—

In case (a.) from the Deputy Commissioner of the district; and

In case (b.) from the township officer of the township, to which, as the case may be, the opium or poppy-heads is or are to be transported.

(iii.) In case (a.), if the officer granting the written permission thinks fit, he may expressly permit the application to be made for transport direct to the township of destination, and in this case he shall send a copy of the written permission to the township officer of the township.

(iv.) A copy of the transport pass shall be sent—

In case (a.) to the Deputy Commissioner of the district; and

In case (b.) to the township officer of the township, to which, as the case may be, the consignment is to be transported.

(v.) Every pass granted for the transport to another district of opium or poppy-heads shall show on the face of it whether it is to be presented for examination to the Deputy Commissioner of the district to which the consignment is to be transported, or to the township officer of the township of destination. Such a pass may

another township of the same district the Deputy Commissioner shall cause the district register to be corrected accordingly and shall direct the person to report himself to the officer in charge of the township in which he intends to reside.

33. Any non-Burman of 20 years or upwards may at any time apply orally or in writing to the officer in charge of the township in which he resides or to which he has come to have his name entered in Register B., and the township officer, if he is satisfied that the applicant is a non-Burman and is 20 years of age or upwards, shall, after ascertaining the village or ward in which such person resides, enter his name in the township register and shall cause his name to be entered in the village register, and shall make report to the Deputy Commissioner, who shall cause his name to be entered in the district register.

34. The township officer, and, in the Rangoon Town district, the Deputy Commissioner, shall annually during the months of February and March test the entries in the registers by verifying the existence of the persons whose names are borne on the registers, and the death or removal of the persons whose names have been struck off the registers during the year, and shall, if necessary, correct the registers.

Transport.

35. Any person other than a licensed vendor may transport opium and opium preparations which he may legally possess from one place in a town or township to any other place in the same town or township, or from a shop or place in which opium is sold in accordance with the law to his place of residence.

36.—(i.) A licensed vendor or holder of a license for wholesale vend under Rule 54 may transport opium or poppy-heads—

(a.) From one district to another; or

(b.) From one township to another township of the same district, under a transport pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) A transport pass must be obtained for each consignment.

(iii.) The transport pass shall be granted—

In case (a.) by the Deputy Commissioner of the district; and

In case (b.) by the township officer of the township, from which, as the case may be, the opium or poppy-heads is or are to be transported.

37.—(i.) The transport pass shall specify—

(1.) The name of the consignor;

(2.) The name of the person in charge of the consignment;

(3.) The place from which the consignment is to be transported;

(4.) The name of the consignee;

(5.) The number of packages and the weight and contents of each;

(6.) The destination of the consignment; and

(7.) The period for which the pass shall remain in force.

Each package in the consignment shall be stamped in the presence of the officer granting the pass with his official seal across the seams.

(ii.) Such transport pass shall be granted only on production by the person applying for it of a written permission to apply for such pass—

In case (a.) from the Deputy Commissioner of the district; and

In case (b.) from the township officer of the township, to which, as the case may be, the opium or poppy-heads is or are to be transported.

(iii.) In case (a.), if the officer granting the written permission thinks fit, he may expressly permit the application to be made for transport direct to the township of destination, and in this case he shall send a copy of the written permission to the township officer of the township.

(iv.) A copy of the transport pass shall be sent—

In case (a.) to the Deputy Commissioner of the district; and

In case (b.) to the township officer of the township, to which, as the case may be, the consignment is to be transported.

(v.) Every pass granted for the transport to another district of opium or poppy-heads shall show on the face of it whether it is to be presented for examination to the Deputy Commissioner of the district to which the consignment is to be transported, or to the township officer of the township of destination. Such a pass may

APPENDIX L. RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

DRAFT REVISED RULES.

be enfaced for presentation to the township officer of the township of destination only when the written permission to apply for the pass expressly allows this. If the pass is so enfaced, the Deputy Commissioner of the district to which the consignment is being transported shall, without delay, forward on receipt the copy of the transport pass referred to in sub-rule (iv.) to the township officer of the township of destination.

(vi.) On arrival at destination the transport pass and the consignment shall be presented for examination and weight to, and shall without delay be examined and weighed by—

In case (a.) the officer named in this behalf on the face of the pass; and

In case (b.) the township officer of the township, to which the consignment has been transported.

21. Any Deputy Commissioner may extend the period for which a transport pass under Rule 19 has been granted, upon application for such extension by the person in charge of the consignment of opium or poppy-heads covered by the pass. Provided that—

(i.) Due cause satisfactory to such Deputy Commissioner be shown for such extension; and

(ii.) The package or packages of the consignment is or are intact.

Any extension so granted shall be endorsed upon the pass by the Deputy Commissioner granting it.

22. An officer granting a transport pass may make it a condition of the pass that the bulk of the consignment shall not be broken in transit.

If no such condition is made, the holder of a license for wholesale vend under Rule 36 who is transporting a consignment under a transport pass obtained in accordance with Rule 19 may break bulk in transit for the purpose of effecting, within the area specified in his license, a sale by wholesale of the whole or part of the opium or poppy-heads covered by the said pass. Provided that such sale shall be recorded and attested on the transport pass by an officer not below the rank of a township officer. An officer attesting a sale shall re-seal the packages as required by Rule 20 after re-examining and re-weighing them.

On all Upper Burma-grown opium or poppy-heads transported from a local area in which the cultivation of the poppy plant is permitted to a district or township in which such cultivation is not permitted, there shall be levied the same duty as may for the time being be leviable on opium or poppy-heads imported by land into Burma.

Import.

23. Government may import opium and poppy-heads on its own account.

24. A Shan or foreign horse dealer importing horses or ponies into Upper Burma may import opium produced in the Shan States or out of India in any quantity not exceeding 15 tolas for each horse or pony in his possession.

25. A Shan or foreign traveller or visitor entering Burma by land, from the Shan States or from a country out of India, may import opium produced in the Shan States or out of India for the personal use of himself and his attendants, and not for sale or barter, in any quantity not exceeding in weight 15 tolas for each such person.

26.—(i.) Subject to the payment of the duty which may for the time being be imposed by the Governor-General in Council, opium or poppy-heads produced out of India may be imported by land into districts of Upper Burma by a farmer, licensed vendor, or holder of a license for wholesale vend under and subject to the conditions of an import pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) An import pass must be obtained for each importation.

(iii.) Opium or poppy-heads imported under a pass shall be taken as soon as possible to the opium warehouse of the district into which the opium or poppy-heads is or are first imported.

(iv.) The import pass shall be granted by the Deputy Commissioner of the district into which the opium or poppy-heads is or are imported, or by some officer authorised by him to grant such passes.

(v.) The import pass shall specify—

(1.) The name of the importer;

(2.) The name of the person in charge of the importation;

be enfaced for presentation to the township officer of the township of destination only when the written permission to apply for the pass expressly allows this. If the pass is so enfaced, the Deputy Commissioner of the district to which the consignment is being transported shall, without delay, forward on receipt the copy of the transport pass referred to in sub-rule (iv.) to the township officer of the township of destination.

(vi.) On arrival at destination the transport pass and the consignment shall be presented for examination and weight to, and shall without delay be examined and weighed by—

In case (a.) the officer named in this behalf on the face of the pass; and

In case (b.) the township officer of the township, to which the consignment has been transported.

38. Any Deputy Commissioner may extend the period for which a transport pass under Rule 36 has been granted, upon application for such extension by the person in charge of the consignment of opium or poppy-heads covered by the pass. Provided that—

(i.) Due cause satisfactory to such Deputy Commissioner be shown for such extension; and

(ii.) The package or packages of the consignment is or are intact.

Any extension so granted shall be endorsed upon the pass by the Deputy Commissioner granting it.

39. An officer granting a transport pass may make it a condition of the pass that the bulk of the consignment shall not be broken in transit.

If no such condition is made, the holder of a license for wholesale vend under Rule 54 who is transporting a consignment under transport pass obtained in accordance with Rule 36 may break bulk in transit for the purpose of effecting, within the area specified in his license, a sale by wholesale of the whole or part of the opium or poppy-heads covered by the said pass. Provided that such sale shall be recorded and attested on the transport pass by an officer not below the rank of a township officer. An officer attesting a sale shall re-seal the packages as required by Rule 37 after re-examining and re-weighing them.

On all Upper Burma-grown opium or poppy-heads transported from a local area in which the cultivation of the poppy plant is permitted to a district or township in which such cultivation is not permitted, there shall be levied the same duty as may for the time being be leviable on opium or poppy-heads imported by land into Burma.

Import.

40. Government may import opium and poppy-heads on its own account.

41. In Upper Burma a Shan or foreign horse dealer importing horses or ponies into Upper Burma may import into Upper Burma opium produced in the Shan States or out of India in any quantity not exceeding 5 tolas for each horse or pony in his possession.

42. A Shan or foreign traveller or visitor entering Upper Burma by land, from the Shan States or from a country out of India, may import into Upper Burma opium produced in the Shan States or out of India for the personal use of himself and his attendants, and not for sale or barter, in any quantity not exceeding in weight 5 tolas for each such person.

43.—(i.) Subject to the payment of the duty which may for the time being be imposed by the Governor-General in Council, opium or poppy-heads produced out of India may be imported by land into districts of Upper Burma by a licensed vendor or holder of a license for wholesale vend under and subject to the conditions of an import pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) An import pass must be obtained for each importation.

(iii.) Opium or poppy-heads imported into Upper Burma under a pass shall be taken as soon as possible to the opium warehouse or Treasury Office of the district into which the opium or poppy-heads is or are first imported.

(iv.) The import pass shall be granted by the Deputy Commissioner of the district into which the opium or poppy-heads is or are imported, or by some officer authorised by him to grant such passes.

(v.) The import pass shall specify—

(1.) The name of the importer;

(2.) The name of the person in charge of the importation;

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

DRAFT REVISED RULES.

APPENDIX A.

- (3.) The route by which the importation is to be brought;
- (4.) The number of packages and the weight and contents of each;
- (5.) The warehouse to which the opium or poppy-heads must be taken;
- (6.) The period for which the pass shall remain in force; and
- (7.) The amount of duty paid or payable.
- (vi.) A copy of every import pass granted by an officer, other than the Deputy Commissioner of the district, shall be forthwith sent by the officer granting it to the Deputy Commissioner.

26A.* Opium and poppy-heads produced out of India and not exceeding 1 seer in weight in the case of opium and 10 seers in weight in the case of poppy-heads may be imported by sea by a medical practitioner holding a license under Rule 43.

27. On arrival at the opium warehouse the opium or poppy-heads shall be examined and weighed and compared with the pass by the officer in charge of the warehouse, who shall retain the pass and give the person bringing the opium or poppy-heads a receipt for the same in such form as the Financial Commissioner may prescribe.

28. No opium shall be removed from an opium warehouse until the full duty payable on it has been paid.

The officer in charge of an opium warehouse shall report to the Deputy Commissioner of the district the arrival of each importation, and shall send him the pass under which the opium or poppy-heads has or have been imported as soon as possible after the arrival of each importation.

29. The officer in charge of an opium warehouse shall keep a register of arrivals, deliveries, and other transactions under his charge in such form as the Financial Commissioner may from time to time prescribe.

Export.

30. Government may export opium and poppy-heads on its own account.

Further general Provisions regarding Opium and Poppy-heads in transit.

31. Every Deputy Commissioner and other revenue officer not below the rank of a Myoök, every police officer not below the rank of a head constable, and every customs officer not below the rank of a preventive officer is authorised to detain, so long as may be reasonably necessary for the inspection of the same, and to inspect any consignment of opium or poppy-heads in transit passing through his jurisdiction, and to call for production of the pass under which such opium or poppy-heads is or are transported, imported, or exported.

32. No railway administration or steamboat company shall receive or convey opium or poppy-heads not covered and accompanied by a pass issued by an officer competent under these rules to grant the same, or shall convey opium or poppy-heads otherwise than in the immediate custody of its own officers to the station or landing-place at which, according to the route prescribed in such pass it should leave the railway or vessel. Opium or poppy-heads in transit by railway or steamboat may be detained so long as may be reasonably necessary for the examination of the same, and the weight of each packing and the number (when there are more than one) of the packages may be verified at any railway station or landing-place at which the Chief Commissioner may, either generally or specially, direct such detention or examination.

33.—(i.) On weighment of transported opium on its arrival at its destination, or by an officer attesting a sale during transit, an allowance for dryage may be made by the officer making the weighment up to such extent as the Financial Commissioner may from time to time prescribe by notification in the "Burma Gazette"

- (3.) The route by which the importation is to be brought;
- (4.) The number of packages and the weight and contents of each;
- (5.) The warehouse or treasury to which the opium or poppy-heads must be taken;
- (6.) The period for which the pass shall remain in force; and
- (7.) The amount of duty paid or payable.
- (vi.) A copy of every import pass granted by an officer, other than the Deputy Commissioner of the district, shall be forthwith sent by the officer granting it to the Deputy Commissioner.

44. On arrival at the opium warehouse or treasury the opium or poppy-heads shall be examined and weighed and compared with the pass by the officer in charge of the warehouse or treasury who shall retain the pass and give the person bringing the opium or poppy-heads a receipt for the same in such form as the Financial Commissioner may prescribe.

45. No opium shall be removed from an opium warehouse or treasury until the full duty payable on it has been paid.

The officer in charge of an opium warehouse or treasury shall report to the Deputy Commissioner of the district the arrival of each importation, and shall send him the pass under which the opium or poppy-heads has or have been imported as soon as possible after the arrival of each importation.

46. The officer in charge of an opium warehouse or treasury shall keep a register of arrivals, deliveries, and other transactions under his charge in such form as the Financial Commissioner may from time to time prescribe.

47. Opium, opium preparations, and poppy-heads produced out of India, and not exceeding 1 seer in weight in the case of opium and opium preparations and 10 seers in weight in the case of poppy-heads may be imported by sea by a medical practitioner holding a license under Rule 61.

Export.

48. Government may export opium and poppy-heads on its own account.

Further general Provisions regarding Opium and Poppy-heads in transit.

49. Every Deputy Commissioner and other revenue officer not below the rank of a Myoök, every police officer not below the rank of a head constable, and every customs officer not below the rank of a preventive officer is authorised to detain, so long as may be reasonably necessary for the inspection of the same, and to inspect any consignment of opium or poppy-heads in transit passing through his jurisdiction, and to call for production of the pass under which such opium or poppy-heads is or are transported, imported, or exported.

50. No railway administration or steamboat company shall receive or convey opium or poppy-heads not covered and accompanied by a pass issued by an officer competent under these rules to grant the same, or shall convey opium or poppy-heads otherwise than in the immediate custody of its own officers to the station or landing-place at which, according to the route prescribed in such pass, it should leave the railway or vessel. Opium or poppy-heads in transit by railway or steamboat may be detained so long as may be reasonably necessary for the examination of the same, and the weight of each package and the number (when there are more than one) of the packages may be verified at any railway station or landing-place at which the Chief Commissioner may, either generally or specially, direct such detention or examination.

51.—(i.) On weighment of transported opium on its arrival at its destination, or by an officer attesting a sale during transit, an allowance for dryage may be made by the officer making the weighment up to such extent as the Financial Commissioner may from time to time prescribe by notification in the "Burma Gazette."

* Added by Financial Department Notification, No. 24, dated the 27th October 1892.

APPENDIX L. RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

DRAFT REVISED RULES.

(ii.) If, on inspection of a consignment under Rule 27 or Rule 31, or on the arrival of a consignment at destination, any deficiency is found that cannot be accounted for by dryage or by any sale by wholesale as permitted by Rule 22, the fact shall be reported to the Deputy Commissioner of the district.

Wholesale Sale.

34.—(i.) Opium in quantities not less than 1 seer, or poppy-heads in quantities not less than 5 seers in weight, may be sold, under such conditions as the Financial Commissioner may prescribe, by Deputy Commissioners of districts, or township officers, to any farmer, to any licensed vendor, to any holder of a license for wholesale vend, and to any medical practitioner.

(ii.) In local areas in which the cultivation of the poppy plant is permitted a cultivator may sell to any person other than a Burman any quantity of opium or poppy-heads the produce of his cultivation.

(iii.) Subject to the conditions of his license a holder of a license for wholesale vend may sell opium or poppy-heads to Government, or to a licensed vendor, or to a farmer, or to a holder of a license, for wholesale vend; but he shall not sell to any person at one time a less quantity than 10 seers of opium or than 5 seers of poppy-heads.

35. Subject to the conditions of his license a farmer may sell by wholesale opium or poppy-heads to Government, or to any licensed vendor, or to a farmer or to a holder of a license for wholesale vend provided that he shall not sell to any person by wholesale any thing which that person is not authorised to possess.

36. Subject to the payment of the fee for the time being prescribed under Rule 37 and to the conditions laid down in the Opium Act, 1878, and in these rules a Commissioner of a division in Upper Burma may grant to any person other than a Burman a license for the wholesale vend of opium and poppy-heads within his division or any part thereof.

37. The Financial Commissioner may, with the previous sanction of the Chief Commissioner, fix the fee to be paid in each district for such a license, and may from time to time, subject to the same sanction, alter, in the case of any district or districts, the fee so fixed.

38. Such license shall specify the district or districts in which sale of opium and poppy-heads may be made under it. It shall be in force from the date on which it is issued until the 1st April next following such date, and it shall then be returned to the Commissioner who issued it.

Retail Sale.

39.—(i.) Subject to the conditions of his license or lease a licensed vendor or farmer may sell by retail opium or poppy-heads to any person in Lower Burma and to any person other than a Burman in Upper Burma.

(ii.) Subject to the conditions of his license a medical practitioner may sell by retail opium or poppy-heads to any person for medical purposes only.

40. Unless the Financial Commissioner otherwise specially direct, a license for retail sale shall be granted for one year only.

(ii.) If, on inspection of a consignment under Rule 44 or Rule 49, or on the arrival of a consignment at destination, any deficiency is found that cannot be accounted for by dryage or by any sale by wholesale as permitted by Rule 39, the fact shall be reported to the Deputy Commissioner of the district.

Wholesale Sale.

52. In Lower Burma Government opium in quantities not less than 10 tolas and poppy-heads in quantities not less than 5 seers in weight may be sold by one licensed vendor to another and by Deputy Commissioners, township and treasury officers and by such other Government officers as may be specially empowered by the Financial Commissioner so to do, to any licensed vendor or medical practitioner or licensed doctor or tattooer.

53.—(i.) In Upper Burma opium in quantities not less than 10 tolas or poppy-heads in quantities not less than 5 seers in weight may be sold under such conditions as the Financial Commissioner may prescribe by Deputy Commissioners of districts or township officers to any licensed vendor, to any holder of a license for wholesale vend, to any medical practitioner, to any licensed doctor, and to any tattooer.

(ii.) In local areas in Upper Burma in which the cultivation of the poppy plant is permitted a cultivator may sell to any person other than a Burman any quantity of opium or poppy-heads the produce of his cultivation.

(iii.) Subject to the conditions of his license a holder of a license for wholesale vend in Upper Burma may sell opium in quantities not less than 10 tolas or poppy-heads in quantities not less than 5 seers to Government or to a licensed vendor, or to a holder of a license for wholesale vend, or to a medical practitioner, or to a licensed doctor or tattooer.

54. Subject to the payment of the fee for the time being prescribed under Rule 55 and to the conditions laid down in the Opium Act, 1878, and in these rules, a Commissioner of a division in Upper Burma may grant to any person other than a Burman a license for the wholesale vend of opium and poppy-heads within his division or any part thereof.

55. The Financial Commissioner may, with the previous sanction of the Chief Commissioner, fix the fee to be paid in each district for such a license, and may from time to time, subject to the same sanction, alter in the case of any district or districts, the fee so fixed.

56. Such license shall specify the district or districts in which sale of opium and poppy-heads may be made under it. It shall be in force from the date on which it is issued until the 1st April next following such date and it shall then be returned to the Commissioner who issued it.

Retail Sale.

57.—(i.) A Deputy Commissioner within his district, or a township officer within his township, or any other officer of Government specially empowered by the Financial Commissioner, may sell by retail, at such price as the Financial Commissioner may fix, Government opium or poppy-heads to any person in Lower Burma who is permitted to possess opium.

(ii.) Subject to the conditions of his license a licensed vendor may sell by retail Government opium or poppy-heads to any person in Lower Burma who is permitted to possess opium and opium or poppy-heads to any person other than a Burman in Upper Burma.

(iii.) Subject to the conditions of his license a medical practitioner may sell by retail opium preparations or poppy-heads to any person for medical purposes only.

(iv.) Subject to the conditions of his license a doctor in Upper Burma may sell by retail opium preparations or poppy-heads to any person for medical purposes only.

(v.) Subject to the conditions of his license a doctor in Lower Burma may sell by retail opium preparations made from Government opium to any person for medical purposes only.

58. Unless the Financial Commissioner otherwise specially direct, a license for retail sale shall be granted for one year only.

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

41.—(i.) Such limited number of shops for the retail sale of opium or poppy-heads, or both, as the Financial Commissioner may from time to time determine, shall be allowed in each district, and the exclusive right of selling opium or poppy-heads by retail at one or more of these shops, under a license to be granted by the Deputy Commissioner, shall be sold by or under the orders of the Deputy Commissioner before the commencement of each official year by public auction, or in such other mode as the Financial Commissioner, with the sanction of the Local Government, may direct. The Deputy Commissioner shall not be bound to accept the highest or any other bid. But, if he refuses to accept any bid, he shall record his reasons for such refusal in writing. He shall not be bound to inform any bidder of his reasons for refusing his bid.

(ii.) Such sale, whether by auction or otherwise, shall not be deemed to be complete until it has been confirmed by the Commissioner of the division. If the Commissioner declines to confirm the sale, he may order a fresh sale, or he may authorise the Deputy Commissioner to grant a license to any person to carry on the retail vend on behalf of Government in the whole or in any part of a district.

42. Every person taking out a license for retail vend under Rule 41 shall sign a counterpart of the same in token of an engagement by him to duly observe and perform all the conditions expressed in the said license and in these rules, and shall give such security for the performance of his engagement or make such deposit in lieu of security as the Deputy Commissioner may

43. A Deputy Commissioner may grant a license to any person for the retail vend of opium or poppy-heads, or both, for medical purposes only.

44. Every person to whom a license is granted under Rule 43 or 49 for the retail sale of opium or poppy-heads, or both, shall pay for his license such fee as may from time to time be fixed with the sanction of the Financial Commissioner, or a fee regulated in such manner and in accordance with such rules as the Financial Commissioner may prescribe, and the fee shall be specified in the license and shall be payable in such instalments, and the instalments shall be payable at such times and places as the Financial Commissioner may direct.

45.—(i.) A license for retail vend of opium or poppy-heads, or both, granted under Rule 41, may be recalled by the Deputy Commissioner if the holder violates any of the provisions of the Opium Act, 1878, or of the rules made thereunder, or any condition entered in the license, or if the holder of the license is convicted of breach of the peace, or of any other criminal offence during the term of the license.

(ii.) If the license is recalled for any of these causes, the holder will have no claim to any compensation whatever, or to refund of any duty or instalment or duty already paid, or to remission of any sum due from him to Government.

But it shall be in the discretion of the Deputy Commissioner to make such compensation, refund, or remission as he may think right.

(iii.) If the Deputy Commissioner desires to recall a license before expiry of its term for any cause not specified in sub-rule (i.) he may do so, subject to the conditions that—

(a.) He shall give 15 days' previous notice of his intention to recall the license and shall remit a sum equal to the duty for 15 days, or

DRAFT REVISED RULES.

APPENDIX L.

59.—(i.) Such limited number of shops in *Upper Burma* for the retail sale of opium or poppy-heads or both, and in *Lower Burma* for the retail sale of *Government opium* or poppy-heads or both, as the Financial Commissioner may from time to time determine, may be allowed in each district, and the exclusive right of selling opium or poppy-heads by retail at one or more of these shops, under a license to be granted by the Deputy Commissioner, may be sold by or under the orders of the Deputy Commissioner before the commencement of each official year by public auction, or in such other mode as the Financial Commissioner, with the sanction of the Local Government, may direct. The Deputy Commissioner shall not be bound to accept the highest or any other bid. But, if he refuses to accept any bid, he shall record his reasons for such refusal in writing. He shall not be bound to inform any bidder of his reasons for refusing his bid.

(ii.) Such sale, whether by auction or otherwise, shall not be deemed to be complete until it has been confirmed by the Commissioner of the division. If the Commissioner declines to confirm the sale, he may order a fresh sale, or he may authorise the Deputy Commissioner to grant a license to any person to carry on the retail vend on behalf of Government in the whole or in any part of a district.

60. Every person taking out a license for retail vend under Rule 59 shall sign a counterpart of the same in token of an engagement by him to duly observe and perform all the conditions expressed in the said license and in these rules, and shall give such security for the performance of his engagement or make such deposit in lieu of security as the Deputy Commissioner may require.

61. A Deputy Commissioner may grant a license—

(a.) To any medical practitioner for the retail vend of opium preparations or poppy-heads, or both, for medical purposes only.

(b.) To any doctor in *Upper Burma* for the retail vend of opium preparations or poppy-heads, or both, for medical purposes only.

(c.) To any doctor in *Lower Burma* for the retail vend of opium preparations made from *Government opium* or poppy-heads, or both, for medical purposes only.

(d.) To any tattooer in *Upper Burma* for the possession of such quantity of opium or opium preparations not exceeding 10 tolas in weight as may be necessary for the ordinary practice of his profession, to be used only for tattooing purposes.

(e.) To any tattooer in *Lower Burma* for the possession of such quantity of *Government opium* or opium preparations made therefrom, not exceeding 10 tolas in weight, as may be necessary for the ordinary practice of his profession, to be used only for tattooing purposes.

62. Every person to whom a license is granted under Rule 61 for the retail sale of opium or poppy-heads, or both, shall pay for his license such fee as may from time to time be fixed with the sanction of the Financial Commissioner, or a fee regulated in such manner and in accordance with such rules as the Financial Commissioner may prescribe, and the fee shall be specified in the license and shall be payable in such instalments, and the instalments shall be payable at such times and places as the Financial Commissioner may direct.

63.—(i.) A license for retail vend of opium or poppy-heads, or both, granted under Rule 59, may be recalled by the Deputy Commissioner if the holder violates any of the provisions of the Opium Act, 1878, or of the rules made thereunder, or any condition entered in the license, or if the holder of the license is convicted of breach of the peace, or of any other criminal offence during the term of the license.

(ii.) If the license is recalled for any of these causes, the holder will have no claim to any compensation whatever, or to refund of any duty or instalment of duty already paid, or to remission of any sum due from him to Government.

But it shall be in the discretion of the Deputy Commissioner to make such compensation, refund, or remission as he may think right.

(iii.) If the Deputy Commissioner desires to recall a license before expiry of its term for any cause not specified in sub-rule (i.) he may do so, subject to the conditions that—

(a.) He shall give 15 days' previous notice of his intention to recall the license and shall remit a sum equal to the duty for 15 days, or

APPENDIX L. I RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

DRAFT REVISED RULES.

(b.) If notice be not given, he shall remit a sum equal to the duty for 15 days, and shall also make such further compensation in consideration of want of notice as the Commissioner may think fit.

46. A person who has been granted a license for the retail vend of opium or poppy-heads, or both, under Rule 41, may surrender his license on giving one month's notice to the Deputy Commissioner and on paying such fine, not exceeding the amount of duty for six months, or the amount of the loss caused to Government by the surrender, as the Deputy Commissioner may adjudge. If the Deputy Commissioner is satisfied that the reason for surrendering the license is adequate, he may, with the consent of the Financial Commissioner, remit the fine.

47. The Financial Commissioner may from time to time fix the maximum price at which in any district holders of licenses for retail vend and farmers under Rule 48 may sell opium or poppy-heads to the public.

If such maximum price is fixed, it shall be specified in the license.

Farm of Fees.

48.—(i.) The Deputy Commissioner may, with the sanction of the Financial Commissioner, let in farm for a term not exceeding five years the fees leviable in a district, or in part of a district, on licenses for the retail sale of opium or of poppy-heads, or of both.

(ii.) The Financial Commissioner may from time to time prescribe rules—

(a.) For the invitation and acceptance of tenders for farming leases under this rule;

(b.) For the requisition of security for the due fulfilment of the conditions of those leases; and

(c.) Regarding the form and conditions of the leases.

(iii.) Any breach of such conditions, or of any of the provisions of the Opium Act, 1878, or of the rules made thereunder, shall render the lease liable to cancellation by the authority by whom it was granted.

(iv.) When the fees leviable on the retail sale of opium or poppy-heads are let in farm, the farmer may, subject to the conditions of his lease and consistently with the provisions of these rules, himself sell by retail, and grant licenses for the retail sale of opium or poppy-heads, as the case may be, within the local limits of his farm.

49. Any person duly licensed by the farmer in accordance with these rules, and with the conditions of the farmer's lease, may sell opium or poppy-heads, as the case may be, within the local limits of the farm, subject to the provisions of these rules and the terms of the license granted by the farmer in accordance with the conditions of his lease.

50. Before entering into an engagement for a farm, the Deputy Commissioner may, with the sanction of the Commissioner of the division, make such reservations or restrictions with respect to the grant of licenses by the farmer as he thinks fit.

51. The farmer shall file in the Deputy Commissioner's office a list of all the licenses granted by him in such form and on such day or days in each year as the Financial Commissioner may from time to time prescribe in this behalf.

52. In proceeding to let in farm the fees leviable on the retail sale of opium or poppy-heads the Deputy Commissioner may, on such terms as the Financial Commissioner may from time to time prescribe, farm separately the fees leviable on the retail sale of poppy-heads, or may, if he thinks it advisable, grant separate licenses for the retail sale of poppy-heads.

53. The Deputy Commissioner may, with the sanction of the Financial Commissioner, obtained through the Commissioner of the division, cancel a lease granted under Rule 48 or Rule 52, or within the term of the lease, make or impose on the farmer such new reservations or restrictions as may seem fit.

54. If the lease is cancelled or if any new reservation or restriction is made or imposed for any cause specified in the lease, the farmer shall not be entitled to compensation for any loss thereby caused to him.

55. If the lease is cancelled, or if any new reservation or restriction is made or imposed within the term of the lease for any cause not specified in the lease, the Financial Commissioner may award to the farmer compensation for any loss thereby caused to him.

(b.) If notice be not given, he shall remit a sum equal to the duty for 15 days, and shall also make such further compensation in consideration of want of notice as the Commissioner may think fit.

64. A person who has been granted a license for the retail vend of opium or poppy-heads, or both, under Rule 59 may surrender his license on giving one month's notice to the Deputy Commissioner and on paying such fine, not exceeding the amount of duty for six months, or the amount of the loss caused to Government by the surrender as the Deputy Commissioner may adjudge. If the Deputy Commissioner is satisfied that the reason for surrendering the license is adequate, he may, with the consent of the Financial Commissioner, remit the fine.

65. The Financial Commissioner may from time to time fix the maximum and minimum price at which in any district holders of licenses for retail vend may sell opium or poppy-heads to the public.

If such maximum and minimum prices are fixed, they shall be specified in the license.

Manner in which retail Sales are to be made in Lower Burma.

66. In every township and in the Rangoon Town district the retail vendor of opium shall be furnished with copies of Registers A. and B. of persons who are permitted to possess opium in that township or district.

67. Every retail vendor, whether official or licensed vendor, shall keep a daily account of sales of opium in the forms prescribed in the Appendix to these rules, and shall record therein the amount of opium daily sold to each person.

Disposal of Articles remaining with a Farmer or Licensed Vendor after expiration of his Lease or License.

56. If any person who has been a farmer, licensed vendor or holder of a license for wholesale vend under Rule 36 has in his possession, on the expiration of his lease or license, any opium or poppy-heads which he is unable to dispose of to the satisfaction of the Deputy Commissioner by private sale to other farmers, licensed vendors or holders of licenses for wholesale vend under Rule 36, or to a medical practitioner, he shall surrender the same to the Deputy Commissioner or to the officer in charge of the excise revenue.

And the incoming farmer, licensed vendor, or holder of a license for wholesale vend under Rule 36, or, if the lease or license has not been renewed, any farmer, licensed vendor or holder of a license for wholesale vend under Rule 36 within the district, shall, on the requisition of the Deputy Commissioner, be bound, under penalty, if the Deputy Commissioner sees fit, of forfeiting his lease or license, to buy the opium or poppy-heads, as the case may be, at such price as the Deputy Commissioner may adjudge, and in any quantity not exceeding that which the Deputy Commissioner may determine to be ordinarily saleable in two months by the person in whose favour the lease or license has been renewed, or by the farmer, licensed vendor, or holder of a license for wholesale vend under Rule 36, as the case may be.

Provided that, if the opium or poppy-heads, or any part thereof be declared by the civil surgeon to be unfit for use, the Deputy Commissioner shall cause it or them, or that part, to be destroyed.

Disposal of things Confiscated.

57.—(i.) All things confiscated under the Opium Act, 1878, except opium, poppy-heads, and the preparations and admixtures provided for in clause (iv.) of this rule, shall be disposed of by the Deputy Commissioner by public auction.

(ii.) Opium so confiscated shall be sent for examination to the civil surgeon, and if declared by him to be fit for use shall be disposed of in such manner as the Financial Commissioner may by general or special order direct. If declared to be unfit for use it shall be immediately destroyed in the presence of the Deputy Commissioner or some other officer deputed by him for the purpose. Such officer shall not be below the rank of a township officer.

(iii.) Poppy-heads so confiscated shall be disposed of as may be directed by the Deputy Commissioner or the officer in charge of the excise revenue of the district in which the confiscation is made.

(iv.) All preparations and admixtures of opium or of the poppy not included in the definition of "opium" in these rules shall, when so confiscated, be immediately destroyed.

Rewards to be paid out of the proceeds of Fines and Confiscations.

58.—(i.) Any magistrate convicting an offender under section 9, or any magistrate or other authorised officer ordering the confiscation of anything under section 12 of the Opium Act, 1878, may grant, in such proportions as he thinks fit, to any person or persons who have contributed to the conviction of the offender or to the seizure of the thing or things confiscated, a reward or rewards not exceeding in the aggregate the value of the things confiscated *plus* the amount of any fine imposed.

(ii.) If in any case the fine is not realised or is only realised in part, or if the value of the confiscated articles is not realised, or is only realised in part, and if the total sum realised appears to the convicting magistrate or to the magistrate or officer ordering confiscation, as the case may be, to be insufficient for the purpose of rewarding the person or persons who have contributed to the conviction of the offender or to the

Disposal of Articles remaining with a Licensed Vendor after expiration of his Lease or License.

68. If any person who has been a licensed vendor or holder of a license for wholesale vend under Rule 54 has in his possession, on the expiration of his license, any opium or poppy-heads which he is unable to dispose of to the satisfaction of the Deputy Commissioner by private sale to other licensed vendors or holders of licenses for wholesale vend under Rule 54, or to a medical practitioner, he shall surrender the same to the Deputy Commissioner or to the officer in charge of the excise revenue.

And the incoming licensed vendor or holder of a license for wholesale vend under Rule 54, or if the license has not been renewed, any licensed vendor or holder of a license for wholesale vend under Rule 54 within the district, shall, on the requisition of the Deputy Commissioner, be bound, under penalty, if the Deputy Commissioner sees fit, of forfeiting his license, to buy the opium or poppy-heads, as the case may be, at such price as the Deputy Commissioner may adjudge, and in any quantity not exceeding that which the Deputy Commissioner may determine to be ordinarily saleable in two months by the person in whose favour the license has been renewed, or by the licensed vendor or holder of a license for wholesale vend under Rule 54, as the case may be.

Provided that, if the opium or poppy-heads, or any part thereof be declared by the civil surgeon to be unfit for use, the Deputy Commissioner shall cause it or them, or that part, to be destroyed.

Disposal of things Confiscated.

69.—(i.) All things confiscated under the Opium Act, 1878, except opium, poppy-heads, and the preparations and admixtures provided for in clause (iv.) of this rule, shall be disposed of by the Deputy Commissioner by public auction.

(ii.) Opium so confiscated shall be sent for examination to the civil surgeon, and if declared by him to be fit for use shall be disposed of in such manner as the Financial Commissioner may by general or special order direct. If declared to be unfit for use it shall be immediately destroyed in the presence of the Deputy Commissioner or some other officer deputed by him for the purpose. Such officer shall not be below the rank of a township officer.

(iii.) Poppy-heads so confiscated shall be disposed of as may be directed by the Deputy Commissioner or the officer in charge of the excise revenue of the district in which the confiscation is made.

(iv.) All preparations and admixtures of opium or of the poppy not included in the definition of "opium" or of "opium preparations" in these rules shall, when so confiscated, be immediately destroyed.

Rewards to be paid out of the proceeds of Fines and Confiscations.

70.—(i.) Any magistrate convicting an offender under section 9, or any magistrate or other authorised officer ordering the confiscation of anything under section 12 of the Opium Act, 1878, may grant, in such proportions as he thinks fit, to any person or persons who have contributed to the conviction of the offender or to the seizure of the thing or things confiscated, a reward or rewards not exceeding in the aggregate the value of the things confiscated *plus* the amount of any fine imposed.

(ii.) If in any case the fine is not realised or is only realised in part, or if the value of the confiscated articles is not realised, or is only realised in part, and if the total sum realised appears to the convicting magistrate or to the magistrate or officer ordering confiscation, as the case may be, to be insufficient for the purpose of rewarding the person or persons who have contributed to the conviction of the offender or to the seizure of the

RULES framed under the OPIUM ACT, 1 of 1878, for BURMA.

seizure of the thing or things confiscated, the Financial Commissioner may, on the application of the said magistrate or officer, as the case may be, grant to the said person or persons any reasonable reward or rewards not exceeding Rs. 200 in the aggregate as may seem fit.

59. The Financial Commissioner may direct by general order what classes of excise officers shall receive rewards and what classes shall have no title to share therein.

Forms of Leases, Licenses, Passes, Permits, and other Documents.

60.—(i.) The Financial Commissioner may, with the sanction of the Local Government from time to time, prescribe the forms in which leases, licenses, and passes under these rules shall be granted by the Deputy Commissioner and in which licenses shall be granted by farmers.

(ii.) The Financial Commissioner may also from time to time of his own authority prescribe the forms of all registers, returns, accounts, and other documents not mentioned in sub-rule (i.) for which he considers that forms should be provided.

(iii.) The forms referred to in sub-rules (i.) and (ii.) shall be consistent with the provisions of the Opium Act, 1878, and with these rules.

Miscellaneous.

61. Farmers are prohibited from levying any fees from cultivators or manufacturers of opium for permission to cultivate or manufacture, or on any other pretext whatever.

62.—(i.) Suspensions and remissions of demand on account of pè duty or on account of any other fees or duties leviable under these rules may be made under the sanction of the Commissioner of the division.

(ii.) In the case of suspensions a date or dates for payment shall be fixed.

(iii.) Refunds of pè duty or of any other fees or duties levied under these rules may be made under the rules for the time being applicable to refunds on account of land revenue.

(iv.) All suspensions, remissions, and refunds sanctioned by Commissioners shall be reported at once to the Financial Commissioner.

Appeal and Revision.

63.—(i.) An appeal shall lie from an order of a Deputy Commissioner or from an original or appellate order of a Commissioner of a division as follows, namely:—

(a.) To the Commissioner of the division when the order is made by a Deputy Commissioner.

(b.) To the Financial Commissioner when the order is made by a Commissioner of a division.

Provided that when a Commissioner of a division confirms on appeal the order of a Deputy Commissioner a further appeal shall not lie.

(ii.) The period of limitation for an appeal under sub-rule (i.) shall run from the date of the order appealed against, and shall be as follows:—

(a.) When the appeal lies to the Commissioner of the division 30 days.

(b.) When the appeal lies to the Financial Commissioner 60 days.

64. The Financial Commissioner may revise any order passed by a Deputy Commissioner or a Commissioner under these rules.

65. A petition of appeal from, or an application for revision of, an order must be accompanied by an authenticated copy of the order or the omission to produce such copy must be explained.

66. Any officer who has passed an order under these rules, other than an order in the course of a judicial proceeding, may of his own motion or on the application of any person concerned cancel or modify such order.

DRAFT REVISED RULES.

thing or things confiscated, the Financial Commissioner may, on the application of the said magistrate or officer, as the case may be, grant to the said person or persons any reasonable reward or rewards not exceeding Rs. 200 in the aggregate as may seem fit.

71. The Financial Commissioner may direct by general order what classes of excise officers shall receive rewards and what classes shall have no title to share therein.

Forms of Licenses, Passes, Permits, and other Documents.

72.—(i.) The Financial Commissioner may, with the sanction of the Local Government from time to time prescribe the forms in which licenses and passes under these rules shall be granted by the Deputy Commissioner and in which licenses shall be granted by farmers.

(ii.) The Financial Commissioner may also from time to time of his own authority, prescribe the forms of all registers, returns, accounts, and other documents not mentioned in sub-rule (i.) for which he considers that forms should be provided.

(iii.) The forms referred to in sub-rules (i.) and (ii.) shall be consistent with the provisions of the Opium Act, 1878, and with these rules.

Miscellaneous.

73.—(i.) Suspensions and remissions of demand on account of pè duty or on account of any other fees or duties liable under these rules may be made under the sanction of the Commissioner of the division.

(ii.) In the case of suspensions a date or dates for payment shall be fixed.

(iii.) Refunds of pè duty or of any other fees or duties levied under these rules may be made under the rules for the time being applicable to refunds on account of land revenue.

(iv.) All suspensions, remissions, and refunds sanctioned by Commissioners shall be reported at once to the Financial Commissioner.

Appeal and Revision.

74.—(i.) An appeal shall lie from an order of a Deputy Commissioner or from an original or appellate order of a Commissioner of a division as follows, namely:—

(a.) To the Commissioner of the division when the order is made by a Deputy Commissioner.

(b.) To the Financial Commissioner when the order is made by a Commissioner of a division.

Provided that when a Commissioner of a division confirms on appeal the order of a Deputy Commissioner a further appeal shall not lie.

(ii.) The period of limitation for an appeal under sub-rule (i.) shall run from the date of the order appealed against, and shall be as follows:—

(a.) When the appeal lies to the Commissioner of the division 30 days.

(b.) When the appeal lies to the Financial Commissioner 60 days.

75. The Financial Commissioner may revise any order passed by a Deputy Commissioner or a Commissioner under these rules.

76. A petition of appeal from, or an application for revision of, an order must be accompanied by an authenticated copy of the order or the omission to produce such copy must be explained.

77. Any officer who has passed an order under these rules, other than an order in the course of a judicial proceeding, may of his own motion or on the application of any person concerned cancel or modify such order.

No. 2567—Ex.

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT.

SEPARATE REVENUE.—OPIUM.

To the CHIEF COMMISSIONER OF BURMA.

SIR, Simla, June 20, 1893.
I AM directed to acknowledge the receipt of your secretary's letter, No. 22-3-O.—1, dated the 2nd May 1893, submitting a draft of the revised rules under the Indian Opium Act, which you propose to issue in order to give effect to the instructions conveyed in this office letter, No. 1167-Ex., dated 21st March 1893.

2. The rules, when issued, will have the force of law,

Resolution of the Government of India in the Home Department, No. 48-1791-1807, dated 8th November 1882.

and it is therefore necessary, with reference to the orders noted in the margin, to which attention has lately been called in Home Department's Circular, No. 7136, dated 20th ultimo, that before being issued they should be published for general information with a view to ascertain whether any valid objections can be taken to them. It appears that the draft rules now forwarded have not been published in the "Burma Gazette" before being submitted to the Government of India; and having regard to their novel and stringent character, and the number of persons who will be affected by them, the Government of India consider that it would not be justifiable to dispense with the preliminary publication required by the standing orders, notwithstanding the inconvenience of continuing the present temporary arrangements. An intimation to this effect was conveyed to you by telegram on the 17th instant. In now forwarding to you a copy of the draught rules as amended by the Government of India, I am directed to request that you will be good enough to publish them in the "Burma Gazette," and in one or two local newspapers, and in such other manner as you may deem fit, together with a notification explaining that it is proposed to issue them as rules under sections 5 and 13 of the Indian Opium Act in supersession of those now in force; and that any communications that may be addressed to you by public bodies or members of the public will be received up to a date which should be stated in the notification, and should be not less than one month from the date of publication. After the expiry of this period the rules should be re-submitted for the consideration of the Government of India, together with the substance of any communications of importance that may have reached you regarding them, and an expression of your views as to any modifications that may, in your opinion, be required. In re-submitting the rules, I am to request that you will also consider and report on the points regarding which your opinion is invited in the subsequent paragraphs of this letter. Until the new rules, as finally approved by the Government of India, eventually come into operation, you are authorised to maintain the temporary arrangements now in force.

3. It will be seen that the draft rules now forwarded to you for preliminary publication differ considerably from those which were submitted with Mr. Bayne's letter under reply. The reasons which have rendered it necessary to make these changes are as follows: The proposals which were approved by the Secretary of State, and to which you were instructed to give effect, were to assimilate the rules regarding the possession and use of opium in Lower Burma to those now in force in Upper Burma, provision being made, by means of a system of registering consumers, to guard against hardship to Burmans who had become habituated to the use of opium, and to limit the issue of opium to licensed shops to such quantity as might be required for the use of known consumers, Burman and non-Burman, the registration of non-Burmans being permitted for this purpose. The draft rules now submitted appear in some important particulars to go beyond these instructions, and to involve consequences which in some cases can scarcely have been intended, and which the Government of India are unable to approve. The question of requiring the registration of non-Burman consumers has also been reconsidered, and the Government of India are now advised that rules requiring registration merely for the purpose of ascertaining the number of non-Burman consumers would have no legal effect under the Act. The principal changes which have been made on account of these considerations are explained in paragraphs 4 to 9 of this letter. Besides these there are several minor points in respect of which the

Government of India have been unable to accept the proposals embodied in the draft rules, and these are enumerated in paragraph 10 below. The draft rules also contained a considerable number of verbal imperfections and errors of drafting. The Government of India regret that these numerous errors of drafting should have escaped the notice of the authorities who examined the rules before they were submitted. They have been corrected, and, together with the other alterations that have been made, are shown in italics in the amended draft forwarded herewith. The changes made have necessitated the renumbering of the rules; and in the following paragraphs of this letter the rules are referred to under their original numbers, the new numbers being also given in brackets in each case.

4. The more essential points in which the rules submitted by you have been modified are four in number, and are as follows:—

- (1.) The omission of restrictions on the possession and use of opium for medical purposes;
- (2.) The treatment of non-Burmans;
- (3.) The grant of certificates to registered consumers with permission to purchase opium without restriction of locality; and
- (4.) The extension of the time allowed for registration.

5. As regards the first of these, it is observed that the draft rules originally submitted contained no provision authorising any person to possess opium, or preparations of opium, for use as a medicine. The effect of Rule 11 (12), as submitted, would have been to render penal in Lower Burma the possession of any quantity of opium or of any medical preparation of opium, such as chlorodyne, by any person, Burman or non-Burman, unless he had registered his name as a habitual consumer. Such a result would be intolerable; and it must have been by oversight that rules having that effect were proposed. It has never been contemplated that difficulties should be thrown in the way of persons who require opium or preparations of opium for *bonâ fide* medical purposes. It would be unreasonable to prohibit a doctor or medical practitioner in Lower Burma from prescribing opium for a patient unless the latter has been registered. Any restrictions that may be required on the use of opium as a medicine should be imposed on the practitioner and not on the patient.

6. To supply this omission, Rule 11 (12) has been recast, and a new rule, No. 10, has been inserted in the section dealing with possession. The rule, it will be seen, applies to both Upper and Lower Burma and to Burmans and non-Burmans alike. The quantities of poppy-heads and of opium or medical preparations which may be lawfully possessed by any person under this rule have for the present been fixed at 5 seers, 3 tolas, and 6 tolas respectively. It may hereafter be found desirable to alter these quantities; and I am to request that this point may be considered when you submit the report on the preliminary publication of the new rules which is referred to in paragraph 2 of this letter.

7. The next, and perhaps the most material, point in respect of which the draft has been modified relates to the treatment of non-Burmans. It will be seen that all the provisions relating to the registration of these classes have been omitted. The reason for this change is that the provisions of the draft rules go beyond what was intended or sanctioned. It is true, that in your note of the 4th July 1892, the proposals in which were generally approved for adoption, it was proposed that non-Burmans should be registered in Lower Burma as well as Burmans. The object of this proposal, however, was stated to be to enable the authorities to check the licit consumption of the shops, and thereby to determine the quantity of opium to be issued to each shop. There was no suggestion that registration should be prescribed as a condition precedent to the purchase, possession, or use of opium by non-Burmans. Opium is considered to be specially injurious to persons of Burmese race, and for this reason it has been decided to attempt to restrict and ultimately prevent the use of opium by such persons. But this consideration does not apply in the case of non-Burmans. In Upper Burma, non-Burmans are permitted to use opium subject only to restrictions similar to those in force in other Indian provinces. It is not in accordance with the instructions conveyed to you to impose on non-Burmans in Lower Burma restrictions materially more stringent than those to which they are subject in Upper Burma. In order to ascertain the consumption, and thereby facilitate the detection and prevention of smuggling,

the Government of India would have been willing to approve rules requiring the registration of non-Burman consumers of opium for information merely, and not as a condition of possession. But they are advised that such rules are not authorised by the Opium Act, would possess no legal validity, and could not be enforced if disregarded. It is therefore not considered expedient to include them among rules issued under the Act. It has accordingly been necessary to omit or recast all rules providing for the registration of non-Burmans, to omit the proposed Register B, and to modify the form of daily account of sales to non-Burmans. The information required to enable you to limit the quantity of opium to be issued to each shop must be obtained by executive measures.

8. The third important change which it has been considered necessary to introduce in the draft rules is that which provides for the grant to registered consumers of certificates which will entitle the holder to purchase and possess opium without restriction as to locality.

The grant of certificates to registered habitual consumers was one of the proposals made in your note of the 4th July 1892, and its object was stated to be "to prevent undue hardship to Burmans in Lower Burma who have become habituated to the use of opium." A similar suggestion had previously been made by Sir A. Mackenzie with the same object. The draft rules, however, did not contain any such provision. Rule 11 (12) provided that a consumer, who has been registered in any township may possess opium within that township only. Such registration will not authorise him to possess opium in any other locality. Rule 28 (29) provides for the transfer of the name of any registered consumer who intends permanently to leave his township or district; but there is no provision for the case of a consumer who desires to leave his township or district for a time only. Rules 57 (54) and 66 (63) read together provided that opium shall not be sold to any registered consumer except within the township in which his name is registered. The Government of India are of opinion that these arrangements will fail to secure those who have become habituated to the use of opium from the hardships which they profess to guard against. Either the rules will be extensively evaded, or they will throw serious and unjustifiable obstacles in the way of the free movement of the population. When a Burman has registered his name as an opium consumer in any township, the Government of India consider that he must be allowed to purchase, possess, and use opium in any part of Lower Burma. It has accordingly been provided in Rule 23 (24) that to every person whose name has been entered in the register of consumers a certificate shall be given in a form prescribed for that purpose. Minor additions subsidiary to this change have been made to Rules 26 to 29 (27 to 30); and in Rule 66 (63) it has been provided that a licensed vendor may sell opium and poppy-heads within the prescribed limits of quantities to any Burman who produces his certificate, even though the name in the certificate is not in the vendor's register. If registration in any township carries with it the right to possess opium without further restriction of locality, it will, no doubt, be rather more difficult to enforce the rules; but this difficulty will be lessened by the grant of certificates, and these will also afford the duly registered consumer some measure of protection against oppression by the police or other persons who might question his right to use opium.

9. The last of the four matters, referred to in paragraph 4, relates to the period allowed for registration. Draft Rule 25 (26), as modified by your telegram of the 18th ultimo, proposes that the register shall be finally closed on the 15th July 1893, i.e., 15 days after the new rules were to have come into force, and that, save on account of absence, no Burman's name shall thereafter be entered in it except as a doctor or tattooer. The Government of India are unable to accept this proposal, which, in their opinion, is likely to occasion unnecessary hardship. In the first place, it cannot be believed that the registration of habitual consumers will really be completed by the 15th July 1893. Notwithstanding the clear and peremptory notifications which the Financial Commissioner has issued, it is certain that many persons will either not realise or will not believe in the necessity for having their names registered until they feel the actual operation of the new rules. A system which virtually requires that registration shall be completed before the new rules come into force is certain of failure. Secondly, the Government of India consider that after the register has been closed,

registration must be still allowed in the case of Burmans who were prevented from registering their names within time by reason of absence or other reasonable cause. It would not in their opinion be safe to treat absence as the only cause that would justify subsequent registration. In this view Rule 25 (26) has been recast so as to allow registration of Burmans for six months after the new rules shall have come into force, or any later date that you may prescribe by notification in the "Burma Gazette," and also to provide for the registration after that date of any persons otherwise eligible who may have been prevented from registering within time by absence or other reasonable cause. For reasons explained in paragraph 10 below, it is not intended that doctors or tattooers shall be registered as such, and the reference to these classes has therefore been omitted.

10. The minor changes which have been made in the draft rules are explained below. Merely verbal alterations, which are somewhat numerous, are, with one or two exceptions, not separately specified:—

RULE 1 (iv).—The words "manufactured by Government and" have been omitted from the definition of Government opium. It is considered that the real test regarding the opium, dealings in which are to be permitted in Lower Burma, is not the manufacture but the issue by or on behalf of Government.

RULE 1 (v).—"Medical preparation" has been substituted for "opium preparation" in this definition and throughout the rules. It is thought expedient that the term used should show on its face that it denotes preparations for medical purposes only.

RULE 1 (xx).—In the draft rules the term "non-Burman," though specially defined in this rule was seldom used. It has now been substituted for "person other than a Burman" wherever the latter expression occurs in the rules.

RULE 7.—"Non-Burman" has been substituted for "person." This change is necessary to make the rule consistent with Rule 12 (13), in which possession is restricted to non-Burmans in the local areas concerned.

RULE 8.—This rule has been renumbered 8 (a), and has been recast so as to permit the manufacture of opium by a licensed vendor, medical practitioner, doctor, or tattooer, subject to the conditions of his license. As regards licensed vendors, it is thought that they must be allowed to manufacture beinsi and beinchi, which are included within the definition of "opium;" and if it is desired that they should be prohibited from manufacturing other forms of opium, the restriction should form one of the conditions of the license. Medical practitioners, doctors, and tattooers are authorised to possess opium under Rules 16 to 19 (17 to 20), and it is considered that they must also be allowed to sell it, Rules 57 (54) and 61 (58) being modified accordingly. In these circumstances there seems to be no sufficient reason for refusing to allow them to manufacture it.

RULE 9.—This rule has been renumbered 8 (b), and has been modified in the same manner and for the same reasons as Rule 8. In this rule, and in the rules relating to possession in Lower Burma and to registration, the provisions which require or imply that a licensed vendor, doctor, or tattooer shall be registered as such have been omitted. The grant of a license to these persons is sufficient registration. Moreover, the object of registration is to preserve a record of those persons who wish to consume opium, and not of those who wish to sell it, or to administer it to others for medical purposes.

RULE 10.—A new rule bearing this number has been prefixed to the rules dealing with possession, authorising possession on behalf of Government.

RULE 10 (11).—The words "or medical practitioner" in the sixth line have been omitted, as they are covered by the new Rule 10. The words "from a cultivator in a local area in which the cultivation of the poppy plant is permitted" have been inserted after "bought" in the 8th line, because it is not clear why opium should be treated differently in this respect from poppy-heads.

RULE 12 (13).—The words "or medical preparations manufactured therefrom" have been added in order to make the rule consistent with Rule 7.

RULE 13 (14).—The words "whose name has been registered, as herein-after provided," have been omitted for the reasons explained with reference

APPENDIX L.

- to Rule 9. The other changes made in this rule are verbal only.
- RULE 14 (15).**—This rule, as drafted, was not reconcilable with the other rules in several respects. The words “and opium preparations” in the third line have been omitted, because licensed vendors are not allowed to sell medical preparations of opium, and it is therefore unnecessary that they should possess them. The words “holder of a license for wholesale vend” have been substituted for “licensed vendor,” because in Upper Burma one licensed vendor may not sell to another, whereas a wholesale vendor is permitted by Rule 53 (iii.) (50) to sell to a licensed vendor. The words “or medical practitioner or doctor” have also been omitted, as these persons can sell to licensed vendors only as private persons, and for medical purposes only. The words “or from a cultivator authorised to sell the same under Rule 50 (ii.)” have been added to make the rule consistent with Rule 53 (ii.) (50).
- RULES 20 and 21 (21 and 22).**—The word “Upper” has been omitted wherever it occurs in these rules before “Burma.” The Government of India have no objection to the reduction of the quantity of opium which travellers and horse-dealers may possess from 15 tolas to 5 tolas; but they do not think that sufficient reason has been shown for confining this privilege to Upper Burma. A similar change has been made in Rules 41 and 42 (38 and 39).
- RULE 23 (24).**—The words “desire to be registered as consumers of opium” have been substituted at the end of the first sentence of this rule for the words “are permitted to possess Government opium.” As explained in paragraph 7, the references to non-Burmans in this and other rules relating to registration have been omitted.
- RULE 26 (27).**—The last sentence of this rule has been omitted. The new rules permit a Burman habitual consumer to obtain opium, because to deprive him of it involves risk of injuring his health. This consideration is not affected by the fact that he may be subsequently sentenced to imprisonment.
- RULE 35 (32).**—The words “or holder of a license for wholesale vend” have been inserted after “licensed vendor,” as transport by wholesale vendors is covered by Rules 36 (33) *et seq.* Poppy-heads, which have apparently been omitted from this rule by oversight have been included. The words “from one place to another” have been substituted for the words beginning “from one place” to the end of the rule. This follows from the decision of the Government of India explained in paragraph 8 above, that the registration of a Burman's name in any township covers possession without further restriction of locality.
- RULE 36 (33).**—The words “under a transport pass granted in such form as the Financial Commissioner may from time to time prescribe” appear to have been incorrectly printed as a part of clause (i.) (b.). They have now been printed so as to apply to both clauses.

RULES 40 and 48 (37 and 45).—“Medical preparations” have been inserted in these rules.

RULES 52 and 53 (49 and 50).—In these rules the smallest quantity of opium or Government opium, as the case may be, that may be sold wholesale, is fixed at 10 tolas. This is not quite consistent, especially in regard to the third clause of the latter rule, with the definition of wholesale sale in Rule 1 (xi.), in which 3 tolas is the minimum quantity. It is also apprehended that some inconvenience may be caused if the minimum quantity of opium which may be sold wholesale under these rules is exactly the same as the maximum quantity which may be possessed by a doctor or tattooer under Rules 17 to 19 (18 to 20). In Rules 52 and 53 (49 and 50), therefore, the expression “not less than 10 tolas” has been changed to “exceeding 3 tolas,” which is consistent with Rule 1 (xi.); and I am to inquire whether you see any objection to the alteration.

RULE 57 (iii.), (iv.), and (v.) (54).—This rule has been altered so as to allow a medical practitioner or doctor to sell opium or Government opium, as the case may be, as well as medical preparations and poppy-heads. As these persons are empowered to possess opium and to sell by retail medical preparations of opium, it is quite impossible to prevent them from prescribing plain opium in the practice of their profession if they desire to do so, or to detect them if they do. Neither does there seem to be any good reason for making such an attempt, even if it were likely to be successful. The rule provides that the sale of the drug may be for medical purposes only.

RULES 61 and 62 (58) and (59) have been modified so as to agree with Rule 57 (54) as altered. It will be observed that Rule 62, as originally drafted, was not consistent with Rule 61.

RULE 69 (i.) (66).—The words “medical preparations” have been inserted after “opium.” It was apparently overlooked that “opium” as now defined does not include medical preparations of opium. A similar correction has been made in clause (ii.) of this rule.

RULE 72 (i.) (69).—The words “and in which licenses shall be granted by farmers” have been omitted, as there will be no farmers under the new rules.

The title of Register A. has been modified in accordance with the alterations explained above.

11. I am to invite attention to Rules 6, 9, 37, 45, 49, 50 and 54 (i.), as re-numbered, which authorise Government or Government officers to manufacture, possess, import, export, and sell opium and medical preparations of opium. It has been suggested that there is some danger lest the publication of rules of this kind may tend to represent Government in the light of a petty dealer in opium; and I am to request that when re-submitting the rules, as directed in paragraph 2 of this letter you will be good enough to consider whether any practical inconvenience is likely to be caused if rules of this kind were altogether omitted.

I have, &c.
(Signed) J. F. FINLAY,
Secretary to the Government of India.

DRAFT RULES AS RECEIVED FROM BURMA.

Definitions.

1. In these rules, unless there be something repugnant in the subject or context—
 - (i.) “India” means the territory included within the British frontier lines on the extreme west, north, and east of British India.
 - (ii.) “Lower Burma” means the territories for the time being comprised in Lower Burma under sub-sections (1) and (2) of section 2 of the Upper Burma Laws Act, 1886; “Upper Burma” means the whole of Burma, except Lower Burma and the Shan States.
 - (iii.) “Opium” means the inspissated juice of the poppy and beinsi and beinchi, but does not include poppy-heads, nor kunbôn, nor beinye, nor any preparation or admixture thereof, nor any other intoxicating or narcotic preparation of opium or of the poppy.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA

APPENDIX L.

- (iv.) "Government opium" means opium manufactured by Government, and sold or issued by a Government officer empowered to sell or issue opium, and includes beinsi and beinchi made or prepared from such opium.
- (v.) "Opium preparation" means any preparation or admixture of opium intended for medical purposes only.
- (vi.) "Poppy-heads" means the capsules of the poppy plant.
- (vii.) "Tola" means a weight of 180 grains troy.
- (viii.) "Seer" means a weight of 80 tolas.
- (ix.) "Viss" means 3·65 pounds avoirdupois.
- (x.) "Pè" means 1·75 of an acre.
- (xi.) "Opium," "Government opium," and "opium preparations," when sold in any quantity not exceeding 3 tolas in weight, shall be deemed to be sold by "retail," and when sold in larger quantities shall be deemed to be sold "wholesale." Poppy-heads, when sold in any quantity not exceeding 5 seers in weight, shall be deemed to be sold by "retail," and when sold in any larger quantities shall be deemed to be sold by "wholesale."
- (xii.) "Licensed vendor," used with reference to opium or to poppy-heads, means a person to whom a license for the retail sale of opium or poppy-heads, or both, has been granted by the Deputy Commissioner under Rule 59.
- (xiii.) "Medical practitioner" means a person who practices medicine according to European methods, or who deals in European medicines and drugs as a means of livelihood, and to whom a license for the retail sale of opium preparations or poppy-heads, or both, for medical purposes has been granted under Rule 61 by the Deputy Commissioner.
- (xiv.) "Doctor" means a person who practices medicine according to Asiatic methods as a means of livelihood, and to whom a license has been granted under Rule 61.
- (xv.) "Tattooer" means a Burman who practises tattooing of the human body according to Burmese methods, and to whom a license has been granted under Rule 61.
- (xvi.) "Import," "export," and "transport" have the respective meanings assigned to them in the Opium Act, 1878.
- (xvii.) "Upper Burma-grown opium" means opium manufactured from the poppy plant grown in those parts of Upper Burma in which the cultivation of the plant is permitted.
- (xviii.) "Civil surgeon" means a Civil surgeon or other principal medical officer of a district.
- (xix.) "Burman" means any person born of parents both of whom belong to races indigenous to Burma, except Kachins, in districts in which the cultivation of the poppy is permitted.
- Every person who ordinarily wears a dress commonly worn by persons of any race indigenous to Burma and speaks the Burmese language shall be presumed to be a Burman until the contrary is proved.
- (xx.) "Non-Burman" means any person who is not a Burman.
- (xxi.) "Village" means a village as defined in the Lower Burma Village Act, 1889, and the Upper Burma Village Regulation, 1887.
- (xxii.) "Town" means a town to which the provisions of the Lower Burma Towns Act, 1892, or the Upper Burma Towns Regulation, 1891, have been extended.
- (xxiii.) "Headman" in the case of villages to which the Lower Burma Village Act, 1889, or the Upper Burma Village Regulation, 1887, extend means a headman as defined in the said Act and Regulation, and in the case of towns to which the Lower Burma Towns Act, 1892, or the Upper Burma Towns Regulation, 1891, extend means a headman of a ward appointed thereunder.
- (iv.) "Government opium" means opium sold or issued by a Government officer empowered to sell or issue opium, and includes beinsi and beinchi made or prepared from such opium.
- (v.) "Medical preparation" means any preparation or admixture of opium intended for medical purposes only.
- (vi.) "Poppy-heads" means the capsules of the poppy plant.
- (vii.) "Tola" means a weight of 180 grains troy.
- (viii.) "Seer" means a weight of 80 tolas.
- (ix.) "Viss" means 3·65 pounds avoirdupois.
- (x.) "Pè" means 1·75 of an acre.
- (xi.) "Opium," "Government opium," and "medical preparations," when sold in any quantity not exceeding 3 tolas in weight, shall be deemed to be sold "retail," and when sold in larger quantities shall be deemed to be sold "wholesale." Poppy-heads, when sold in any quantity not exceeding 5 seers in weight, shall be deemed to be sold "retail," and when sold in any larger quantities shall be deemed to be sold "wholesale."
- (xii.) "Licensed vendor," used with reference to opium or to poppy-heads, means a person to whom a license for the sale of opium or poppy-heads, or both, by retail has been granted by the Deputy Commissioner under Rule 56.
- (xiii.) "Medical practitioner" means a person who practices medicine according to European methods, or who deals in European medicines and drugs as a means of livelihood, and to whom a license has been granted by the Deputy Commissioner under Rule 58.
- (xiv.) "Doctor" means a person who practises medicine according to Asiatic methods as a means of livelihood, and to whom a license has been granted by the Deputy Commissioner under Rule 58.
- (xv.) "Tattooer" means a Burman who practices tattooing of the human body according to Burmese methods, and to whom a license has been granted by the Deputy Commissioner under Rule 58.
- (xvi.) "Import," "export," and "transport" have the respective meanings assigned to them in the Opium Act, 1878.
- (xvii.) "Upper Burma-grown opium" means opium manufactured from the poppy plant grown in those parts of Upper Burma in which the cultivation of the plant is permitted.
- (xviii.) "Civil surgeon" means a Civil surgeon or other principal medical officer of a district.
- (xix.) "Burman" means any person born of parents both of whom belong to races indigenous to Burma, except a Kachin, residing in any district in which the cultivation of the poppy is permitted.
- Every person who ordinarily wears a dress commonly worn by persons of any race indigenous to Burma and speaks Burmese as his vernacular language shall be presumed to be a Burman until the contrary is proved.
- (xx.) "Non-Burman" means any person who is not a Burman.
- (xxi.) "Village" means a village as defined in the Lower Burma Village Act, 1889, and the Upper Burma Village Regulation, 1887.
- (xxii.) "Town" means an area declared to be a town for the purposes of the Lower Burma Towns Act, 1892, or the Upper Burma Towns Regulation, 1891.
- (xxiii.) "Headman" means in the case of villages a headman as defined in the Lower Burma Village Act, 1889, or the Upper Burma Village Regulation, 1887, and in the case of towns a headman of a ward appointed under the Lower Burma Towns Act, 1892, or the Upper Burma Towns Regulation, 1891, as the case may be.

DRAFT RULES AS RECEIVED FROM BURMA.

Cultivation.

2. Subject to the payment of the duty, and to the conditions laid down in the following rules, the poppy plant may be grown in the Kachin villages in the Katha, Bhamo, and Upper Chindwin districts, and in other local areas in which the Chief Commissioner may from time to time by notification in the "Burma Gazette," permit such cultivation.

3. A duty of 8 annas shall be levied for each quarter of a pè of poppy cultivation. A fraction of a quarter of a pè shall be charged as a quarter of a pè. The above duty may, with the sanction of the Commissioner of the division, be commuted to a lump-sum payment by any village or tribe, or may be remitted entirely by the Financial Commissioner.

4. The Local Government may, at any time by notification in the "Burma Gazette" giving six months' notice, enhance the rate of duty in any local area up to any rate not exceeding Re. 1 for a quarter of a pè or fraction thereof.

5. The measurement of the area under poppy cultivation shall be effected by headmen under such rules as to supervision and otherwise as the Financial Commissioner may from time to time prescribe.

Manufacture.

6. Opium may be manufactured on account of Government.

7. In any local area in Upper Burma in which the cultivation of the poppy plant is permitted, Upper Burma-grown opium and opium preparations therefrom may be manufactured by any person from poppy grown in such area.

8. In Upper Burma opium preparations may be manufactured by—

- (i) a licensed vendor, subject to the conditions of his license;
- (ii) a medical practitioner, doctor, or tattooer, subject to the conditions of his license.

9. In Lower Burma—

- (i) opium preparations from Government opium may be manufactured by a licensed vendor, doctor, or tattooer whose name has been registered as herein-after provided, subject to the conditions of his license;
- (ii) opium preparations may be manufactured by a medical practitioner, subject to the conditions of his license.

Possession.

10. In Upper Burma any person other than a Burman may possess poppy-heads not exceeding 5 seers in weight which have been bought from a cultivator in a local area in which the cultivation of the poppy plant is permitted, or from Government, or a licensed vendor, or medical practitioner, and opium and opium preparations not exceeding 3 tolas in weight which he has bought from Government, or a licensed vendor, or medical practitioner, or doctor.

11. In Lower Burma—

- (i) any Burman of 25 years of age or upwards whose name has been registered and is borne on the prescribed register as herein-after provided, may, within the township in which his name is registered, or, if registered in the Rangoon Town District, within that district, possess poppy-heads not exceeding 5 seers

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

Cultivation.

2. Subject to the payment of the duty, and to the conditions laid down in the following rules, the poppy plant may be grown in the Kachin villages in the Katha, Bhamo, and Upper Chindwin districts, and in other local areas in which the Chief Commissioner may from time to time by notification in the "Burma Gazette," permit such cultivation.

3. A duty of 8 annas shall be levied for each quarter of a pè of poppy cultivation. A fraction of a quarter of a pè shall be charged as a quarter of a pè. The above duty may, with the sanction of the Commissioner of the division, be commuted to a lump-sum payment by any village or tribe, or may be remitted entirely by the Financial Commissioner.

4. The local Government may, at any time by notification in the "Burma Gazette" giving six months' notice, enhance the rate of duty in any local area up to any rate not exceeding Re. 1 for a quarter of a pè or fraction thereof.

5. The measurement of the area under poppy cultivation shall be effected by headmen under such rules as to supervision and otherwise as the Financial Commissioner may from time to time prescribe.

Manufacture.

6. Opium may be manufactured on account of Government.

7. In any local area in Upper Burma in which the cultivation of the poppy plant is permitted, Upper Burma-grown opium and medical preparations therefrom may be manufactured by any non-Burman from poppy grown in such area.

8. (a.) In Upper Burma—

- (i) opium may be manufactured by a licensed vendor, subject to the conditions of his license;
- (ii) opium and medical preparations may be manufactured by a medical practitioner, doctor, or tattooer, subject to the conditions of his license.

(b.) In Lower Burma—

- (i) Government opium may be manufactured by a licensed vendor, subject to the conditions of his license;
- (ii) Government opium and medical preparations therefrom may be manufactured by a doctor or tattooer, subject to the conditions of his license;
- (iii) Opium and medical preparations may be manufactured by a medical practitioner, subject to the conditions of his license.

Possession.

9. Any person duly authorised in that behalf may possess opium, medical preparations, and poppy-heads on account of Government.

10. Any person may possess poppy-heads not exceeding 5 seers in weight, opium not exceeding 3 tolas in weight, and medical preparations not exceeding 6 tolas in weight, provided that he has bought the poppy-heads, opium, or medical preparations from a medical practitioner or doctor, and requires them for medical purposes only.

11. In Upper Burma any non-Burman may possess poppy-heads not exceeding 5 seers in weight which have been bought from a cultivator in a local area in which the cultivation of the poppy plant is permitted, or from Government, or a licensed vendor, and opium not exceeding 3 tolas in weight which he has bought from a cultivator in a local area in which the cultivation of the poppy plant is permitted, or from Government, or a licensed vendor.

12. In Lower Burma—

- (i) any Burman whose name has been entered in, and has not been removed from, the register prescribed in Rule 24 may possess poppy-heads not exceeding 5 seers in weight and Government opium not exceeding 3 tolas in weight which he has bought from Government or from a licensed vendor.

DRAFT RULES AS RECEIVED FROM BURMA.

in weight and Government opium and opium preparations made therefrom not exceeding 3 tolas in weight which he has bought from any officer of Government empowered to sell Government opium, or from a licensed vendor, or medical practitioner, or doctor;

- (ii.) any non-Burman of 20 years of age or upwards whose name has been registered and is borne on the prescribed register as herein-after provided, may, within the township in which his name is registered, or, if registered in the Rangoon Town District, within that district, possess poppy-heads not exceeding 5 seers in weight and Government opium and opium preparations made therefrom not exceeding 3 tolas in weight which he has bought from any officer of Government specially empowered to sell Government opium, or a licensed vendor, or medical practitioner, or doctor.

12. In any local area in which the cultivation of the poppy plant is permitted, any person other than a Burman may possess any quantity of poppy-heads or opium being the produce of poppy plants grown in such local area.

13. Subject to the conditions of his license, a licensed vendor in Lower Burma whose name has been registered as herein-after provided, may possess any quantity of Government opium and poppy-heads obtained by him from any officer of Government empowered to sell Government opium or from any licensed vendor authorised to sell, and sold to him by such persons in accordance with the conditions of their licenses.

14. Subject to the conditions of his license, a licensed vendor in Upper Burma may possess any quantity of opium and opium preparations and poppy-heads obtained by him from Government, or from a licensed vendor, or medical practitioner, or doctor, and sold to him by any such person in accordance with the conditions of his license.

15. Subject to the conditions of the pass, a holder of a pass for transport, import, or export may possess the poppy-heads or opium covered by the pass.

16. Subject to the conditions of his license, a medical practitioner may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of opium and of opium preparations not exceeding 1 seer in weight.

17. Subject to the conditions of his license, a doctor in Upper Burma may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of opium or of opium preparations not exceeding 10 tolas in weight.

18. Subject to the conditions of his license, a doctor in Lower Burma may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of Government opium or of opium preparations made therefrom not exceeding 10 tolas in weight.

19. Subject to the conditions of his license, a tattooer may possess in Upper Burma any quantity of opium and of opium preparations not exceeding 10 tolas in weight, and in Lower Burma any quantity of Government opium and of opium preparations made therefrom not exceeding 10 tolas in weight.

20. A traveller or visitor entering Upper Burma by land from the Shan States or from a country out of India may, while in Upper Burma, possess opium produced in the Shan States or out of India for the personal use of himself and attendants, and not for sale or barter, in any quantity not exceeding in weight 5 tolas for each person.

21. A horse dealer importing horses or ponies into Upper Burma from the Shan States or a country out of India may, during the period of his sojourn in Upper Burma, possess opium produced in the Shan States or out of India in any quantity not exceeding in weight 5 tolas for each horse or pony for the time being in his possession.

22. Any person specially licensed in that behalf by the Deputy Commissioner of the district in which he resides or trades may possess in Upper Burma opium and opium preparations, and in Lower Burma Government opium and opium preparations made therefrom, in such quantity and for such period as may be specified in the special license. Provided that no such special license shall be granted without the previous sanction of the Commissioner.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA. APPENDIX I.

- (ii.) *any non-Burman may possess poppy-heads not exceeding 5 seers in weight and Government opium not exceeding 3 tolas in weight which he has bought from Government or from a licensed vendor.*

13. In any local area in which the cultivation of the poppy plant is permitted, any non-Burman may possess any quantity of poppy-heads or opium being the produce of poppy plants grown in such local area, or medical preparations manufactured therefrom.

14. Subject to the conditions of his license, a licensed vendor in Lower Burma may possess any quantity of Government opium and poppy-heads obtained by him from Government or from any other licensed vendor who has sold the same to him in accordance with the conditions of his license.

15. Subject to the conditions of his license, a licensed vendor in Upper Burma may possess any quantity of opium and poppy-heads obtained by him from Government or from a holder of a license for wholesale vend, and sold to him by such vendor in accordance with the conditions of his license, or from a cultivator authorised to sell the same under Rule 50 (ii.).

16. Subject to the conditions of the pass, a holder of a pass for transport or import may possess the poppy-heads or opium covered by the pass.

17. Subject to the conditions of his license, a medical practitioner may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of opium and of medical preparations not exceeding 1 seer in weight.

18. Subject to the conditions of his license, a doctor in Upper Burma may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of opium or of medical preparations not exceeding 10 tolas in weight.

19. Subject to the conditions of his license, a doctor in Lower Burma may possess any quantity of poppy-heads not exceeding 10 seers in weight, and of Government opium or of medical preparations made therefrom not exceeding 10 tolas in weight.

20. Subject to the conditions of his license, a tattooer may possess in Upper Burma any quantity of opium and of medical preparations not exceeding 10 tolas in weight, and in Lower Burma any quantity of Government opium and of medical preparations made therefrom not exceeding 10 tolas in weight.

21. A traveller or visitor entering Burma by land from the Shan States or from a country out of India may, while in Burma, possess opium produced in the Shan States or out of India for the personal use of himself and attendants, and not for sale or barter, in any quantity not exceeding in weight 5 tolas for each person.

22. A horse dealer importing horses or ponies into Burma from the Shan States or a country out of India may, while in Burma, possess opium produced in the Shan States or out of India in any quantity not exceeding in weight 5 tolas for each horse or pony for the time being in his possession.

23. Any person specially licensed in that behalf by the Deputy Commissioner of the district in which he resides or trades may possess in Upper Burma opium and medical preparations, and in Lower Burma Government opium and medical preparations made therefrom, in such quantity and for such period as may be specified in the special license. Provided that no such special license shall be granted without the previous sanction of the Commissioner.

DRAFT RULES AS RECEIVED FROM BURMA.

Registration of Persons in Lower Burma who are permitted to possess Government Opium.

23. Two Registers, A. and B., in the forms prescribed in the Appendix to these rules, shall be maintained in each township of every district in Lower Burma, showing the names of all persons resident in the township who are permitted to possess Government opium. An extract of the register for each village or ward, called the village register, shall be given to the headman of the village or ward, and shall be maintained by him. A combined register for the entire district, called the district register, shall be maintained by the Deputy Commissioner.

Register A. is for Burmans only of 25 years or upwards.

Register B. is for non-Burmans only of 20 years or upwards.

24. In the Rangoon Town district the Deputy Commissioner shall exercise the powers and perform the duties assigned by these rules to a township officer in addition to those of a Deputy Commissioner.

25. On the 15th July 1893 Register A. shall be closed, and no name shall be added to it except on transfer of any registered person from one jurisdiction to another as herein-after provided, or by special order of a Deputy Commissioner made before such date as the Chief Commissioner may prescribe. But any Burman of 25 years or upwards who, after Register A. has been closed, desires to adopt the profession of doctor or tattooer may, on application in writing to the township officer or Deputy Commissioner, be registered if the headman of the village or ward in which he resides or intends to practise certifies that he is a respectable man; that he intends to adopt the profession as a means of livelihood; and that the residents of the village or ward have no objection to his possession of opium in quantity sufficient for the practice of his profession.

26. Any person whose name is borne on Register A. may at any time apply, orally or in writing, to the township officer to have his name struck off the register, and the township officer shall forthwith cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner, who shall strike his name off the district register. But no such person shall be entitled to have his name restored to the register. If any person whose name is borne on Register A. is sentenced to imprisonment for six months or more, his name shall be struck off the register.

27. When any person whose name is borne on Register A. dies, the headman of the village or ward shall report his death to the township officer, who shall thereupon cause his name to be struck off the township and village register, and shall make report to the Deputy Commissioner, who shall cause his name to be struck off the district register.

28. When any person whose name is borne on Register A. intends permanently to leave the township or district, he shall inform the headman of the village or ward. The headman shall make report to the township officer, who shall thereupon give the aforesaid person, free of charge, a certified extract of the register concerning him, and shall cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner. If the person aforesaid is leaving the district, the Deputy Commissioner shall strike his name off the district register. If he is changing his residence to another township of the same district, the Deputy Commissioner shall cause the district register to be corrected accordingly, and shall direct the person to report himself to the officer in charge of the township in which he intends to reside.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

Registration of Persons in Lower Burma who are permitted to possess Government Opium.

24. A register in the form prescribed in the Appendix to these rules shall be maintained in each township of every district in Lower Burma, showing the names of Burmans resident in the township who desire to be registered as consumers of opium. An extract of the register for each village or ward, called the village register, shall be given to the headman of the village or ward, and shall be maintained by him. A combined register for the entire district, called the district register, shall be maintained by the Deputy Commissioner.

In this register shall be entered only the names of Burmans of 25 years of age or upwards. To every person whose name is entered in the register a certificate in the following form shall be given :—

"Certified that the name of _____, a Burman, has been entered in the register prescribed by Rule 24 of the rules framed under the Opium Act, I. of 1878, for Burma for the registration of Burmans who desire to be registered as consumers of opium, of the township of _____, and that the _____, licensed vendor of the opium township, shop located at _____, or any other licensed vendor in Lower Burma, is authorised to sell to the said _____ poppy-heads or opium in the quantities permitted by or under the said rules on the production of this certificate."

25. In the Rangoon Town district the Deputy Commissioner shall exercise the powers and perform the duties assigned by these rules to a township officer in addition to those of a Deputy Commissioner.

26. When six months, or such longer period as the Chief Commissioner may prescribe by notification in the Burma Gazette, shall have elapsed from the date on which these rules come into force, the register shall be closed, and no new name shall be entered in it, except as provided below in this rule or in the subsequent rules providing for transfer of names from the register of one township or district to that of another. Provided that any Burman of 25 years of age or upwards who may have been prevented, by absence or other reasonable cause, from registering his name before the prescribed date shall be entitled to have his name registered at any time if he is otherwise eligible for registration.

27. Any person whose name is borne on the register may at any time apply, orally or in writing, to the township officer to have his name struck off the register, and the township officer shall forthwith, after recovering the certificate granted to him under Rule 24, cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner, who shall strike his name off the district register. But no such person shall be entitled to have his name restored to the register.

28. When any person whose name is borne on the register dies, the headman of the village or ward shall report his death to the township officer, who shall thereupon recover and destroy the certificate granted to him under Rule 24, cause his name to be struck off the township and village register, and make report to the Deputy Commissioner, who shall cause his name to be struck off the district register.

29. When any person whose name is borne on the register intends permanently to leave the township or district, he shall inform the headman of the village or ward. The headman shall make report to the township officer, who shall thereupon endorse on the certificate granted to him under Rule 24 the words "the name of _____ may be transferred to the register of township _____," and shall cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner. If the person aforesaid is leaving the district, the Deputy Commissioner shall strike his name off the district register. If he is changing his residence to another township of the same district, the Deputy Commissioner shall cause the district register to be corrected accordingly, and shall direct the person to report himself to the officer in charge of the township in which he intends to reside.

DRAFT RULES AS RECEIVED FROM BURMA.

29. Any person whose name has been struck off Register A. under Rule 28 may apply to the officer in charge of the township to which he has changed his residence to have his name entered in Register A., and on production by such person of a certified extract granted under Rule 28, the township officer shall, after such inquiry as he may consider necessary, cause his name to be entered in the township and village register, and shall report to the Deputy Commissioner, who shall cause his name to be entered in the district register. If a person produces before a township officer a document purporting to be a certified extract granted under Rule 28, the township officer shall, if he doubts the genuineness of the document, make such inquiries as he considers necessary, and, if he finds that the document is not genuine, shall refuse to enter the applicant's name in Register A.

30. Any person whose name is borne on Register B. may at any time apply orally or in writing to the township officer to have his name struck off the register, and the township officer shall forthwith cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner, who shall strike his name off the district register.

31. When any person whose name is borne on Register B. dies, the headman of the village or ward shall report his death to the township officer, who shall thereupon cause his name to be struck off the township and village register, and shall make report to the Deputy Commissioner, who shall cause his name to be struck off the district register.

32. When any person whose name is borne on Register B. intends permanently to leave the township or district, he shall inform the headman of the village or ward. The headman shall make report to the township officer, who shall thereupon cause his name to be struck off the township and village register, and shall report to the Deputy Commissioner. If the person aforesaid is leaving the district, the Deputy Commissioner shall strike his name off the district register. If he is changing his residence to another township of the same district, the Deputy Commissioner shall cause the district register to be corrected accordingly, and shall direct the person to report himself to the officer in charge of the township in which he intends to reside.

33. Any non-Burman of 20 years or upwards may at any time apply orally or in writing to the officer in charge of the township in which he resides, or to which he has come, to have his name entered in Register B., and the township officer, if he is satisfied that the applicant is a non-Burman and is 20 years of age or upwards, shall, after ascertaining the village or ward in which such person resides, enter his name in the township register and shall cause his name to be entered in the village register, and shall make report to the Deputy Commissioner, who shall cause his name to be entered in the district register.

34. The township officer and, in the Rangoon Town district, the Deputy Commissioner, shall annually, during the months of February and March, test the entries in the registers by verifying the existence of the persons whose names are borne on the registers, and the death or removal of the persons whose names have been struck off the registers during the year, and shall, if necessary, correct the registers.

Transport.

35. Any person, other than a licensed vendor, may transport opium and opium preparations which he may legally possess from one place in a town or township to any other place in the same town or township, or from a shop or place in which opium is sold in accordance with the law to his place of residence.

36.—(i.) A licensed vendor or holder of a license for wholesale vend under Rule 54 may transport opium or poppy-heads—

- (a) from one district to another; or
- (b) from one township to another township of the same district, under a transport pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) A transport pass must be obtained for each consignment.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

APPENDIX L.

30. Any person whose name has been struck off the register under Rule 29 may apply to the officer in charge of the township to which he has changed his residence to have his name entered in the register, and on production by such person of the certificate granted under Rule 24, duly endorsed under Rule 29, the township officer shall, after such inquiry as he may consider necessary, cause his name to be entered in the township and village register, and shall report to the Deputy Commissioner, who shall cause his name to be entered in the district register. If a person produces before a township officer a document purporting to be a certificate granted under Rule 24, duly endorsed under Rule 29, the township officer shall, if he doubts the genuineness of the document, make such inquiries as he considers necessary, and, if he finds that the document is not genuine, shall refuse to enter the applicant's name in the register.

31. The township officer and, in the Rangoon Town district, the Deputy Commissioner shall annually, during the months of February and March, test the entries in the register by verifying the existence of the persons whose names are borne on the register and the death or removal of the persons whose names have been struck off the register during the year, and shall, if necessary, correct the register.

Transport.

32. Any person, other than a licensed vendor, or holder of a license for wholesale vend, may transport opium, medical preparations, and poppy-heads which he may legally possess from one place to another.

33.—(i.) A licensed vendor or holder of a license for wholesale vend under Rule 51 may transport under a transport pass granted in such form as the Financial Commissioner may from time to time prescribe, opium or poppy-heads—

- (a) from one district to another; or
- (b) from one township to another township of the same district.

(ii.) A transport pass must be obtained for each consignment.

(iii.) The transport pass shall be granted—
in case (a), by the Deputy Commissioner of the district; and
in case (b), by the township officer of the township, from which, as the case may be, the opium or poppy-heads is or are to be transported.

37.—(i.) The transport pass shall specify—

- (1) the name of the consignor;
- (2) the name of the person in charge of the consignment;
- (3) the place from which the consignment is to be transported;
- (4) the name of the consignee;
- (5) the number of packages and the weight and contents of each;
- (6) the destination of the consignment; and
- (7) the period for which the pass shall remain in force.

Each package in the consignment shall be stamped in the presence of the officer granting the pass with his official seal across the seams.

(ii.) Such transport pass shall be granted only on production by the person applying for it of a written permission to apply for such pass—

in case (a), from the Deputy Commissioner of the district; and

in case (b), from the township officer of the township, to which, as the case may be, the opium or poppy-heads is or are to be transported.

(iii.) In case (a), if the officer granting the written permission thinks fit, he may expressly permit the application to be made for transport direct to the township of destination, and in this case he shall send a copy of the written permission to the township officer of the township.

(iv.) A copy of the transport pass shall be sent—

in case (a) to the Deputy Commissioner of the district; and

in case (b) to the township officer of the township, to which, as the case may be, the consignment is to be transported.

(v.) Every pass granted for the transport to another district of opium or poppy-heads shall show on the face of it whether it is to be presented for examination to the Deputy Commissioner of the district to which the consignment is to be transported or to the township officer of the township of destination. Such a pass may be enfaced for presentation to the township officer of the township of destination only when the written permission to apply for the pass expressly allows this. If the pass is so enfaced, the Deputy Commissioner of the district to which the consignment is being transported shall, without delay, forward on receipt the copy of the transport pass referred to in sub-rule (iv.) to the township officer of the township of destination.

(vi.) On arrival at destination the transport pass and the consignment shall be presented for examination and weighment to, and shall without delay be examined and weighed by—

in case (a) the officer named in this behalf on the face of the pass; and

in case (b) the township officer of the township to which the consignment has been transported.

38. Any Deputy Commissioner may extend the period for which a transport pass under Rule 36 has been granted upon application for such extension by the person in charge of the consignment of opium or poppy-heads covered by the pass. Provided that—

- (i) due cause satisfactory to such Deputy Commissioner be shown for such extension; and
- (ii) the package or packages of the consignment is or are intact.

Any extension so granted shall be endorsed upon the pass by the Deputy Commissioner granting it.

39. An officer granting a transport pass may make it a condition of the pass that the bulk of the consignment shall not be broken in transit.

If no such condition is made the holder of a license for wholesale vend under Rule 54, who is transporting a consignment under transport pass obtained in accordance with Rule 36, may break bulk in transit for the purpose of effecting, within the area specified in his license, a sale by wholesale of the whole or part of the opium or poppy-heads covered by the said pass: Provided that such sale shall be recorded and attested on the transport pass by an officer not below the rank of

(iii.) The transport pass shall be granted—
in case (a), by the Deputy Commissioner of the district; and
in case (b), by the township officer of the township, from which, as the case may be, the opium or poppy-heads is or are to be transported.

34.—(i.) The transport pass shall specify—

- (1) the name of the consignor;
- (2) the name of the person in charge of the consignment;
- (3) the place from which the consignment is to be transported;
- (4) the name of the consignee;
- (5) the number of packages and the weight and contents of each;
- (6) the destination of the consignment; and
- (7) the period for which the pass shall remain in force.

Each package in the consignment shall be stamped in the presence of the officer granting the pass with his official seal across the seams.

(ii.) Such transport pass shall be granted only on production by the person applying for it of a written permission to apply for such pass—

in case (a), from the Deputy Commissioner of the district; and

in case (b), from the township officer of the township, to which, as the case may be, the opium or poppy-heads is or are to be transported.

(iii.) In case (a), if the officer granting the written permission thinks fit, he may expressly permit the application to be made for transport direct to the township of destination, and in this case he shall send a copy of the written permission to the township officer of the township.

(iv.) A copy of the transport pass shall be sent—

in case (a) to the Deputy Commissioner of the district; and

in case (b) to the township officer of the township, to which, as the case may be, the consignment is to be transported.

(v.) Every pass granted for the transport to another district of opium or poppy-heads shall show on the face of it whether it is to be presented for examination to the Deputy Commissioner of the district to which the consignment is to be transported or to the township officer of the township of destination. Such a pass may be enfaced for the presentation to the township officer of the township of destination only when the written permission to apply for the pass expressly allows this. If the pass is so enfaced, the Deputy Commissioner of the district to which the consignment is being transported shall, without delay, forward on receipt the copy of the transport pass referred to in sub-rule (iv.) to the township officer of the township of destination.

(vi.) On arrival at destination the transport pass and the consignment shall be presented for examination and weighment to, and shall without delay be examined and weighed by—

in case (a) the officer named in this behalf on the face of the pass; and

in case (b) the township officer of the township to which the consignment has been transported.

35. Any Deputy Commissioner may extend the period for which a transport pass under Rule 33 has been granted upon application for such extension by the person in charge of the consignment of opium or poppy-heads covered by the pass. Provided that—

- (i) due cause satisfactory to such Deputy Commissioner be shown for such extension; and
- (ii) the package or packages of the consignment is or are intact.

Any extension so granted shall be endorsed upon the pass by the Deputy Commissioner granting it.

36. An officer granting a transport pass may make it a condition of the pass that the bulk of the consignment shall not be broken in transit.

If no such condition is made, the holder of a license for wholesale vend under Rule 51, who is transporting a consignment under transport pass obtained in accordance with Rule 33, may break bulk in transit for the purpose, of effecting, within the area specified in his license a sale by wholesale of the whole or part of the opium or poppy-heads covered by the said pass: Provided that such sale shall be recorded and attested on the transport pass by an officer not below the rank of

DRAFT RULES AS RECEIVED FROM BURMA.

township officer. An officer attesting a sale shall re-seal the packages as required by Rule 37 after re-examining and re-weighing them.

On all Upper Burma-grown opium or poppy-heads transported from a local area in which the cultivation of the poppy plant is permitted to a district or township in which such cultivation is not permitted, there shall be levied the same duty as may for the time being be leviable on opium or poppy-heads imported by land into Burma.

Import.

40. Government may import opium and poppy-heads on its own account.

41. In Upper Burma a Shan or foreign horse-dealer importing horses or ponies into Upper Burma may import into Upper Burma opium produced in the Shan States or out of India in any quantity not exceeding 5 tolas for each horse or pony in his possession.

42. A Shan or foreign traveller or visitor entering Upper Burma by land from the Shan States or from a country out of India may import into Upper Burma opium produced in the Shan States or out of India for the personal use of himself and his attendants, and not for sale or barter, in any quantity not exceeding in weight 5 tolas for each such person.

43.—(i.) Subject to the payment of the duty which may for the time being be imposed by the Governor General in Council, opium or poppy-heads produced out of India may be imported by land into districts of Upper Burma by a licensed vendor or holder of a license for wholesale vend under and subject to the conditions of an import pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) An import pass must be obtained for each importation.

(iii.) Opium or poppy-heads imported into Upper Burma under a pass shall be taken as soon as possible to the opium warehouse or treasury office of the district into which the opium or poppy-heads is or are first imported.

(iv.) The import pass shall be granted by the Deputy Commissioner of the district into which the opium or poppy-heads is or are imported, or by some officer authorised by him to grant such passes.

(v.) The import pass shall specify—

- (1) the name of the importer;
- (2) the name of the person in charge of the importation;
- (3) the route by which the importation is to be brought;
- (4) the number of packages, and the weight and contents of each;
- (5) the warehouse or treasury to which the opium or poppy-heads must be taken;
- (6) the period for which the pass shall remain in force; and
- (7) the amount of duty paid or payable.

(vi.) A copy of every import pass granted by an officer, other than the Deputy Commissioner of the district, shall be forthwith sent by the officer granting it to the Deputy Commissioner.

44. On arrival at the opium warehouse or treasury, the opium or poppy-heads shall be examined and weighed and compared with the pass by the officer in charge of the warehouse or treasury, who shall retain the pass and give the person bringing the opium or poppy-heads a receipt for the same in such form as the Financial Commissioner may prescribe.

45. No opium shall be removed from an opium warehouse or treasury until the full duty payable on it has been paid.

The officer in charge of an opium warehouse or treasury shall report to the Deputy Commissioner of the district the arrival of each importation, and shall send him the pass under which the opium or poppy-heads has or have been imported as soon as possible after the arrival of each importation.

46. The officer in charge of an opium warehouse or treasury shall keep a register of arrivals, deliveries, and other transactions under his charge in such form as the Financial Commissioner may from time to time prescribe.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA. APPENDIX L.

a township officer. An officer attesting a sale shall re-seal the packages as required by Rule 34 after re-examining and re-weighing them.

On all Upper Burma-grown opium or poppy-heads transported from a local area in which the cultivation of the poppy plant is permitted to a district or township in which such cultivation is not permitted, there shall be levied the same duty as may for the time being be leviable on opium or poppy-heads imported by land into Burma.

Import.

37. Government may import opium, *medical preparations*, and poppy-heads on its own account.

38. A Shan or foreign horse-dealer importing horses or ponies into Burma may import into Burma opium produced in the Shan States or out of India in any quantity not exceeding 5 tolas for each horse or pony in his possession.

39. A Shan or foreign traveller or visitor entering Burma by land from the Shan States or from a country out of India may import into Burma opium produced in the Shan States or out of India for the personal use of himself and his attendants, and not for sale or barter, in any quantity not exceeding in weight 5 tolas for each such person.

40.—(i.) Subject to the payment of the duty which may for the time being be imposed by the Governor General in Council, opium or poppy-heads produced out of India may be imported by land into Upper Burma by a licensed vendor or holder of a license for wholesale vend under and subject to the conditions of an import pass granted in such form as the Financial Commissioner may from time to time prescribe.

(ii.) An import pass must be obtained for each importation.

(iii.) Opium or poppy-heads imported into Upper Burma under a pass shall be taken as soon as possible to the opium warehouse or treasury office of the district into which the opium or poppy-heads is or are first imported.

(iv.) The import pass shall be granted by the Deputy Commissioner of the district into which the opium or poppy-heads is or are imported, or by some officer authorised by him to grant such passes.

(v.) The import pass shall specify—

- (1) the name of the importer;
- (2) the name of the person in charge of the importation;
- (3) the route by which the importation is to be brought;
- (4) the number of packages and the weight and contents of each;
- (5) the warehouse or treasury to which the opium or poppy-heads must be taken;
- (6) the period for which the pass shall remain in force; and
- (7) the amount of duty paid or payable.

(vi.) A copy of every import pass granted by an officer, other than the Deputy Commissioner of the district, shall be forthwith sent by the officer granting it to the Deputy Commissioner.

41. On arrival at the opium warehouse or treasury, the opium or poppy-heads shall be examined and weighed and compared with the pass by the officer in charge of the warehouse or treasury, who shall retain the pass and give the person bringing the opium or poppy-heads a receipt for the same in such form as the Financial Commissioner may prescribe.

42. No opium shall be removed from an opium warehouse or treasury until the full duty payable on it has been paid.

The officer in charge of an opium warehouse or treasury shall report to the Deputy Commissioner of the district the arrival of each importation, and shall send him the pass under which the opium or poppy-heads has or have been imported as soon as possible after the arrival of each importation.

43. The officer in charge of an opium warehouse or treasury shall keep a register of arrivals, deliveries, and other transactions under his charge in such form as the Financial Commissioner may from time to time prescribe.

APPENDIX L.

DRAFT RULES AS RECEIVED FROM BURMA.

47. Opium, opium preparations, and poppy-heads produced out of India, and not exceeding 1 seer in weight in the case of opium and opium preparations and 10 seers in weight in the case of poppy-heads may be imported by sea by a medical practitioner holding a license under Rule 61.

Export.

48. Government may export opium and poppy-heads on its own account.

Further general Provisions regarding Opium and Poppy-heads in transit.

49. Every Deputy Commissioner and other revenue officer not below the rank of a myoök, every police officer not below the rank of a head constable, and every customs officer not below the rank of a preventive officer is authorised to detain, so long as may be reasonably necessary for the inspection of the same, and to inspect any consignment of opium or poppy-heads in transit passing through his jurisdiction, and to call for production of the pass under which such opium or poppy-heads is or are transported, imported, or exported.

50. No railway administration or steamboat company shall receive or convey opium or poppy-heads not covered and accompanied by a pass issued by an officer competent under these rules to grant the same, or shall convey opium or poppy-heads otherwise than in the immediate custody of its own officers to the station or landing-place at which, according to the route prescribed in such pass, it should leave the railway or vessel. Opium or poppy-heads in transit by railway or steamboat may be detained so long as may be reasonably necessary for the examination of the same, and the weight of each package and the number (when there are more than one) of the packages may be verified at any railway station or landing-place at which the Chief Commissioner may, either generally or specially, direct such detention or examination.

51.—(i.) On weighment of transported opium on its arrival at its destination, or by an officer attesting a sale during transit, an allowance for dryage may be made by the officer making the weighment up to such extent as the Financial Commissioner may from time to time prescribe by notification in the "Burma Gazette."

(ii.) If on inspection of a consignment under Rule 44 or Rule 49, or on the arrival of a consignment at destination, any deficiency is found that cannot be accounted for by dryage or by any sale by wholesale as permitted by Rule 39, the fact shall be reported to the Deputy Commissioner of the district.

Wholesale Sale.

52. In Lower Burma Government opium in quantities not less than 10 tolas and poppy-heads in quantities not less than 5 seers in weight may be sold by one licensed vendor to another, and by Deputy Commissioners, township, and treasury officers, and by such other Government officers as may be specially empowered by the Financial Commissioner so to do, to any licensed vendor, or medical practitioner, or licensed doctor, or tattooer.

53.—(i.) In Upper Burma opium in quantities not less than 10 tolas or poppy-heads in quantities not less than 5 seers in weight may be sold, under such conditions as the Financial Commissioner may prescribe, by Deputy Commissioners of districts or township officers to any licensed vendor, to any holder of a license for wholesale vend, to any medical practitioner, to any licensed doctor, and to any tattooer.

(ii.) In local areas in Upper Burma in which the cultivation of the poppy plant is permitted, a cultivator may sell to any person other than a Burman any quantity of opium or poppy-heads the produce of his cultivation.

(iii.) Subject to the conditions of his license, a holder of a license for wholesale vend in Upper Burma may sell opium in quantities not less than 10 tolas or poppy-heads in quantities not less than 5 seers to Government, or to a licensed vendor, or to a holder of a license for wholesale vend, or to a medical practitioner, or to a licensed doctor, or tattooer.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

44. Opium, medical preparations, and poppy-heads produced out of India, and not exceeding 1 seer in weight in the case of opium and medical preparations and 10 seers in weight in the case of poppy-heads may be imported by sea by a medical practitioner holding a license under Rule 58.

Export.

45. Government may export opium, medical preparations, and poppy-heads on its own account.

Further general Provisions regarding Opium and Poppy-heads in transit.

46. Every Deputy Commissioner and other revenue officer not below the rank of a myoök, every police officer not below the rank of a head constable, and every customs officer not below the rank of a preventive officer is authorised to detain, so long as may be reasonably necessary for the inspection of the same, and to inspect any consignment of opium or poppy-heads in transit passing through his jurisdiction, and to call for production of the pass under which such opium or poppy-heads is or are transported or imported.

47. No railway administration or steamboat company shall receive or convey opium or poppy-heads not covered and accompanied by a pass issued by an officer competent under these rules to grant the same, or shall convey opium or poppy-heads otherwise than in the immediate custody of its own officers to the station or landing-place at which, according to the route prescribed in such pass, it should leave the railway or vessel. Opium or poppy-heads in transit by railway or steamboat may be detained so long as may be reasonably necessary for the examination of the same, and the weight of each package and the number (when there are more than one) of the packages may be verified at any railway station or landing-place at which the Chief Commissioner may, either generally or specially, direct such detention or examination.

48.—(i.) On weighment of transported opium on its arrival at its destination, or by an officer attesting a sale during transit, an allowance for dryage may be made by the officer making the weighment up to such extent as the Financial Commissioner may from time to time prescribe by notification in the "Burma Gazette."

(ii.) If on inspection of a consignment under Rule 41 or Rule 46, or on the arrival of a consignment at destination, any deficiency is found that cannot be accounted for by dryage or by any sale by wholesale as permitted by Rule 36, the fact shall be reported to the Deputy Commissioner of the district.

Wholesale Sale.

49. In Lower Burma Government opium in quantities exceeding 3 tolas and poppy-heads in quantities exceeding 5 seers in weight may be sold by one licensed vendor to another, and by Deputy Commissioners, township, and treasury officers, and by such other Government officers as may be specially empowered by the Financial Commissioner so to do, to any licensed vendor, or medical practitioner, or doctor, or tattooer.

50.—(i.) In Upper Burma opium in quantities exceeding 3 tolas or poppy-heads in quantities exceeding 5 seers in weight may be sold, under such conditions as the Financial Commissioner may prescribe, by Deputy Commissioners of districts or township officers to any licensed vendor, to any holder of a license for wholesale vend, to any medical practitioner, to any doctor, and to any tattooer.

(ii.) In local areas in Upper Burma in which the cultivation of the poppy plant is permitted, a cultivator may sell to any non-Burman any quantity of opium or poppy-heads the produce of his cultivation.

(iii.) Subject to the conditions of his license, a holder of a license for wholesale vend in Upper Burma may sell opium in quantities exceeding 3 tolas or poppy-heads in quantities exceeding 5 seers to Government, or to a licensed vendor, or to a holder of a license for wholesale vend, or to a medical practitioner, or to a doctor, or tattooer.

DRAFT RULES AS RECEIVED FROM BURMA.

54. Subject to the payment of the fee for the time being prescribed under Rule 55 and to the conditions laid down in the Opium Act, 1878, and in these rules, a Commissioner of a division in Upper Burma may grant to any person other than a Burman a license for the wholesale vend of opium and poppy-heads within his division or any part thereof.

55. The Financial Commissioner may, with the previous sanction of the Chief Commissioner, fix the fee to be paid in each district for such a license, and may from time to time, subject to the same sanction, alter, in the case of any district or districts, the fee so fixed.

56. Such license shall specify the district or districts in which sale of opium and poppy-heads may be made under it. It shall be in force from the date on which it is issued until the 1st April next following such date, and it shall then be returned to the Commissioner who issued it.

Retail Sale.

57.—(i.) A Deputy Commissioner within his district, or a township officer within his township, or any other officer of Government specially empowered by the Financial Commissioner, may sell by retail, at such price as the Financial Commissioner may fix, Government opium or poppy-heads to any person in Lower Burma who is permitted to possess opium.

(ii.) Subject to the conditions of his license, a licensed vendor may sell by retail Government opium or poppy-heads to any person in Lower Burma who is permitted to possess opium, and opium or poppy-heads to any person other than a Burman in Upper Burma.

(iii.) Subject to the conditions of his license, a medical practitioner may sell by retail opium preparations or poppy-heads to any person for medical purposes only.

(iv.) Subject to the conditions of his license, a doctor in Upper Burma may sell by retail opium preparations or poppy-heads to any person for medical purposes only.

(v.) Subject to the conditions of his license, a doctor in Lower Burma may sell by retail opium preparations made from Government opium to any person for medical purposes only.

58. Unless the Financial Commissioner otherwise specially direct, a license for retail sale shall be granted for one year only.

59.—(i.) Such limited number of shops in Upper Burma for the retail sale of opium or poppy-heads, or both, and in Lower Burma for the retail sale of Government opium or poppy-heads, or both, as the Financial Commissioner may from time to time determine may be allowed in each district, and the exclusive right of selling opium or poppy-heads by retail at one or more of these shops, under a license to be granted by the Deputy Commissioner, may be sold by or under the orders of the Deputy Commissioner before the commencement of each official year by public auction, or in such other mode as the Financial Commissioner, with the sanction of the Local Government, may direct. The Deputy Commissioner shall not be bound to accept the highest or any other bid. But if he refuses to accept any bid, he shall record his reasons for such refusal in writing. He shall not be bound to inform any bidder of his reasons for refusing his bid.

(ii.) Such sale, whether by auction or otherwise, shall not be deemed to be complete until it has been confirmed by the Commissioner of the division. If the Commissioner declines to confirm the sale, he may order a fresh sale, or he may authorise the Deputy Commissioner to grant a license to any person to carry on the retail vend on behalf of Government in the whole or in any part of a district.

60. Every person taking out a license for retail vend under Rule 59 shall sign a counterpart of the same in token of an engagement by him to duly observe and perform all the conditions expressed in the said license and in these rules and shall give such security for the performance of his engagement or make such deposit in lieu of security as the Deputy Commissioner may require.

61. A Deputy Commissioner may grant a license—

(a) to any medical practitioner for the retail vend of opium preparations or poppy-heads, or both, for medical purposes only;

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

APPENDIX L.

51. Subject to the payment of the fee for the time being prescribed under Rule 52 and to the conditions laid down in the Opium Act, 1878, and in these rules, a Commissioner of a division in Upper Burma may grant to any *non-Burman* a license for the wholesale vend of opium and poppy-heads within his division or any part thereof.

52. The Financial Commissioner may, with the previous sanction of the Chief Commissioner, fix the fee to be paid in each district for such a license, and may from time to time, subject to the same sanction, alter, in the case of any district or districts, the fee so fixed.

53. Such license shall specify the district or districts in which sale of opium and poppy-heads may be made under it. It shall be in force from the date on which it is issued until the 1st April next following such date, and it shall then be returned to the Commissioner who issued it.

Retail Sale.

54.—(i.) A Deputy Commissioner within his district, or a township officer within his township, or any other officer of Government specially empowered by the Financial Commissioner, may sell by retail, at such price as the Financial Commissioner may fix, Government opium or poppy-heads to any person in Lower Burma who is permitted to possess opium.

(ii.) Subject to the conditions of his license, a licensed vendor may sell by retail Government opium or poppy-heads to any person in Lower Burma who is permitted to possess opium, and opium or poppy-heads to any *non-Burman* in Upper Burma.

(iii.) Subject to the conditions of his license, a medical practitioner may sell by retail *opium, medical* preparations, or poppy-heads to any person for medical purposes only.

(iv.) Subject to the conditions of his license, a doctor in Upper Burma may sell by retail *opium, medical* preparations, or poppy-heads to any person for medical purposes only.

(v.) Subject to the conditions of his license, a doctor in Lower Burma may sell by retail Government *opium, medical* preparations therefrom, or *poppy-heads* to any person for medical persons only.

55. Unless the Financial Commissioner otherwise specially direct, a license for sale *by retail* shall be granted for one year only.

56.—(i.) Such limited number of shops in Upper Burma for the sale *by retail* of opium or poppy-heads, or both, and in Lower Burma for the sale *by retail* of Government opium or poppy-heads or both, as the Financial Commissioner may from time to time determine may be allowed in each district, and the exclusive right of selling opium or poppy-heads by retail at one or more of these shops, under a license to be granted by the Deputy Commissioner, may be sold by or under the orders of the Deputy Commissioner before the commencement of each official year by public auction, or in such other mode as the Financial Commissioner, with the sanction of the Local Government, may direct. The Deputy Commissioner shall not be bound to accept the highest or any other bid. But if he refuses to accept any bid, he shall record his reasons for such refusal in writing. He shall not be bound to inform any bidder of his reasons for refusing his bid.

(ii.) Such sale, whether by auction or otherwise, shall not be deemed to be complete until it has been confirmed by the Commissioner of the division. If the Commissioner declines to confirm the sale, he may order a fresh sale, or he may authorise the Deputy Commissioner to grant a license to any person to carry on the *sale by retail* on behalf of Government in the whole or in any part of a district.

57. Every person taking out a license for *sale by retail* under Rule 56 shall sign a counterpart of the same in token of an engagement by him to duly observe and perform all the conditions expressed in the said license and in these rules, and shall give such security for the performance of his engagement or make such deposit in lieu of security as the Deputy Commissioner may require.

58. A Deputy Commissioner may grant a license—

(a) to any medical practitioner for the *sale by retail* of *opium, medical* preparations, or poppy-heads, or *all or any of them*, for medical purposes only;

APPENDIX L.

DRAFT RULES AS RECEIVED FROM BURMA.

- (b) to any doctor in Upper Burma for the retail vend of opium preparations or poppy-heads, or both, for medical purposes only ;
- (c) to any doctor in Lower Burma for the retail vend of opium preparations made from Government opium or poppy-heads, or both, for medical purposes only ;
- (d) to any tattooer in Upper Burma for the possession of such quantity of opium or opium preparations, not exceeding 10 tolas in weight, as may be necessary for the ordinary practice of his profession, to be used only for tattooing purposes ;
- (e) to any tattooer in Lower Burma for the possession of such quantity of Government opium or opium preparations made therefrom, not exceeding 10 tolas in weight, as may be necessary for the ordinary practice of his profession, to be used only for tattooing purposes.

62. Every person to whom a license is granted under Rule 61 for the retail sale of opium or poppy-heads, or both, shall pay for his license such fee as may from time to time be fixed with the sanction of the Financial Commissioner, or a fee regulated in such manner and in accordance with such rules as the Financial Commissioner may prescribe, and the fee shall be specified in the license and shall be payable in such instalments, and the instalment shall be payable at such times and places as the Financial Commissioner may direct.

63.—(i.) A license for retail vend of opium or poppy-heads, or both, granted under Rule 59 may be re-called by the Deputy Commissioner if the holder violates any of the provisions of the Opium Act, 1878, or of the rules made thereunder, or any condition entered in the license, or if the holder of the license is convicted of breach of the peace, or of any other criminal offence during the term of the license.

(ii.) If the license is recalled for any of these causes, the holder will have no claim to any compensation whatever, or to refund of any duty or instalment of duty already paid, or to remission of any sum due from him to Government.

But it shall be in the discretion of the Deputy Commissioner to make such compensation, refund, or remission as he may think right.

(iii.) If the Deputy Commissioner desires to recall a license before expiry of its term for any cause not specified in sub rule (i.) he may do so, subject to the conditions that—

- (a) he shall give 15 days' previous notice of his intention to recall the license, and shall remit a sum equal to the duty for 15 days ; or
- (b) if notice be not given, he shall remit a sum equal to the duty for 15 days, and shall also make such further compensation in consideration of want of notice as the Commissioner may think fit.

64. A person who has been granted a license for the retail vend of opium or poppy-heads, or both, under Rule 59 may surrender his license on giving one month's notice to the Deputy Commissioner and on paying such fine, not exceeding the amount of duty for six months, or the amount of the loss caused to Government by the surrender as the Deputy Commissioner may adjudge. If the Deputy Commissioner is satisfied that the reason for surrendering the license is adequate, he may, with the consent of the Financial Commissioner, remit the fine.

65. The Financial Commissioner may from time to time fix the maximum and minimum price at which in any district holders of licenses for retail vend may sell opium or poppy-heads to the public.

If such maximum and minimum prices are fixed, they shall be specified in the license.

Manner in which Retail Sales are to be made in Lower Burma.

66. In every township and in the Rangoon Town district the retail vendor of opium shall be furnished with copies of Registers A. and B. of persons who are permitted to possess opium in that township or district.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

- (b) to any doctor in Upper Burma for the sale by retail of opium, medical preparations, or poppy-heads, or all or any of them, for medical purposes only ;
- (c) to any doctor in Lower Burma for the sale by retail of Government opium, medical preparations therefrom, or poppy-heads, or all or any of them, for medical purposes only ;
- (d) to any tattooer in Upper Burma for the possession of such quantity of opium or medical preparations, not exceeding 10 tolas in weight, as may be necessary for the ordinary practice of his profession, to be used only for tattooing purposes ;
- (e) to any tattooer in Lower Burma for the possession of such quantity of Government opium or medical preparations therefrom, not exceeding 10 tolas in weight, as may be necessary for the ordinary practice of his profession, to be used only for tattooing purposes.

59. Every person to whom a license is granted under Rule 58 for the sale by retail of opium or medical preparations, or poppy-heads, or all or any of them, shall pay for his license such fees as may from time to time be fixed with the sanction of the Financial Commissioner, or a fee regulated in such manner and in accordance with such rules as the Financial Commissioner may prescribe, and the fee shall be specified in the license and shall be payable in such instalments, and the instalments shall be payable at such times and places as the Financial Commissioner may direct.

60.—(i.) A license for sale by retail of opium or poppy-heads, or both, granted under Rule 56 may be recalled by the Deputy Commissioner if the holder violates any of the provisions of the Opium Act, 1878, or of the rules made thereunder, or any condition entered in the license, or if the holder of the license is convicted of breach of the peace, or of any other criminal offence during the term of the license.

(ii.) If the license is recalled for any of these causes, the holder will have no claim to any compensation whatever, or to refund of any duty or instalment of duty already paid, or to remission of any sum due from him to Government.

But it shall be in the discretion of the Deputy Commissioner to make such compensation, refund, or remission as he may think right.

(iii.) If the Deputy Commissioner desires to recall a license before expiry of its term for any cause not specified in sub-rule (i.), he may do so, subject to the conditions that—

- (a) he shall give 15 days' previous notice of his intention to recall the license, and shall remit a sum equal to the duty for 15 days ; or
- (b) if notice be not given, he shall remit a sum equal to the duty for 15 days, and shall also make such further compensation in consideration of want of notice as the Commissioner may think fit.

61. A person who has been granted a license for the sale by retail of opium or poppy-heads, or both, under Rule 56 may surrender his license on giving one month's notice to the Deputy Commissioner, and on paying such fine, not exceeding the amount of duty for six months, or the amount of the loss caused to Government by the surrender, as the Deputy Commissioner may adjudge. If the Deputy Commissioner is satisfied that the reason for surrendering the license is adequate, he may, with the consent of the Financial Commissioner, remit the fine.

62. The Financial Commissioner may from time to time fix the maximum and minimum price at which in any district holders of licenses for sale by retail may sell opium or poppy-heads to the public.

If such maximum and minimum prices are fixed, they shall be specified in the license.

Manner in which Retail Sales are to be made in Lower Burma.

63. In every township and in the Rangoon Town district the retail vendor of opium shall be furnished with a copy of the register of Burmans registered as consumers of opium in that township or district. A vendor may sell opium and poppy-heads within the prescribed limits of quantities—

- (a) to non-Burmans ;
- (b) to Burmans who produce certificates under Rule 24.

If any Burman produces a certificate the name in

DRAFT RULES AS RECEIVED FROM BURMA.

67. Every retail vendor, whether official or licensed vendor, shall keep a daily account of sales of opium in the forms prescribed in the Appendix to these rules, and shall record therein the amount of opium daily sold to each person.

Disposal of Articles remaining with a licensed Vendor after expiration of his Lease or License.

68. If any person who has been a licensed vendor, or holder of a license for wholesale vend under Rule 54, has in his possession, on the expiration of his license, any opium or poppy-heads which he is unable to dispose of to the satisfaction of the Deputy Commissioner by private sale to other licensed vendors or holders of licenses for wholesale vend under Rule 54, or to a medical practitioner, he shall surrender the same to the Deputy Commissioner or to the officer in charge of the excise revenue.

And the incoming licensed vendor or holder of a license for wholesale vend under Rule 54, or, if the license has not been renewed, any license vendor or holder of a license for wholesale vend under Rule 54 within the district, shall, on the requisition of the Deputy Commissioner, be bound, under penalty, if the Deputy Commissioner sees fit, of forfeiting his license, to buy the opium or poppy-heads, as the case may be, at such price as the Deputy Commissioner may adjudge, and in any quantity not exceeding that which the Deputy Commissioner may determine to be ordinarily saleable in two months by the person in whose favour the license has been renewed, or by the licensed vendor, or holder of a license for wholesale vend under Rule 54, as the case may be.

Provided that, if the opium or poppy-heads, or any part thereof, be declared by the civil surgeon to be unfit for use, the Deputy Commissioner shall cause it or them, or that part, to be destroyed.

Disposal of things Confiscated.

69.—(i.) All things confiscated under the Opium Act, 1878, except opium, poppy-heads, and the preparations and admixtures provided for in clause (iv.) of this rule, shall be disposed of by the Deputy Commissioner by public auction.

(ii.) Opium so confiscated shall be sent for examination to the civil surgeon, and, if declared by him to be fit for use, shall be disposed of in such manner as the Financial Commissioner may by general or special order direct. If declared to be unfit for use, it shall be immediately destroyed in the presence of the Deputy Commissioner or some other officer deputed by him for the purpose. Such officer shall not be below the rank of a township officer.

(iii.) Poppy-heads so confiscated shall be disposed of as may be directed by the Deputy Commissioner or the officer in charge of the excise revenue of the district in which the confiscation is made.

(iv.) All preparations and admixtures of opium or of the poppy not included in the definition of "opium" or of "opium preparations" in these rules shall, when so confiscated, be immediately destroyed.

Rewards to be paid out of the proceeds of Fines and Confiscations.

70.—(i.) Any magistrate convicting an offender under section 9, or any magistrate or other authorised officer ordering the confiscation of anything under section 12 of the Opium Act, 1887, may grant, in such proportions as he thinks fit, to any person or persons who have contributed to the conviction of the offender or to the seizure of the thing or things confiscated, a reward or rewards not exceeding in the aggregate the value of the things confiscated, plus the amount of any fine imposed.

(ii.) If in any case the fine is not realised, or is only realised in part, or if the value of the confiscated articles is not realised, or is only realised in part, and if the total sum realised appears to the convicting magistrate or to the magistrate or officer ordering confiscation, as the case may be, to be insufficient for

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA. APPENDIX I.

which is not included in the extract from the register received by the licensed vendor, he should at once report the sale and the particulars of the certificate produced to the Deputy Commissioner for such inquiry as that officer may consider necessary.

64. Every retail vendor, whether official or licensed vendor, shall keep a daily account of sales of opium in the forms prescribed in the Appendix to these rules, and shall record therein the amount of opium daily sold to each person.

Disposal of Articles remaining with a licensed Vendor after expiration of his License.

65. If any person who has been a licensed vendor or a holder of a license for wholesale vend, under Rule 51, has in his possession, on the expiration of his license, any opium or poppy-heads which he is unable to dispose of to the satisfaction of the Deputy Commissioner by private sale to other licensed vendors or holders of licenses for wholesale vend under Rule 51, or to a medical practitioner, he shall surrender the same to the Deputy Commissioner or to the officer in charge of the excise revenue.

And the incoming licensed vendor or holder of a license for wholesale vend under Rule 51, or, if the license has not been renewed, any licensed vendor or holder of a license for wholesale vend under Rule 51 within the district, shall, on the requisition of the Deputy Commissioner, be bound, under penalty, if the Deputy Commissioner sees fit, of forfeiting his license, to buy the opium or poppy-heads, as the case may be, at such price as the Deputy Commissioner may adjudge, and in any quantity not exceeding that which the Deputy Commissioner may determine to be ordinarily saleable in two months by the person in whose favour the license has been renewed, or by the licensed vendor, or holder of a license for wholesale vend under Rule 51 as the case may be.

Provided that, if the opium or poppy-heads, or any part thereof, be declared by the civil surgeon to be unfit for use, the Deputy Commissioner shall cause it or them, or that part, to be destroyed.

Disposal of things Confiscated.

66.—(i.) All things confiscated under the Opium Act, 1878, except opium, *medical preparations*, poppy-heads, and the preparations and admixtures provided for in clause (iv.) of this rule, shall be disposed of by the Deputy Commissioner by public auction.

(ii.) *Opium and medical preparations* so confiscated shall be sent for examination to the civil surgeon, and, if declared by him to be fit for use, shall be disposed of in such manner as the Financial Commissioner may by general or special order direct. If declared to be unfit for use, it or they shall be immediately destroyed in the presence of the Deputy Commissioner or some other officer deputed by him for the purpose. Such officer shall not be below the rank of a township officer.

(iii.) Poppy-heads so confiscated shall be disposed of as may be directed by the Deputy Commissioner or the officer in charge of the excise revenue of the district in which the confiscation is made.

(iv.) All preparations and admixtures of opium or of the poppy not included in the definition of "opium" or of "*medical preparations*" in these rules shall, when so confiscated, be immediately destroyed.

Rewards to be paid out of the proceeds of Fines and Confiscations.

67.—(i.) Any magistrate convicting an offender under section 9, or any magistrate or other authorised officer ordering the confiscation of anything under section 12 of the Opium Act, 1878, may grant, in such proportion as he thinks fit, to any person or persons who have contributed to the conviction of the offender or to the seizure of the thing or things confiscated, a reward or rewards not exceeding in the aggregate the value of the things confiscated, plus the amount of any fine imposed.

(ii.) If in any case the fine is not realised, or is only realised in part, or if the value of the confiscated articles is not realised, or is only realised in part, and if the total sum realised appears to the convicting magistrate or to the magistrate or officer ordering confiscation, as the case may be, to be insufficient for

APPENDIX L.

DRAFT RULES AS RECEIVED FROM BURMA.

the purpose of rewarding the person or persons who have contributed to the conviction of the offender or to the seizure of the thing or things confiscated, the Financial Commissioner may, on the application of the said magistrate or officer, as the case may be, grant to the said person or persons any reasonable reward or rewards not exceeding Rs. 200 in the aggregate as may seem fit.

71. The Financial Commissioner may direct by general order what classes of excise officers shall receive rewards and what classes shall have no title to share therein.

Forms of Licenses, Passes, Permits, and other Documents.

72.—(i.) The Financial Commissioner may, with the sanction of the Local Government, from time to time prescribe the forms in which licenses and passes under these rules shall be granted by the Deputy Commissioner and in which licenses shall be granted by farmers.

(ii.) The Financial Commissioner may also from time to time of his own authority, prescribe the forms of all registers, returns, accounts, and other documents not mentioned in sub-rule (i.) for which he considers that forms should be provided.

(iii.) The forms referred to in sub-rules (i.) and (ii.) shall be consistent with the provisions of the Opium Act, 1878, and with these rules.

Miscellaneous.

73.—(i.) Suspensions and remissions of demand on account of pè duty or on account of any other fees or duties leviable under these rules may be made under the sanction of the Commissioner of the division.

(ii.) In the case of suspensions a date or dates for payment shall be fixed.

(iii.) Refunds of pè duty or of any other fees or duties levied under these rules may be made under the rules for the time being applicable to refunds on account of land revenue.

(iv.) All suspensions, remissions, and refunds sanctioned by Commissioners shall be reported at once to the Financial Commissioner.

Appeal and Revision.

74.—(i.) An appeal shall lie from an order of a Deputy Commissioner or from an original or appellate order of a Commissioner of a division as follows, namely,—

- (a.) To the Commissioner of the division when the order is made by Deputy Commissioner;
- (b.) To the Financial Commissioner when the order is made by a Commissioner of a division:

Provided that when a Commissioner of a division confirms on appeal the order of a Deputy Commissioner a further appeal shall not lie.

(ii.) The period of limitation for an appeal under sub-rule (i.) shall run from the date of the order appealed against, and shall be as follows:—

- (a.) When the appeal lies to the Commissioner of the Division, 30 days;
- (b.) When the appeal lies to the Financial Commissioner, 60 days.

75. The Financial Commissioner may revise any order passed by a Deputy Commissioner or a Commissioner under these rules.

76. A petition of appeal from, or an application for revision of, an order must be accompanied by an authenticated copy of the order, or the omission to produce such copy must be explained.

77. Any officer who has passed an order under these rules, other than an order in the course of a judicial proceeding, may of his own motion, or on the application of any person concerned, cancel or modify such order.

DRAFT RULES AS REVISED BY THE GOVERNMENT OF INDIA.

the purpose of rewarding the person or persons who have contributed to the conviction of the offender or to the seizure of the thing or things confiscated, the Financial Commissioner may, on the application of the said magistrate or officer, as the case may be, grant to the said person or persons any reasonable reward or rewards not exceeding Rs. 200 in the aggregate as may seem fit.

68. The Financial Commissioner may direct by general order what classes of excise officers shall receive rewards and what classes shall have no title to share therein.

Forms of Licenses, Passes, Permits, and other Documents.

69.—(i.) The Financial Commissioner may, with the sanction of the Local Government, from time to time prescribe the forms in which licenses and passes under these rules shall be granted by the Deputy Commissioner.

(ii.) The Financial Commissioner may also from time to time of his own authority, prescribe the forms of all registers, returns, accounts, and other documents not mentioned in sub-rule (i.) for which he considers that forms should be provided.

(iii.) The forms referred to in sub-rule (i.) and (ii.) shall be consistent with the provisions of the Opium Act, 1878, and with these rules.

Miscellaneous.

70.—(i.) Suspensions and remissions of demand on account of pè duty or on account of any other fees or duties leviable under these rules may be made under the sanction of the Commissioner of the division.

(ii.) In the case of suspensions a date or dates for payment shall be fixed.

(iii.) Refunds of pè duty or of any other fees or duties levied under these rules may be made under the rules for the time being applicable to refunds on account of land revenue.

(iv.) All suspensions, remissions, and refunds sanctioned by Commissioners shall be reported at once to the Financial Commissioner.

Appeal and Revision.

71.—(i.) An appeal shall lie from an order of a Deputy Commissioner or from an original or appellate order of a Commissioner of a division as follows, namely:—

- (a.) To the Commissioner of the division when the order is made by a Deputy Commissioner;
- (b.) To the Financial Commissioner when the order is made by a Commissioner of a division:

Provided that when a Commissioner of a division confirms on appeal the order of a Deputy Commissioner a further appeal shall not lie.

(ii.) The period of limitation for an appeal under sub-rule (i.) shall run from the date of the order appealed against, and shall be as follows:—

- (a.) When the appeal lies to the Commissioner of the division, 30 days;
- (b.) When the appeal lies to the Financial Commissioner, 60 days.

72. The Financial Commissioner may revise any order passed by a Deputy Commissioner or a Commissioner under these rules.

73. A petition of appeal from, or an application for revision of, an order must be accompanied by an authenticated copy of the order, or the omission to produce such copy must be explained.

74. Any officer who has passed an order under these rules, other than an order in the course of a judicial proceeding, may of his own motion, or on the application of any person concerned, cancel or modify such order.

THE INDIAN OPIUM COMMISSION.

At the Patna College Hall, Bankipur.

THIRTY-SIXTH DAY.

Wednesday, 3rd January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.

MR. R. G. C. MOWBRAY, M.P.
„ HARIDAS VEHARIDAS DESAI.
„ H. J. WILSON, M.P.

THE HONOURABLE T. A. BRASSEY, *Assistant Secretary.*

Mr. A. FORBES called in and examined.

10777. (*Chairman.*) I believe you are the Commissioner of Patna?—Yes.

10778. And you have been in the service of the Government of India since 1867?—Yes.

10779. Will you tell us in what districts you have served and in what capacities?—During the early part of my service I spent three years in Behar in charge of the Behar Sub-division in the Patna District and of the Tajpur Sub-Division in the district of Tirhut (now Muzaffarpur and Darbhanga), and I was also employed in the last mentioned district on famine relief work during the year 1874. I then served for a year in Assam as Deputy Commissioner of Goalpara. Returning from Assam, I was for six months Collector of Dacca, in Eastern Bengal; then I served for four years as Junior Secretary to the Board of Revenue (1880-1883) during which time I was employed as Member and Secretary of "The Commission appointed by the Government of India to enquire into the working of the Opium Department in Bengal and the North-Western Provinces." Since then I have served for about four years as Magistrate-Collector of the 24 Parganas District for an aggregate of about three years as Magistrate-Collector of the Sarun, Shahabad and Muzaffarpur Districts, for seven months as Commissioner of the Dacca Division, and for the last one and a-half years as Commissioner of Patna. I also acted for three months in 1890 as Commissioner of Excise in Bengal.

10780. With regard to the amount of opium consumed in the different districts with which you are connected, I presume we shall get that best from the statistical tables in the Provincial Excise Reports?—Quite so.

10781 I presume that the more important figures have been given to us in a collective form in the general memorandum presented by the Government of India?—Yes, so I understand.

10782. I shall be glad to have your general view as to the effect of the opium habit upon those who either eat or smoke it?—I have not myself seen any signs of evil results from consumption of the drug on the moral or physical condition of the people. No doubt the evils attendant upon an immoderate use of opium are less likely to attract attention than those which arise from the abuse of ganja and intoxicating liquors: still the fact remains that in the course of some twenty-five years of experience of this country, no demoralizing results from the use of opium have come to my notice. The only exception I can think of is the occurrence of cases of opium poisoning; but these are not incident upon the habitual use of the drug, and have therefore no bearing upon the present question. The existence of opium shops is never looked upon as an evil by respectable natives and non-official Europeans, as is frequently the case with ganja, and especially liquor shops. The latter especially are not unfrequently complained of, particularly by employers of labour, such as indigo and tea planters; but opium shops, never. The idea is prevalent among natives that in malarious tracts opium is successfully used as a preventive against fever; it is also considered a specific

in cases of diabetes, a very common disease among natives of a respectable class and of sedentary habits. I share in these popular beliefs, which are also generally supported by medical opinion. Mr. A. Forbes.
3 Jan. 1894.

10783. In what light do the people of this province regard the use of opium?—When immoderately used they look upon it with reprobation, but otherwise they think nothing of it.

10784. Do you think they regard it in the same way as the use of wine and alcohol in England when consumed in moderate quantities?—Quite so.

10785. What would be the feeling of the people in the event of the prohibition of the use of opium, excepting for medical use, and it becoming necessary to compensate the exchequer of the Government of India by taxation in another form?—They would look upon it as a most unjustifiable interference with the liberty of the subject.

10786. Do you consider that it would be possible to compensate the Government for the loss of its opium revenue by direct taxation in any form?—If any attempt of the kind were made, I think the only question is how long any Government would survive it. Direct taxation in this province has reached a point beyond which it is impossible, in the absence of some visible corresponding benefit, such as the preparation and maintenance of a record-of-rights, to carry it. The following figures will give some idea of the position, in this respect, in the Patna Division. Within an area of 23,675 square miles, we find the following collections from direct taxation:—

	Rs.
Land Revenue	81,97,237
Road and Public Works Cess	24,83,318
Income Tax	3,78,449
Zemindari Dak Cess	72,130
Embankment Cess	58,463
Pay of Chaudikars (rural police)	7,19,388*
Municipal Taxes	5,99,042
Total, Direct taxation	1,25,79,227

*19,983 men taken at Rs. 3 per mensem.

This, spread over a population of 15½ millions, comes to about 1 annas a head, or, say, Rs. 4 per family of five persons. This represents, in Behar, more than a full month's pay of each father of a family. Besides this, from excise (indirect taxation), we have an income of about Rs. 25,00,000; and a large income, which I estimate roughly at 50 to 60 lakhs, from the duty on salt and petroleum. There are also the stamp duties levied in the division, amounting to a very considerable sum. I have not the figures with me.

10787. Do you think it would be possible to increase the revenue of the Government in the event of the loss of the opium revenue by indirect taxation?—To an increase in indirect taxation, I do not particularly object. However large the total income be, the individual incidence is small, and

Mr.
A. Forbes.
3 Jan. 1894.

consequently is not much felt. The tax is paid unconsciously, and its collection is unaccompanied by inquisitorial enquiries and opportunities for extortion by underpaid and corrupt subordinates. But were any attempt made to replace the opium revenue by any kind of direct tax, it could only succeed by placing the country under martial law. Personally, I should like to see the cotton duties re-imposed, with a corresponding duty on the production of the Indian mills. A duty on piece-goods shares with the salt tax the recommendation that the incidence is individually so small as to be almost, if not quite, imperceptible; while it has the advantage over the salt tax of the incidence, such as it is, being in direct proportion to each consumer's means. A largely increased salt tax would also interfere with certain industries, such as fish and hide curing, and would injuriously affect the health of cattle, in the treatment of which considerable quantities are used. An increase of, say, 10 per cent. in the price of cotton goods would be accompanied with no similar disadvantages. But to replace the opium revenue, we should require an *ad valorem* duty several times heavier than this.

10788. With regard to the difficulties which might arise in case a policy of prohibition were ultimately adopted, how would it be possible to prevent smuggling. Would there be any difficulty in preventing the poppy cultivation, if there was an edict put forth that it should not be cultivated?—I certainly know of no argument in favour of prohibiting the growth of the poppy and the manufacture and sale of opium in British India. So far as this division is concerned, it would, physically speaking, be quite possible to put an immediate stop to poppy cultivation. The crop is a conspicuous one, and could not be grown in stealth, except in the interior of the homestead enclosures, out of sight, where it might be grown stealthily to a small extent. But it would be quite impossible to prevent smuggling from across the Nepalese border. This is now actively carried on, and is only kept in check (1) by our preventive establishments, (2) by our affording an outlet to the Nepalese cultivators by our purchasing their crude opium for use in the Patna Factory, (3) by the establishment of opium shops in our districts, each vendor becoming, in his own interests, an excise detective. Were the Government monopoly abolished and the growth of opium prohibited, we should lose the help of the opium-vendors as detective officers and of the outlet now afforded to the Nepalese cultivators; and we should be obliged to enormously increase our preventive establishments, and even then, having regard to the length of our frontier to be protected and the jungle character of much of the country along the border, we should succeed but indifferently. The drug is small in bulk, and can be smuggled in many various ways.

10789. Assuming that the growth and manufacture of opium is not to be prohibited, do you consider that the system known as the Bengal system is the best that could be devised for the purpose of controlling the production and the consumption of the opium, and at the same time obtaining the maximum revenue for the Government?—Most certainly. I am of opinion that the existing system, under which the production and sale of opium is a Government monopoly, cannot be improved upon. It results in a maximum revenue with a minimum use of the drug.

10790. What have you to say about *chandus* and *madak* shops?—I have no objection to their being closed entirely, except in towns where there is a Chinese population addicted to their use, provided also that it were found that the measure did not encourage consumption in clubs and private houses.

10791. Have you a Chinese population in your division?—No.

10792. The Patna Division is a division, as I understand, in which opium is extensively grown?—It includes the whole of the Behar Agency with the exception of the Monghyr District and a small part of the Chota Nagpore Division, where however the cultivation amounts only to about 26,000 acres.

10793. Can you give us the leading statistics relating to the cultivation of the poppy in the Patna Division?—In a total cultivated area, in the Patna Division, of 16,582 square miles, opium, during the three years 1889-90 to 1891-92, covered 248,893, 252,975, and 234,741; or an average yearly of 246,203 acres *minus* the 26,000 acres mentioned above.

10794. What were the amounts paid to the cultivators?—The payments made to the cultivators for opium, leaves and trash during the same three years, amounted, I learn, from the Patna Opium Agent, to Rs. 86,92,571, Rs. 79,35,394, and Rs. 65,06,758, or an average of about 77 lakhs annually.

10795. That makes an average per acre of how much?—About Rs. 31½. This is without allowing for the value of

seed. Allowing for the value of seed—estimated by me at 34 lakhs of rupees—the average value of the total produce per acre comes to about Rs. 45. From the figures supplied to me, I find that the average payments to the cultivators, month by month, during the above three years, have been as follows:—

During April	about 34 lakhs of rupees.
" May	5½ "
" June and July	Insignificant.
" August	12½ lakhs of rupees.
" September	12 " "
" October	½ " "
" November and Decem-ber	Insignificant.
" January	6½ lakhs of rupees.
" February	4 " "
" March	½ " "

The total averaging 77 lakhs per annum.

Practically the whole, or nearly the whole, of this money is at once paid away by the cultivators in rent to the zemindars, and is in turn used by the latter to meet the Government land-revenue demands, amounting, as before stated, in the Patna Division, to some 82 lakhs. As regards the time of payments, I would observe that the arrangements, whether by accident or design, fall in with the zemindars' requirements, whose collections of rent are usually made in three *kists*, *viz.*, (1) in October, (2) in January and February, and (3) after the *rabi* crop has been harvested in March and April. This third *kist* is the last in the Fashi year (which obtains in Behar), and the very heavy payments made in April to the cultivators by the Opium Department in that month are of the greatest possible use to them in clearing up their rent accounts for the year.

It needs little demonstration to prove how the stoppage of these heavy cash payments to the ryots by Government would injuriously affect their own and the zemindars' interests. As regards the ryots, it would be the closure of an immense Agricultural Loans Society from which they have, for many years past, freely received advances, without any charge for interest, repayable in kind, at a fixed market rate. I can conceive no greater disaster to the agricultural population of the opium-producing districts than a measure of this kind. They would be at once thrown into the clutches of the mahajans, or forced in many cases to cultivate lands on the *bhaoli* (or metayer) system, which they now hold at fixed money-rates. The extent to which the ryots in the Patna Division are already being encumbered with debt may, to some extent, be gauged by the following figures which show the number of registered sales and mortgages of immovable property during the two quinquennial periods 1880-81 to 1884-85 and from 1887-88 to 1891-92:—

	1880-81 to 1884-85.	1887-88 to 1891-92.
Registered sales of property of value Rs. 100 and upwards	38,002	57,529
Registered mortgages of property of value Rs. 100 and upwards	62,008	99,601
Registered sales of property of value below Rs. 100	24,990	68,388
Registered mortgages of property of below Rs. 100	32,476	129,101

The noticeable points about these figures are (1) that while registered sales and mortgages of properties valued at Rs. 100 and upwards have increased from 100,010 during the first quinquennial period to 157,130 during the second period, those of petty immovable properties (comprising the smaller ryots' holdings) have increased in a much larger ratio, *viz.*, from 57,466 to 197,489 and (2) that while out and out sales of the latter (petty properties) have increased by 173 per cent., mortgages of similar properties have increased more enormously still, *viz.*, by 297 per cent. A part of the increase is no doubt to be attributed to a greater appreciation by the public, generally, of the advantages of registering their documents. Still, I fear the increasing impoverishment of the agricultural classes is the principal factor; and the relatively larger increase in mortgages over sales, especially of petty properties, points, I think, to this conclusion. So long as the ryot can retain some vestige of a hold over his holding he will do so, and, will not sell outright. The survey and record-of-rights now being made in Behar will doubtless have an immense effect in ameliorating the condition of the agricultural population by stereotyping their rights and protecting

them from illegal exactions in future, but one cannot fail to see how greatly their embarrassments would be aggravated were they denied the means they now have of turning to the Opium Department for assistance.

10796. You have given us some interesting and valuable statistics as to the increasing amount of indebtedness among the agricultural population : is there anything further you would like to add to your evidence?—I have made an attempt to collect reliable figures to show the relative cost of cultivation, outturn, value of produce, and profits from poppy and other crops, but without much success. In the case of poppy we can arrive at some sort of estimate of the average profits per acre, or other given area, for we know the exact price paid by the Opium Department for the produce of the several hundreds of thousands of acres over which the crop extends, and a tolerably fair calculation can be made of the cost of cultivation. Still, even with opium, seeing that so much depends upon the class of soil, character of the season, and especially upon the care bestowed upon its cultivation, any such average will only be a general one, much below the highest rate of profits and much above the lowest. But in the case of other crops we cannot even get an approximate general average ; not such a reliable one, I mean, as would justify us in attempting to make a close comparison or to draw any safe deductions as to the relative advantage or otherwise of cultivating each crop. To make such comparison our inquiries would have to extend over a very large area, instead of being confined merely to an acre here and an acre there, as they hitherto have been. And they would have to be conducted by a skilled staff whose duty it would be to measure each area and its exact outturn, as in the case of opium. The very *andazi* (uncertain) statements of native cultivators, as any one acquainted with them knows, cannot be depended upon in a matter of this kind, even when they have every desire to speak the truth. And even if we could, in this way, strike an approximately correct average outturn of each crop, we should still have to reckon with the market barometer. Any change in the state of the market would upset all our calculations. The marketable value of his opium to the cultivator remains constant ; but not so with the other competing crops. The price of crude sugar is at present unprecedentedly high, 30 per cent. higher, it is reported, than last year ; while that of tobacco, which last year stood at Rs. 7 per maund, now oscillates between Rs. 4 and Rs. 5. The fact is that with poppy, as with other crops, we must take things as we find them. If it pays the cultivator to grow it he will do so but, not otherwise. If, however, the Commission still desire to have figures before them, I would refer them to the tabular statement given in paragraph 571 of the Report of the Opium Commission of 1883. In the light of reports I have lately received, the details given in that statement appear to me to be still fairly correct, except that the cost of reaping the poppy crop and the average outturn of opium both seem to be pitched somewhat too high, while the value of seed, at Rs. 2-8-0 per maund, is certainly too low. Among the reports I have lately received the most carefully considered one gives the following estimate of the cost of cultivating one local bigha (= 4,225 square yards) of *dih* land irrigated with well water :—

		Rs. a. p.
Rent		7 8 0
Ploughing	5 ploughings with 4 ploughs at 2 annas per plough	2 8 0
Manure	14 cart loads at 4 annas per cart load plus Re. 1-4 for carriage	4 12 0
Seed	3 seers at 1 anna 6 pies	0 4 6
Weeding	4 to 5 times with 14 coolies at 1 anna 6 pies	6 4 0
Irrigation	4 times with 6 coolies	2 4 0
	making beds, etc.,	1 14 0
Collection of opium	5 persons for 16 days at 1½ annas	7 8 0
Collection of flower petals, leaves and stalks		1 4 0
	Conveyance of produce to the Depot	1 0 0
	Salamis, etc., say	1 0 0
	TOTAL	36 2 6
Produce	7½ seers of opium at Rs. 5-2	38 7 0
	4 maunds of seeds at Rs. 4	16 0 0
	Flower petals,	0 10 0
	Stalks	2 8 0
	TOTAL	57 9 0

Profit per bigha Rs. 21-7-0, or per acre Rs. 24-9-0, a result singularly near to that (Rs. 25-1-0) which was accepted by the Commission of 1883. The officer, Mr. P. C. Lyon, who is employed in settlement work in the Hajipur Sub-

Division of the Muzaffarpur District, from whose report the above figures are taken, finds the profits from country potatoes grown on similar land to be, per bigha, Rs. 31-2-0, and from tobacco, Rs. 18-4-0. Regarding the question of the competition of other crops with poppy I would refer to Chapter XXIII, Part II, of the Report of the Commission in 1883, and to the remarks in the Patna Opium Agent's Reports for 1890-91, and 1891-92. There can be no doubt but that in the neighbourhood of towns and of the railway poppy is being ousted gradually by market garden products. But this is not the case further afield. The advantages of poppy cultivation described in paragraph 575 of the Commission Report of 1883 are obviously too great. To these may be added the following broad facts as to why poppy can never be superseded, except to a comparatively small extent, by any other equally paying crops. It is obvious that the only other crops that can take the place of poppy successfully are other *rabi* crops, which, like it, are grown upon the high *dih* lands of the village. The principal of these are potatoes and tobacco. But both of these are very exhausting crops, and cannot be grown year after year, as poppy can, on the same land. Their cultivation, too, is more expensive, especially that of potatoes, to the ryots; not only actually, but because they require more male labour, which must be paid for. In the case of poppy, on the other hand, much of the work, such as the extraction of the juice and the gathering of the petals, is performed, free of cost, by the women of the household. There is also this to be considered, *viz.*, that if poppy lands were to be diverted in a wholesale manner, and otherwise than gradually under the influence of ordinary competition, to potatoes or tobacco, the market would speedily be overstocked, prices would fall, and the lands would, in the end, have to be put under some other less paying crops. With tobacco, this is already happening, notwithstanding that its cultivation has been largely taken up in only two (Muzaffarpur and Darbhanga) of the seven districts in this division. The reason for this is that the tobacco grown in Behar does not suit European tastes, and will never probably be a large article of export. With country potatoes the same would soon be the case. The local market would soon be overstocked, while, as regards the export to centres outside the province (of Behar), the large bulk of the commodity renders carriage too expensive from places which are not within easy reach of the railway. Sugarcane, the only other crop besides garden products, that seriously competes with poppy, can also do so only to a limited extent, for the greater part of the poppy-lands are not suitable to its cultivation. They are, all the best of them, high dry lands, whereas sugarcane grows best on low-lying moist lands. It also is an exceedingly exhausting crop and can never be grown for more than two years in succession on the same land, which then has to be allowed for a time to lie fallow. It is evident, then, that were poppy abandoned, we could not look to sugarcane to take its place, except over a contracted area, and in an intermitting manner. With respect to these three competing crops, there is also this to be remarked, *viz.*, that they all interfere, partly or wholly, with the *bhadai* crop, tobacco and potatoes, because they exhaust the ground very much more than poppy does, and sugarcane because it occupies the land the whole year round. This loss to the *bhadai* crop, comprising maize or Indian corn, would be a most serious matter in Behar. It is the mainstay of the people in years of scanty rainfall, carrying them on from the cutting of the *rabi* to the *kharif* or winter rice harvest, and not unfrequently taking, in a great measure, the place of the latter (when it fails) in helping the cultivators through the cold weather until the next *rabi* crop comes on. The immense importance to the prosperity of the agricultural population of the Behar Province of the opium crop is apparent from the fact that while the annual valuation of the seven districts in the Patna Division according to the road cess returns amounts to Rs. 4,38,23,207, the opium payments to the cultivators average (taking the past three years) Rs. 77,11,000. Adding to this the market value of the seed, which I estimate roughly at about Rs. 34,00,000, it comes to this, *viz.*, that the value of the produce of the poppy crop over an area of about 400 square miles out of 16,600 square miles of cultivated land, amounts to about one-fourth of the annual value or rent-paying capacity of the whole area. The suspension of such an industry would, I consider, be a very great calamity to the Behar province.

10797. I presume you think the people would view with regret the enforcement of a policy of prohibition of the further cultivation of the poppy?—Very much so. I consider that it would ruin thousands of them. I think myself that the proper policy of Government would be to raise the Government price of the poppy. I have very little doubt, if the Government price of opium were raised from Rs. 5 a seer to Rs. 5-8, or certainly to Rs. 6, that it

Mr.
A. Forbes.

would compete much more equally with the other crops which have risen with the fall in the value of the rupee which the Government price of poppy has not done.

10798. You think the Government does not pay enough for the poppy?—That is my opinion.

10799. Has there been any substantial change in the general prices of agricultural produce, consequent upon the depreciation of the rupee?—I think they have about proportionately risen, excepting where overproduction has for a time seriously brought down the prices.

10800. The object of the Commission in the tour which it has now commenced is especially to make itself acquainted with the local circumstances of the different parts of India, and especially to ascertain, as far as possible, the feeling of the people with regard to the question which has been submitted to us for inquiry. May I take it that you confidently say that the people of this division would object to a change of the system?—I should say that the feeling of the people of this division, both cultivators and zemindars, would be universally against prohibition or any alteration of the present policy, such as, with due regard to public morality, an English Government could possibly permit.

10801. We at home, connected with the Parliament of the Empire, are fully sensible of how important it is that the action of the Government of India should be supported by the popular approval of the country, and we wish to ascertain, as accurately as we can, the state of the popular feeling of the different districts which we visit,—that was a special article of our order of reference. You speak with confidence on this point?—I speak quite confidently upon that point.

10802. You have alluded to the increasing impoverishment of the agricultural classes: can you give us any reasons for that?—The pressure of the population on the soil. The last census returns show a very steady increase in the population.

10803. The amount of agricultural produce in proportion to the area has not diminished?—No; certainly not.

10804. And you have told us that prices have increased?—The prices, I think, have about kept pace in inverse ratio with the fall in exchange.

10805. So that if the amount of produce to the acre has not fallen short and the prices obtained have fully kept pace with the depreciation of the rupee, you come to the conclusion that it is rather the excessive density of population which has been the cause of impoverishment of the individuals,?—I think so.

10806. (*Sir James Lyall.*) In saying that you think that Government ought to raise the price of opium in order to keep up the superiority of poppy over other garden crops as a paying crop, I suppose you mean that it is still superior as a paying crop, but not to the same extent as it was formerly?—I think in the neighbourhood of towns, where market garden products are in great request, that opium is being ousted, but in other places I think it still quite holds its own.

10807. I suppose you would admit that, besides the price paid, Government indirectly gives something extra in the way of advances without interest?—The whole of the advances are given without interest.

10808. We may say that it is really something additional to the price?—Distinctly so. If the cultivators could not get the advances from Government, they would be obliged, at certain periods of the year, to take them from the mahajans at very heavy interest.

10809. In talking of crops competing with poppy, you said nothing of indigo, is not that a competing crop?—I do not look upon indigo as a competing crop, because in this part of India the indigo sowings are made in April, after the poppy has been cleared from the ground.

10810. Do indigo planters take interest on their advances: they have some system of making advances, have they not?—They have different systems in different districts. In some places the indigo is cultivated entirely at the expense of the factory by means of hired ploughs, on which they give advances. In other districts the planters pay about Rs. 12-8 a bigha to the ryot, and the ryot cultivates the indigo.

10811. Do you know whether they pay it in advances?—I am not sure about that.

10812. You say that the increased poverty of the ryot is due in your opinion to the pressure of the increase of the population: have any other industries, other than agriculture, which formerly existed, been destroyed in any way in this part of the country?—Weaving has almost entirely died out among the Julaha class.

10813. What is that due to?—It is due to the influx of Manchester goods.

10814. Has the old vegetable oil mill industry been affected?—That, also, has been very much affected by the introduction of petroleum.

10815. So that not only has the population increased, but it is more and more driven on to the land?—Quite so.

10816. You said that you had not yourself seen any instances of opium sots: you have been at the head of very large establishments, I suppose, both civil establishments and police?—Civil.

10817. Have not the police been under you?—Yes, both as Commissioner and as Magistrate, the police have been indirectly under me.

10818. Have you had to dismiss or degrade an official for opium intemperance?—I do not remember a single instance.

10819. You said you would object strongly to any increase of direct taxation; but you said you would not very much object to indirect taxation: it has been suggested once or twice to us by witnesses who came before us that, in lieu of the revenue derived from opium, a revenue might be derived from a tax on tobacco. Would you call such a tax on tobacco indirect taxation?—It depends how it is levied. I do not see any way of levying it indirectly. I think a tax on tobacco would be quite impracticable. The cultivation of tobacco extends over such a widely scattered area that, without an immense excise staff it would be quite impossible to control the collection of any kind of tax on tobacco.

10820. You could not put a direct tax upon the growth of tobacco without infringing the permanent settlement, I suppose?—I do not see that, because it would be a tax on the grower. That would not involve any increase of the land revenue paid by the zemindar.

10821. It would tend to reduce his rents surely, would it not: opium is a different thing because the law by which you can stop opium cultivation dates from before the permanent settlement?—Yes; it is quite true it would tend to reduce his rents.

10822. Do you know from experience whether the people who grow opium or who live in villages where it is grown, are more disposed to the use and abuse of opium than the people in villages and districts where it is not grown—can you give an opinion upon that?—I have not noticed any facts that would lead me to such a conclusion, excepting the mere fact that the licit consumption of opium in opium-producing districts is very small indeed, and naturally the deduction is that they supply themselves illicitly, but I know of nothing to lead me to suppose that they take more than in non-opium tracts.

10823. You gave a table to show the increasing encumbrances, sales and mortgages of landed property, and you took those under Rs. 100 as mostly representing property of the ryots, did not you?—Yes, the smaller ryots: I should add that those figures of course include immoveable properties, all kinds, besides ryots' holdings.

10824. The question I want to ask you is how long is it that the ryots in Behar have had the right to mortgage and sell their holdings?—Practically transfers between ryots *inter se* have been going on for some time, but they are only to a certain extent really legal. Under the Tenancy Act the transfer of whole holdings, without the landlord's consent, is only allowable where it can be proved that it has been the custom for such transfers to be made; while transfers of part holdings, without the landlord's written consent, are illegal, although, as a matter of fact, they continually are going on.

10825. When did the Tenant Act come into force?—In 1885.

10826. Before that it was very doubtful whether the tenant had in practice any legal right, was it not?—Yes.

10827. In your comparative calculation of expense of cultivating opium and tobacco, say, and potatoes, I suppose, for the sake of comparison, you put a value upon all the labour used in each case?—Yes.

10828. As a matter of fact, in all cases I suppose the labour is mostly the labour of the family?—More so in the case of opium than in the case of any of the others. Potatoes and tobacco both require more paid labour than opium, and sugarcane is cultivated altogether by male labour. The women of the household do not take part in the cultivation.

10829. (*Mr. Haridas Veharidas.*) In those cases, where the opium crop is not so paying a concern as other crops

are, do the cultivators grow opium willingly?—As far as I know the cultivators grow it entirely of their own free will

10830. (*Mr. Moubray.*) As Commissioner of Patna you are not in direct communication with the Opium Department, I suppose?—No; practically I have nothing to do with it.

10831. You are absolutely independent of the Opium Department?—Entirely.

10832. Your opportunities of investigating this opium question, I take it, were mainly in connection with the Commission in 1883 to which you have referred?—Yes; and also as Sub-Divisional Officer and District Magistrate-Collector. Such officer has nothing to do directly with

The witness withdrew.

Mr. A. A. WACE called in and examined.

10836. (*Chairman.*) Will you tell us what is your appointment? I am now an Additional Commissioner of the Patna Division. It is an appointment created for about six or eight months.

10837. Previously to holding your present appointment, where had your principal service been? I have served for over twenty-one years in India. My service has been in the Presidency, Patna, Bhagalpur, Burdwan, Northern Bengal and Chota Nagpore divisions in Bengal, and I was five months Commissioner of the Assam Valley. During that time I have had charge of districts about fourteen years.

10838. Can you give us any general information as to the consumption of opium in this locality?—The excise statistics show roughly the distribution of opium for the purpose of consumption over India.

10839. I believe that we have been furnished by the Government of India with tables which give, in a collected form, all the more important statistics with reference to the consumption of opium generally and also locally? Yes.

10840. I should like to ask if you have any observations to make which connect the consumption in Bengal with the physical circumstances of the districts?—In Bengal the consumption varies more with reference to the surroundings and habits of the people than with reference to race. The figures below bear out the oft-asserted connection between life in malarious tracts and the need of opium. The Sanitary Commissioner's Report for 1892 gives the death-rate from fever for the whole province as 16·37. The following districts are notoriously feverish: and I give against each the reported death-rate from fever, and the consumption of opium per 1,000 of the population:—

Districts.	Death-rate.	Consumption of opium per 1,000.	
		Seers.	Chataks.
Dinajpur	30·9	1	1
Rangpur	31·3	1	7
Purnea	28·4	1	1
Maldah	30·7	2	8
Murshidabad . . .	25·4	1	10
Hooghly	25·2	3	3

The effect of climate in regulating the use of opium is curiously illustrated in the district I know best, *viz.*, Bhagalpur. The district is cut in halves by the Ganges. The southern part is dry and healthy; the eastern half of the northern part is damp and malarious, especially where it borders the river Kosi. The three most malarious thanas, Kishengang, Madhepura and Partabgang, with a population of 27 per cent. of the whole district, have 42 per cent. of the opium shops licensed for the whole district. The three driest thanas of the south, containing a population about $\frac{1}{4}$ ths of the damper thanas, have only two opium shops, while the three damp thanas have seventeen.

opium, but it is a matter that one sees and hears a great deal about in camping about the district.

10833. You are brought, I may almost say, unofficially into connection with it?—Quite so.

10834. Except when employed on the Commission, you were not directly in connection with the Opium Department?—No. I was not.

10835. You have no reason to doubt any of the conclusions at which you arrived in the report of this Commission?—I would rather answer any questions on that report when I am recalled, I have not had the time with all my other duties to re-read the report lately, and it was written ten years ago

The inference is that opium meets a real want in the constitution, and is a valuable prophylactic in damp districts. After twenty-five years' service I can only remember one of my servants, two clerks and one or two of the many native gentlemen who have been my friends, who appeared to me to have suffered from the use of the drug. On the other hand, it is notorious that a moderate use of the drug is reckoned to be a valuable prophylactic, and I am informed that it is largely used as a remedy for, and as a check on diabetes, that commonest ailment of the sedentary official class in whom so much of the real administration of the country falls.

I can of course only speak to general opinion in the matter, but the common idea is that smoking it is much more dangerous than eating it, and people will tell you that rich food, milk and ghi, must be taken as an accompaniment of opium.

10841. Have you any observations to make with reference to the prohibition of the cultivation of opium which has been proposed? The Secretary for the Suppression of the Opium Trade proposes the absolute prohibition of the growth of the poppy in British territories and of the export from Malwa (*vide p. 71 of Mr. Alexander's pamphlet*). Elsewhere they contemplate the use of it for medical purposes only; but if the cultivation is to be stopped the cost of imported foreign opium will be prohibitive to the poorer classes. The prohibition of cultivation would be considered a grievous interference in itself, and it could only be effected under a system of espionage which would involve constant and irritating interference. The position would be aggravated in my opinion by the knowledge that the movement resulting in these evils had been largely fostered by missionary agency. An impression that England had in interfering with the cultivation and consumption of opium any idea, however remote, that its abolition would help towards the extension of the Christian religion would increase the dangers I have alluded to.

10842. (*Mr. Wilson.*) That last remark I do not find in your printed statement?—No, I added it because the subject was brought to my notice, and the pamphlet from which I quoted was put into the hands of native gentlemen in this division.

10843. (*Chairman.*) Have you anything to say about the cultivation of the poppy in comparison with other descriptions of produce?—As to the relative cost of cultivating each crop, I have referred to the report of the Commission of 1883, which my colleague Mr. Forbes has quoted. The figures in paragraph 571 of that report show that sugarcane, market produce and potatoes pay more than opium, but tobacco less than opium. These figures were furnished for the North-West provinces. In Tirhut at least I believe tobacco also pays better than opium. I believe that in this division if a ryot has to pay for all the labour employed on each crop, if the land is suitable, and if the market is available sugarcane, vegetables and potatoes all pay better than opium crop for crop. But the whole question turns on those three "ifs". As to the first, it is notorious that much of the petty culture and care of the poppy plant is done by the women of the house at no cost and from hereditary love of gardening. Secondly, as to the suitability of the land, soils vary very much, and it would be impossible to grow sugarcane on the greater part of the opium lands. Sugarcane does not do on the nitrous soils on which opium and tobacco thrive. Then as to the third, I may say that it is no good growing miles away in the interior cauliflower, cabbages, onions, egg plants and potatoes, which find a ready market round a big town and within easy reach of the

Mr.
A. Forbes.

3 Jan. 1894.

Mr.
A. A. Wace.

Mr. A. A.
Wace.

3 Jan. 1894.

railway. There would simply be no demand within reach. On the other hand, it is no trouble to a cultivator to start off with his little pot of opium; indeed he rather looks forward to the trip in company with his fellows. The opium does not spoil on the way, and he knows he is sure of a full price on a full weight and cash down if the value of his opium exceeds the advances given him. Then it must never be forgotten that opium exhausts the soil less and occupies it a shorter time than the other crops with which I have compared it. There is no necessity to let lands lie fallow to receive it. There are fields about here which yield first a crop of *makai*, then some early potatoes, then opium, and after that *chena*, and the same plots year after year grow opium. Roughly, I put it thus, if a good ryot had only to think of how to live for a single year, how to make the most of land favourably placed for a market for that year, I daresay he would prefer, with an equal supply of funds, to grow sugarcane, vegetables or tobacco. But on a term of years he finds a profit in growing opium. Then, too, the hereditary instincts of the Koeri and Kurmi class make for opium. The feeling that a man is doing what his father and his grandfather have done for generations is a strong instinct in the native character, and I believe Koeris would go on cultivating even at a loss, just as the Julahas go on weaving though Manchester and Bombay bar them from their old profits.

10844. Do you consider that any possible increasing supply of the wants of China from local sources and the consequent possible tendency to close the Chinese market to opium grown in India is a consideration which should be in the view of the Government and rather tend to make it wise to avoid taking steps to encourage the cultivation of the poppy artificially; do you think there is anything in that?—Government, in my opinion, should not attempt, by increasing the advances or price paid, to encourage opium cultivation as against these or other crops. If, as seems likely, the demand from China falls off, the cultivation and the revenue can shrink gradually, and the loss to our revenue may be gradually made up with the development of other sources and increased economy.

10845. (Sir James Lyall.) You say that, I suppose, because you rather object to the system, do not you?—I have, as you will hear, some objections to it.

10846. (Chairman.) Are there any considerations connected with the recent history of Indian industry which in your opinion should make it necessary to proceed with great care and discrimination in introducing any changes in the management of the opium revenue?—There is an idea abroad that our commercial policy and instincts have hitherto paid less consideration to Indian than to external interests. The jute trade is said to have left a smaller area available for rice. The other day the Dewan of the Dumraon Raj attributed part of the ill-feeling between the Mahomedans and Hindus on that large estate to the fact that Manchester goods had driven the Mahomedan weaver class from their hereditary occupation to cultivation, thus leaving less land available for Hindus. It has been gravely asserted to me since I began to make inquiries lately that the indigo-planters of Behar are fostering this agitation against opium in order either to get hold of opium lands for their own cultivation or to take up the cultivation of opium themselves when Government gives it up. There may be all unreasonable ideas, but they exist, and the uneducated mind of the cultivator is prone to find the most abstruse reasons for the simplest acts of our Government. If a prohibition of opium cultivation, causing discontent in a very industrious class of cultivators, was at the same time accompanied by some increase, even temporary, in taxation (as it assuredly must be), and also by an irritating invasion of hungry spies and informers, the state of things in Behar and the North-Western Provinces might become very serious.

10847. What would be the effect on public opinion if changes were introduced which tended to raise the cost of opium?—I think it would cause much discontent to those who now consume it. The vast majority of them do not abuse it, but derive a benefit from it; and, even if the export of opium to China should be prohibited, the people of India will not understand why they should be deprived of it or charged an exorbitant price for it, in order to secure this.

10848. Would the enforcement of rules of prohibition entail too serious cost upon Government?—It would be very heavy. I can hardly calculate the cost. It must be remembered that opium was once grown over a very much larger tract of country than it is now cultivated in. It was grown in the districts east of Monghyr, its present limit, as far as Jalpaiguri, and I am, I think, right in thinking that it was also cultivated in Assam. The produce was

poorer there than to the west: but if the people could not get our excise opium at a reasonable price, they would grow their own. How is this to be prevented? Our Police are insufficient even for existing purposes, and give notoriously little help in excise. A special establishment would be needed to prevent opium cultivation. If this was entertained throughout the year, it would be sitting idle for the eight months when the plant cannot grow, and would fatten in the other four on extortion. If it was entertained only for the season of cultivation, the rapacity of it would be all the worse. The underlings of the present Opium Department are, I fear, some of the most dishonest of our servants, though there is much European supervision over them. Without that they would be a curse to every district.

10849. What would be the view of the land-owners on the policy of prohibition?—I think they would be glad to be rid of the rapacious opium Amlah from their villages.

10850. (Mr. Mowbray.) What is an Amlah?—"Amlah" is the word for under officers—native officers chiefly. I think the zemindar would like to see the ryot deprived of the little protection which the opium-ryot's connection with Government gives him, but he would find it harder to get his rents. Our advances often go straight to the zemindari coffers. The mahajan and the planter would be glad to step in to Government shoes and finance the ryot, but the ryot would pay interest to them, and the freedom from interest at 12 to 20 per cent. on about 200 lakhs means a good deal, even though this may be distributed among over a million ryots.

10851. (Chairman.) You have made some reflections on the character of the subordinate officers in the present Opium Department: do you consider that it is possible to correct those faults?—I think it is almost impossible; it depends very much on the individuals. The European supervision is so small and the people who are dealing in opium are so scattered that it would be very difficult to stop what goes on. What I allude to particularly is the system of little petty payments, that, whatever you do, natives will give.

10852. You say that a certain amount of corruption prevails?—It is not big corruption, or particular acts, but little petty things. There is no doubt, for instance, that a considerable proportion, of the opium that is grown is kept back. I believe it is chiefly *pasewa*. Of course, people who are wandering about the interior know that a little opium is kept back, and I am afraid that they make that a sort of excuse for exacting little payments.

10853. It is an evil inseparable from the system under which the Bengal monopoly is worked?—It would be infinitely worse without that monopoly, because it would be scattered all over the country.

10854. You recognise an evil under the existing system, but you believe that the evils are less under the direct administration of the Government than they would be, if this business were worked by a number of private individuals with a less sense of responsibility than that which exists in the case of the Government?—I do. I think that our preventive establishment would be intolerable.

10855. Do you attach any importance to objections to the cultivation of opium which have been raised on the ground that thereby the capacity of the land to provide food for the people is diminished?—No; I do not. The common argument that the diversion of the opium fields to food grains would mitigate famine is a delusion. Opium does not prevent *bhadai* cultivation as Mr. Forbes said; and as to cold weather cultivation, no ryot would think of growing the crops, our distressed classes eat, on opium fields. He would grow wheat or vegetables, or a more paying crop, and that would be sold, not consumed. Paying no interest for the advances he gets, he gets the means to buy grain, and that is all we need think of now in combating famine, thanks to railways.

10856. As you are aware, arguments have been advanced against the direct connection of the Government as a manufacturer of opium; in many of the discussions that have taken place at home that point has been particularly insisted upon; what do you say upon it?—I have thought out the possibility of severing the direct connection. Government has with the cultivation and manufacture, for I don't like it, because it is liable to misrepresentation. But I can see no way out of it, which would not increase cultivation. We cannot deprive the people of opium altogether, and if we open the cultivation to others, more opium of a more injurious kind would get into consumption, and the risks of abuse would increase. The present system gives us at least full control over the drug. The control may be marred by the dishonest retention of opium by smuggling and by the rapacity of our amlah, but these difficulties would be

magnified under any system of cultivation under a heavy tax.

10857. (*The Maharaja of Darbhanga.*) You say that the connection with the Government of the ryot who cultivates opium gives him a certain amount of protection; will you define what that protection is?—It is hard to define. I think that the wandering about of responsible Europeans through all the opium villages, four or five months every year, is a check on abuses.

10858. What reason have you for thinking that landlords would be very glad to see the ryots deprived of this little protection, as you define it?—I think that in some zemindaris, in past years, at any rate, the ryot has had scant mercy from some of the landlord's underlings, who really give the trouble.

10859. In what way does the Opium Department protect the ryot from the so-called oppression of the zemindars?—My impression is that the man who cultivates opium takes credit to himself for it, and holds up his head. If he is bullied, he will go to the Deputy Opium Agent.

10860. As regards the production of opium, will you let us know what you think would be the average profit to a ryot from opium lands?—I have compared the figures in the Opium Commissioner's Report with the figures obtained from four or five different sources, and the four or five gentlemen who have given me those figures have probably got many more; but I find it absolutely impossible to reconcile the figures. My experience is that it is generally difficult to reconcile figures in statistics. I can only give you my general impression as I have stated it.

10861. (*Sir William Roberts.*) You state that the Sanitary Commissioner, in his report for 1892, gives the death-rate from fever for the whole province at 16·37; in the table that follows you also give the consumption of opium; could you give us the consumption per thousand for the whole province?—That is in the excise statistics to which I alluded. I got the figures from the Sanitary Commissioner's Report.

10862. I suppose the statistics of death are fairly accurate?—I do not pretend to attach any accuracy to them. Our mortuary statistics are bad, but the same prevailing errors run through the years. We have the same inefficient establishment, and one can only say that the figures are relatively accurate.

10863. (*Mr. Wilson.*) You have quoted figures showing that the issues of excise opium do not represent a hundredth part of the consumption in the Behar Districts, you think that is somewhat exaggerated?—I do.

10864. Can you form any estimate as to the extent to which you think it is exaggerated?—I cannot. I can only say that I think it must be exaggerated, because I do not believe that there is the same consumption of opium here as there is in the fever districts of Bengal—certainly not as in Assam where I have served.

10865. If it were reduced to one-tenth, do you think it would be nearer the mark?—I would rather not give a guess. We do not know how much opium is kept back.

10866. You say that it is notorious that the moderate use of the drug is reckoned to be a valuable prophylactic; can you tell me anywhere where that is recorded either in official statements or in any other statements until within the last two or three years?—No. I confess I never read it until the Honourable Commission began its sittings, but I know it is a common idea among the people.

10867. You do not know anywhere where it can be found recorded either in medical or popular works?—I do not read medical works, and I have no time for reading many popular works.

10868. What is the result of taking opium in the case of persons who are not able to get rich food, such as milk and ghi?—That is a medical question. I can only say what I have been told, that you must have rich food in order to obtain the advantages of opium. With people who are without rich food, such as milk and ghi, it dries them up; that is the common expression of the people.

10869. You have referred to Mr. Alexander's pamphlet, which I presume you have read?—Yes.

10870. Are you aware that the first three lines of the pamphlet are these: "The object of this treatise is to show that the immediate sacrifice of the entire opium revenue of British India, except so much of it as is derived from the medicinal use of opium, not only is dictated by Christian morality, but is feasible," etc., so that at the very outset the medicinal use is exempted?—I am quite aware of that, but the paragraph I had in my mind was at page 71.

It is as follows:—"Thus, by the end of the present century, if the payment be commenced in the year 1892-93, the growth of the poppy next autumn being absolutely prohibited in British India, and at the same time the export of Malwa opium through British territory, we should have finished paying off this evil legacy of debt left to us by our father, which the present generation has, by its culpable negligence, permitted to grow and increase."

10871. You do not recognise that the whole burden of Mr. Alexander's pamphlet was founded upon the assumption that an exception would be made in the case of the medicinal use of opium?—I quite realise that, but my idea is that it is impracticable. You will see that I have said that the Society contemplates the use of it for the medicinal purposes only.

10872. I want to put this to you that the Anti-Opium Society and the opponents of the opium traffic have never objected to the cultivation and dissemination of opium for medicinal purposes?—Then I must apologise for having misunderstood the Society. I had in my mind the words that I have read: "The growth of the poppy next autumn being absolutely prohibited in British India."

10873. May I ask you what special means you have had of knowing the feeling of the cultivators on this subject, as to the popularity or otherwise of growing poppy?—I have camped about the districts a great deal, and I am in constant communication with native landlords and other native gentlemen. One cannot live 21 years in this country, especially when one is a quarter of the time under canvas, without knowing something about what people think.

10874. Have you put the question distinctly to them what they think about it?—I have often asked the landlords what the ryots think about it.

10875. Then you do not regard the zemindar's interest as being quite the same as the ryots?—Not the same certainly.

10876. Therefore, perhaps, they are hardly fair representatives?—They are representatives of their class.

10877. I may take it that you have not asked many ryots personally, what they think?—Not this year, but I have in previous years.

10878. Have you asked them since the cultivation of the poppy became less profitable, as you have told us it is?—No; I have not.

10879. For aught you know they may have changed their minds since these circumstances occurred, since you put the question to them?—I could not say. I dare say it is quite possible that in some parts of this big division the ryots find other crops paying much more.

10880. In reference to the policy of the Opium Department, why do the police not give help to the excise?—They have not time.

10881. Is there any jealousy or friction between them?—Not between the police and the Opium Department that I am aware of. Certainly not between the police and the excise.

10882. In what way could they help the excise?—We know that in spite of all that we do, there is still a certain amount of illicit distillation.

10883. And do not the police report that when they know of it?—That I cannot say. I cannot say that they always know it, but we get very few reports.

10884. When you speak of distillation you are not referring to opium?—No. But I thought you were asking about the Excise Department.

10885. I wanted to know whether it was a complaint against the police or whether it indicated some amount of friction between them?—There is no friction. I have often deplored in my annual reports that the police have given us little help in excise matters.

10886. I have seen it rather in the form of complaint?—They simply have not time; they have not time even to do their own work thoroughly.

10887. In what way are the underlings of the Opium Department some of the most dishonest of our servants?—I tried to explain that.

10888. Will you kindly explain it a little more?—They have many opportunities for little petty exactions.

10889. From the ryots?—From the ryots.

10890. From the zemindars?—Certainly not from the zemindars; they are in a position to hold their own.

10891. Can you explain the nature of these petty

Mr. A. A.
Wace.

3 Jan. 1894.

Mr. A. A.
Wace.

3 Jan. 1894.

exactions?—When these men go about the districts, I doubt very much if when they go into the villages they pay for their food.

10892 I do not know if you told us what is meant by Bhadoi cultivation?—It is the autumn crop; in this part of the country it is the Indian corn and the lesser millet called *Marwa*.

10893. You say that the opium advances often go straight to the zemindar's coffers, is that an advantage to the ryot or otherwise?—I think the ryot looks upon it as an advantage.

10894. He has ready money at a time when he wants it?—He really does not think about his rent. The Khatadar gets the money; the patwari or the village accountant gets hold of the Khatadar, who is the ryot's headman, and the money never passes into the ryot's hand at all in lots of cases. That is what I mean. The money goes straight from the headman, who has received it from the Opium Department, to the zemindar.

10895. You used the term "pasewa", will you tell us what that is?—Pasewa means sweating. It is the sweating of the opium.

10896. It is a liquid that sweats from it?—Yes, but Mr. Tytler, who will be examined, is an expert, and he can tell you all about it. It is an inferior form.

10897. Can you tell me if the rent of the zemindars is sometimes paid in kind instead of in money?—In South Behar it is largely paid in kind.

10898. Which method do you consider preferable?—That is a large question. Theoretically it is infinitely preferable that the ryot should pay in cash, but as a matter of fact payment in kind insures very largely the great irrigation works of the southern part of this division. The zemindar is immediately interested in keeping up all the irrigation works in order that his share of the produce may be the greater. It is a very big question, and I can only sketch that roughly as the main outline of it. I may add that if I could ensure that the irrigation channels should always be kept up, I would certainly prefer cash payment, but I do not see my way to enforce that without a complete record of the ryot's rights, not only in land, but in irrigation channels.

10899. You have referred to European officers going about the country. Have I been rightly informed that it is the custom for the headman of the villages to provide them with fodder for their horses, with fowls, vegetables and various things for which they are not paid?—That is a matter that the Government has gone into closely, and there is a large fund of information on the subject. I will give my opinion on the subject roughly if the Commission wish it.

10900. Is it in connection with the opium revenue?—Yes.

10901 (*Chairman*). If it is connected with the mode in which the opium revenue is levied, we shall be glad to hear anything you have to say?—I do not know that I can say anything definitely. Probably there are some abuses connected with the system, as these are connected with the tours of all of us, do what we will. We all do our best to check the payment for supplies, but it is most difficult to do so.

10902. You do not think that people always get paid?—I believe that the money goes out of our hands. That the money goes into the hands of people who have given, here an egg and there a chicken, and there a pot, I cannot pretend to say.

10903. Do I understand that there is some practical difficulty about it that extends beyond the Opium Department?—Certainly. If you will allow me, I will tell you a fact that occurred to myself in my last district. I was particularly careful always to have up the zemindar's man on leaving camp and ask him if he had been paid for his supplies. At one camp I had up the gomashtha, and I said "Have you got paid? The village accountant arrived, the man whom the zemindar would charge with looking after the supplies. He had a list of what I had had, the things had been written down and the prices charged, and I said, "Have you been paid?" He said, "Yes, I have been paid in full." My servants had then gone on; it was evening time. When I came to my next camp my butler came to me with the money in his hand, and said, "What am I to do? The zemindar's gomashtha would not take the money." Yet the gomashtha had positively assured me an hour before that he had been paid everything.

10904. (*Mr. Mowbray*). You are not connected with the administration of the Opium Department yourself?—Not the least.

10905. You go through all the opium-growing districts?—I do not tour. I went last year to Arrah, and I am to go again.

10906. You have toured?—I have spent about four years under canvas in my service.

10907. And you have had ample opportunities of being brought into connection with the people who grow opium?—I cannot say that of late years. I was for two years in one of the largest opium-growing sub-divisions of Behar.

10908. Touring about?—Touring about. At that time I was on famine duty. We then lived knocking about.

10909. Have you any doubt that the cultivation on the part of the ryots is a voluntary cultivation?—That is a big question. It is a point that has only been suggested to me within the last week or ten days.

10910. Then I may take it that you never heard it suggested to you when you were yourself touring about?—Certainly not in those days. If the Commission will allow me I will read a note that I have written about it.

There was a time when the zemindar was himself largely interested in pushing opium cultivation because he got a higher rate of rent for lands under opium. My colleague, Mr. Forbes, thinks that these differential rates are being abandoned; and he has more recent experience of the mofussil in these parts than I have. If this is so, the only benefit the zemindar gets from opium cultivation is by reason of his putting his ryots in funds to pay his rent. I can add nothing to Mr. Forbes' figures as to this, except to draw attention to the fact that the land which pays about one-fourth of the rent of the division is only two per cent. and less of the general cultivation in four districts, and not much over three in the other three districts. What pressure is used comes, I believe, from the Khatadar and he, it must be remembered, is selected by the ryots, and gets a merely nominal payment from Government. I speak with some diffidence, for I have not had much recent mofussil experience of Behar but I have discussed the subject with many well-informed persons, and I cannot help thinking that the Behar system of letting the Khatadar practically pay himself from the ryots and of giving the lower servants of the Department a commission, is at fault in making pressure possible. The Khatadar makes his profits to our knowledge by what is called *kharcha*. This comes here to about one rupee eight annas a bigha.

10911. What does "*kharcha*" mean?—Expenses. This varies in different districts. I believe it to be higher south of the Ganges than in the north, and I think the amount of it depends very largely on the efficiency of European supervision. The Khatadar's average area is 20 bighas. He thus gets only Rs. 30 for them, and some of that he has to give up to the native subordinates. He also makes a little by winking at the withholding of some of the produce—*pasewa* chiefly. The knowledge of what is kept back gives him a hold over the ryot. If a ryot will not give all that the Khatadar thinks he might grow, the latter can always threaten him with exposure as to the concealment of opium. If, however, there is any pressure used, it is in the neighbourhood of large towns and villages and of railway stations, and those are the very places where the ryot is most independent. The ryot is getting more so every year, and more attentive to the pulse of the market. This year, for instance, oilseeds having gone up, the ryot in this district has, I am told, gone off on a new track, and has sown mustard on lands which used to hold opium. The following figures, about which there can be no mistake, indicate that the ryot is looking after himself pretty well. The Hajipur, Munair and Phulwari kothis serve Patna and its export trade to Calcutta of vegetables, potatoes, etc. In those three kothis the cultivation has fallen in five years 25 per cent. whereas on the whole Agency the decrease has been less than five. In 1892-93 the net cultivation generally rose rather over 2 per cent., and yet in those kothis it fell no less than 8 per cent. Government at least carefully avoids the ordinary methods of keeping a hold over the cultivator by paying him off every year. There is no carrying forward of payments against the ryots, as is the custom with most crops grown. I cannot believe this story of wholesale compulsion. We wander about our districts year after year, we hear stories of police oppression; Government has to appoint a Commission to investigate complaints against our subordinate canal officers, and the system of working the canals. The districts are full of planters who would benefit by the contraction of opium cultivation and to whom ryots often turn for help against their zemindars and the police, and yet no Collector can quote instances of compulsion, and an officer like Mr. Forbes, who has spent eight years in this division, two of which have probably been spent in the interior, tells you he never heard of compulsion till within

the last few days. Look at it in another way. Government exercises the power of a landlord in large Government estates and ward estates scattered all over the division. If there is compulsion anywhere, surely it would be traced in those estates, and cultivation would be larger in them than in villages outside that influence. I have tried to get figures from some districts comparing the proportion which this area of opium fields bears to the total area of specimen villages of each class situated similarly as regards soil and population. The quantity of land suitable for poppy varies in different villages and according to the caste of the cultivators. But the following figures are at least some indication that no pressure is used. In Patna, the Government village of Khigrapara, with an area of 226 acres, has 2.6 per cent. of its land under opium. A private village, Mahdumpur alongside, has 6.5 per cent. on an area of 214 acres. The Government village Burdeha Buzurg has no opium, while Salempur, a private village, has 6.1. Rampursmanpur has 2.7 against 3.4 per cent. in the adjoining village of Muslasapur. Nagowa Bhokouz and Dhakwahi belonging to Government and a private zemindar respectively have each 1.6 per cent. In Darbhanga in the two largest Government estates, Buktarypur and Jogiara, under direct management, there is, according to the Collector, no poppy cultivation at all. The Collector of Gaya writes to me: "I have had a lot to do with Government estates in my service, principally in Shahabad, and I never once was spoken to by any Opium Officer on the subject, or ever heard of any trying to extend cultivation in Government villages. In four Government villages of his present district, which he took at random, opium cultivation was found to have increased in a higher ratio than in adjoining private villages since 1888, but in seven groups of adjoining wards and private villages there has, since 1888, been an increase from 118 to 123 acres in ward's villages, and from 46 to 58 in private villages. In Arrah the percentage of opium cultivation in eight private villages covering 10,453 acres was 2 per cent. In three ward's villages covering 15,418 acres, the opium area was 1 per cent. In three large Government estates covering, I am told, 59,849 acres, the acreage under opium is .08. The inference I draw is that there is absolutely no pressure, and that entirely agrees with my own experience as a Collector.

10912. The Khatadar system to which you began by referring exists in the Behar Agency, but not in the Benares Agency?—The Khatadar is not known in Benares, but I think the Lumbardar is rather like him. The system is different in some ways.

10913. You are not personally acquainted with the Benares system?—No, I know that the theory of the Benares system is direct dealing with the cultivator, not through the Khatadar.

10914. I suppose in any case in which the Government fixes the price of opium, there is always a tendency on the part of the people, who have opium to cultivate and to sell, to try and induce the Government to raise the price?—Of course, I think the Government has not raised the price for the last five years, and I am not sure that the period is not longer.

10915. There cannot be said to be a market price for opium?—There is no price for it.

10916. There is no market by which you can test it?—No; we have absolute control over it. We fix the price, except of what is smuggled and kept back.

10917. Therefore it may be that the complaints against opium cultivation really mean dissatisfaction with the price paid by the Government?—I think it is probable. In villages and large towns I think other crops pay better.

10918. You yourself are not in favour of raising the price of opium?—I think it would be liable to misrepresentation—liable to be misunderstood.

10919. You mean that it would be liable to be represented as a direct encouragement by Government to the extension of opium?—I do. That is a matter on which I can only form my own opinion. As I have said, I do not like the direct Government connection with it. But I look upon it as the only possible way of controlling opium cultivation.

10920. You have told us that it was impracticable to limit the supply to medical purposes; that is a proposal which has been frequently brought before the Commission. Will you kindly tell me why you think it impracticable?—I do not see where it is to be sold. I do not see how in the interior it is to be put within the reach of the people for purely medicinal purposes.

10921. Can you give me any idea of the number of dispensaries in your division as compared with the number of opium shops?—I could count the dispensaries in this division

on four hands. Mr. Forbes can give you the figures definitely. *Mr. A. A. Wace.*

3 Jan. 1894.

10922. Do you consider that for the supply of opium for medical purposes you would require to have as many centres of distribution as you have opium shops at the present time?—I think you would.

10923. And if these were put under Government Officers would not that be a very material increase in the expense to the country?—Very material. I should be afraid that those same officers would wink at the cultivation and at smuggling.

10924. You think that unless they were well paid, there would be a large element of corruption?—You would have to pay them very high indeed to stop that.

10925. Have you any other remark to make as to the impracticability of carrying out any scheme for a supply of opium for medical use only?—No. I have thought about it, and I cannot see my way to it in the least.

10926. (*Mr. Haridas Viharidas.*) Is the Khatadar elected by the opium cultivators?—He is nominated by the ryots, but that is a point on which I would rather you would examine Mr. Tytler, who is an officer of the Department.

10927. (*Sir James Lyall.*) You say that the Opium Department underlings are probably some of the most dishonest of our servants; you have explained that the supervising staff is too small. That is not so true, I think, of the Ghazipur Agency as of the Behar Agency?—I cannot say.

10928. Each Department in India I believe hears of the corruption of the underlings of the other Departments?—Yes, every one.

10929. Are not the underlings of all departments more or less corrupt in the way of taking food, tips, etc., if they can get them?—I believe so, and I think I have said that: but what I meant was that I think the opium people have more opportunities for it. They are always wandering about.

10930. It is the dishonest ryot who keeps back the opium, who is most liable to exactions by official underlings?—Certainly.

10931. Can you imagine any way in which an Opium Department official underling can effectually coerce or bully an unwilling ryot into cultivating or continuing to cultivate, supposing the ryot to be an honest man, not a man who keeps back opium, or anything of that kind?—I do not think he has the power. I may further say that the mere fact of a man not having kept back opium would be no bar to his being charged with having kept it back.

10932. I suppose the Opium Department underling has much less power in that way than the police underling?—I should think he has. Of course, the power behind the police is greater.

10933. Probably, the underling of the Opium Department has less prestige than the underling of the Revenue Department?—I should think so.

10934. Are the officers of the Revenue Department, the Commissioners, Deputy Commissioners, and Joint Magistrates ever applied to lend their influence or prestige to the work of the Opium Department?—I have never known such a case.

10935. Do the two Departments pull together?—My experience is that we are entirely apart. I remember one case, when I was Collector of Bhagalpur. One of the European Opium Agents came to me and said that there was some land in some Government villages in my District which would do for opium. I said, "You won't get it, because that is land that is put under sugarcane, and what there is to spare is put under Indigo." He went to try, and when I went down there later the following year, I did not find a cotta under opium. They found that the sugarcane paid them better, and they would not take the advances. No native Subordinate of mine has ever said to me that he had been asked by the Opium Department to find him land for opium.

10936. (*Mr. Wilson.*) I see you are described as an Additional Commissioner?—Yes.

10937. Will you explain what that is?—The Commissioner's work in this division is so heavy that Government finds it necessary for six or eight months to put on another officer, who is one of the senior Collectors, to help the Commissioner.

10938. I think you said that the Gomashta is the village accountant?—The patwari; Gomashta is the Bengali word meaning much the same thing.

10939. I believe it has another meaning in connection with the Opium Department?—Yes, Gomashta is one of the subordinates of the Opium Department.

The witness withdrew.

3 Jan. 1894.

(Chairman.) Mr. Wilson desires to make a statement.

(Mr. Wilson.) It was given in evidence that Mr. Alexander and I had been at Gya, and had made enquiries there. This week, since I arrived, I learned from Mr. Jones, Baptist Missionary, resident here, that last Wednesday, when he was at Gya, at the house of a Baptist Missionary there, an Inspector of Police, and another man called, bringing with them the Dak Bungalow register of visitors, and proceeded to question the Missionary about my friends and myself, as to where we had been, whom we had seen, and particularly whether we had spoken to any opium cultivators. This statement of Mr. Jones seemed so important and extraordinary that my son, and a friend, Mr. Saville, have been to Gya to enquire about the circumstances of the case. Among others, they called on Mr. Harris, the Superintendent of Police, who justified such enquiries, saying it was the duty of the Police, to report on all strangers visiting the place. I do not now stop to remark on this statement of a general system. But I will point out that this inquisition into our conduct was not made for seven weeks after our visits, and was, therefore, a farce, from a police point of view. The important point is that this inquisition was made within a week of the Royal Commission coming to this part of India, and I desire to enter the most emphatic protest against this kind of attempt, by any officers or authorities whatever to interfere with persons who are

interested in the Opium question, who may be prosecuting enquiries, or who may become witnesses before this Commission. It is not with me a personal matter, but a public one, and I entertain a very strong opinion on the subject.

(Chairman.) The Commission having heard Mr. Wilson's statement will call upon Mr. Macpherson, the resident Magistrate, to offer an explanation either in the witness's chair or in writing.

The following letter was sent to Mr. Macpherson :—

The 3rd January 1894.

SIR,

At the meeting of the Royal Committee on Opium this day, Mr. Wilson made a statement, of which I send you a copy.

We shall feel obliged if you will attend at our meeting to-morrow or Friday, when we shall ask for explanations.

Yours faithfully,

BRASSEY.

Babu
Roy Radha
Krishna.

Babu ROY RADHA KRISHNA called in and examined (through an interpreter).

10940. (Chairman.) What is your position?—Zemindar and Banker.

10941. Are you resident in Patna?—Yes.

10942. Is opium extensively used by the population of this district?—The use of opium is not confined to any particular class, and it is not generally used by the inhabitants of this district.

10943. In the case of those who do use opium, is it used for a medical purpose, or as an ordinary article of diet?—Opium is generally used for medicinal purposes, but it is sometimes also used for pleasure by young people.

10944. Do you consider that the use of opium has a demoralising effect generally?—No.

10945. There are no doubt cases of excess?—When taken in excess it generally produces laziness, but people taking it are not addicted to any crime.

10946. Would you say that persons who use opium to excess are a small minority of those who use it?—Yes.

10947. It has been proposed to this Commission that the use of opium should be prohibited, except for medical purposes; if that prohibition were carried out it would involve a loss of revenue to the Government, and other taxes would have to be imposed. What would be the public feeling upon that subject?—The resources of the people of this country being limited, and they being overburdened with taxes, they are quite unwilling to bear in whole or in part the cost of prohibitive measures. The cultivation of the poppy and manufacture of opium in British India should not be prohibited, as the people would suffer in manifold ways, and their total prohibition is almost impossible. There does not seem to be any practical measure in further restricting the existing opium traffic in Bengal and Behar so as to yield a sufficient revenue.

10948. Is the extent of land under poppy cultivation considerable?—A large portion of land is under poppy cultivation, and so the magnitude of interests is very great. It profits the tenant, the landlord, and the Government as well. The ryots reserve a part of their fields for poppy cultivation to enable them to pay off their rents to landlords. The periodical payments of advances by the Government enables the ryots to pay up their rents in time to their landlords, who are thus enabled to pay off the Government revenue in time. Should the cultivation of poppy be prohibited it will revolutionize the whole system of zemindari in Behar.

10949. Is the number of men employed as cultivators, of the poppy considerable?—A very large number of men in these provinces, including the labouring classes, are employed in permanent or temporary capacity in this industry, and they will be all thrown out of employment should the cultivation be stopped. The views of all these classes, as well as of the landlords and tenants, are in favor of the continuation of poppy cultivation.

10950. (Mr. Haridas Veharidas.) You are a zemindar?—Yes.

10951. In your zemindari is the poppy grown?—Yes.

10952. Have you different rates of rent on land for different crops?—Yes.

10953. You have a different rate for sugarcane?—Yes.

10954. And for poppy a different rate?—Yes.

10955. (The Maharaja of Darbhanga.) Does the rent vary according to the quality of the land, or according to the quality of the crop?—According to the quality of the land and the crop.

10956. (Mr. Haridas Veharidas.) If the poppy is not grown in your land, and the sugarcane or tobacco is grown, it would make much difference to you?—When the poppy is cultivated in my zemindari, it is easy to realise rents from the ryots. When they receive the advance from the Government they pay up at once.

10957. So far is it beneficial to you?—Yes.

10958. But not in point of rent?—No, but poppy cultivation makes the realisation of rent easy, as said before.

10959. (The Maharaja of Darbhanga.) I believe there are two kinds of land, one for which money rents are paid, and another for which rent is paid in kind?—Yes.

10960. (Mr. Haridas Veharidas.) In the case of the opium crop you do not get rent in kind, all the produce being taken by the Government, so that there is no occasion for you to have opium as a share of your rent?—No.

10961. In the case of other crops, you do take a share in that way?—Yes, if it is stipulated for kind with the lessee.

10962. Will you compare the effects of opium with those of alcohol?—By the use of opium a man is not addicted to any fierce crimes, while by the use of alcohol it is sometimes found that men commit very serious crimes.

10963. Is opium prohibited by the Hindu religion?—No.

10964. Is alcohol?—Yes.

10965. (Mr. Wilson.) Will you tell us in what way opium profits the tenant?—In two ways: if the tenants set apart a certain piece of their holdings for the cultivation of opium, they receive periodical advances from the Government with which they pay the zemindars; so it makes matters easy for them to pay their rent to the zemindars. In the second place, there are some lands which grow poppy better than any other crop.

10966. Do the people set apart a portion of their land willingly or because they are invited to do it by the zilladars?—They set them apart willingly.

10967. The zilladars never have to persuade them?—No, as far as I know.

10968. Do the Khatadars ever persuade them?—No.

10969. You state that opium is used generally by Mahomedans?—Yes.

10970. Are you speaking of men or women or children or all?—Generally by men.

10971. What proportion of the men do you think take opium amongst the Mahomedans?—I cannot say the exact proportion.

The witness withdrew.

10972. Do you mean that Mahomedans take it more than the Hindus?—In Patna low-caste Mahomedans indulge more than the Hindus.

Babu Roy
Radha
Krishna.

3 Jan. 1894.

The Hon. SYUD FUZZ IMAM called in and examined.

10973. (Chairman.) I believe you are a Member of the Bengal Legislative Council?—Yes.

10974. Are you a land-owner?—I am.

10975. And a banker?—No.

10976. Do you live in this district?—Yes, I belong to this district.

10977. Will you tell us whether opium is extensively used in this district or not?—I think it is. A certain proportion of each race of people use opium: the Hindus generally in Behar smoke opium called *madak*, while the Mahomedans mostly use it raw, dissolved in water, and some make it into *chandu* and smoke it.

10978. Do you consider that among those who use opium there is any distinct effect in regard to their moral condition?—Not very much.

10979. In regard to their physical condition?—When they smoke it, it has some effect.

10980. How do you compare opium with alcohol, which do you think is the greater evil?—Of course alcohol. Compared with alcoholic drinks, the use of opium is harmless, alcohol is much more injurious.

10981. Do you think that the prohibition of the use of opium, for any other than medical purposes, would be approved by the people of this province?—No.

10982. It follows from that answer that you would tell us that they would not be prepared to bear any additional taxation to replace the loss of revenue from the prohibition of opium?—Exactly.

10983. You therefore, I presume, have come to the conclusion that the prohibition of opium except for medical use, should not take place?—Yes.

10984. If it were possible to prohibit, you would not think it desirable?—No.

10985. Assuming that the cultivation of the poppy and the manufacture of opium are to continue, do you consider that the existing arrangements for working the revenue are satisfactory?—I think so.

10986. You have heard what has been said by the previous witness, with reference to the convenience of the ryots, and I suppose to the zemindars also, of the advances which are made by the Government in relation to poppy cultivation—do you agree with that?—I do not.

10987. Do you desire to tell us, in conclusion, that both landlords and cultivators are against the prohibition of opium?—Yes. As far as I know they are against it.

10988. (Sir William Roberts.) Is eating opium considered a disgraceful thing in this province? Not for medical purposes, but taking it in excess is thought to be disgraceful.

10989. Is the moderate use of opium—I do not mean for medical purposes but for restorative or comforting purposes, considered a disgraceful thing in this province?—Excess is thought to be disgraceful, but moderate consumption is not thought disgraceful.

10990. (Mr. Wilson.) You say that smoking affects to some extent the physical condition of the people—in what way?—I have seen many people get lean and thin, and in a wretched condition, becoming very dull.

10991. Do they get intoxicated with it?—I do not think they get intoxicated. But constant use reduces a man to a certain extent.

10992. Do you mean the smoking of *madak* or *chandu*?—I mean *chandu*.

10993. Not *madak*?—Not *madak*.

10994. Do you think there is any difference in the physical effects on their bodies between smoking and eating?—Yes.

10995. What is the difference?—Smoking is worse.

10996. Does eating do a little harm?—To some it does, and to many it does good; there are different constitutions.

10997. (Chairman.) And the quantity differs too?—The quantity too.

10998. (Mr. Wilson.) Do you think that most of the Hindus in Behar eat opium or smoke it, or both?—They mostly smoke *madak*.

10999. More than eat it?—Yes.

11000. You say that the cultivators are against prohibition?—Yes.

11001. You think they are in favour of cultivating opium?—I think so.

11002. Have you ever heard of any who objected to cultivating it?—I do not think I have heard of any.

11003. You are a zemindar?—Yes.

11004. Do any of your ryots ever object to growing opium?—No. Not one.

11005. You never heard of any?—No.

11006. Can you give us any idea how much profit they make on a bigha of opium?—In this district, I think, not less than Rs 100 or 150, including the zemindar's share per bigha.

11007. (Mr. Mowbray.) Do many of your tenants cultivate the poppy?—Yes, I think so.

11008. (Mr. Haridas Veharidas.) Do you know whether the cultivators cultivate voluntarily or whether they are asked to cultivate?—Both. Sometimes they are asked by Khatadars and Zilladars, and sometimes they volunteer doing it.

11009. (Sir James Iyall.) Do you think that the officials of the Opium Department, particularly the minor officials, have any sort of power which would enable them to bully or coerce a man into cultivating, who wish to give up?—I do not think so.

11010. Is there any trick by which they can compel or coerce him?—They might induce him, I do not think they can compel.

11011. They might flatter and persuade him?—I know some instances where they persuade, but they have never compelled.

11012. Are the ryots sufficiently intelligent to know that they are free in the matter?—They are; now-a-days every ryot is intelligent.

11013. When you talk of persuading, in what way do they get over them?—I was once in a village, when a Zilladar was there. Some of my ryots had left cultivating poppy, and they were going to cultivate potato. This man went to try and persuade them. A ryot then came to consult me. He pointed out the convenience of the profit of potato cultivation, and I found from the figures that the profit of the potato was greater than that of opium. I said: "It is at your option." There was no case of compulsion.

11014. Did the ryot cultivate opium?—No. He stuck to the potatoes.

The witness withdrew.

Adjourned till to-morrow at 11 o'clock.

The Hon.
Syud Fuzl
Imam.

At the College Hall, Bankipur.

THIRTY-SEVENTH DAY.

Thursday, 4th January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
 THE HON'BLE SIR LACHMESWAR SINGH BAHADUR,
 MAHARAJA OF DAREHANGA, K.C.I.E.
 SIR WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
 " ARTHUR PEASE.
 " HARIDAS VERHARIDAS DESAI.
 " H. J. WILSON, M.P.

THE HONOURABLE T. A. BRASSEY, *Asst. Secretary.*

*The Rev.
 Daniel
 Jones.*

The Reverend DANIEL JONES called in and examined.

11015. (*Chairman.*) I believe you are a missionary of the English Baptist Missionary Society?—I am.

11016. And you have been in India for 19 years, I believe?—Yes.

11017. And I believe you have mixed a great deal with the people?—Yes, I have mixed freely with the people and know their language. Soon after I came to India I learnt that those who were known as opium-eaters were not looked upon as respectable people. The effect of opium consumption upon such as I have known was to brighten them up for a time, but the after effect was the very reverse; they became dull and listless with little or no desire to exert themselves. From respectable and educated Hindus and Mahomedans I have heard on different occasions these same words. "We hate opium-eaters." An educated Mussalman in good position could only account for certain Mahomedans giving evidence in favour of opium by saying that they must be opium consumers themselves. A respectable educated Hindu once told me that there is a saying amongst them, in which opium-eaters and gamblers are classed together. The saying is, "Afunchi-Juari." I have heard it frequently said that it is next to impossible to give up the habit, and I have known some sad cases. I have lived for about seven years in the districts of Monghyr, Benares, and Patna; and have, since the opium question has been so much discussed of late years, taken considerable interest in the question. I have not found in conversation with the cultivators that poppy cultivation is popular, but on the contrary I have found that many have given up growing it, and many others are desirous of giving up the cultivation of the poppy. When asked why they desire to give it up, they answer, "It does not pay, there is so much risk; and also much labour needed." The risk as compared with other crops is considerable, from hail, heavy rain, the east wind, and insects. Then there is so much of ploughing and watering that they have to work hard to secure a crop at all. I have been repeatedly told by cultivators that they would not grow opium were it not for the money advanced them by Government. It is a temptation to them to take this money because it comes to them at a time when they need money to pay their rents; but it not unfrequently happens that they fail to get a crop, they have then to make good the money advanced to them. In this connection I have found that the middleman—the Khatadar or Lambardar, is made responsible for returning this money, and when they have not been able to make it good they have told me that even there cattle are sold and they have been left to secure the money from the cultivators when and how they could. One old Khatadar, who was supported in his statements by several others, told me that had he continued to cultivate the poppy for two or three years more he would not have an ox or anything left, and as it was it did not look as though he had much left. Thus we find that only the very poor engage in this work. It requires harder work to cultivate poppy than those less poor are willing to give, and even these very poor ones grow as little as they can, just enough to secure the rent money for such other land as they have on which they grow other crops. I would add here that on close calculation, taking each item

of expenditure separately as given by the cultivator himself, I have found, on comparing expenditure and receipts, that the cultivator is a loser by this cultivation of opium from 20 to 25 per cent., possibly more. This is not as it should be, and perhaps what is sadder still is this, that the ignorant cultivator does not know that he is losing to such an extent. The profits that accrue to him from his other crops are swallowed up to a great extent by the loss on this side. He does not see this because he pays *in kind* and not in cash. Nor does he keep a detailed account, besides which several members of the same family engage in the work, and so they manage after a fashion, but it is only a question of how little can they manage to exist on. Opium has been spoken of as profitable to the cultivator on account of the leaves they gather for food therefrom. This I find is a very limited source of profit and can be had only for a short time, when the leaves are young and tender. Then for the seed I find on enquiry that 3 maunds is the maximum amount from one bigah of poppy, which the cultivator sells to the oilman for Rs. 4 per maund. Thus realising Rs. 12 only, oftener less; the oil made from this seed for cooking purposes he has to purchase for himself. I have met with one cultivator who suggested to me that, if instead of poppy, food grains were cultivated, the latter would become much cheaper, and so far they would be losers, but surely this is a phase of this question which the Government would do well to look into. Prices for food grains are high, the consumers are on the increase, and the cry of the poor is heard in the land. When I think of the more than 400,000 bigahs of land or 250,000 acres in Behar province, that are devoted to the growth of what the people of England label Poison, but what some people in India would have us believe is such a boon and a blessing to men. I feel like crying out with all my soul; "Give the people bread and not a stone." Here in this province of Behar where some 4 million pounds of opium are grown, 300 million pounds of wheat might be grown. It does not require any stretch of imagination to conclude that the masses would be happier and stronger and better every way by eating bread and wholesome food. The poverty of this province is proverbial, and there can be no doubt that the extensive cultivation of the poppy in the province has much to do with this state of things. Should any objection be urged against wheat and for sufficient reasons, there are other crops, which the cultivators themselves have told me they would willingly cultivate in the place of opium. It is well known that instead of the—as a rule—one crop of opium yearly that is produced, as many as four other crops of good paying kinds can be grown in the year. There is another point to which I desire to call attention. That is the cutting down of mango trees on such a large scale for the making of opium chests. It has been said that if the opium trade were stopped there would be danger of a rising among the people who consume it. Is the opium trade really in need of such an argument? When I have asked people who ought to know the feeling of their countrymen on the subject, whether they thought there would be any trouble on this account, they have spoken very positively in the negative, and expressed surprise, that in such a connection they could have been suspected of such a thing. But there is considerable feeling, I am told, in reference to the cutting down of the

4 Jan. 1894.

mango trees. An influential Indian gentleman told me the other day that the people of India love their cattle, their corn and their fruit, and referred to the time years ago, when whole groves of mango trees had been cut down to supply the then newly made East Indian Railway with fuel for the trains, remarking that those groves have never been replaced, and that feeling ran very high among the masses at that time. Now I am told that on an average one tree is needed to make one chest. I am not positive that it is so, but it is a fact that yearly thousands of good fruit-bearing mango trees are cut down for the above-named purpose. It takes many years for a tree to grow into a good fruit-bearing tree. And one such old tree is worth 100 young ones.

How does this affect the people? At one time 2,000 mangoes could be bought for Re. 1, that is, in the district. It is not so now. This was a staple food of the poor. They take the fruit and boil it, eat the pulp and then break up the seed in a mortar, which after a cleansing process yields a white flour, of which bread is made, and in times of scarcity is eaten by all castes, but by the poor is eaten every year. Some may regard this as a matter of small moment, but it is another link in the chain of losses sustained by the people of India on account of the poppy cultivation, nor does it in the least tend to pacify the people at a time when such pacification is desirable. Permit me also to call earnest attention to the fact that from some cause or other the opium revenue is on the decrease, and to beg you without delay to devise some means for replacing it before our Government is driven to do so by force of circumstances. The resources of India are not so limited. Make it more difficult for men to get drunk. Get revenue in that and kindred ways. There is a cry going up all over India from millions of helpless ones "Deliver us from the curse of opium and alcohol."

11018. I notice at the conclusion of your statement your reference to alcohol: may I take it from you that while you have expressed in strong terms your objection to the use of opium excepting under a medical certificate, you would entertain an equally strong objection to the use of alcohol excepting for medical purposes?—Quite so, equally as strong.

11019. You have insisted strongly on the unfavorable return to the cultivator of the poppy: I presume your objection to the cultivation of the poppy would not be mitigated by a more liberal payment from the Government to the cultivators?—The cultivators themselves would profit by other grains.

11020. Confining our attention to the poppy your objection to the cultivation would not be removed by the concession of more liberal scales of payment by the Government to the cultivators?—I should not recommend that.

11021. Such a course as that would tend, would it not, to render the poppy cultivation more popular, and that is not what you desire?—No.

11022. You speak of an aggregate of 250,000 acres in Behar province given up to the cultivation of the poppy—is that supported by statistics?—Yes, fully so, it is somewhat more.

11023. (Sir James Lyall.) Your argument is that if instead of poppy food grains are cultivated food would be cheaper for the masses?—Yes.

11024. The same argument could have been applied to the cultivation of cotton in years when the supply of cotton from America failed; the immense extension of cotton cultivation for export raised the price of food for the masses very greatly, yet is it not the case that the money poured into India in those years especially on the Bombay side and it was thought a benefit to the ryots and was encouraged in every way by the English Government and by the English people?—I cannot say.

11025. In the same way the large export of wheat to England and to Europe which is going on at present no doubt raises the price of food for the people, but it is generally thought to be a benefit to India and the English Government requires the Government of India to promote it in every way?—If that be a sufficient reason against wheat then there are other crops.

11026. My argument is that the export of wheat to England in the same way raises no doubt the price of food to the masses, but it is generally thought to be a benefit to India on the whole and the English Government requires the Government of India to promote it in every way: if that is the case then your argument that the poppy cultivation does harm by taking the place of food grains hardly applies, does it?—If it can be shown that by the exportation of wheat the cultivators are benefited, I do not see how that applies to the question of the losses sustained by the cultivators in growing poppy.

11027. It does not apply to the asserted loss, but it applies to the argument that it raises the price of food to the masses?—The return, as far as I understand the question, would be more direct to the people in this case than the return of the opium traffic, which would be to the Government.

11028. That is another question, but you cannot separate the Government from the people in a matter of public revenue, can you?—In the matter of the opium traffic I think most decidedly so and if I have endeavoured to show that the cultivator is a loser, whilst of course the Government is not a loser.

11029. The public revenue belongs to the public and not to the Government only?—If the revenue is to be raised let it not be taken out of the pockets of the cultivators.

11030. I am not going into the question whether the cultivator loses or not. I was going into the question of whether the price of food is raised to the masses?—If it be a healthy trade then of course the cultivator would profit thereby.

11031. You call poppy as a rule a one crop a year crop; is that correct?—I understand that frequently Indian corn is not grown just before the poppy is sown; it does not follow that every year the Indian corn is grown along with the opium crop or rather before the opium crop.

11032. But is it not a rule that two crops are grown a year on the ground which grows poppy: many witnesses have cited that to us?—Others have told me that it is not always so.

11033. Mr. Wace, who is an officer of experience in this sort of thing, told us yesterday that he knew instances of where four crops had been grown in a year—that poppy was one out of four crops in a year?—I have understood from cultivators that four crops referred to other kinds of crops which are not grown in connection with the poppy neither after the poppy nor before it.

11034. Does not your objection to the cutting down of mango trees go very far. I suppose you admit it is a good thing for the owner of the mango trees, he knows what is best for him?—He is possibly tempted to sell the trees because he has a good price offered for them, but it is a good price at one time, a lump sum paid, which would be more than refunded by keeping the trees standing and selling the crop of fruit. Besides it is not one person who suffers—there are many sufferers.

11035. Do you know any country where such a principle is followed, that in order to benefit the masses—that is to keep the prices low, for instance in this case to keep the price of mangoes down to 2,000 for the rupee, the owner of the tree is not allowed to sell it—is there any country in the world where such a principle is followed?—I know of no country in the world where there is such fruit for the masses as the mango is for the Indians.

11036. You have said, "Make it more difficult for men to get drunk"—I suppose you mean by raising the price of liquor?—Not by lowering it by any means. That has been done recently I understand.

11037. Are you aware that in the Punjab for instance and in some other parts of India the price of liquor has been raised within the last 30 years in the same proportion as it would be if we had raised the price of beer in England to the price of champagne?—I am not well up in those matters. But I know in this province native liquor has been reduced from six pice to four pice a bottle recently. That would probably be like reducing the price of champagne to the price of beer.

11038. That is extraordinarily cheap—are you sure of your figures?—I think I am.

11039. In the Punjab the ordinary price is about twelve annas a bottle?—It was much dearer I think in these parts a year ago.

11040. (Chairman.) Is the alleged reduction in the price of native liquor of which you speak due to any action on the part of Government?—I could not say; but I have heard that the Excise officer has done this.

11041. (Mr. Fanshawe.) I see you refer to the use of the term "Afimchi"—would not that ordinarily mean an opium-eater in excess?—It would surely refer to one who is known as an opium-eater.

11042. It would refer to one who eats opium in excess, would it not?—Possibly so.

11043. Do not you think it would represent with regard to opium what the term "drunkard" represents with regard to the excessive use of alcohol?—Possibly so.

The Rev.
Daniel
Jones.

4 Jan. 1894.

The Rev.
Daniel
Jones.

4 Jan. 1894.

11044. I see you state, that "even these very poor ones grow as little as they can"—is it not the case that poppy cultivation is chiefly in the hands of market gardeners?—I know that they do so.

11045. A man of this class has not a large holding, as a rule, but he is a thrifty and good cultivator, is he not?—I believe that he needs the advance from Government in order to help him.

11046. But still he is a good cultivator?—One of the best types of cultivators, though he has not a large holding as a rule.

11047. When you say that even these very poor ones grow as little as they can, does not that give rather a wrong impression of this class who are among the best poppy cultivators?—I say that it is a temptation to them to take this money because it comes to them at a time when they need money to pay their rents.

11048. What you say is practically that they put just enough land under poppy to secure the rent money?—Yes.

11049. Is it not the case that the land which may be put under poppy cultivation is limited by considerations of soil, manure, water and various conditions of that kind?—That is so, but I have been told by men who take this money that if they did not receive it they would not grow the poppy.

11050. That is to say, the advance is a very material consideration in their undertaking poppy cultivation?—Quite so.

11051. And of course if the advance was not given the price of the opium would have to be raised?—Yes.

11052. Do I understand you to wish to say that the cultivator is not free, or does not think himself free, to cultivate poppy or not as he may think fit?—I think different statements are to be obtained from different cultivators on that subject.

11053. Speaking generally in the present day, do you not think that it is perfectly well understood by cultivators that they are free to cultivate, or not to cultivate, poppy?—My idea is that near cities and large towns the cultivator is more enlightened, but further away in the districts where the people are very ignorant the desire of Government would be in their estimation equivalent to a command.

11054. Even so, do you think that they would be willing to work out of pocket in order to cultivate a crop to please Government?—The difficulty lies in the fact that they do not know that they are out of pocket. The out-of-pocket business is in this way, they lose their profits on one side by the loss on the other. There may be a little profit on the whole and they think they are pretty well off.

11055. (*Sir James Lyall*). Do you believe that the cultivator considers a desire expressed by Government officials to be equal to an order upon actual experience or from theory?—Actual experience.

11056. Can you quote any instance?—I know the desire of poor men is generally to do what is wanted—"what your desire is".

11057. They will say that to you or to me or to anybody, but when it comes to a matter of profit or loss do they actually carry that out in practice?—I suppose they would be prepared to even take a loss if the Sircar ordered it.

11058. If the Sircar ordered it, but if a subordinate official goes and asks them that is a different matter. They all know that many people have been giving up the cultivation of the poppy, do not they?—I do not know how far that is known by the ryots.

11059. Every man must know that, even the least enlightened?—What I wanted to explain was, that if the cultivator thought it was a thing that was wanted of him, whether it was put in a direct order or not, he would think it would be his duty to obey.

11060. That is your experience?—That is my experience—widely so.

11061. (*Mr. Haridas Vekaridas*). You said that the effect of opium and alcohol is equally bad?—I consider them equally bad.

11062. Do you say that from your own point of view or that the Hindus and Mahomedans consider it equally as bad?—The people I have spoken to think that alcohol is more manifest in its effects, and that in one sense its ravages are making themselves more manifest in these days than opium.

11063. You are a Missionary and you are aware that the Hindu religion prohibits the use of alcohol?—Yes.

11064. And also the Mahomedan religion?—Yes.

11065. And you are also aware that it does not so expressly prohibit opium as alcohol?—I understand in the Mahomedan religion all kinds of intoxicants are prohibited.

11066. Especially alcohol, but opium is not so expressly prohibited?—I do not know whether there was so much opium consumed in those days.

11067. (*Chairman*). As a matter of fact the prohibition of alcohol is more expressed in their sacred book?—I understand that liquor is prohibited.

11068. (*Mr. Haridas Vekaridas*). In the Hindu religion is opium expressly prohibited?—I cannot say.

11069. You say that alcohol is prohibited?—As to the Hindu religion I have no data that I can remember.

11070. (*Mr. Mowbray*). You propose to prohibit opium absolutely except for medical purposes?—Yes, except for medical purposes.

11071. You propose also to get a revenue from drink, why do you make that distinction between the two if you tell us you have an equal objection to both?—I have no hope that alcohol could be prohibited entirely just now, but I should hope that by highly taxing it that would be one of the means of a great decrease in its consumption.

11072. What is your reason for thinking that although opium might be possibly prohibited it would be impossible to prohibit alcohol?—I have not spoken of prohibiting opium as a medicine.

11073. I assumed that all through. I am not putting it in that way. Tell me why you think it possible to prohibit opium and not to prohibit alcohol?—The ravages of alcohol are very considerable at the present time and are very rapidly spreading.

11074. That is not an answer to my question. You have told us that you consider opium and alcohol equally objectionable, and you propose to prohibit the use of opium except for medical purposes; and you propose to raise a revenue from alcohol: you have told me that you consider it impossible at the present time to prohibit alcohol, but you do not consider it impossible to prohibit opium. I ask you what the difference is between the two which makes you think it possible to prohibit the one, and not possible to prohibit the other?—I have spoken here in reference to drink. I have said "Make it more difficult for men to get drunk. Get revenue in that and kindred ways."

11075. I want you to give me an explanation of the answer which you have already given, that you recommend the prohibition of opium because it is practicable to prohibit it, and you do not recommend the prohibition of alcohol?—Perhaps I have not done it here but I might have added it if I had thought a little more. I may say that I belong to the Prohibition League with reference to alcohol.

11076. If you are unable to answer the question for yourself, shall I put this answer to you and see whether you will adopt it?—Is it that by prohibiting opium you will only interfere with the customs of the natives, and that by prohibiting alcohol you will interfere with the customs of Europeans in this country?—I have not thought of it in that light.

11077. Have you thought of any explanation for the answers which you have already given to me that you were in favour of prohibiting opium because it is practicable and not in favour of prohibiting alcohol?—I am most decidedly in favour of prohibiting alcohol. I do not know that I have said I am not. I have not stated it distinctly here, but I mean until such time arrives for the prohibition of alcohol, get all you can out of it by putting a heavy tax upon it.

11078. Then you are in favour of prohibiting alcohol?—I have just said I am a member of the Prohibition League for India.

11079. What do you mean by making the suggestion that you can do away with the opium revenue and make it up by levying a further tax upon alcohol if you are at the same time in favour of the prohibition of alcohol?—I regard that question as of such paramount importance that I consider it worthy of a Royal Commission. The ramifications are so great that you could not expect me to give an answer to such a very wide question. I understand that in the House of Commons a resolution was proposed by Mr. Webb that such a Commission should be appointed to enquire as to what ways and means might be adopted to supply revenue in the place of opium.

11080. You have made a suggestion in one sentence which you now draw back upon, I therefore wish to know what the value of the suggestion is. Your suggestion is that it would be possible to replace the opium revenue by getting an increased revenue from alcohol, and you now tell me that you are in favour of the prohibition of alcohol, which is a

totally different thing from raising a revenue from alcohol?—I should most decidedly hope that that would be one of the things the Royal Commission might decide.

11081. You have no suggestion to make how you would make up the combined loss of opium and alcohol revenues?—I think that is beyond me.

11082. I do not quite understand how you reconcile the two statements that you made in answer to Sir James Lyall. You said that the opium crop is as a rule a one year crop, and you have told us that the opium cultivator although he loses on his opium makes so large a profit on his other crops that he is not aware of the loss that he makes on the opium. I do not understand if opium is a one year crop where he gets the opportunity of making a profit on the other crops?—He grows at the same time in other parts of his holding other crops.

11083. You have told us you have given a close calculation as to the items given by the cultivator himself—you are aware of course that other persons have also formed estimates on this subject?—I understand that it is so in the Government records.

11084. I do not know whether you heard Mr. Wace give his evidence yesterday as to the extreme difficulty of arriving at any trustworthy conclusion?—I did not hear his evidence.

11085. You are aware that in the reports of the Commission which sat about ten years ago and which went into this matter very fully, there was an estimate arrived at which is very different from the estimate which you have given to-day?—I am not aware of it.

11086. Could you give me any idea of the number of cultivators or the number of districts from which these items have been derived?—I have a knowledge of only this district, the Patna district.

11087. Do you mean the whole of the Opium Agency of Patna, or this particular district of Patna?—I have had information from one cultivator, and I find that the statement is substantially correct as given by others from other parts of the district and from other districts; but I have not been going about to gather this information from district to district.

11088. Can you give me any rough notion as to how many cultivators there are in the Patna district whom you have had the opportunity of consulting to arrive at these figures?—I do not know—I have no idea of that.

11089. You have had a direct statement from one cultivator?—Yes.

11090. And you compare that with something else—I do not understand what?—With others who know of this in the same way by asking other cultivators. I find that I am rather more in his favour than the others are; they show a greater loss even than I do.

11091. What was the difference between the one man from whom you got the items and the others with which you compare them?—They show that in the case of those from whom they had information the loss is even greater than I showed.

11092. You mean that you did not compare the result which you arrived at with the actual cultivators, but you compared it with other people who had had estimates from enquiries which they had themselves made?—Yes.

11093. Then so far as personal information goes, that calculation is based upon the items given by one cultivator?—By one cultivator; I speak of it as such is in my paper.

11094. (Mr. Wilson.) You were asked some questions about the cutting down of mangoe trees; is it not the object of the Forest Department in this country, and of any depart-

ment that looks after the forests, to take care that trees necessary for the benefit of the people as a whole shall not be improvidently cut down for the pecuniary benefit of a particular individual?—I should think it ought to be so, but I have no personal knowledge of that.

11095. Therefore you would say that for the sake of the people at large there ought to be something to prevent a selfish man in the immediate want of money from destroying that which may supply large quantities of food for the people?—Most assuredly.

11096. Have you seen a return relating to opium presented to the House of Commons being an article by Dr. Watt in which the calculation is made as to the cost of cultivation?—I have.

11097. Are you aware that in this article, page 42, it is stated that the price paid by Government for the drug alone is in districts where the soil is good and the cultivation moderately careful, not much less than Rs. 50 per acre, and that something more is realised from the seed and dry capsule?—Yes.

11098. There are three items of cultivation given by Dr. Watt?—Yes.

11099. What do they add up to in the print?—Rs. 38-4 as.

11100. Is that correctly added?—It is not.

11101. What do they really add up to?—Rs. 43-4 as.

11102. Making a difference of Rs. 5. against the cultivator?—Yes.

11103. Less profitable than is represented there?—Yes.

11104. And adding the rent as he adds it, of Rs. 10, what do you make the total?—Rs. 53-4 as.

11105. Against what?—Rs. 43-4 as.

11106. That is Rs. 5 less profit?—Yes.

11107. Therefore instead of showing a profit, as he shows, of Re. 1-8 as. on opium alone, it shows a distinct loss on the opium alone which can only be compensated by leaves and trash and other things?—Quite so.

11108. Considerably vitiating the argument there?—Quite so.

11109. I think you made that discovery in the article yourself?—I did.

11110. In regard to the question of getting revenue from drink, may I put it to you that you wrote this statement somewhat in haste, and on full consideration you are not in favour of getting revenue from drink any more than from opium?—I should be going against my principle if I thought that drink was to be treated in such a way as to get a revenue from it. My statement is that it should be made difficult for a man to get drunk. That shows that I am not in favour of drinking as such.

11111. The question put to you by Mr. Mowbray and your replies to it appeared to show that there was some inconsistency between what you had stated here and your reply in reference to prohibition. I suggest to you that you wrote that somewhat hastily and on mature reflection, you do not propose to get a revenue from drink?—It is true that I wrote this under the pressure of other business and had not as much time for it as I should have liked. On mature consideration I would not propose by any means to get a revenue from the taxation on alcohol.

11112. You say, "an educated Mussalman in good position could only account for certain Mahomedans giving evidence in favour of opium by saying that they must be opium consumers themselves: "—was that recently?—Recently.

11113. Has that reference to the evidence given before the Commission?—Yes, direct reference.

The witness withdrew.

Mr. A. M. MACRAE called in and examined.

11114. (Sir James Lyall.) I believe you are an indigo planter?—I am.

11115. In what district?—Tirhut.

11116. How many years have you been engaged in that industry?—Twenty-six years altogether, deducting the time I have been at home.

11117. Will you give us your experience with regard to the cultivation of opium?—Poppy is grown by many of my ryots, particularly by Koeris, who are the most prosperous

cultivators and the best farmers in India. They consider it a profitable crop. They grow it in fields close to their houses, and the whole family assist in gathering the opium. The advances they get help to pay the rent of their holding, and they go of their own accord for those advances, being only too glad to get money without interest. I have never heard of any ryot having been coerced into growing poppy, and they would consider it a great loss were the poppy cultivation to be put a stop to. They would find it more difficult to pay their rents, and the zemindar would find it more difficult

*The Rev.
Daniel
Jones.*

*Mr. A. M.
Macrae.*

Mr. A. M.
Macrae.
4 Jan. 1894.

to meet the Government revenue. Every one would suffer from the abolition of the poppy as the revenue now derived from it would have to be made up, directly or indirectly, from the community at large. The crops that would take the place of the poppy are wheat, barley and oats, but these grain crops are much more exhausting to the soil than poppy, and the succeeding crop of maize is not so good after grain crops as after poppy. The profit from these grain crops is not as much as from the poppy. Were the cultivation of the poppy prohibited, there would be an immense amount of smuggling from the Nepal territory. It would be impossible to efficiently watch its long boundary. Those who use opium, and all classes do, must and will have it. I have never seen a man injuriously affected through eating opium.

11118. Does indigo compete at all with poppy on the same land?—Poppy is generally grown close to the houses.

11119. And where is indigo grown?—On almost any part of the holdings except in the low rice lands.

11120. Do the same men cultivate poppy and indigo?—Yes.

11121. Do indigo planters who get their indigo from ryots make advance to the ryots?—They do.

11122. In a similar way to that in which the opium agents make advances for poppy, or in a different way?—In a different way. They take an agreement for a term of years from the ryot and give him an advance which remains until the end of the term.

11123. And there is a running account on the permanent advance?—The permanent advance remains, and yearly he gets his full account.

11124. Is interest charged on the advance?—No interest is charged.

11125. Are other crops also cultivated in the same year and on the same field which grows poppy?—Always.

11126. The previous witness has said that the Behar ryot near towns is too intelligent to be coerced or bullied by the Opium Department officials into cultivating opium against his will, but that in the remoter tracts, in the village country, the ryot is still afraid to oppose any Government official, that if a Government official asks him to cultivate poppy he takes it as equivalent to an order from Government, and is afraid to refuse: do you, from your long experience of the country and of the ryots, think that is true?—No, it is not true.

11127. You are sure it is not true?—Quite certain.

11128. Are the Opium Department officials people of whom the ryots stand in awe in any way?—Not at all.

11129. (Mr. Pease.) You stated that the poppy was a more profitable crop than the other crops which you have mentioned, wheat, barley and oats: could you give me the figures upon which you base that statement?—It is not easy to give the figures. I go more upon the fact that poppy is a crop that does not impoverish the ground; whereas grain crops do; but I should say that the return from poppy would be more valuable than the return from grain.

11130. Was it not a fact that some years ago the money paid to the poppy cultivator had to be increased because the lands were being devoted to other crops?—About that time the prices of grain did go up. The price of grain is now nearly three times what it was when I went into Tirhut in 1855. You could then get three maunds of paddy, *i.e.*, rice in the husk, for a rupee; now you cannot get one maund for a rupee.

11131. You think, taking the present prices of other produce, it is to the interest of the ryot to grow poppy?—It still is, taking the present rates.

11132. (Mr. Wilson.) Do I understand that oats would be a substitute for poppy?—It would grow on the same lands.

11133. Is it a crop that they would ever think of growing instead of poppy?—They would either grow one of the three, wheat, barley or oats.

11134. Kindly answer my question. Are oats a crop that would be likely to be substituted for poppy?—Not in poppy-land. In the land near houses in which they at present grow poppy they would not be likely to grow oats.

11135. I think you mentioned that oats might be grown as a substitute for poppy?—I mentioned it as one of three.

11136. We will take oats first. You mention that as a possible substitute?—Yes.

11137. Do you think it is a likely substitute?—The value of oats is very high just now, and it is just possible that they would.

11138. You think it is a likely substitute?—Yes.

11139. We have had a number of witnesses who have suggested various other crops: I think we have never had oats suggested before, but you adhere to your view?—I do.

11140. Why is poppy grown near the villages?—The field near to houses of course are fertile.

11141. Why?—They are better manured than the fields at a distance.

11142. Therefore poppy requires more manure than other crops?—It is more convenient for the members of the family, the women and children, to gather the juice of the poppy-heads.

11143. Poppy requires more manure than most other crops?—I should not say that.

11144. You said it was grown near the villages because it was convenient to manure?—That is one reason: the ground is fertile, and gives a good return of opium.

11145. It does require more manure than most other crops?—I do not think it does.

11146. You said just now that it was grown near villages because it could be manured there?—Yes.

11147. Did I understand you to say that indigo planters and others who make advances for indigo do not charge interest?—They charge no interest.

11148. Have you ever heard of Mr. Gibbon, the Manager of the Bettiah Raj?—I have.

11149. He told us that if a cultivator deems it necessary to take advances upon other crops from the trader, he must pay a heavy interest on the advances: that is not your experience?—I do not understand what he means by "trader": he did not mean an indigo planter.

11150. Do you mean that indigo planters do not charge interest?—They do not charge interest.

11151. If anybody has said they do, they have made a mistake?—Yes, they have made a mistake.

11152. Is sugarcane a substitute for poppy?—No.

11153. May I ask you who invited you to come here?—The Collector of the district.

11154. When did you come?—I came yesterday.

11155. (Mr. Mowbray.) Are opium and indigo ever grown on the same plots?—Yes, they are.

11156. Is that a thing of recent years?—No, as far back as I can recollect.

11157. (Mr. Haridas Veharidas.) Do some of the cultivators who grow for you give up the opium and take to indigo?—Yes.

11158. Are they more in favour of indigo, or of poppy?—I really could not say, they grow the crop that pays them best, that suits each individual best.

11159. So that it is not what pays best, but what suits best?—What suits them best, that is the same thing as what pays them best.

11160. Does your indigo pay them more than poppy?—I have not gone into statistics, but the same ryots who grow opium in a portion of their holding grow indigo in another portion of their holding.

11161. Have you instances in which your cultivators have given up poppy altogether and continued your indigo growing?—I am not aware.

11162. Or vice versa?—I do not know.

11163. (Mr. Fanshawe.) You have stated that other crops are always grown on the same land as poppy. We have been told by a former witness that a crop of maize generally precedes opium and sometimes millet follows: were you referring particularly to the maize as being most commonly grown with poppy?—Yes.

11164. That would be the crop which you say is generally grown during the same year with the poppy?—Yes.

11165. We have been told by Sir Edward Buck and by other witnesses that on the lands near villages the crops which would be the chief competitors with opium would be tobacco, potatoes and sugarcane: do I understand you to say that you do not agree with that at all, or that it has not come within your own experience?—Not in my part of Tirhut.

11166. Does your experience of poppy cultivation relate mainly to land near villages, or to outlying land?—Land cultivated near villages.

11167. You would not yourself think that those three crops would be competitors?—No, I do not think so, not in those lands.

11168. You are aware that in the past it was thought that certain crops were closely competing with poppy; are you also aware of the results of certain inquiries made in 1883 by some officers appointed by Government for this purpose?—No, it is not within my knowledge.

The witness withdrew.

Mr. GURU PRASAD SEN called in and examined.

Mr. Guru
Prasad Sen.

4 Jan. 1894.

11169. (Chairman.) You are practising at the Bar, I believe?—Yes.

11170. At Patna?—Yes.

11171. You desire, do you not, to confine your evidence to two main points?—Yes.

11172. What is the first point you wish to take up?—The cost of the production of opium per bigha as incurred by the ryots.

11173. What is your general view on that subject: do you believe that the cultivation of the poppy at the rates at present allowed by the Government gives a fair return to the ryot?—No; they cultivate the poppy at a loss.

11174. Is the cultivation difficult?—Yes, very difficult.

11175. What are the principal processes?—The processes are ploughing, manuring, irrigation, weeding, lancetting and extracting.

11176. Is it necessary that the ground should be ploughed a considerable number of times?—Yes.

11177. How many times?—From what I have learned it varies from 12 to 25 times, according to the nature of the soil.

11178. What do you put as the total expense for ploughing?—Fifteen times is the average for all kinds of soil, and the cost I put at Rs. 6-9 as.

11179. Do you take, in addition to that, the cost of the feed of the bullocks, and, if so, what would that amount to?—Spreading it over from 15 to 18 bighas, it would amount to Rs. 2.

11180. Do you take an item of cost for interest of money?—Yes. There is the item of cost for the outlay on bullocks and ploughs, with renewal thereof, and the cost incidental to repairs, etc. The ryot often does it with borrowed money and has to pay interest to mahajans, etc. This, for one poppy season, would be little over a rupee.

11181. Then as to manure?—Manuring for a bigha is variously estimated at from Rs. 2 to Re. 1 per bigha.

11182. Then how much for irrigation?—The highest is nine times a bigha, and the lowest six times. The whole expense would be Rs. 6 per bigha.

11183. Then as to weeding?—Rs. 2-4.

11184. What is lancetting?—Making an incision.

11185. What figure do you take for that?—Rs. 2-13 as.

11186. And extracting?—Rs. 5-10.

11187. Then you have some other charges for seeds and Mahtowari payment; contribution towards supervision; the cost of cultivator's travelling; and rent, which you take on the average as Rs. 10 for a bigha?—Yes.

11188. And adding up all those figures you get a total of how much?—Rs. 37-14 as.

11189. What is a bigha?— $\frac{1}{4}$ ths of an acre.

11190. Having gone through the estimates of the expenses you turn to what the ryot has been getting for his poppy land for eleven years over which your calculation goes, and the whole amounts to how much?—Rs. 28-12 as. The price of four seers six chattacks of opium is Rs. 21-14 as.

11191. Then there is something for Pattal—that is another item of receipt?—Yes, 8 annas.

11192. And for seeds?—Rs. 6.

11193. And interest on advances?—Six annas.

11194. The whole amounting to Rs. 28-12 as.?—Yes.

11195. So that on a bigha the cultivation of which has cost Rs. 37-14 as. the receipts have averaged Rs. 28-12 as., showing, according to your calculation, a loss to the ryot of Rs. 9-2 as.?—Yes.

11196. That being according to your view the pecuniary result to the ryot, can you explain to us why it is that the poppy cultivators cultivate the poppy at a loss?—In many places they have given it up for sugarcane, potatoes, and for other paying crops, and poppy under the present conditions will probably die out in the course of a few years. Most of the ignorant cultivators do not know that they cultivate at a loss; they pay for *bhusa* and for produce wages out of their own stores, and do not calculate the whole cost of production as has here been done; they cultivate it in a small portion of their holding, and the loss in one crop is

made up, by whatever profit they make in another; and so long as, by their cultivation as a whole they can eke out a penurious existence, they do not care to examine any further. They have been doing it from generation to generation with some profit before the last 11 years, and their answer possibly will be why should not they do it now for the advances, which come to them in a part of the year when the annual account for rents with the landlord has to be settled.

11197. The convenience of having these advances at a particular time when money is wanted to pay for rent has been a moving cause for leading people to continue to cultivate when really they were cultivating at a loss?—I would also say that it is on account of ignorance. They do not calculate, but where they have calculated they have come to give it up.

11198. The calculation you have given us refers to the Behar Agency?—Yes, there is another figure for the Benares agency where the amount is Rs. 60-3 as. per acre. That is a calculation by Mr. Wright.

11199. With regard to the Benares Agency, can you give us the general results?—I find from a note of Mr. F. N. Wright, C.S., Settlement Officer, Cawnpore, 1877, that the cost of the production of poppy for one acre of poppy land by well irrigation is Rs. 60-3 as. that of course per bigha is Rs. 37-8 as., which tallies nearly with my figures.

11200. Does the ryot engaged in poppy cultivation suffer to any considerable extent from failures of his crop?—Yes, that is my impression by looking at the figures and by examining the cultivators too. I find from the figures the failures in 1890-91 were 2-3 per cent. of the whole area sown with poppy in the Behar Agency, 4 per cent. in the Benares agency, about 3 per cent. in the Behar Agency in 1889-90 and 4 per cent. in Benares.

11201. You have made an estimate of what the cultivator ought to have been paid according to your calculation simply to cover his expenses?—Yes.

11202. How much has he received per seer?—Rs. 5, if the opium is 70 degrees consistency, and less if it is less than 70.

11203. That is what he has received?—Yes.

11204. What ought he to have received in your view?—I have shown from the figures that he ought to have received at the rate of Rs. 7-8 as. simply to cover his losses.

11205. Then what do you think he ought to have received in order to get a fair profit?—To get a profit of 25 per cent. on the outlay he should have Rs. 2-8 as. more per seer. Altogether in order to give a profit the price ought to be Rs. 10 per seer.

11206. You are here specially to urge upon us that there should be an increase in the price paid by Government per seer for opium?—Yes.

11207. Are we then to recommend that the cultivation should be abolished?—If they are paid fair rates, Rs. 10 per seer as I recommend, it is not necessary to abolish the monopoly. I have not studied that question very much, and I would not be for the abolition of the monopoly, but I would like the ryots to be paid for what they lose.

11208. You have come here looking at the question from a moral point of view to urge that the cultivation of the poppy should be prohibited?—No. That is not the point of view on which I came.

11209. Your point of view is that the price should be more liberal?—Yes, unless it should be considered immoral to compel the ryots of Behar to cultivate at a loss.

11210. Do you think you have reason to complain that India makes too large a revenue at the expenses of the poor ryots of Behar?—Yes.

11211. Can you say anything to develop your view on that point?—Yes. The payment to the cultivators should have been in 1890-91 double what they received or Rs. 3,85,89,258. This would have left us only a revenue of Rs. 1,87,19,483 and in 1888-89 Rs. 1,52,20,891 in the Behar and Benares agencies.

11212. You complain, do you not, that the Government gives Rs. 5 per seer to the cultivator while it makes by the sale of its excise opium in India Rs. 16 to Rs. 40 a seer?—Yes.

11213. You think that Government makes too much and the ryot too little?—I do.

Mr. Guru
Prosad Sen.

4 Jan. 1894.

11214. Have you any general observation to make with reference to the material circumstances of the ryots of Behar?—Yes. Mr. Finucane's experimental survey and record of rights in a part of the district of Mozufferpore during the year 1885-86 established the fact,—a fact which is well known to all those acquainted with the economic condition of Behar, that the average total area held by a ryot, whether under the same or different landlords, was, as far as could be ascertained, about 3 acres. On the produce of this small holding have to live five or six individuals, and this small holding will be divided generation after generation into smaller units. Now, the 3 acres yield under the best possible condition—irrigation by canal waters—20 maunds paddy per acre (the average yield does not exceed 15 maunds). The total receipt is Rs. 69 and the cost is Rs. 27-9 as.; adding up all the charges, and deducting these from the price there is a balance of Rs. 41-7 as. To this a small addition is made from ghi, milk and straw; this added to the whole comes up to Rs. 60 per annum. It is hard to conceive how a family from five to six can eke out an existence on Rs. 60, yet Rs. 12 at the most is the average income of a man of this class in Behar. The charge for food in Gya last year was only Rs. 12 per head. Some sort of chabena (parched pulse) in the morning and a substantial meal of rice and dhal in the evening in ordinary years is what they can get; a pair of *dhoties* serve them for a whole year; they cannot afford to pay for medicine in cases of illness. I might have added that they live in a hut which is worse than a cattle shed. There are no beddings except a *khatia* (bed) and that not always, no utensils but a brass *lota* (pot) or two, and perhaps one or two brass *thalis* (plates). They have to stint themselves in the matter of that necessary article of consumption, salt. During the distress of 1891-92 in the Darbhanga and Muzaffarpur districts alone there were 34,950 deaths in excess of the normal death-rate.

11215. If your recommendations were carried out and a much more liberal sum was paid to the ryot by the Government, of course a necessary consequence would be that there would be a considerable loss of revenue to the Government of India. How do you propose that that should be dealt with?—I am strongly of opinion that whatever is got out of the pockets of the starving population of Behar should be made good to them at any cost, whether it be by the abolition of the monopoly or by the introduction of new taxes, or by the curtailment of expenditure.

11216. Can you suggest any additional taxation?—No, I cannot. The minimum income per head of this country on my calculation (I can place the figures before the Commission) is Rs. 20 a year and the average taxation is Rs. 3 per head of the population, if Rs. 88, 67,900 be taken as the actual revenue, or Rs. 2 per head if the actual revenue be taken as Rs. 59,868,400. With all cesses added, it will be seen that over and above the revenue we derive from land in Bengal under our permanent settlement we now take away about 5 per cent. from the rental, and we have an Income-tax of 2-5 per cent. on incomes other than from land. The poorest of the poor pays for his salt at the rate of 5 annas per head. The suggested tobacco-tax ought not to be imposed in the interest of these poor ryots, for that is their only luxury, for men as well as for women. If the cotton duties were to be re-imposed, the amount received thereby should come in for the relief of the poor in the shape of removing the additional burden imposed on salt, as also for raising the taxable minimum of the income-tax from Rs. 500 to Rs. 1,000, as these taxes were imposed simply because the cotton duties had to be taken away. The expansion of our revenue, whatever it is, ought to come in for relief in the matter of salt duties and for expenditure under the head of education, which has been feeling the shears of late years, while all our other expenses have gone on growing.

11217. Recognising the immense difficulty of compensating for a loss of revenue from opium by other taxation, your suggestion is, I understand, that the deficit should be met by a curtailment of the expenditure?—Yes.

11218. Is it in relation chiefly to the army expenditure that you propose there should be reductions?—Yes.

11219. Have you any practical suggestions to make with a view of reducing the army expenditure?—Yes, there is one item charged in the Budget which used to be only Rs. 500,000 in 1882-83, that is half a million to England for lending troops. The bill is a consolidated one without items shown; and it has since shown a tendency to rise; till in 1890-91 it has come up to Rs. 850,000. I also submit there is no reason why the stores that are now purchased in England, Rs. 19,000, should not be purchased in India with

greater benefit to the Indian tax-payers and the Indian manufacturers. I also suggest that of the regular army of 218,000 men in India, of which 70,000 are British troops, a sensible decrease in this number should be made in order that our army expenditure may be effectually decreased, the charge for one British soldier being four times as much as the charge for a native soldier. I support these suggestions by expressing my belief that India is all loyal, and that if a policy of confidence in the people is established, there is no reason why there should be so much spent on army expenditure. The Indian army would be sufficient, *plus* such an army as England could spare for defending the British Empire in India against all attacks. I have also to suggest that the matter of home charges should be looked to, the net receipt of India is Rs. 47,540,500, and we spend Rs. 21,898,500 on the army, the expenditure in England is Rs. 5,259,200; and that deducting the exchange leaves us only a balance of Rs. 17,753,080 out of the real revenue for the general Civil Administration of India.

11220. Your object in coming before us has been not to recommend the prohibition of the cultivation of the poppy but rather to show that Government should pay the cultivators more liberally. Have you any opinion to give us with reference to the moral effects of the use of opium among the people of India?—I have no experience myself, I have never tried opium myself, and I have never in my life seen a man smoking opium. I may have seen some one eating opium, but I have never seen a man smoking it, and I am now 51 years of age.

11221. Then smoking is not a very prevalent habit with your people?—From what I am told I do not think there is much opium-eating here except amongst particular classes of people.

11222. It is not a general practice with the people?—I do not think so.

11223. You would not say that the consumption of opium among your people was carried to such an extent as to be the cause of any general moral or physical degradation?—I have not examined the question.

11224. If that had been the case, it would have come under your notice? It might have done so; I have not carefully gone into that. I know of course that *afimkhors* and *afimchis* are looked down upon by my countrymen. There is a public opinion against *afimchis*, *afimkhors* and *goolchkhors*, which are terms of reproach.

11225. Are those terms applied to people who use opium in excess?—They are applied generally to sluggards as terms of reproach.

11226. (Mr. Pease.) You have said that opium was consumed by particular classes—what classes did you refer to?—I would not wish you to trust to my testimony in that matter. I believe opium is taken amongst certain classes of Mahomedans. I know of one instance in which it has been very harmful. People sometimes get their babies to sleep by a little dose of opium.

11227. How does the condition of the ryots who grow opium compare with that of the ryots who grow other crops?—That is a question that I cannot answer except it be in this way, that, considering the loss which I calculate, I think the other classes of ryots who cultivate other crops are better off. I know as a matter of fact that sugarcane and potatoes pay much better. With regard to potatoes I can give you figures from my own experience.

11228. Your general evidence is that if those who grow opium at the present time were to discontinue it, it would be no loss to them but rather a gain?—Yes.

11229. You state that their cultivation of opium rises principally from ignorance?—Yes.

11230. Are there any other influences which induce them to grow opium?—I have stated all my reasons; I am not aware of any other. I have heard that there is a little pressure put on them at times, but I do not know anything about it.

11231. You said that unless the Government considered it moral to compel them to cultivate at a loss; did that refer to there being any influences brought to bear on them by Government or by the zemindars or any other influences which led men to cultivate who would prefer not to do so?—It was a general remark that I made. I was asked whether I based my case on a moral point of view, and I said that I based it on a moral point of view, inasmuch as we should not be justified in getting a revenue from these ryots by compelling them to cultivate.

11232. My question was whether you are aware of any influences that are brought to bear to induce the men to cultivate the poppy who prefer not to do so?—I am not personally aware of any.

11233. (Mr. Wilson.) You have referred to the question of salt?—Yes.

11234. You say that they stint themselves, and you also say that you calculate it at the rate of five annas—is that your calculation?—That is my own calculation out of the Budget figures—the figures that we have in our financial Budget for 1892-93. That is a calculation that can be made at any moment.

11235. It is your own calculation made from certain official figures?—Yes.

11236. Speaking of the poverty of the people, are you speaking especially of Behar or does that apply to all India?—Especially to Behar.

11237. Is that because you have special knowledge of Behar, or because you think Behar is worse than India generally?—My belief is that Behar is worse than Bengal. I can compare the two, but as for the rest of India I am not in a position to make a comparison.

11238. You have referred to certain districts in which there is a large excess in the death-rate: in cases of extreme distress and so on, what means are there of meeting it—you have not a regular poor law in India?—We have a Famine Insurance Fund which means that every ryot contributes out of the amount which he pays to the landlord as rent—one pie for every rupee of rent—and this is supposed to ensure him as against famine. The Government of India raises one crore and fifty lakhs of rupees out of it and they are supposed to ensure our people out of this fund, but it does not come to us in proper time.

11239. Is that for general poverty or for special cases of famine?—For special cases of famine.

11240. You have also said that Rs. 12 at the most is the average income of a man of this class in Behar, and that it can be easily shown not to exceed Rs. 20?—That is for the whole of India. I get my calculation thus: total income assessed over Rs. 500 is about Rs. 54,536,000. I put down the incomes below 500 and not assessed at Rs. 218,144,000—four times as much as the other income. The income-tax is not on the land, and I put down as from all incomes on land Rs. 5,45,36,000. The total dividend is therefore from Rs. 18 to Rs. 20 per annum for all India.

11241. When you speak of Rs. 12 you are speaking of a certain class in Behar?—The average you will see is made up by higher incomes as well as by lower.

11242. Is it from official sources or from your own calculation that you make the taxation of Rs. 3 per head of the population?—From official sources. The Budget income is Rs. 88,367,900; if you divide the population of British India 220,000,000 excluding the Native States, that gives a taxation per head of Rs. 3. This of course is made up of commercial as well as the principal heads of revenue. If you take Rs. 59,868,400 as our income the taxation per head would be Rs. 2.

11243. May we take it that a very large proportion of the cultivators in Behar cultivate opium?—I have by me the Administration Report of 1890-91 for the Behar Agency in which I find that this unwillingness of the Behar ryots to cultivate poppy has been brought to the notice of Government by the Behar Agent.

11244. Do you complain of the extreme poverty in Behar as having reference to opium cultivators or to all cultivators?—It refers to all cultivators.

11245. Does it include opium cultivators?—Yes.

11246. We had as a witness Mr. Gibbon, manager of the Bettiah Raj. The question was asked him—"These people (opium cultivators) are excessively poor, are they not?" and he said, "That is not my opinion of them." Do you think that he was quite wrong?—I would not say that he was entirely wrong. The particular cultivators that came under his observation might be cultivating poppy along with other crops, and of course it is not easy to determine whether the poverty was owing to poppy cultivation or to anything else.

11247. In reference to the use of opium, did I understand you to say that you had never seen anybody smoking?—I have not.

11248. We had two witnesses yesterday who spoke of it as comparatively common—that is not your experience at all?—I think they smoke in very private places. They

do not generally come under the observation especially of those men whom they know not to have anything to do with opium.

11249. (Mr. Mowbray.) Supposing that the Government were to double the price that they pay for opium, which I think is your suggestion, would there be anything to prevent the zemindars taking the increased price in the form of rent?—I think most of the cultivators under the present Bengal Tenancy Act have fixity of rent, almost in every case fixity of tenure, and I think in most places freedom of sale. I would not therefore think that anything given to the ryots would be forced out of their hands by the zemindars.

11250. You think that any increase in the price paid by the Government would actually go to and remain in the pockets of the ryots?—Yes.

11251. Can you tell us anything about the respective rents now paid for opium lands and other lands?—In the district of Patna I have learnt on enquiry that the rent per bigha of poppy land never exceeds Rs. 10. I have heard of one case only in which it was Rs. 20.

11252. Can you tell us anything about the rents of other lands such as sugarcane?—The rent of potato land at and about towns is from Rs. 16 to 20 per bigha.

11253. Are you using the term "bigha" in the same sense with regard to opium land and potato land?—No; I should have said that the bigha is greater in extent with respect to potato than with respect to poppy. The poppy bigha is the Government standard bigha, that is, I believe more than a third less than the zemindari bigha.

11254. That is, the potato bigha compared with the opium bigha is about 4 to 3?—Yes like that.

11255. And the rent of the opium land is something like Rs. 10 per opium bigha?—Yes.

11256. And the rent of the potato land near towns you put at what?—Rs. 16 to 20. I might have said that I also know the rent for poppy to be sometimes as low as Rs. 7.

11257. Then you consider that the rents paid for other lands are higher than rents paid for opium?—Not altogether. I think in most places it would be found that Rs. 10 is the highest rent and Rs. 10 is rent only for land near the villages. The general average I should think in Behar would be not more than Rs. 3 per bigha.

11258. Is it to the interest of the zemindars that land should be cultivated with opium or potato?—I do not think the zemindar would be in any way a gainer or a loser by the cultivators giving up poppy and taking to potato; the lands are all "Nakdi," and they would be paid for at the same rate whether poppy or potato was cultivated. I have heard that there is an impression that the zemindars gain by the cultivation of the poppy, but that is not right.

11259. You have told us that poppy cultivators have given it up in several places, and that the poppy under present conditions will possibly die out in the course of a few years. Can you tell us how many cultivators there are at the present time in the Behar Agency?—The whole number of cultivators in the two agencies is 1,370,000.

11260. You have said that cultivators have given it up in several places, and that the poppy under present conditions will probably die out in the course of a few years. I see in the papers that have been put in the number of cultivators in the Behar Agency in the year 1892-93 was 637,585. I think you have referred to the last eleven years. I will therefore go back to 1881 when the figures were 702,014, which shows a diminution. I do not think the figures are very much less if you take an average. In the Benares Agency the numbers in 1892 was 558,286, and in the year 1881-82 it was 582,452, so that taking those two years there appears to be a small reduction in each of the agencies?—My impression is founded not upon the number of cultivators, but upon several of the ryots giving up poppy to my knowledge and also upon what I have seen in the Administration Report upon opium for 1890-91.

11261. I suppose you would also admit that if some people give it up and that if others are found to take their places, the fact that some people give it up does not prove that cultivation is not profitable?—I should say that the introduction of new cultivators would prove the case. If the old cultivators who had been growing poppy give it up and new cultivators have to be brought in, I think it would prove the case.

11262. You think it proves itself. You do not think that the fact that the Government are able to get new

Mr. Guru
Prosad Sen.

Mr. Guru
Prosad Sen.
4 Jan. 1896.

cultivators to take the place of the old cultivators if they give it up, shows that there are people who consider that the cultivation is sufficiently profitable?—It is not very difficult for impecunious ryots to be brought in. They have had at times too great a demand for money, and of course if they have some hopes of getting an advance for opium (and there are advances for wells)—these considerations would induce them to cultivate.

11263. (Mr. Haridas Viharidas.) Is the rate of rent fixed according to the nature of the crop?—That is not so.

11264. Is it fixed according to the quality of the land?—Yes.

11265. If that is the case, why should there be so much tax—Rs. 20 for poppy cultivation?—I do not mean that. I simply meant that for the best land in which poppy must be cultivated the rent would be generally Rs. 10. It may be sometimes less or more.

11266. That is a fixed thing?—Yes, according to the quality of the land.

11267. Opium would grow in that land. The cultivator would profitably cultivate sugarcane or anything. It is not left to the discretion of the landlord to increase the rent for a particular crop?—No.

11268. (Mr. Ranshawe.) You have evidently given a good deal of attention to the subject, and I think you will admit that it is a matter of extreme difficulty to found conclusions on figures as regards profits and expenses of cultivation?—No, I would not, inasmuch as I think that figures are the best test.

11269. You are aware that various officials have prepared figures which would bring out different conclusions. We have all found in connection with cultivation in India that it is a matter of extreme difficulty to arrive at trustworthy conclusions from statistics of this kind?—I simply say that if my figures are wrong, all the statements I have based upon them will be wrong, but so long as my figures are not shown to be wrong, the conclusions derived from them would be correct.

11270. Is it not a matter of extreme difficulty to prepare figures with so much certainty as to enable you to found conclusions upon them—you have to assume so many points?—I have examined a number of ryots, and I have found their statements varying with reference to various soils. I have taken what I supposed to be a mean figure, and I am supported by a reference to the figures of 1877 drawn by a settlement officer who at that time had simply to work out the accurate figure, and furthermore in the Administration Report of 1890-91, I find that there is a certain amount of unwillingness evinced by the ryots of Behar to cultivate poppy, and that they have given it up in several places.

11271. You think you have arrived at substantially accurate figures as far as the cost of cultivation goes?—Yes, accurate figures.

11272. You say you have examined a number of poppy cultivators: Can you tell me what number?—I have a list with me.

11273. Can you give me the number generally?—I think from 10 to 20.

11274. Do they belong to the Patna District or to other districts in Behar?—Most of them to Patna, one of them to Shahabad.

11275. Do you think you can safely found a general conclusion as to 630,000 cultivators in Behar upon the comparatively few cases which you have been able to examine?—Yes, I also find my figures corroborated by official figures. I have referred to friends in Patna for certain information, and these friends also put into my hand the exact figures which I have drawn up.

11276. That is not quite an answer: do you think that the figures you have obtained from one district, from 10 to 20 men, are figures upon which you can found general conclusions as to 630,000 cultivators in other districts in the same province?—Of course, when I find my figure corroborated by the official figure, I do not want to go further.

11277. You admit, no doubt, that as regards the number of times of ploughing, the expense of irrigation, and all those points, there may be a good deal of difference of opinion, and that in the report drawn up in 1883 by a number of officials who enquired into the subject, there are different views taken. I only suggest that these matters are open to a good deal of variation in different districts and to a good deal of difference of opinion?—I would not say much of that, because I find in Cawnpore the figures agree exactly with what I have heard at Patna.

11278. You base the correctness of your figures largely upon the fact that they agree with Mr. Wright's figures?—Yes.

11279. Will you explain what you mean by the expression "after deducting failures"?—That is to say, every year I find a certain number of poppy cultivation failing entirely, and the percentage is made from the bighas actually under cultivation.

11280. You mean on which the crop was actually successful?—Yes.

11281. Where did you take your figures from?—I have taken my figures from the Administration Reports.

11282. Where have you taken your information from as to the failures?—From the Administration Reports.

11283. Does that give details of the total acreage on which the crops had failed?—Yes.

11284. With regard to the average amount of produce which you place at 4 seers 6 chittacks a bigha, is not that, speaking generally, a very low assessment?—I have simply calculated upon the number of bighas sown in a year and the number of maunds produced.

11285. Taking it generally as the average produce for a given bigha, would not 6 or 7 seers be a much more reasonable assessment?—I would not say that, because I find from the actual figures that this figure is a correct one.

11286. In the report of 1883 I see that 7½ seers were taken as the average yield per bigha on good land, while you take from 4 to 6 seers?—I shall have to explain that.

11287. I understand that you have taken the average on general results, but in regard to the average yield on good land, Government officers have put it as high as 7½ seers?—That is good land. I have taken all poppy lands, all the areas sown.

11288. Have you not assessed the rate of interest at a very low figure?—No; the Government advances loans at 6 per cent.

11289. Is it not the fact that if the Government did not make advances the cultivator would have to borrow, and would have to pay to the money-lender something like 24 per cent?—Not exactly; I think it would be something like 12 per cent.

11290. For the year?—Yes.

11291. Can the ordinary cultivator of Behar obtain a loan at that rate of interest?—They borrow Rs. 10 and they give Re. 1 a month, and the whole thing is cleared up in 11 months.

11292. If you want to make a fair calculation you ought to take a higher rate of interest?—It may be 6 annas, or, you may calculate it, at 8 annas.

11293. It may be doubled at any rate. If the Government did not make advances free of interest, and the cultivator had to obtain an advance in the market, he would have to pay 12 per cent. at least?—He would have to pay a little more.

11294. With regard to the excessive death-rate in the Darbhanga and Muzaffarpur Districts, is it your intention to attribute that to the condition of the peasantry of those districts?—In the Gazette, from which I quote my figure, it is referred to cholera, diarrhoea, and dysentery in those years.

11295. Was there a special scarcity in those years?—There were 34,950 deaths above the normal.

11296. Were they due to scarcity, or to any special epidemic of cholera, or any special disease?—In the Gazette I find that there was an admitted scarcity, and then there were 34,950 deaths above the normal rate of death in three months. Then I find in the gazette that these cases were referred to cholera, diarrhoea and so on, on the report of the local officers.

11297. (Sir James Lyall.) In your calculations you have put a money-value on all labour, including that of the women and children, have you not?—Yes.

11298. You have also put a money-value on what you call supervision, which is not exactly labour?—No; but then I have supposed the labour to be actual labour, and I have added supervision, simply because I have calculated the labour rate, and I have put something for intelligence and control.

11299. But this labour and this supervision, if not employed, as it is, upon opium, would not have any other money-value really, would it?—I have put down the amount on the whole holding of from 15 to 18 bighas.

11300. I mean if the spare time of these women and children were not employed in watering, weeding, and all the other processes in the opium field, it would not be expended in anything which would bring any income to them; it would be wasted, would it not, as a rule?—Of course they could spend their time in looking after something else. If

there was not cultivation of the poppy, there might be cultivation of some other crop.

11301. They would not be hiring out their labour?—It would not be hiring out of labour. The man who generally controlled the thing would require his own food and his own clothes; and that has to be distributed over the whole area, and it would come to something like Rs. 1-4-0. In the poppy field there are two crops ordinarily.

11302. In calculating this you have found out that the poppy does not pay; have you tried to make out on the same system the expenses and profits of any other crop?—Yes; the potato I have tried, and I can give you the result. In my own garden I raised potato in a bigha, and the whole cost was something like Rs. 25, and the yield 62 maunds odd. My crop was not the finest crop of the year.

11303. You are not aware that it has been done for a variety of crops by officers of Government, who are supposed to be experts, and that the opium has in those calculations stood the test and proved a profitable crop as well as other crops like sugarcane?—If it has done so, I should think they must have made some mistake, because I find the figures are quite to the contrary.

11304. Are you aware that with this same system of calculation Mr. Halsey, an officer of experience and Collector of Cawnpore, made out that all the peasants of that district cultivated their crops at a loss?—I am not aware of that.

11305. You said that the potato crops paid better than opium. Is not this the case near towns? Do you think it would be the case in villages also at a distance from a town?—I have seen the potatoes grown in the districts outside the towns.

11306. I suppose they are much more profitable near towns?—I cannot give the exact figures.

11307. If the potato crop was largely increased away from towns by being substituted for opium, would not the prices go down on potato cultivation?—Potato is cheap enough in season, but I think it might do for the food of the people.

11308. You seemed to think that the cultivation of the poppy may be one reason for the poverty of the masses in Behar. Is not that poverty generally supposed to be due to the density of the agricultural population; the minute subdivision of tenants' holdings to the high rents which are appropriated by the zemindar landlords?—I should say that the two first causes are quite correct, that is over-population and division of tenures, but as for the rest I have been comparing the figures for Bengal and Behar, and I am satisfied that there is no more rack-renting in Behar than in Bengal.

11309. I do not say that there is rack-renting, but the fact is that a large proportion of the produce of the country goes into the hands of the great zemindar landlords who are very rich people?—Yes, a few.

11310. That explains partly why the people who cultivate land are poor? They do not get so large a share as goes to other people?—I should not think so. I think the ryots are better off under Rajahs than under petty landlords, because big Rajahs are more indulgent than petty landlords.

11311. I see that you have made no allowance in the ryots' profit from poppy cultivation for the opium kept back by the ryot, do you think that occurs?—Not to my knowledge. They would make themselves liable to criminal prosecution if they were to do it.

11312. You do not think they are in a position to do it with safety?—I do not think there is any smuggling in opium at least.

11313. You have had considerable experience of poppy-cultivating ryots; are these ryots tempted to excessive consumption of opium or to the consumption of opium at all?—From what I know of these ryots, I believe they are not opium-eaters at all.

11314. Your argument is that the Government of India ought to increase the price which is given to the cultivator for his opium, and that it unfairly keeps the price down?—Yes.

11315. Are you aware that if it is proposed in India to raise the prices paid to the cultivator for opium, there is a

party in England which objects on the ground that the raising of the prices is an immoral encouragement to the production of opium?—I am not aware that any party in England would be so unkind to our poor ryots in Behar as to object to pay them properly for their labour.

11316. You have referred to the fact that when England was at a greater distance from India than now, the British Government relied mainly on Indian troops and had fewer English troops in proportion?—Yes.

11317. Is it not the case that the situation is now very different owing to the propinquity of our frontiers to great European military powers?—In my humble opinion if there were a policy of confidence adopted, all India would to a man rise against a foreign enemy.

11318. I ask you whether the situation is not changed?—The situation is not at all changed. I think the best bulwark for England would be to keep the people of India contented and in peace, and to trust them.

11319. Is not the situation so far changed that great military European powers are now much nearer to India than before?—That does not matter. The frontiers of Germany and France are near to each other. Of course there must be frontiers.

11320. Does not that account for the keeping up of such enormous military forces?—They do not keep up any buffer States.

11321. You think that if we came into collision with these great European powers, we could rely safely on an army mainly composed of Indian troops?—Yes.

11322. (*Chairman.*) You have referred to the want of affluence among the classes of ryots; is it the case that their incomes have been brought to what you consider an insufficient amount, partly owing to the fact that the amount of ground cultivated by each ryot is too small?—Yes.

11323. In short, the people seem to be too thick upon the land?—Yes.

11324. That is to a certain extent the case, is it not?—Yes.

11325. And increasingly the case?—Yes. I would suggest that their attention should be diverted from agriculture to anything else.

11326. You would like to see other industries springing up in the country?—Yes. I should like to see manufactures growing in the country.

11327. If these industries are to be created by a judicious application of capital, would you hope that the connection of this country with England would be the means of leading up to that result?—Yes; certainly.

11328. I think you made it quite clear: you say that your view is that the Government should be more liberal in its dealings with the ryots who cultivate poppy?—Yes.

11329. If that recommendation of yours were carried out, you would, I presume, very much regret that this Commission should recommend that the cultivation of the poppy should be altogether prohibited?—The result would be something like that from what I see. But if it is that, I would not regret the abolition of the monopoly.

11330. (*Mr. Wilson.*) You have been asked some questions in reference to the amount of production of opium per bigha. Are you acquainted with a table which is issued on a map by the Opium Department from which it appears that last year the highest average amount from any district was under 6 seers per bigha?—I have seen that map, but I worked out my figure by dividing the number of maunds of poppy grown by the number of bighas that were sown, and that gives me the exact figure. I worked out for the first two years myself.

11331. Are you aware that this table also shows that in the district of Hazipore the outturn was only one and a quarter seer?—I have not examined the separate figures for the different sub-agencies. My figures are derived thus: there are so many maunds of poppy grown; multiplying that by 40 gives the seers, then dividing by the number of bighas cultivated, gives the exact figure. I worked out the first two myself; for the rest I trusted to my son.

Mr. Guru
Prosad Sen.

4 Jan. 1894.

The witness withdrew.

Tilangi Imri

Singh,
Poonit
Singh.

4 Jan. 1894.

TILANGI, IMRI SINGH, POONIT SINGH, and several other ryots called in and examined (through an interpreter).

11332. (Mr. Wilson.) How many times do you plough your ground to get it ready for sowing poppy-seed? (Tilangi.) Generally from twenty to forty times. The more you plough the land the better the produce.

11333. How much does each ploughing cost?—A pair of bullocks in a Dekhani plough can plough from 15 to 20 cottas.

11334. What does that cost?—The bullocks take 5 or 6 pānsers of 5 seers or 50 pounds per day of fodder; also 2 seers (4 pounds) of khalli, (oil-cake), and from 2 to 4 seers of korai (pulse).

11335. How many waterings does it require?—Eight or nine waterings.

11336. What does that cost, or how many men does it take?—Eight men are required for each watering of one bigha of land.

11337. How long are they employed?—From 6 o'clock in the morning to 6 o'clock in the evening.

11338. But eight men cannot be employed at once in watering from one well?—If there be a well with four *lathas* to draw water from, then the watering of one bigha should be finished by eight men in a day. If the well has only two *jathas*, it will take eight men two days to one bigha.

11339. How many times does it require to be weeded?—Four or five weedings are required.

11340. Is that done by the wives and families, or by coolie-women?—It is done by coolie labour.

11341. (Sir James Lyall.) Are you an opium cultivator?—Yes.

11342. How much land?—Ten cottas grow opium.

11343. (Mr. Wilson.) How are the coolies paid?—Three seers of grain and a seer of *satua*.

11344. No money?—In some places they are paid in cash and others in kind.

11345. If they were paid in cash, how much would they get?—Two annas per coolie.

11346. Do not women do the weeding?—Both men and women do the weeding.

11347. How much do the women get?—They get the same as the men.

11348. How many times is the lancetting done?—Five times.

11349. (Sir James Lyall.) Is that done by hired labour also?—It is done by hired labour.

11350. Are you speaking of your own particular land or generally?—Both coolies and the cultivators' own men are employed in doing the work according as the cultivator has the hands or not.

11351. (Mr. Wilson.) Is the poppy a useful and profitable crop?—I lose by the cultivation of poppy.

11352. What is there more profitable that you could grow?—Any other crop—wheat, potatoes, and sugarcane; there is not so much labour and cost required as in growing poppy.

11353. Then why do you grow it if it is not profitable?—Because we are poor people, and it is the order of the Government that we should cultivate poppy.

11354. Who tells you that it is the order of the Government?—The zilladar and the mohurrirs say to us that it is the order of the Government that we should cultivate poppy.

11355. Did you ever tell them you did not want to cultivate it?—I have not personally objected to growing poppy. I have heard that in the case of people who have refused to grow poppy, and have grown other crops in the land, their crops have been uprooted.

11356. By whom?—The zilladar uprooted them.

11357. Do they have to give any *bucksheesh* to the zilladars?—We do not pay *bucksheesh* to the Zilladars.

11358. Do you pay *bucksheesh* to anybody?—We pay it to the Mahts, the village headman.

11359. Is that the same as the Khattdar?—The same.

11360. How much do they pay him?—The rates vary from Re. 1 to Re. 1-8-0. In some places Re. 1-4-0 is paid per bigha.

11361. Does Imri Singh agree with what the witness has said?

(Imri Singh.) Yes, I agree.

11362. Do you consider the poppy a profitable crop?—There is no profit, but there is a loss.

11363. Then why do you grow it?—If I do not grow poppy the hakim would snatch away the land from me and would settle it with somebody else.

11364. What do you mean by the hakim?—I mean the party who purchases the opium and causes it to be weighed.

11365. Do you mean the inferior officers of the Opium Department who take charge of the weighing and pay the money?—The zilladars and moharrirs say that it is the order of the Government that poppy should be grown.

11366. Have you heard of anybody spoiling crops because they did not grow poppy?—Yes, I have seen it.

11367. If you were quite free to do as you like would you grow opium?—I would not have grown poppy, but I would have cultivated some other crop, which would have brought me a profit.

11368. (Chairman.) Do the other witnesses agree with what has been said?

(Interpreter.) They say they all agree with the evidence of the two previous witnesses.

11369. Do they desire the cultivation of the poppy should be prohibited in Behar?

(Interpreter.) They all say that they wish that the opium should be stopped by the Government.

11370. (Mr. Haridas Vekharidas.) Have any of you grown any other crop than poppy, and has the zilladar intervened and uprooted the other crop and forced you to grow poppy?

(Poonit Singh.) In my field half the crop was wheat and half was poppy. The zilladar came and uprooted half the crop of wheat and forced me to grow poppy.

11371. When was that?—Five or six years ago.

11372. Who was the zilladar who did this?—I do not know his name; he was a Mussulman; he is transferred to some other place.

11373. Was the zilladar in question the one who was succeeded by the present zilladar, or was he one between the two?—There was one between the two.

11374. Was this after you had received the advance?—Yes.

11375. (Chairman.) Why, having received the advance, did you not grow poppy?—I did not grow poppy in the land for which I received the advance.

11376. Why?—There were one or two members of my family who were ill and I could not do it.

11377. (Mr. Haridas Vekharidas.) Why did you not grow poppy even though there were sick people in your house?—Poppy requires special treatment soon after sowing, while wheat does not.

11378. (Mr. Pease.) In what way was the wheat crop destroyed?—The zilladar brought my bullocks that were brought by my servants and got the crop uprooted.

11379. (Mr. Wilson.) How much money had you received as an advance?—Rs. 5 per bigha.

11380. Was any claim made upon you to return that money?—No, the zilladar did not ask the money back from me.

11381. Has any claim since been made upon you for that money?—As I afterwards grew poppy in the wheat land the money was not asked for.

11382. (Mr. Mowbray.) Did you make any complaint to any officer higher than the zilladar?—I did not.

11383. (Mr. Haridas Vekharidas.) In what village do you live?—In Sandah.

11384. What district?—Patna.

11385. What subdivision?—Patna also.

11386. What is your caste?—I am a Rajput.

11387. Do any of you know of similar cases?—Not within my knowledge. I have given up the cultivation, and accepted service since.

11388. What kind of service?—I am a chaprasi.

11389. Do any of the witnesses know of any other case of the kind?

(Another Ryot.) We have heard instances of a similar kind, but cannot give the names of the person or the village. These instances have not occurred in our village, but a village 20 or 30 miles distant.

11390. (Mr. Haridas Veharidas.) I should like to ask Poonit Singh another question. Why did you give up

cultivation?—I have only come here to serve as a chaprasi for the last four years, but my people at home do cultivate.

11391. Before that four years did you yourself cultivate and work the plough?—Before I became a chaprasi I was at home, but I was not tilling myself. The work was done by my servants.

The witnesses withdrew.

RAJA RAM NARAYAN SINGH called in and examined (through an interpreter).

Raja Ram
Narayan
Singh.
4 Jan. 1894.

11392. (Chairman.) You have given us a printed statement of your views; may we take it that that is the evidence you wish to produce?—Yes.

(The following statement of the witness was read:—)

The use of opium in moderate quantities is harmless and necessary in the case of a large number of poorer population to whom it is more a beneficial stimulant than an useless luxury, while its use even in excess is not so injurious or demoralising as wine and other intoxicating drugs or drinks. There is no doubt about the fact that the labouring classes in this province take opium for purposes other than medical, and derive much benefit from it, as it enables them to undergo the toils and fatigues of their daily life much more easily than without it. That the consumption of opium is not attended by moral or physical deterioration of the people who moderately indulge in it is proved by an observation of the habits and ways of those consumers with whom we more or less come in contact. That the poppy is very extensively cultivated in this province, and its cultivation brings appreciable profits into the pocket of the cultivator who would be deprived of this source of their income should poppy cultivation be prohibited, and as there is hardly any other crop which can supply the place of poppy, the ryots will greatly suffer in consequence. The prohibition of the growth, manufacture and sale of opium is, therefore, very likely to create universal discontent, which would surely be intensified by the imposition of fresh taxation to which the Government will be compelled to resort to make up for the loss of revenue caused by the abolition of this important trade. Under these circumstances, I am firmly of opinion that the growth of the poppy and manufacture and sale of opium in British India cannot and should not be put a stop to, and no change in the existing arrangement seems to me necessary.

11393. (Mr. Pease.) Is it your opinion that a large number of the poorer population of the district take opium?—I think a large number of the poor labouring class really do consume opium.

11394. Do you think that those who labour in poppy cultivation are consumers of opium?—The cultivators who grow opium consume opium, and also the labouring class who do not cultivate it.

11395. Do any of those who consume opium also take intoxicating drinks?—There is no connection between the consumption of opium and liquor, but as a matter of fact some people take both.

11396. Are you of opinion that the cultivation of the poppy is more profitable than growing of other crops?—I think that the profits from opium cultivation are greater than the profit from other crops.

11397. Did you hear the evidences of the ryots who have just been called, and who stated that it would be no disadvantage to them if the crop was given up?—I have heard their evidence with much astonishment. My belief is that there is profit in the cultivation.

11398. Do you think there is any impression on the minds of the cultivators that they are expected by the Government to grow poppy?—The cultivators do not grow it to please the Government. I know cases in which ryots have mortgaged suitable poppy land, and it has been their one wish to get back those lands in order that they might put them again under opium.

11399. Are you the owner of any land which is cultivated by poppy?—In my zemindari there is a large amount of opium cultivation.

11400. How many ryots have you upon your property who grow poppy?—I cannot say definitely the number of men who cultivate it, but I can state about the area under opium cultivation in my zemindari.

11401. Are there any ryots on your property who do not grow opium?—There are those who have no land fit for it.

11402. Do you ever ask your ryots to grow opium?—I have never had to make the request. All land is not suitable for growing poppy, and they are willing enough to cultivate with poppy what land is suitable.

11403. Has the quantity of your estate devoted to opium cultivation been increased or altered to any extent within the last three years?—There are in my zemindari about 7,000 bighas of opium cultivation; the area varies from year to year; sometimes it is 50 or 100 bighas short, sometimes 50 or 100 bighas more.

11404. (Mr. Wilson.) You say that to a large number of the poorer population it is a beneficial stimulant; can you give any idea how much money they spend in purchasing opium?—I cannot say how much they spend; all I know is that a certain number take it as a medicine, and a certain number take it in order to enable them to bear toil the better.

11405. You have no idea of the amount they spend?—It is very hard to say. I think that a cultivator who consumes opium may, in some cases, spend 8 annas a month. I am here speaking of the man who eats a little; the man who eats more may spend Re. 1 or Re. 1-8.

11406. What are the wages of coolies in that district?—Coolies are of different kinds; they earn varying wages—8 annas, 6 annas, down to 2 annas; they earn as much as 8 annas in workshops. I refer to artisan labour as much as to cultivating labour.

11407. The coolies are the men who would get 2 annas?—Coolies who work on the land get 2 annas a day, or 6 pice or 4 pice.

11408. (The Maharaja of Darbhanga.) Do they get any food on those occasions?—They get a little *sattu* (dried powdered pulse).

11409. (Mr. Wilson.) You said that some of the coolies get 2 annas; what kind of coolies are they?—The men who get 2 annas are the coolies who draw water for irrigation, or who dig hard land, or are hewers of wood.

11410. The men who do the hardest work?—Yes.

11411. (Mr. Fanshawe.) You have spoken of men taking opium to enable them to undergo toil; do you mean when they have an excessively hard day's labour in the sun?—I mean the men who do bearer's work, carrying the palki or doolie, and the men who drive bullock-carts.

11412. You had said that cultivators use opium to some extent; do you mean that the cultivators take opium to enable them to go through a hard day's work in the fields?—Yes; most of the men, I believe, are hardworking men, men who carry doolies and palkis and drive carts, but the cultivators actually take opium to enable them to bear a hard day's work in the sun, or to go out into the water or into the cold.

11413. (Sir James Lyall.) Who are the people who spend from 8 annas to Re. 1-8-0 per month on opium; are they the ryots, or artisans, or coolies?—They are cultivators too; cultivators sometimes takes as much as that, but I mean chiefly those who earn 8 or 6 or 5 annas a day.

11414. Artisans or the better class of labourers?—Artisans.

11415. Do you think that your tenantry who cultivate opium do so simply of their own free will, or that they are ever bullied into it by the Opium Department officials?—They do it of their own free will, and I know of cases of which men have tried to get back land in order to grow opium.

11416. (Mr. Wilson.) I do not think you have told us exactly where your estate is?—It is in Monghyr.

11417. Is it close to the town?—I live in Khaira.

11418. (Sir James Lyall.) What is the area of your land?—The main villages, with their smaller villages attached to them, number 350, or rather more.

Raja Ram
Narayan
Singh.

4 Jan. 1894.

11419. I want to know the exact position of some of them?—My zemindari lies on either side of the Chord line between the stations of Luckeesarai and Smallatta.

11420. (*The Maharaja of Darbhanga.*) Are your rents fixed according to so much per bigha, or do you get it according to the produce?—The rents are fixed in both ways. I could not say in what proportion.

The witness withdrew.

Mr. D. J.
Macpherson.

MR. DUNCAN J. MACPHERSON called in and examined.

11424. (*Chairman.*) You are aware that the attention of the Commission was called by Mr. Wilson to the circumstance of his visit to Gya, which seemed to have been followed up by some action on your part, or on the part of your officers, of which he felt entitled to complain. I believe you have seen his statement?—I have to-day.

11425. (*Chairman.*) We shall be glad to have any explanation from you.

(*Witness.*) I have just written a statement, which I ask permission to read. Last week, on the 26th December, I met Mr. Dane in Calcutta and he told me that Mr. Alexander, Secretary to the Anti-Opium Society, had announced that he had rather important evidence from Gya, but that he had not disclosed what its nature was. It was possible, he said, that some rebutting evidence might be called for. He said I had better therefore find out what it was so as to be prepared in case of a call for evidence to explain it. He added that as the Commission would be at Bankipur by the 3rd, and be there only four days, we might not have time to produce any evidence that might be required unless we knew beforehand something of the nature of the case we had to meet. I met Mr. Harris, District Superintendent of Police, Gya, just after this at the United Service Club, and mentioned to him that I had heard from Mr. Dane that anti-opium people had been about our district hunting up evidence they seemed to think of importance, and I asked him if he had received any reports of the visits of such persons. He said he had heard of none except a visit of Mr. Alexander early in November, but that he was writing to his Inspector and would tell him to make enquiries if I wished. I said yes, I should like this done. I said the Inspector need not do more than ascertain who had been to the district, what they did there, and who were working up the case with them. Mr. Harris went off to write to the Inspector, and I came away. The whole thing was done very hurriedly as we wished to get away. On my return from Calcutta I joined my camp at Tikari on the 29th, Friday last, and there the Police Inspector came to see me. He said that, in consequence of instructions he had received from the District Superintendent, he had gone to the dāk bungalow at Gya and found from the visitors' book there that a Mr. Wilson and a Mr. Williams from Sohagpore had arrived there on, I think, the 9th November, but that the dāk bungalow khansamah had told him these gentlemen left and went to stay with the Reverend Prem Chand. He accordingly went to the Reverend Prem Chand, he said, and found there with him a Mr. Jones, a missionary, who had come from Patna. From the Reverend Prem Chand he ascertained that the gentlemen left the next forenoon after being round the town where the opium shops were; and that apparently no one had been to see them during their stay. The Inspector added that he gathered from the Reverend Prem Chand's conversation with him that he was anxious to get hold of parwanas he alleged had been issued to Khatadars to get the ryots to cultivate opium. The Inspector then left, as he said he was under orders of transfer and had made over charge of his duties to join his new appointment. I took no further action whatever thereafter except to write to the Sub-Deputy Opium Agent at Gya to tell him that if any parwanas had really been issued of the nature referred to, he would probably be called on to produce them before the Opium Commission, and he should therefore see if any had been. I may add that, until the Inspector came to me last Friday, I had no idea whatever that any gentleman of the name of Mr. Wilson had ever been to my district; and I regret extremely that the action of the Inspector, who was quite a new man, should have resulted in any annoyance to that gentleman.

(*Mr. Wilson.*) I do not know that I have anything to say. I entirely disapprove of this spying, but I have nothing further to say about it. In Ireland it is called "shadowing."

11426. (*Chairman.*) I think the situation is sufficiently clear. In a general way the Government of India are naturally anxious,—a very important interest being at stake

11421. (*Mr. Pease.*) Are all your opium lands paid by a fixed rent in money?—Yes.

11422. (*Mr. Haridas Voharidas.*) The rent for the opium land is all fixed?—Yes.

11423. If the cultivator does not grow opium, but grows another crop, will he pay the same rent, or will there be any change?—The rent would not vary. If he gave up the opium crops he would have to pay the same rent.

In the enquiry we are conducting,—to obtain information as to the points to which exception may be taken by witnesses who are likely to be produced before the Commission. It is very natural that they should desire to know beforehand what may be urged, and who may appear, so that they may be prepared to meet what is said with information which they think ought to be placed before the Commission relating to the points that are being raised. When we set out upon our enquiry in the first instance in London, there was an intimation made to us, on behalf of the Government of India, which seemed to me very reasonable; and in pursuance of that, we began our enquiry by inviting those who object to the present opium policy to state their case. Then we go from generals to particulars as we go into different localities; and just as the Government of India reasonably desire to know the general case which is to be urged against them, so they may desire, when the Commission is about to visit a locality, to have local information to know what sort of questions may be raised at different points that may be visited, and who may possibly appear in support of the views to be presented to the Commission. All that seems reasonable enough. At the same time it is perfectly certain that any member or members of the Commission are in their strict right in visiting localities that they think it is important for them to see, and placing themselves in communication with the persons who they may think are likely to be able to produce evidence which any member desires should be heard by the Commission. It is quite clear, also, that nothing should be done by any officer of the Government of India which would be comparable to what is called in Ireland "shadowing." In the present instance I think it is not unreasonable that the Government should desire to be in possession of information as to who was coming from Gya, and as to what they might be likely to state; but I am sure Mr. Macpherson himself must regret the manner in which the enquiry was made.

(*Witness.*) I have stated that I extremely regret it. The Inspector who made the enquiry was quite a new man, having been only appointed temporarily two or three weeks ago.

11427. (*Chairman.*) The mere fact of the agency of the police being imported into the matter is, I think, to be regretted.

(*Witness.*) I happened to meet the District Superintendent of Police in Calcutta, and therefore it struck me that I might make the enquiry in that way.

(*Mr. Alexander.*) I should like to say that I have always readily given every information in my power as to the evidence that we were intending to bring forward. When I was asked what evidence we were to bring forward at Patna, I did not know what the evidence would be. I gave every information at Patna. As a matter of fact we are not bringing any evidence from Gya, except that of Mr. Chand, who is to be the next witness.

(*Chairman.*) And upon whom the Inspector of Police called.

(*Mr. Alexander.*) I did not know whether we should have any other evidence from Gya. It turns out that we have not any.

(*Mr. Dane.*) May I add a word? I merely wish to say that we tried by openly asking Mr. Alexander to ascertain what was the character of the attack to be made on the administration of the Opium Department, and as he was unable to give us the information, we took steps to ascertain for ourselves. The result was unfortunate.

(*Chairman.*) It was proper that the Government should endeavour to possess themselves of information.

(*Mr. Dane.*) May I say that I acted in the matter throughout on my own responsibility? Your Lordship will remember that according to the original itinerary, one day was devoted to Patna. That was afterwards altered to four days, although our evidence was of a character that might be produced in one day. Then I understood that Mr. Alexander had said that he had strong evidence to prove that the cultivators were growing poppy under compulsion.

He was unable to give any idea as to the character of the evidence forthcoming, and I thought the only way of satisfactorily meeting the question was that we should

have rebutting evidence ready to place before the Commission on arrival, so that the matter might not drag on and delay the stay of the Commission here.

Mr. D. J.
Macpherson.
4 Jan. 1894.

The witness withdrew.

Adjourned till to-morrow at 11 o'clock.

At the College Hall, Bankipur.

THIRTY-EIGHTH DAY.

Friday, 5th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HONOURABLE SIR LACHMIPUSWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" A. PEARSE.
" HARIDAS VECHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

(*Mr. Wilson.*) I desire to say one word with reference to what took place yesterday. Perhaps I should have done more wisely in not speaking on the spur of the moment. I wish to say that I have not the slightest ill-feeling towards Mr. Macpherson for anything that took place, but I could not accept an apology which was purely personal to myself, because I was a Commissioner, and which did not in any way include the friends I was with, nor do I desire to find any fault with the police action at Gya if it be a part of the whole system of the country. My protest is directed against any such system and any such practice for any such purposes. I desire Mr. Macpherson to understand that in not accepting his apology I have no personal feeling. As I stated previously I brought the matter forward on public grounds, and, as it was a public matter, I could not accept the apology in that form.

(*Sir James Lyall.*) You say "any such purposes" In your remarks on the first day the purpose you attributed to the visit was that of intimidating witnesses.

(*Mr. Wilson.*) I said nothing of the kind in public.

(*Sir James Lyall.*) Was it not said at the end of your written statement?

(*Mr. Wilson.*) I do not know whether it is desirable to go into what was said in this room when it was cleared, but I said nothing of the kind in public.

(*Sir James Lyall.*) Is it not at the end of your statement? Do you say that you did not say anything in that to that effect?

(*Mr. Macpherson.*) The statement I thought I had to answer was that I had been using the police for the purpose of interfering with persons connected with the opium movement and with their witnesses. That was what I thought I had to explain; and I gave a personal apology with reference to Mr. Wilson. I understand he was annoyed at thinking his movements were being watched.

(*Sir James Lyall.*) On the second occasion Mr. Wilson used the word "espionage." He said he objected to such espionage. I beg to say that there was no espionage intended.

(*Mr. Wilson.*) I used the terms "inquisition" and "shadowing."

(*Sir James Lyall.*) There was no shadowing intended. The explanation which Mr. Paine and Mr. Macpherson gave was a simple one. I am not at all surprised at Mr. Wilson being irritated and justly annoyed at his visit to Mr. Prem Chand having brought upon that gentleman a visit from the policeman, but there was no espionage intended and no intimidation of witnesses intended.

(*Chairman.*) I hope, Mr. Wilson, you will be prepared to regard it in the light in which it is placed by Sir James

Lyall, who says that there was no intention to practise any espionage, or to intimidate in any way. Mr. Macpherson has expressed, and I am sure will express again and again, his great regrets that in a hasty moment, and owing to his absence in Calcutta, and his want of time to make any other arrangements, that the police should have been brought into this matter at all. He has expressed the greatest regrets to yourself, and I am sure he will express his regrets to Mr. Prem Chand.

(*Mr. Macpherson.*) I am quite prepared to express my regrets to anybody who in any way feels that the action I took was not proper. It was purely by accident that I happened to meet at the time the District Superintendent of Police, and that suggested to myself the employment of the police agency in the matter.

(*Chairman.*) You have, I think, endeavoured to make it quite clear to the Commission that you were not unnaturally anxious to know what matters might be produced for the consideration of the Commission, and upon what points the officials of the Government might be called upon to give answers and to supply information. It was with that view, we understand, of being prepared to make a public answer to the Commission in regard to any matters that might be brought forward that you were trying to find out some particulars as to the nature of Mr. Wilson's enquiries.

(*Mr. Macpherson.*) That was my sole object.

(*Chairman.*) You regret, I am sure, very much that the enquiry should have been made in the manner in which it was made.

(*Mr. Macpherson.*) I extremely regret that the enquiry should have been made through the police agency, and in a manner to cause annoyance to anybody.

(*Mr. Wilson.*) Mr. Macpherson having included my friend in his expression of regret, I desire to modify that part of what I have said, and to thank him for that expression as a personal matter; but I am unable to modify my view as to the nature of the transaction from a public point of view. Personally I have not a particle of ill-feeling on the subject.

(*Mr. Macpherson.*) Thank you.

(*Chairman.*) I am sure, if this action had been referred for consideration to superior authority, or even if it had had the fuller consideration of Mr. Macpherson himself, that the steps which you have complained of would never have been taken. It is a matter of great regret, and I am sure that it has been the desire of Mr. Macpherson to offer the fullest expressions of his regret. In the actions he took he was under no directions, and he is himself responsible for what took place.

(*Mr. Macpherson.*) I am entirely responsible for having employed the police in this matter.

Mr. J. G.
Alexander,
L.L.B.

5 Jan. 1894.

Mr. J. G. ALEXANDER, L.L.B., called in and examined.

11428. (*Chairman.*) I believe you wish to make a statement with regard to Mr. Munro's evidence?—I observe that whilst I was absent in Burma, Mr. James Munro, C.B., stated that, as he understood, I had been unable to find any ladies who could "tell anything about the horrors of the Opium Trade in the zenanas." Mr. Munro has evidently misunderstood a letter of mine which he has seen. I have spoken to the heads of the principal Zenana Missions in Calcutta,—Miss Mullany, of the Church of England Zenana Mission; Miss Warrack, of the Free Church of Scotland Mission; and Mrs. Thoburn, of the American Methodist Episcopal Mission. They all told me that they had often heard in the zenanas of the evils caused amongst families whose ladies they visit by indulgence in opium, but they and the ladies of their missions, not having made any special enquiries or notes on the subject, felt unable to give evidence of a sufficiently precise and specific character to justify them in taking up the time of the Commission.

From a Zenana Missionary at Burdwan, however, Miss Harding, of the Church of England Zenana Mission. I have received the following narrative:—"In 1887 I was working among the Muhammadan women of Calcutta in a zenana where we had taught for some time. I was suddenly brought in contact with the effects of opium-eating. My pupil was on the bed quite unconscious (stupid). The husband, pointing to her, said, 'Look what you have done; you English Christians come with opium in one hand, the Bible in the other; you have ruined my wife in mind and body. You never set foot in the house again.' No reasoning on my part was of any avail, and bleating with shame for our countrymen I had to come away. The zenana was closed and never opened since. I have never forgotten that sad scene, and since then I have seen more victims to the vice.*"

The Revd
Prem Chand.

The Reverend PREM CHAND called in and examined.

11429. (*Chairman.*) I believe you are a Baptist Missionary at Gya?—Yes.

11430. Will you explain to us the nature of your work and of your experience which has enabled you to speak to us with knowledge upon the subject that has been referred to the Commission?—I have had special opportunities to become acquainted with the grievances of opium cultivators. I have lived amongst them all my life, and I have, as a preacher of the Gospel, to visit them, to converse with them, and to hear all they have to say in a dialect which is my own mother-tongue.

11431. Are you acquainted with the system under which the subordinate officials of the Government in the Opium Department deal with opium cultivators?—The sherishtadars, gomashtras, and mohurrirs are the men employed by Government, who come into direct contact with the opium cultivators. They receive a monthly salary and a premium or commission on the number of maunds of opium produced in the opium district to which they are appointed. Their premium, as a rule, amounts to two to three times the amount of their salary. The zilladar is a Government employé appointed to inspect the fields and see that poppy is properly cultivated. He has several villages under his inspection. He is paid according to his grade from Rs. 5 to Rs. 7 a month. He receives no commission from Government or any travelling allowance.

11432. Are there any other officials or persons employed?—The Khatadar is one of the head ryots in a village in whose name the *khata*, or account, is opened. He has a number of ryots under him to whom he distributes the advances made by Government to him, and is held responsible for any bad debts on account of the advance. As far as I have been able to find out from the Khatadars themselves, they do not receive any remuneration from Government for their services or the responsibility which they undertake. Some say he receives a commission of one rupee per maund of opium produced by the ryots under him. The Khatadar has seldom more than 2 maunds of opium thus produced, and the amount of his commission will amount to Rs. 2 per year.

11433. What is the character of the fields upon which opium is grown?—They must be the richest fields in a village, well manured and provided with the means of irrigation. The masonry well costs from Rs. 300 to 400 according to size and cost of materials. The ground-rent of such fields is seldom under Rs. 9 per bigha. The land is well ploughed, often twenty times or more, to break the clods and reduce the earth almost to powder. The whole field is then divided into beds, and the seed sown. The crop needs constant care and labour for nearly five months in the

shape of hoeing or spade work four times, weeding twice, watering six to eight times, lancing of poppy-heads and scraping of opium for over a fortnight. A bigha of similarly rich land, if sown with wheat or gram, would yield a crop of from 16 to 20 maunds, while on an average not more than 5 seers of opium could be had out of it. In the Tehta Division about 45,000 bighas of land are under poppy cultivation, while last year (a fairly good year for opium) the outturn was about 5,000 maunds of opium. This gives little less than four seers and a half to the bigha.

11434. Is it your object in giving this description of the land to convey that it is badly used for the purposes of obtaining food when it is diverted from wheat to opium?—Yes.

11435. What you desire is that opium should no longer be grown and that wheat and other descriptions of food should be grown instead?—Yes.

11436. Turning to the opium crop, what do you consider are the objectionable features in that kind of cultivation?—The opium crop is very risky and uncertain. It is injured much more than the other spring crops by the ravages of the weather. The strong west wind breaks down the stem and dries up the sap at the time of lancing and scraping. In cloudy weather insects are generated in the stem of the plants. At the time of gathering the opium, heavy showers wash down the sap which has oozed out. In a hailstorm the crop is almost entirely lost.

11437. Do you wish to found upon this statement an argument that the terms offered by the Government to the cultivators are not sufficiently liberal?—They are not paid enough.

11438. You wish the Government to pay a higher price to the cultivators for the opium?—What I wish is that its cultivation should be stopped altogether. If a higher price is paid to the cultivator, even that will in some way or other lead to its abolition.

11439. Are there any points which you wish to urge on behalf of the ryots who are engaged in the cultivation of opium?—The cultivators are generally poor men, and they make the members of their families work hard, as poppy cultivation needs twice or thrice as much labour as any other spring crop. No one who has a capital ever engages in this plantation, for it would be a great loss to him if he employed paid labour instead of the members of his household. People seldom cultivate more than a bigha, and many not more than one-third of a bigha, and all as much as they can manage with the members of their families. Poor people have a great dread of cultivating opium

[NOTE.—With reference to the above, the following letter was addressed by Mr. Munro, to the Secretary, dated 20th January 1894:—

"My attention has been called to a statement in the *Indian Witness* of this morning, said to have been made to the Opium Commission at Bankipur by Mr. Alexander. The statement attributes to me a misunderstanding of a letter written by Mr. Alexander.

I am not aware whether the statement referred to has been formally made to the Commission, and whether it forms part of the record. If this is the case, then perhaps you will be good enough to ask the Commission to re-examine me on the point, or perhaps the simplest way will be to forward this letter to the Commission, that it, like Mr. Alexander's statement, may form part of the documentary evidence admitted by the Commission.

I cannot repeat *verbatim* my statement made when giving evidence. I have not a copy of the statement as recorded. But I believe that what I did say amounted to this—"So far as my daughter is concerned, and other ladies that I have met with, who have visited zenanas, there is not one of them who can tell me anything about the horrors of the opium trade in the zenanas. And that I believe is the experience up to date of the Secretary of the Anti-Opium Society. Mr. Alexander has so stated that hitherto he has not been able to get any ladies to come forward and give evidence as to the evils which they saw in the zenanas." The above represents what I said in giving evidence.

The ground for my having said so was a statement made by Mr. Alexander in a letter dated the 28th November 1893. The words of that statement are as follows: "hitherto I have been unsuccessful in all my efforts to obtain lady witnesses to speak of the evils they see in the zenanas as caused by opium."

This statement by Mr. Alexander, it seems to me fully justified my assertion, and after reading the further statement by Mr. Alexander in the *Indian Witness*, I confess that I do not see in what respect I have misunderstood the plain words of his letter of 28th November. This further statement rather emphasizes the terms of the previous letter."

on account of the loss that they have to sustain, the interference of the zilladar in making them attend to the poppy cultivation without any regard for other plantations, which they may have at the same time, and which be in need of more attention, and the close supervision and servitude to which they are subjected.

11440. Have you made any calculations as to the cost of growing poppy in your district, comparing it with the income which the cultivator derives from the sale of opium to the Opium Department?—The cost of growing poppy in the district of Gya averages Rs. 36 per bigha and in the town about Rs. 50 per bigha. The average income in the district, including the price of opium and the poppy seed, is about Rs. 26, and in the town about Rs. 38; so that the loss is about Rs. 25 per cent. on the outlay when paid labour is employed.

11441. Comparing opium with other produce for cereals, what would be the cost of cultivating a bigha of land to grow wheat?—Rs. 9-8 per bigha.

11442. What would that yield?—They yield from 16 to 20 maunds, which at Rs. 2 per maund would bring in from Rs. 32 to 40, besides fodder for the cattle. It should be noticed here that the opium plant yields no fodder for the cattle.

11443. Have you made a comparison of the result of the cultivation of opium with the result of the cultivation of sugarcane and potato?—A bigha of sugarcane costs from Rs. 50 to 60, and yields Rs. 150 to 200. A bigha of potato costs from Rs. 80 to 100, and yields Rs. 250 to 300. All these cultivations are for a bigha of equally rich land as used for the poppy.

11444. Have you any evidence of a general character to show that poppy cultivation is not considered profitable?—If the cultivation of poppy pays, as it is alleged by some people, I should ask the following questions: Why do not then zemindars, well-to-do people and large capitalists cultivate poppy or engage in its cultivation? We hear of indigo-planters and tea-planters, but has anybody ever heard of the more euphonic expression, poppy-planters? Why is it necessary to give advances without interest to the poppy cultivators? Are such advances necessary in growing any other crop? (These advances are a great temptation to the people to cultivate opium and a hold in the hands of kothidars and zilladars to fleece the ryots.) Why does Government employ men to superintend and look after the cultivation of poppy? If it pays, will not the cultivators look to it themselves? If opium pays, is it a great deal to ask from Government to cease giving commission to their native agents employed in the Opium Department, to stop advances to the cultivators, and the superintendence of the cultivation of poppy? Let those who wish to cultivate poppy take out licenses to do so. This will considerably reduce the opium staff and expenses.

11445. You have been putting before us figures that you have set out with a view to showing that the cultivation of opium is not profitable to the ryot?—Yes.

11446. Can you explain to us why it is that such vast numbers of ryots in this district continue to cultivate the poppy, although according to your view the cultivation is the most unprofitable in which they could possibly engage?—They cultivate because they are in some way or other compelled to do so. It is true that there is no direct compulsion used by Government, but what does Government mean by giving commission on the number of maunds of opium produced to the sherishtadars, gomashas and mohurrirs? Is not this an incentive to these people to press on as much as they can the cultivation of opium? Is it not a fact that the Khatadars are every year pressed down by these people to increase the area under poppy cultivation under them? Is not the help of zemindars solicited in making their ryots grow opium? The evidence of Rai Isari Prasad of Patna, and Babu Bissessar Singh of Kulharia, should be taken on this point. They refused to compel their ryots to grow poppy. There is not a single cultivator in Kulharia who grows poppy, and other villages are following its example. The advances are given in the hands of the Khatadars, and if the cultivator who has once grown poppy does not receive it and grow poppy, is he not threatened with prosecution? I have visited lately several districts, and everywhere the people prayed to be relieved from the obligation of growing poppy.

11447. Do you contend that the cultivation of opium is a cause of poverty in the district?—Yes; opium cultivation is one of the chief causes of the poverty of this province, the high prices of food-grains, and famine. In the Gya District, including Tehta, there are over one hundred thousand bighas of rich land under poppy cultivation. If food-grains were sown in them they would yield one million

sixty thousand to two million maunds. Every year about a hundred thousand chests are made for packing opium in the Patna and Ghazipore factory. They used to be made of sal wood which cost about Rs. 4 per chest, but lately mango wood, being much cheaper, as it costs about Rs. 8 per chest, is used. About one hundred thousand mango trees are being cut down every year, and the country for miles and miles is fast being denuded of these trees which yielded fruit for men on which they depended to a great extent for their food from three to five months in the year and made bread from the kernel. In times of scarcity and famine many poor people kept their body and soul together by eating this kernel. This is a tremendous loss to the country.

11448. Turning to the effect of opium from a physical point of view, what have you to say?—Opium is a poison. It ruins the health of its consumers and demoralizes them. It makes them timid and unfit for any physical or mental labour when taken in excess. The habitual opium-eaters or smokers cannot give up the evil habit themselves, and their only cry is "Let Government prohibit the sale of it." If they cannot get it at the time when they are habituated to take it, they look half-crazy and in a most confounded manner run to the nearest opium shop for a dose. This presents a sad spectacle, more to be realized by witnessing it than by describing. I have known many people to lose their employment by becoming confirmed opium-eaters.

11449. Have you any other general observations that you desire to make?—The people who largely suffer on account of the opium trade are the poor ryots, because they have to cultivate opium at a great loss to themselves and have the largest temptation in their way to get into the evil habit of using it. Unless they come in touch with the Commission the real state of affairs will not, I fear, be ever disclosed more conclusively. These people, being both poor and ignorant, are not able to come forward and set forth their own grievances, and if they try to do so to native officials no attention is ever paid to their request. They are in mortal dread of the police and of all official underlings, and as to higher officials, they have no means of approach. I would therefore propose an enquiry to be made into their case by a Committee appointed by the Commission to visit the opium cultivators and note their grievances. Let Government grow poppy in the same way as they do cinchona, and supply opium to licensed chemists' shops only, to be marked poison and sold for medicinal use only.

11450. If there were a widespread and strong popular feeling in opposition to the cultivation of opium, and a widely spread desire that the cultivation of the poppy should be prohibited, do you think we should hear nothing of it before this Commission in the course of our visit to this district? Do you think that nobody would come to tell us of it from amongst these cultivators?—I do not think they would be able to come here.

11451. You desire to tell us that in your opinion we should hear nothing of a strong popular feeling in the district in support of the policy you recommend, which is the prohibition of the cultivation of the poppy?—From the cultivators I do not think it is likely that you would hear much unless they were visited in their own villages.

11452. We had an able witness before us yesterday, a man in an independent position, who came here to discuss the case of the ryots at great length, a man who, as I understood it, was in strong sympathy with the ryots and had been in close communication with them. The point he raised was that the payment of the ryots for the opium was insufficient; he did not recommend that the cultivation of the poppy should be prohibited?—On moral grounds it should be prohibited.

11453. If it was a widespread popular conviction that on moral grounds the cultivation of the poppy should be prohibited, do you not think that we should have heard of it from such a man as the witness who appeared here yesterday to speak on behalf of the ryots and to urge that they should be paid more liberally for their opium? Some man or men in a similar position would surely have been ready to come forward and express any popular view that prevailed with reference to this question?—He had his own views to put before the Commission. About others I do not know.

11454. There was no difficulty yesterday in finding an advocate on behalf of the ryots to urge that they should be paid more liberally. They had an able advocate from that point of view, but nobody has come here to say as you say, on behalf of the ryots, that they desire that the cultivation of opium should be prohibited?—I do not say that they desire that the cultivation of opium should be prohibited, but what I ask is that the Commission should visit the opium-cultivators and note their grievances.

11455. Their grievance would be that they are not paid enough?—From them it would be that.

*The Reed.
Prem Chand.
5 Jan. 1894.*

The Revd.
Prem Chand.
5 Jan. 1894.

11456. But, looking at it from a moral standpoint, you say that there should be a prohibition of the cultivation altogether?—That is the second remark that I make in the abstract of evidence.

11457. Do you think that what you recommend would be approved by the people of the district? Do you think that they would be favourable to a policy of total prohibition of the growth of poppy?—I think they would. Many of them I have seen and talked with on this subject, and they are of opinion that opium is a great evil, that it is a curse to the country.

11458. (Sir James Lyall.) What people are you referring to? Do you mean the cultivators?—Cultivators and others.

11459. (Chairman.) You have spoken strongly with regard to opium. What is your general view with reference to the use of stimulants? Do you think that alcohol is a great evil?—Country liquor is a curse too.

11460. You would like to see the consumption of the country liquor prohibited unless it were medically recommended, would you not?—Yes, but I think this Commission is making enquiries about opium.

11461. I should like to have your general attitude of mind with regard to stimulants: do you not think that alcohol is a great evil?—Alcohol is a great evil.

11462. Would you not desire from the moral point of view that the use of alcohol should be prohibited except for medical purposes?—That is my view with regard to alcohol.

11463. (Sir James Lyall.) You say that if the opium cultivators were visited in their villages and consulted they would complain of the insufficient price given for opium. What other complaints would they make, do you think?—They say it does not pay.

11464. That is covered by the insufficient price, but what other complaints besides that would they make?—That they are meddled and interfered with.

11465. By the measuring people and all that sort of thing?—Yes, and that they are kept too much under official supervision.

11466. Those are the two real complaints, that they are meddled with and kept under supervision, and that the price given for opium is not sufficient?—It is insufficient. When they gather the opium, sometimes they have a family quarrel in the house, and the women and children can easily get the opium and take it if they like. It is a deadly poison kept in the house for fifteen days or more.

11467. Is that a thing that the cultivators complain of?—They complain of that too.

11468. That occasionally a woman may commit suicide?—They sometimes have quarrels, and the women generally take opium to put an end to their lives.

11469. That is a complaint that you hear made?—Yes.

11470. Not that women and children take it to consume it in other ways, but it is a risk that they may take it as a poison?—It is a risk and a temptation put in their way to get into the habitual use of it.

11471. These are the three objections which, if we went to the villages, we should hear from the cultivators?—That it does not pay.

11472. That is the insufficient price?—Yes; and then there is the constant supervision by Government officials.

11473. And then there is the risk of the women and children getting at the opium and using it or poisoning themselves with it?—Yes.

11474. Those are the only complaints that we are likely to hear?—There may be some more that they have to make, but as far as I know these are all.

11475. Will you explain how it is that this large number of cultivators continue to cultivate opium and to take advances if they feel keenly these objections which you have stated? How is it managed that in spite of it all they continue to take the advances and to cultivate?—They have the idea, as was said yesterday, that it is the order of the Government that they should do it.

11476. Is that your experience? You must know that many people from time to time give up the cultivation and that others take to it. Is not that the case? In your evidence, you have yourself given instances of whole villages which have given it up?—I have seen the village; it was by the help of the zemindar.

11477. But even without the help of the zemindar there are pretty numerous instances of people, I think, who have given it up in every part of the country?—It is almost impossible for them to give it up.

11478. Why?—Because it is claimed as poppy land or poppy field: if it is sold to others it is poppy land and they must grow poppy.

11479. You said that the cultivator was threatened with prosecution. Will you explain what you mean by being threatened by prosecution?—They get perwanas from the Opium Office, stating that if they do not grow opium they will be prosecuted.

11480. In what way will they be prosecuted?—I believe it is according to some section.

11481. Some section of the Penal Code or what?—The Opium Act or something of that kind; I do not think it is the Penal Code.

11482. You think there is some such section?—There may be some such section.

11483. From whom do you think the perwana comes?—From the Opium Office.

11484. From the Sub-Deputy Opium Officer or from the Opium Agent himself?—From the Opium Office. I do not know who signs it.

11485. You represent yourself as a great friend of these opium ryots, and as having a large experience amongst them; has it never occurred to you to look up the Opium Act or the Indian Penal Code to see the section by which these people can be prosecuted?—I have not looked at that.

11486. If you have been a keen advocate of theirs, surely that would have been the best thing to do, would it not, so as to be able to tell them whether they could be prosecuted or not?—I do not think that would help them in any way if I only told them that. It should be taken into consideration that these are poor ignorant ryots. If I tried to tell them it was not the wish of the Government to compel them to do it they could not understand it.

11487. (Mr. Wilson.) May I interpose for a moment in order to save time. Have you seen some of these perwanas?—A number of them.

11488. Will you look at this paper and tell me whether it is a correct translation? (handing same to witness)?—Yes.

11489. Will you read it?—Yes.

"Notice in the name of _____ of _____ opium cultivator."

"It appeared from the reports of the *Mohurir* and the *Zilladar* of the kothee that you intend to sow other crops in the opium holding, viz., 7 cottas of land in which a settlement was made with you through one _____ *Khatadar*, your agent, and in which field you had grown the poppy crops for the last year and year before last, and that you are not willing to sow the poppy seeds in the field in question. As the field in question yielded the poppy crops only in last year and prior to this, and it was intended for the crop of the poppy, and Government has already sent the advance money, and no objection is, up to this time, made before this Court either by you or your agent before the time of the land was being settled to you, you are therefore informed to take care by this notice that you must sow the poppy seeds in the field in question. If you fail in doing this you will be prosecuted under section 10, Act XIII of 1857, without hearing any excuse on the subject.—Dated 2nd October 1893."

11490. (Sir James Lyall.) By whom is that signed?—It bears a seal. "*Kothee Gya, Opium Court, 1893*," and is signed "*Ram Churn Lall, Gomasta, Kothi Gya*."

11491. (Mr. Wilson.) I may say that the original of that is in my pocket. It is assumed that he has not taken it as an advance?—It says that the money has been sent. He has not received it; when they have received an advance they have nothing to say.

11492. Now will you read the tenth section?—Yes.—"If it shall be found that any cultivator who has not received advances from Government has not cultivated the full quantity of land for which he received such advances he shall be liable to a penalty of three times the amount of the advances received for the land which he has failed to cultivate, and the said penalty may be adjudged by the Deputy Agent or Collector on the complaint of the Sub-Deputy Agent or other officer as aforesaid. Any person dissatisfied with the judgment of the Deputy Agent or Collector may appeal to the Agent and the decision of the Agent shall be final." In the perwana it says that the advance was not received by the cultivator: it was sent to him by the Government.

11493. (Sir James Lyall.) Sent to the *Khatadar*?—The money is usually sent through the *Khatadar*?

11494. Your argument is that whether he has taken the advance or not, if the Khatadar has been told and has taken an advance the *asani* is threatened with prosecution?—Yes.

11495. You ask in your evidence why do not the zemindars, well-to-do people, and large capitalists, cultivate poppy?—Yes, if it pays.

11496. Is it not the fact that one kind of crop will pay a man who cultivates it with his own hands and through his sons and women and children, while it would not pay a big capitalist, who has to pay wages for all the men he employs? Is not that a common fact in India and in other countries?—There are some people who say that it is the most paying crop. Then I naturally ask the question, "If it is the most paying crop and leaves so large a margin, why do not the tea-planters and the indigo-planters and those who have a large capital take up the growth of the crop?"

11497. Then you say, "Why is it necessary to give advances without interest to the poppy cultivators?"—Are not such advances necessary in growing any other crop? Are any advances made by indigo-planters to the ryots? I mean by "such advances," advances such as those made by the Government.

11498. Government in this case under the monopoly is taking the place of the indigo-planter. Is it not the case that in the same way the indigo-planter makes advances to the ryots?—I do not know about the indigo-planter making advances in the same way. They may have their own conditions and terms and their own officers to look after them. I do not think that the men employed under the indigo-planters would be so much dreaded by the people, and that they would be so much brought under compulsion by the underlings of the indigo-planters as in this case.

11499. That was not the case in former days, was it,—at one time indigo-planters were supposed to be considerably dreaded, were they not?—Yes, at one time; but it is not so now.

11500. The Opium Department officials are separate from the district officials, are they not?—I do not think they are in the estimation of the people. They have the constables about them as much as the district officer would have.

11501. Do you mean to say that the flour made from the kernel of the mango stone is used in ordinary years as bread or only in famine years?—By the poorest classes it is used every year, but in times of famine many of the people have to fall back on it.

11502. What do you mean by the "poorest classes"—do you mean people who in ordinary years are almost starving?—People who live from hand to mouth all the year round.

11503. It must take them almost as much labour to make bread out of that as would suffice to earn money to buy wheat?—I do not think it would take much labour. They go about collecting the mango stone on the roads.

11504. You say that the poor ryots have no means of approaching the higher officials,—what do you mean by "higher officials"?—Such as a Magistrate of a district or a Commissioner.

11505. Or a Deputy Opium Agent, is he a higher official or not?—I think he is.

11506. Are not Magistrates of the district, Deputy Opium Agents, and other officers of that sort constantly about in the district?—Yes.

11507. And they talk with a good many people, do they not?—I do not think so; if they talk with them they do so in the presence of their official underlings, and they will not find an opportunity of hearing their complaints; the cultivators do not feel encouraged to speak to them of their grievances. If they are taken into their confidence and if they are taken aside and spoken to, then I think they will come into touch with the higher officers.

11508. Do you mean to say that none of the higher Government officials take the trouble to get into touch with the ryots?—I am not certain that no official would do it, but generally it is not done. I have never heard of any instances in which it has been done.

11509. (Sir William Roberts.) Have you known many habitual opium-eaters personally?—I have seen a good number.

11510. Have you known them personally?—I have known a number personally.

11511. In the better classes of society?—Some of them have been in the better classes of society; others were employed as servants—lower classes. *The Revd. Prem Chand.*

11512. Have some of these that you knew intimately consumed opium for a long time?—Yes.

11513. How long? Some five, six, ten, and some twenty years.

11514. When you state that opium is a poison, I suppose you mean that in a limited sense?—Yes.

11515. It is a poison to these habitual smokers?—It is a poison to the habitual consumer. It is a poison to him if he takes more than he is addicted to take.

11516. You say, "opium is a poison, it ruins the health of its consumers and demoralises them;" do you apply that only to those who take it in excess or do you apply it to all opium-eaters?—I apply it to those who take it in excess.

11517. You further say you have not heard of opium being used as a preventive of fever. I assume you are aware that it is used very much as a popular medicine in malarious districts?—No.

11518. You have not heard that?—No.

11519. Have you not heard that there is a popular opinion in that direction?—No. I have made enquiries amongst the people here in Behar, and nobody says that he ever takes opium as a preventive of fever.

11520. Has it ever been said that it was a good thing for the various ailments of malarious countries?—I do not know.

11521. Do you know whether opium is more largely consumed in malarial districts than in non-malarial districts?—I am not aware of that.

11522. You say the ryots are poor in consequence of cultivating opium?—Yes.

11523. Is it a fact that the ryots of these districts, where opium is cultivated, are poorer than the ryots in other parts of India?—Poorer than in Bengal where opium is not cultivated.

11524. (Mr. Wilson.) You have given us a number of calculations of the cost per bigha and so on; is that what is called the opium bigha that you have given throughout? We have heard of two kinds of bigha, and I want to know which sort you are referring to, and whether it is the same kind throughout your calculations?—It is the usual bigha of the district.

11525. Is it the bigha according to which the cultivators are paid for their poppy?—Yes.

11526. Do you apply the same bigha to the other cereals in your table?—Yes. The same bigha—the usual bigha that is made use of here.

11527. Have you in your statements or anywhere else at all suggested that a true feeling of objection to opium on moral grounds exists among the ryots in this part of the country?—I do not think I have mentioned it anywhere specially, but that is implied—on moral and physical grounds.

11528. Do they have a moral objection or an agricultural objection?—They have both.

11529. Supposing the Government were to considerably raise the prices of opium, would they then have any moral objection?—It will to some extent minimise the evil.

11530. I will put it in another way. I want to know whether what you say in the 9th paragraph of your printed statement refers to the general feeling in the country or whether it is your own personal opinion upon the subject?—It is the general feeling.

11531. Do you draw any distinction on moral grounds between eating opium and smoking opium: one is no better or worse than the other?—Both are evils, but smoking, I think, is more to be condemned.

11532. I want to understand exactly your opinion. You say "it ruins the health of its consumers and demoralises them;" are you there speaking of those who take small quantities or those who take it in what you call in excess?—I am speaking of those who take it in excess; and by excess I do not mean one who perhaps takes 2 or 3 tolas at a time, but one who takes any amount that is not needed to keep him in health.

11533. Supposing a man has regularly taken a few grains a day: is it your opinion that does him any harm?—That

The Revd. Prem Chand.
5 Jan. 1894.

*The Revd.
Prem Chand.*

5 Jan. 1894.

would be taking it in excess, according to my opinion, because it is not needed for his health.

11534. Is there much malarial fever in your district?—No, not much.

11535. Do I understand you to mean by what you have said that this Commission can scarcely get at the truth of the ryots' opinions by sitting in this room?—I mean that.

11536. And that to get at it, it really would be desirable for a smaller number to go to the fields or villages and talk with the ryots?—Yes, to go amongst them and come in contact with them.

11537. Were you present yesterday when some of the ryots came here?—Yes.

11538. Do you think that they would be embarrassed by coming here?—They would very much be embarrassed by coming here; they do not like to leave their villages.

11539. Do you think it would be easy to get a much larger number of ryots to come here and express the same usual opinion?—Almost all of them would say the same thing. I have visited a number of ryots in several districts lately.

11540. Would it not, on the other hand, be easy for the Opium Department to bring a large number of ryots here to testify to the opposite effect and say that they like the cultivation?—Yes, if they were brought here.

11541. Therefore you think we shall not get at the truth in this room?—No.

11542. I think the ryots who came here yesterday were from the Patna district, were they not—do you know where they came from?—No, I do not. They may have belonged to this district.

11543. In what you have said you have been speaking chiefly about your own district?—Yes.

11544. (*Mr. Pease.*) Are advances made to opium cultivators by money-lenders?—No, not as a rule.

11545. You think the opium cultivators have no liabilities except those due to Government for the advances made for their opium cultivation?—They have, and they are going down, sinking into poverty.

11546. (*The Maharaja of Darbhanga.*) Do any of the ryots take opium?—Some of them do.

11547. What is the approximate cost per month of the opium they take?—That depends on the quantity taken.

11548. Do you think they buy opium?—No, it is illicit.

11549. You mean the passewa?—They keep back a portion for their opium-eaters, I think.

11550. The opium cultivator has not to spend any money from his pocket if he takes opium?—I do not think he spends money.

11551. You say that opium is cultivated at a loss?—Yes.

11552. Then why is it that opium cultivators will take to the opium cultivation?—By compulsion.

11553. Do you not think that the cultivation of opium renders the soil more fit for the cultivation of other crops?—It more exhausts the soil, and therefore a good deal of manuring is necessary. No opium could be grown in the interior at a distance from a village, but close to the village where the manures are available.

11554. Are any other crops grown on poppy land in the same year?—I think potato grows and sugarcane grows on poppy land.

11555. Sugarcane and opium the same year on the same land?—No, a sugarcane plantation takes the whole year.

11556. Is anything grown on the same ground besides opium?—Indian corn may be planted.

11557. Do you think that the high cultivation of opium makes the land more fit for the cultivation of Indian corn?—No.

11558. You do not think so?—No.

11559. Is sugarcane grown in the same land for years together as opium is?—I have seen in several places, but they need some sort of manuring, and the people are learning to manure their fields.

11560. Is it not the case that, in many instances, after three or four years, there is a change of crops—is not that the custom in Behar?—In some places.

11561. With opium it is not the case?—With opium, too, unless it is well manured.

11562. You say it is grown on land near villages?—With the help of manuring.

11563. You say that in the village of Kulharia the ryots have refused the cultivation of opium because the zemindar did not compel them to do it?—Yes, I went to the village and saw it.

11564. Is it not the case in Behar that more than 90 per cent. of the ryots have rights of tenancy?—I think more than 50 per cent. of the lands in Behar are bhouli, paid in kind.

11565. Have you any tenancy ryots?—No, I do not think those who grow bhouli lands have any tenancy right.

11566. Have you seen the Tenancy Act?—I have not seen the Tenancy Act.

11567. Can the zemindar eject a ryot?—There is no ejectment necessary in this case.

11568. You say that the ryot is compelled by the zemindar to cultivate opium?—I do not say compelled.

11569. Your words imply that if the zemindar directed the ryot to grow poppy, he would be obliged to do so?—It is done by their influence; a word from them would be enough.

11570. Their moral influence?—The influence of the zemindars.

11571. There is no legal power to compel?—No legal power whatever.

11572. When you speak of the effects of opium, to what districts do you refer?—To Monghyr, Gya, Chupra, and Bankipur.

11573. (*Mr. Mowbray.*) You say that as a preacher of the Gospel you have had special opportunities?—Yes, visiting the people.

11574. Are those special opportunities of ascertaining their economical objections to cultivate poppy or their moral objections?—Both.

11575. Have you a district under you as a missionary?—Yes.

11576. What is the area?—It is the Gya district.

11577. How many Christians are there among the ryots?—There are no Christians amongst the ryots; the missionary is expected to preach the Gospel to the heathens, not specially to Christians.

11578. But do you think that you have special facilities for seeing people who do not belong to the Christian religion?—I have seen many of them, and talked with them, and have known many of them. I go amongst them, and preach the Gospel to them.

11579. Do you think that the fact that you have to go amongst them and preach the Gospel gives you special opportunity of hearing what they themselves would wish to speak about?—Yes, because they do not take me to be in any way connected with the Government. I am regarded as a friend of the people, sitting amongst them in their own houses often.

11580. Do you think that they speak more freely to you than they would to men of their own religion?—I am not speaking of English officials—would they speak more freely to you as being a Christian missionary?—They would speak to men of their own religion too.

11581. You say you have had special opportunities?—Yes.

11582. I want to know whether you really think that your position as a Christian missionary brings you into closer touch with them than natives of their own religion?—Not natives of their own religion—that is not implied.

11583. I should have thought that was the meaning of "special opportunities." You have given us certain statistics; can you give me any idea of what number of people they are based upon, and what sort of examination?—A large number, I think extending over more than three or four years, in some instances, and I have known them for a long time. There was some opium cultivation in Monghyr next to my house.

11584. Did you jot these things down from time to time, and then prepare them?—More than two years ago I had to say something about this business.

11585. Where was that?—It was to a friend who asked me about it.

11586. In public do you mean P—I think it was published.

11587. You speak about people employing paid labour. In some of the estimates of expenditure which we have had before us the item of wages and labour came in; in your estimate there is an amount of Rs. 4-1 in one case and Rs. 3-9 in another for paid labour P—Yes, one is in a case where the field is nearer town, and another in a village where the labour is cheaper than it is in town.

11588. You seem to say that cultivators do not employ paid labour but employ members of their household; why do you make an allowance for paid labour when you come to make up the estimate of cost—is that money that you consider actually paid P—The farmer or cultivator, if he employed paid labour, would have to pay so much for it, say, an anna a day or two annas, and if he employs the members of his family to do the work he must feed and clothe them all the year round. Giving these poor people even the wages that they would get by working for others is not giving them much.

11589. You mean that that item really represents what you call the wages that a man would pay to his family if he paid them P—Yes.

11590. It is not actually paid out of pocket, but it is an item P—It ought to be paid, it must be paid somehow, because many of these people live from hand to mouth. If you look at Mr. Grierson's notes with regard to the Gya district you will see how poor the ryots are in Gya, and how they have to make it up.

11591. With regard to the perwanas, have you seen many of them P—I have seen many of them.

11592. Was the one you mentioned given to you by one of the cultivators P—Yes.

11593. Are they all the same P—I think the wording is almost the same—there are certain changes.

11594. I want to have it clear whether they all state that money had been paid to the Khatadar P—I did not take notice of that.

11595. (Mr. Wilson.) It does not say that the money had been paid to the Khatadar P—It is said that the money has been sent.

11596. (Mr. Moubray.) How is the Khatadar himself appointed, how does he come to exist—is he elected by the ryots themselves to represent them P—I do not think so; he is not elected by the ryots themselves.

11597. How is he elected P—He is appointed by the Government,—that is, as far as I can find out, I have had that information.

11598. Your impression is that he is appointed by Government P—Yes.

11599. Do you know by whom P—By the zilladars. I do not think he is appointed by the European officers, but as that paper is signed by the gomashtha, he is appointed by the gomashtha or some underling.

11600. You think the Khatadar is appointed by an underling of the Government P—Yes.

11601. With regard to your last suggestion as to the Commission appointing a committee to visit the opium cultivators and know their grievances, are you aware that about ten years ago there was a Commission that sat for about two months P Did it come in direct contact with the ryots P—I believe they saw the cultivators in very large numbers.

11602. Were you then in the district of Gya—ten years ago P—No, I went there four years ago.

11603. You have only been there four years P—Yes.

11604. Where were you before that P—In Calcutta four years, and in Monghyr.

11605. Your opinions with regard to the economical and moral objections of the ryots to the cultivation of opium are based on four years' experience P—In Gya and in Monghyr, which is another opium-producing district.

11606. Were you there before you were in Calcutta P—Yes.

11607. How long P—I was born and brought up there—I lived there.

11608. (Mr. Pease.) As a Baptist Minister you are devoting the whole of your life to the interests of the people of the district in which you live P—To the preaching of the Gospel, and also in doing good where I can.

11609. Preaching the Gospel takes a limited part of your time, and during the other portion of your time do you visit them in their houses P—Yes.

11610. And enter into all their interests P—Yes.

11611. Therefore you have special opportunities of knowing what their feelings are with regard to their outward concerns P—Yes.

11612. (Mr. Fanshawe.) You have stated that you lately made a special enquiry in several districts; to which districts does that remark apply P—Chupra, Shahabad, Patna, Gya, and Monghyr.

11613. Five districts P—Yes.

11614. What length of time did you give to this special enquiry in those five districts P—I do not think I said "special" enquiry.

11615. How long did the enquiry occupy you P—In some places a day and in some places more.

11616. Would you tell me generally how many villages you visited, and how many people spoke to you regarding their prayer to be released from the obligation of growing poppy P—What I have said is not only based on my recent visit, but I have been all my life in contact with this people.

11617. You say that a special prayer was addressed to you by cultivators who wished to be relieved from poppy cultivation; how many villages do you refer to as having been visited on this occasion—20 or 30 P—I think it would be more than that.

11618. With how many cultivators did you come in contact P—I saw hundreds or thousands of people. In one village I had more than three hundred and fifty.

11619. You think that you can found on that an opinion as to the general unwillingness of the cultivators in Behar to cultivate opium P—Yes.

11620. You are satisfied that you have had special experience P—Not only on this visit.

11621. With your former knowledge P—Yes.

11622. You have spoken of the perwana, and you have mentioned the village of Kulharia. In Calcutta we had a witness, Babu Sahigram Singh, who referred to the case of this village, and he stated distinctly that the Khatadar belonged to the village and represented the villagers, and was in no way appointed by the Government; may we accept that as correct P—That may be his view.

11623. He was a zemindar owning property P—A zemindar living all his time in Calcutta and not coming in touch with the people, so that I do not think I will accept what he has to say on that point.

11624. Does not the Khatadar come into the head-quarter of the Sub-Opium Agent, to make an engagement on behalf of the cultivators of his village P Is not that the system P—I do not know.

11625. You have been amongst the people; is it not the case in Behar that the Khatadar comes to make an engagement on behalf of the cultivators P—No, I do not think so. The zilladar goes to him.

11626. Does not he come in to the Sub-Opium Agent to make an engagement on behalf of the cultivators of the village P—I do not think he goes there of himself.

11627. Does he make the engagement P—The zilladar brings him.

11628. You mean to say that the zilladar brings in the Khatadar to make the engagement P—Yes.

11629. Does not the Khatadar produce a list of the cultivators of his village who wish to cultivate poppy, and the area they propose to put under poppy P—I think a list is prepared for him.

11630. By whom P—By those who can write for him. He cannot generally read and write. There are others who do the writing for him.

11631. Is it dictated by him P—It is prepared by others when he gets the advances.

11632. What do you mean by its being prepared for him—he comes in and represents that certain villagers wish to grow poppy P—The village is first visited by the zilladar—we should not lose sight of that—and then as I have found from many of these people the sites are selected, and the names are taken down, and one of the ryots is made a Khatadar. One of them is more influential than the other amongst them, and he is made a Khatadar. Then the advances are given. A list is properly prepared and the quantity of land put down.

11633. The Khatadar then comes into head-quarters with his list and takes the advances, does he not P—Yes.

The Hon.
Prem Chand.

5 Jan. 1894.

*The Revd.
Prem Chand.
5 Jan. 1894.*

11634. Are you aware that before he leaves the headquarters of the Sub-Deputy Agent he admits that he has received the advance on behalf of such cultivators as are on his list—are you aware that that is the practice?—No, it may be the regular thing to be done, but I have not heard about it from the people.

11635. In all these questions of cultivation of course conditions differ in different parts; but is it not the case that poppy cultivation is largely carried on on what may be called market garden lands?—Near the towns.

11636. What may be called market garden land, or land on which you would grow garden crops?—I do not see much poppy cultivation here in Bankipur.

11637. Speaking generally of Behar, is not that the case? We have been told that poppy is grown near the villages on what may be called market garden land?—I do not understand the expression "market garden lands."

11638. I mean land on which vegetables and crops of that kind are ordinarily grown, a fine cultivation?—Nearer the towns I do not think they grow opium, but nearer the villages they do.

11639. I am speaking of the villages?—Not near the towns.

11640. Who are the people who ordinarily cultivate poppy in this part of the country—what classes of cultivators?—The low class.

11641. What castes—are they the Muraos, Koeris, or Kachhis?—There are many Koeris and some Brahmans and some Rajputs.

11642. Is it not the case that poppy is largely cultivated by these gardeners or Koeris?—No, I do not think so.

11643. Do you think the acreage under poppy would be largely given up to cereals in any case if the poppy were stopped?—It would.

11644. Do you not think that potatoes, sugarcane, and tobacco would be the chief competing crops with poppy on this land?—Yes, and other crops, wheat and grain.

11645. Which would be the chief competing crops in your opinion?—The potato, I think.

11646. And sugarcane?—Yes.

11647. And tobacco?—About tobacco I do not know.

11648. Sugarcane and potatoes?—Wheat and grain and other food-grains.

11649. But the chief would be sugarcane and potatoes?—Yes.

11650. So far, the area under poppy would not be given up to cereals?—Wheat too.

11651. But more likely sugarcane and potatoes?—Wheat and grain.

11652. It has been stated that a number of applications are made from year to year by cultivators who have had to give up poppy cultivation objecting to their being obliged to give it up: how do you reconcile that with the statement that

there is a general unwillingness in Behar?—I should like to have the names of the cultivators.

11653. You think that in Behar there have not been applications of that character as far as you know?—As far as I know. I should be glad to satisfy myself that there have been such applications.

11654. You speak of the dread of the police; do you wish it to be understood that the police have any direct connection with the working of the 'opium' department?—It is not that; it is about the cultivators approaching the higher officials.

11655. They are prevented by the dread of the police?—Yes.

11656. Do you mean to imply that a dread of the police on the part of the cultivators prevents them from going to Government officials?—Yes, if they want to go and say something they do not get any help or advice from them. If they want help they do not get it.

11657. With regard to mango trees, you have said that a general denudation of the country is going on owing to their being cut down?—Yes.

11658. Is it not the case that a number of new mango trees are constantly being planted?—Even if they be planted I have not seen many. I have seen some in some places.

11659. It is the case, I suppose, that mango groves are constantly being planted though you have only seen some?—Yes, to some extent.

11660. Are you aware that the matter has been taken up by any district or Government officials?—I am not aware of that.

11661. (*Sir James Lyall.*) In comparing the profits of cereal cultivation and poppy cultivation, you put the yield of cereals at from 16 to 20 maunds?—Yes.

11662. You have charged nothing in your account for cereals for the irrigation and manuring?—Grain does not need irrigation.

11663. You are, I suppose, including wheat too?—That needs hardly any irrigation: gram and other cereals do not need it; they belong to dry farming.

11664. On well land wheat is generally irrigated, is it not?—No.

11665. Not when there is a well there?—I do not think it is irrigated.

11666. You think that without irrigation and without manuring the land will produce from 16 to 20 maunds on an average?—Manuring is necessary, but not irrigation.

11667. You have put nothing for manuring?—No.

11668. Do you know that this estimate of yours of yield of cereals is about double the estimate which the Government takes in calculating assessments for land revenue?—I do not know.

11669. (*Mr. Wilson.*) You said you had lived in Monghyr?—Yes.

11670. How long did you live there?—I was born there and lived there up to the age of 36, when I left the place.

11671. That is a poppy-growing district?—Yes.

The witness withdrew.

Mr. DINNONATH MAZUMDAR called in and examined.

*Mr.
Dinnonath
Mazumdar.*

11672. (*Mr. Wilson.*) I believe you live at Bankipur?—Yes.

11673. Are you a Minister of the Brahma Somaj New Dispensation Church?—Yes.

11674. Will you tell us what classes, races, or castes you have had experience amongst?—The rich and respectable class; also the poor and lower classes. I do not speak only of Bankipur. I speak of my experience of many years. The habit is not confined to any particular caste among the Hindus. It is more common among Mussulmans, from whom the Hindus appear to have imbibed the habit of smoking at least.

11675. What special opportunities of observation have you had?—From my boyhood, for about half a century, I have seen men addicted to the habit around me. I have had neighbours and acquaintances, and even friends and relatives, in the habit, some of eating and others of smoking opium, both among the respectable gentry and the low-class people.

11676. How far is opium-eating or drinking prevalent among these classes?—I know nothing of drinking opium.

Opium-eating has become common among the elderly people, there being a general notion that opium removes the susceptibility to all sorts of complaints that a man gets above the age of 40.

11677. How far is opium-smoking prevalent among them?—It is rather decreased amongst the Bengal gentry and educated Beharis and Hindustanis, and is confined to the poor and low-class people in Bengal, and the common people in up-countries, and to men and women of ill-fame throughout, whose number is limited to a small minority of the population.

11678. That has reference to smoking?—Yes.

11679. At what age is the habit generally acquired?—Generally about 25 and sometimes earlier according to circumstances.

11680. What motives induce people to form the habit?—The pleasure of intoxication with some (in case of smoking) and thoughtless imitation from the influence of company with many. Eating is generally from a protective medicinal motive, though introduced without an authorized prescription.

It is originally a Mahomedan intoxicant, and in absence of a beverage, there being a strong restriction against wine in the Mahomedan Scriptures the Mussulmans used it to get them intoxicated in various ways, viz., by swallowing it in timely and repeated doses, by smoking it with all sorts of preparations and by drinking it. The Hindus seem to have learnt it from them after the advent of the Mahomedan Government. Among the consumers both by swallowing and smoking Mussulmans form the majority throughout the country, and the Mahomedan towns—viz., Lucknow, Patna, Moorshedabad, and Dacca—are the foremost.

11681. Is there a marked difference between moderate and excessive consumers; if so what is the percentage of excessive consumers?—Amongst the opium-eaters the number of excessive consumers does not carry a high percentage, most of them maintaining the capability to work though they often doze and yawn. I saw only one man of this stamp who was an educated man of means a quarter of a century ago. But among the smokers the large majority get stupid, stupid, and worthless generally as they can hardly keep a control over undue thirst for smoking as many pills as they would find ready at hand at a sitting, and feel a strong inclination to repeat the sittings to the extent of three or four times in a day.

11682. What proportion of their income do the habitual consumers spend on opium?—There is no uniform rule. Smoking is more expensive, in which the rich or the well-to-do persons generally have a large company around, and sweetmeats, to a large quantity, are taken as a necessary accompaniment to help into intoxication. So a smoker can spend all his income. The eaters are more judicious and economical.

11683. Is there a general tendency to increase the dose?—Yes. Both in the cases of eating and smoking the quantity must be increased gradually to secure the growth of intoxication.

11684. What are the results of the habit, physically, mentally, and morally?—The eater dozes, yawns, passes restless nights, at least without sound sleep. Smoke-tobacco very frequently by day and night gets thin and emaciated, unless he can afford to take milk and ghee in large quantity, as also other rich and nutritive food, none of which will have any effect in the constitution, in case of illness, except in diabetes, rheumatism, diarrhoea and dysentery, but the two last-mentioned cases often prove fatal to the habitual consumers of opium. A swallower, besides all this, gets his eyes sunk and eyesight impaired, and a sort of hoarseness in the voice sometimes. He loses power of concentration and decision and his sense of duty. Morally the smoker loses his sense of self-respect and duties and responsibilities of his life; with want and poverty he takes to pilfering; he is abhorred as a "*qulikhori*," as the madat-smoker is styled in Bengal, and is distrusted as an unfortunate profligate.

11685. In what proportion of cases are injurious results apparent?—Very few opium-eaters, but a large majority of opium-smokers. They generally associate with women of ill-fame and sometimes have their dens in those houses, which makes matters more injurious.

11686. Is opium generally believed to be a protective against fever?—Yes, and the opium-eater always takes his doses, even when he gets fever. But men addicted to the habit preach it as a protective to all sorts of maladies. Opium-eaters do not generally get fever so often, they say.

11687. Is it a protective against fever in your opinion?—I cannot say positively, but as far as we observe, opium-eaters do not generally get fever very often. There are others also among those who have not the habit, that do not get fever so often, the attacks of fever being few and far between in their life. So it does not prove to be a protective to fever. Fever becomes serious with a habitual opiumist. It checks diabetes, rheumatism, and chronic diarrhoea, and some such diseases.

11688. Is it specially useful in malarious districts, or believed to be so?—I cannot give a definite opinion. The consumers of opium believe opium to be very useful in all sorts of complaints, as also in the damp and malarious districts where the habit is as common.

11689. Is it necessary, or believed to be necessary, to enable working people to get through their daily toil?—Never. Far from being necessary, it makes men drowsy and cachectic. The men in Assam who are in the constant habit of chewing opium rags, are extremely lazy and can hardly get up and work. Their females do every work for them, even attend courts of justice when necessary. Opium-eaters cannot do anything unless they get their dose in time.

11690. Is the habit of taking opium looked upon as disgraceful?—Yes, very disgraceful, especially smoking.

11691. Does the existing system of granting licenses for the sale of opium tend to the spread of the habit or to its restriction? How would the license holders make up their money for the license if they do not exert to spread the consumption by extending their sale?—No practical reason is seen in the license system to tend to the restriction of the habit. The vendors preach its salutary effect.

11692. Is it desirable to prohibit the sale of opium except for medical purposes?—Yes, as the use of opium in any shape always produces evil effects, except as medicine.

11693. Would public opinion favour the adoption of this measure?—There is every reason to believe so in the case of the disinterested public. People addicted to it, and many of those who earn their daily bread in the opium service, or those otherwise interested, will not favour the measure. Fear of imposition of a new taxation keeps back many—who have something like a panic—to give out their real conviction; and men of a political turn of mind do not much care to look to the moral or social sides of the thing.

11694. If such a measure were adopted, would it be desirable to make special provision by establishing a register of opium consumers for the wants of those who are already habituated to the use of the drug?—I do not see why it should not be. Those taking opium habitually as medicinal doses should have no reason to blush or make a secret of it. The floating people among them may have some difficulty to get a supply everywhere, unless they are provided with something like a pass to show that they are registered consumers and should be supplied with a fair quantity wherever they live temporarily. The pass would bear the number of quantity allowed, and the signature of the Registrar.

11695. Have you any general observations to make?—It was a recent habit with the Bengalis who took to it from the last generation. I mean the generation previous to mine. My grandfather's generation was never found in the habit. It was begun perhaps with the monopolized traffic of Government, by the Persian-knowing youths—the English-knowing forming an exception,—under the Mahomedan influence, some 60 years ago or thereabout; and it is becoming rare now in Bengal gentry, as far as smoking is concerned. The habit of swallowing pills as protective or medicinal doses, though apparently less formidable, has gradually spread its dominion all over the population, women and children included, except the few educated and enlightened men of thought. The habitual consumer's preach and spread the habit amongst the fair sex on the plea of medicine for all sorts of chronic maladies they complain of, and the children are given small doses to put them to sleep. The ayah in European families being the foremost to put the crying little ones to rest. It is not given to children by parents or relatives, as in the case of the drinkers of wine. There are numerous cases of suicide committed by means of opium every year for trivial differences between relatives, and for other causes, because of its easy access.

11696. (*Mr. Fanshawe*.) To what part of the country do you wish your remarks generally to apply?—In Bengal proper generally.

11697. With regard to your remarks on Assam, were you speaking from personal knowledge?—Yes, I have been in Assam on my tour of mission.

11698. Had you sufficient experience on this tour to found your remarks upon personal knowledge?—I saw people chewing opium rags there, and I saw they were very indolent.

11699. Then they are founded on some personal experience—Yes, on personal experience.

11700. Do you wish us to understand from the last general observations which you have made that the habit of taking opium pills is very largely diffused throughout Bengal now? You say the habit is gradually spreading its dominion over all the population?—It is not very large.

11701. What you say now does not appear to agree with what you said before, that the habit was gradually spreading its dominion over all the population?—As far as opium-eating is concerned, the habit has been very common.

11702. You mean that it has been increasing, but is not yet very common?—Yes; it is getting common.

11703. Getting more common than it was, because you said it was not common?—Yes; women and children also are getting into the habit.

Mr.
Dinbonath
Mazumdar.
5 Jan. 1894.

Mr.
Dinnonath
Mazumdar.

Jan. 1894.

11704. (*Chairman.*) You said that opium-eating had become common among the elderly people, there being a general notion that opium removed the susceptibility to all sorts of complaints that a man gets above the age of 40?—
Yes, that is the general notion.

The witness withdrew.

Babu RASIK LAL GHOSH called in and examined.

Babu
Rasik Lal
Ghosh.

11706. (*Mr. Wilson.*) Have you been deputed to Bihar by the Indian Association to enquire into the circumstances connected with the cultivation of the poppy?—Yes.

11707. You do not propose to deal with the question except as regards the poppy?—No.

11708. Have you visited various places in the district of Shahabad?—I visited various places in the district of Shahabad where I collected information from the poppy cultivators themselves, and from persons who know a good deal on the subject.

11709. What do you say with regard to the cultivation of the poppy being popular?—The cultivation of the poppy does not seem to be popular, because it is not paying. The oppressive acts of Sub-Opium Agencies are another reason why it is not liked by the tenants.

11705. You have given us your general view upon opium, what is your general view with regard to alcohol?—I believe its effects are even worse.

11710. Will you explain that further?—The tenants are often compelled to accept the first advance for growing the poppy; and in case of their refusal, they are threatened with criminal prosecutions and imprisonment; and besides, their legitimate dues on account of the poppy grown the preceding year are withheld from payment unless they (tenants) consent to cultivate the poppy.

11711. Do you suggest potatoes as a substitute?—Potatoes can be raised in the soil which is generally used for the poppy cultivation. I give below a comparative statement of profit and loss of these two crops in a bigha of land,—i.e., 27,225 square feet or $\frac{2}{3}$ of an acre.

11712. I believe you have prepared a calculation which you will hand in?—Yes.

(1) POPPY.

Price paid to tenants for growing the poppy per bigha or $\frac{2}{3}$ of an acre.

	₹	a.	p.	₹	a.	p.
For 4 seers of opium of 70 per cent. consistence, @ R5/12 per seer	23	0	0			
For 5 seers of flower leaf, @ 0/4/0 per seer	1	4	0			
For one maund of poppy leaves for "trash," @ 0/6/0 per maund	0	6	0			
For $\frac{1}{4}$ seer pusewa, @ R3/8 per seer	0	14	0			
For 4 maunds* seed, @ R2/8 per maund	10	0	0			
TOTAL	35	8	0	35	8	0
Loss to the cultivator	13	2	0	31	0	0
	48	10	0	66	8	0

Expenditures incurred by tenants for cultivating the poppy per bigha or $\frac{2}{3}$ of an acre.

	₹	a.	p.	₹	a.	p.
For 10 to 15 ploughings @/12/ each time	7	8	0	11	4	0
For manuring (including carriage)	3	0	0	5	0	0
For labour for preparing the beds, 5 or 6 labourers, @/3/0 per head per day	0	15	0	1	2	0
For seed, 5 or 6 seers	0	6	0	0	7	0
For one ploughing after sowing seed	0	12	0	0	12	0
For 6 to 8 irrigations, @ R2/4 each time	13	8	0	18	0	0
For weeding, 6 or 7 times, 90 to 105 women, @ 0/1/3 per head per day.	7	0	0	8	3	0
For lancing and collecting of juice, 4 to 6 times, 100 to 150 women and children, @ 0/1/3 per head per day	7	13	0	11	12	0
For rent, from R9/ to R12/a year, for 9 months, paid to the landlord	6	12	0	9	0	0
For perquisites, paid to the lambar-dar, @ 1/ per bigha	1	0	0	1	0	0
TOTAL	48	10	0	66	8	0

* 48 seers of 12 gandas or 48 tolas make one local maund of Sháhábád. Therefore 4 local maunds are equal to standard 2 maunds 13 seers 3 chataks and 4 káchá. The other measurements refer to standard measurement.

(2) POTATO.

Price received by the tenants for growing potatoes per bigha or $\frac{2}{3}$ of an acre.

	₹	a.	p.
Outturn from 100 to 200 maunds	150	0	0

Expenditures incurred by tenants for cultivating potatoes per bigha or $\frac{2}{3}$ of an acre.

	₹	a.	p.
For 6 ploughings, @ /12/ each time	4	8	0
For 10 maunds seed, @ R5/ per maund	50	0	0
For sowing, 10 labourers, @/ 3 per head	1	14	0
For irrigation, 3 times @ 2/4 each time	6	12	0
For digging and putting earth at the roots, 20 labourers, @ /3/ per head	3	12	0
For weeding, twice, 30 women, @ /1/3 per head	2	5	6
For manuring	10	0	0
For gathering potatoes, 30 women, @ 0/1/3 per head	2	5	6
For rent, R9/ to R12/, paid to the landlord	12	0	0
TOTAL	93	9	0
Profit of the cultivator	56	7	0
GRAND TOTAL	150	0	0

Both the crops of poppy and potato are sown in October and reaped in February or March. If the tenants are left to their choice, they would sooner grow potato or any other crop than the poppy, because it would be paying and also because it does not require so much labour and care as the poppy; on the other hand, the risk in growing the poppy is ever so much greater than growing any other crop which does not require so much labour and attention as are required for a successful cultivation of the poppy.

11713. Have you some reason to think that the tenants do not get the full amount they are entitled to by the regulations in this opium cultivation?—From a look into the entries of the receipts which the tenants got from the Sub-Opium-Agency, I am disposed to think that the tenants do not get the full amount they are entitled to get for the opium cultivation. I beg to submit a few copies of those receipts before the Commission for inspection.

11714. I believe you have a translation of one of these: will you read it?—I have a translation of two receipts, viz:—

No.

License is given to _____ son of _____
by caste _____ of village _____ Perganah _____ Zillah _____ as per
Kabuliat (lease) written by the *Khatadar* and the tenant mentioned above to grow the poppy produce in the field settled with him situated in village, pergunah and zillah above mentioned.

Area or extent of the settled field . . . 17 cottahs.
Amount of the first advance . . . Rs. 4-4-0
Area of the field measured . . . 9 cottahs 11 dhurs.
Amount of the second advance . . . Rs. 1-9-6
Amount of opium as entered in the book after weighment . . . 13 chataks 3 katcha (1st class)
Ditto 2 seers 12 chataks 2 katcha.
3 seers 10 chataks 1 katcha

Price of the opium _____

(Signed) H. E. W.,
Sub-Deputy Opium Agent.

11715. Are the papers on a printed form with the particulars filled up in writing?—Yes, the paper is printed.

11716. The particulars written in with a pen?—Yes.

11717. What is the part you complain of or say is not fair? I complain of this: the advances of money which the ryots get are entered, the cottahs they are engaged to cultivate are entered and everything is entered but not the price of the opium, the flower-leaf, the poppy-leaf, and the adjustment money. The ryots' complaint is that they take the flower-leaf or the poppy-leaf to the Opium Agency for

weighment, and the Gomashtas, without having it weighed, throw it away, and say, "It is not good; we will not receive it; you will not get anything for it." When the ryots want to get it back, they say "Oh no, we won't allow you to get it back." It may probably be the Gomashtas and other underlings of the Opium Agency enter against their names the weighment to fall the flower-leaf and the poppy-leaf, and get the money from the Opium Agency, but misappropriate the money—that may probably be. Then there is another thing called *passewa*, that is the watery part of the opium. When the ryots take it to the Opium Agency the Gomashtas say: "We won't take this *passewa*," and they do not allow them even to get it back from the Agency; that is also lost to the ryots. The usual proceeding of the Agency is that when the ryots take their opium for weighment the Sub-Opium Agent fixes the class of opium. If it is first class he puts Rs. 5 for it. It may be over 70 consistency or under. When the godown receipt comes from the Central Agency the account is cleared, but the amount which is due to the ryots is not paid at that time; it generally comes by the middle of June; but the ryots get the amount in the next year when they get the first advance. Those ryots who refuse to take the first advance are refused payment of their money; they say: "If you do not accept this first advance this adjustment money will not be paid to you." The ryots are obliged by this act to take the advance from the Agency, and this receipt is useless in a Law Court because there is no date entered in it. They cannot sue the Sub-Agency.

11718. Do I understand that those papers you wish to hand in are all alike?—All alike.

11719. All made out in a similar way?—Yes.

11720. All filled up in a similar way?—Yes; the only small difference is that in one paper the opium is put as second class, and in another as first class.

11721. Do you feel strongly that the tenants are not willing to cultivate?—They are willing to cultivate, but they are unwilling to cultivate the poppy. If the Government is at all disposed to make them cultivate it, it ought to be more liberal in payment to the cultivators, and ought not to wring out the enormous annual profit of about five crores of rupees, at the expense of a starving peasantry.

11722. Have you got this information from one or two persons, or from a considerable number of persons?—I have got it from a considerable number of persons.

11723. Have you any idea—how many?—When I went to a village I generally visited 50 and sometimes 100.

11724. (The *Maharaja of Darbhanga*.) How many of such receipts have you come across?—From one part of Shahabad up to Buxar, wherever I went, I found this kind of receipt everywhere.

11725. In every village?—Wherever I went, in every village.

11726. Did you find this to be the case with every ryot, or was there only a certain percentage?—No; they never keep their accounts with them; they keep them with the *Lambardar* or *Khatadar*.

11727. How many receipts did you compare? What was the percentage in which these forms had not been filled up properly?—I believe some 200 or 300.

11728. In 200 or 300 receipts these forms had not been filled in?—I have seen it with my own eyes.

11729. How many receipts did you see?—Two or three hundred.

11730. All together?—Yes.

11731. In how many cases were the forms not filled up?—All the same, every one.

11732. Every one the same not filled up?—No; filled up.

11733. (Sir James Lyall.) Did you ask any official or anybody to explain why the receipts were not filled up?—I did not meet any official.

11734. Are you certain that the account had been closed before you looked at the receipts?—Yes; it must have been, because the weighment of the opium is entered there, which must have been the previous year.

11735. You say the tenants are often compelled to accept the first advance for growing poppy?—Yes.

11736. And in case of refusal they are threatened with prosecutions and imprisonment; in the enquiry made did you try to find out how they are compelled?—Yes.

11737. Will you tell us how?—The *Lambardar* or *Khatadar* of the village, who is held by the Government and the people as the head of the cultivators, and who, I believe, as

Babu
Basik Lal
Ghosh.
5 Jan. 1894.

Babu
Rasik Lal
Ghosh.

5 Jan. 1894.

we have heard from the Lambardars themselves, are appointed by the Zilladars and not by the tenants, at the time of the first advance go to the Agency with the names of the ryots that are entered in the book of the Agency. They give a list to him, and the money is advanced to the Lambardar.

11738. Who gives the list of names, the Khatadar?—The Agent's officers give a list of the cultivators to the Khatadars, and the Khatadar enters into an agreement with the Agency for cultivating the poppy. In that agreement the name of every tenant is entered. The Khatadar with that list goes to the village, and asks the tenant to receive the money, and sign the papers. Those who receive the money, whether by the persuasion of the Lambardar or by the interference of the Zemindar's Gomashtha, whatever it be, sign the paper, or have it signed by others, those who cannot write. But, in the case of those who object to take the advance, the Zilladar goes to the Agency and makes a report that such and such a tenant objects to taking the advance. Then the Agency sends either the Zilladar or any of the officers to force them to accept the advance, and they are told: "If you do not take the advance the balance of the previous year will not be paid to you."

11739. If the man refuses the advance?—Yes; if still he refuses to accept the money the Zilladar comes and says: "This is the custom that you are to cultivate 5 or 10 cottas of land for 15 or 20 years; you must do it; it is the order of the Sircar" (which means the Government). "If you do not do it I will prosecute you; I will punish you," they threaten. Sometimes the ryot goes to the Sub-Agency to complain to the Agent Sahib that the Zilladar is doing that. They say: "We won't cultivate, give us our balance." The Agent Sahib says: "You are cultivating 5 cottas; this year you must cultivate 6 cottas, and you must accept the advance." Of course these facts have been reported to me.

11740. That is what they tell you?—Yes. That is what the poor ryots do: they take the advance, pressure being put upon them in this way, and they cultivate.

11741. In spite of all this a great many cultivators do give up the cultivation, do they not?—Yes.

11742. The others hold on because they are afraid of forfeiting their balance?—Yes.

11743. I suppose forfeiting the balance is illegal, is it not?—Quite illegal; but the ryots have no remedy against it, because this receipt is a useless piece of paper in a Law Court. No date is entered on this receipt which the ryots get from the Agency. It is useless in a Law Court. There is no date, and no balance is entered; the amount is not entered, and if they sue they say that it is barred by limitation,—that it is five or ten years old.

11744. Your conclusion is that they do not leave off poppy cultivation because these balances would be forfeited; you say that that is held over them?—Yes.

11745. But surely these cultivators at Shahabad are not so unintelligent as not to see that if the poppy cultivation involves so great a loss they had better even forfeit the balance and give up cultivation?—The thing is this: they do not calculate as I have calculated their profit and loss. The year in which they incur some debt they consider that they have lost on their cultivation; but the year in which they pay their dues and everything to the Zemindar Mahajan, and every body, they say, "We have got something."

11746. You mean they do not know that it is so?—As a rule the cultivators do not cultivate a great amount of land. The cultivator has five bighas, and he will cultivate perhaps one bigha or half a bigha or a quarter.

11747. You mean he does not know that it is such a losing concern?—Yes, his impression is that it is a losing concern. They are feeling that now.

11748. Then why not give it up?—They are trying to give it up. The ryots represented to me that they went with petitions to the Sub-Opium Agency to do away with the cultivation, but no one heard about it.

11749. But they do know that they are free to give it up. They must know that because they see a lot of people who have given it up and it is notorious that many people have always refused to cultivate it?—In a village the poorest tenants are made to cultivate.

11750. By the Khatadar?—The Khatadar does not do it, but the Zilladar. If a man has got some stamina or independence he does give it up.

11751. Are the cultivators, most of them, of the Murao caste,—men of the market garden class?—No, they are generally of the Koeri caste.

11752. These Koeri caste are fruit cultivators, are they not?—Yes, for garden purposes.

11753. Are they so poor and stupid as to be under the influence of the Zilladar, a man with from Rs. 5 to Rs. 7 a month,—a mere Chaprasi? They are under the influence of everybody; they are under the influence of the Gomashtha, and under the influence of the Jeth ryot.

11754. Is he separate from the Khatadars?—He is not necessarily the same person.

11755. What interest has he in promoting opium cultivation?—They have the same interest.—You will see in the calculation: For perquisites paid to the Lambardar at Re. 1 per bigha."

11756. Do you not mean the Khatadar?—The Lambardar means the Khatadar. This amount becomes a fund. If there is in a village 50 bighas of cultivation in the Lambardar's hand it is Rs. 50, and Rs. 25 go, as they report, into the pocket of the Zilladar and the Gomashtha, and out of the Rs. 25 the Lambardar or Khatadar bears the expense of feeding and of other charges of the Zilladar and Gomashtha as they visit the villages, and also, as they say, when the Sub-Agent Sahib comes to the village the Lambardar has to supply him with fuel and grass for horses, and they say that the Gomashtha does not pay them. Of course they do not mean that the Sub-Opium Agent intentionally does not pay them. They say: "He may pay the Gomashtha, but the Gomashtha never pays us."

11757. (Mr. Fanshawe.) Was it your intention to say that the Khatadar goes in to make an agreement without previously consulting any of the cultivators?—Yes.

11758. As to whether they are willing to cultivate poppy or not for the next year?—He does not go himself.

11759. When he goes in he has not consulted them previously?—Yes, I know as a matter of fact that no Lambardar is willing to remain a Lambardar.

11760. You spoke of cultivators who had been refused their balances going to the Agent Sahib without redress—are you speaking of the actual Opium Agent or the Sub-Deputy Agent?—They have no direct communication.

11761. Do you mean the Sub-Deputy Agent?—Yes.

11762. Can you kindly give us any instances in which you have been told or know that cultivators went to the Sub-Deputy Agent and were refused redress, or refused payment of their balances?—I have no particular instances to give, but I know of some names of persons who applied to the Sub-Deputy Agent for their balance and to be released from the obligation of cultivating poppy; but for obvious reasons they did not authorize me to tell their names.

11763. As you are making a charge that gentlemen in the position of Sub-Deputy Opium Agents refused to pay balances that were due, you ought to be prepared to state the particulars?—These facts have been reported to me; I did not see them with my own eyes.

11764. How many instances of this kind are there of which you have received information?—I have heard of some ten instances.

11765. Have you any objection to give up the names of these persons, or did you receive the information in confidence from the ryots?—I received the information from the ryots.

11766. In confidence?—In confidence.

11767. You are not prepared or willing to give up the names?—I am not prepared to give up the names.

11768. (Chairman.) Why not?—Because the ryots would be harassed.

11769. (Mr. Fanshawe.) Will you tell me, if you are at liberty to do so, who the Sub-Deputy Agent was who is said to have refused these balances due to certain cultivators?—I did not enquire his name.

11770. (Chairman.) When did this occur?—They said it occurs generally every year almost.

11771. To the same ten?—Not the same cultivators.

11772. (Mr. Mowbray.) Were all the ten cases under the same Sub-Deputy Agent?—I have heard of some ten cases in which they applied to the Sub-Deputy Agent to get their balances and to be released from the obligation of cultivating poppy.

11773. Did all these ten people apply to the same Sub-Deputy Agent?—No.

11774. (Chairman.) Do they all live in the same District?—They belong, I believe, to two Sub-Agencies, Arrah

and Buxar. When they applied to the Agency they said: "No; you will not take these advances and you will have to cultivate one or two cottas more." The ryots are coaxled, and they are sometimes threatened by the Zilladar and the Gomashta, and they are made to accept the advance then and there. It may be that the Zilladar and Gomashta press them, or it may be that it was not the intention of the Sub-Deputy Agent to refuse payment, or again it may be that perhaps he said to them, "why do you give up this cultivation? You had better take the advance." In the meantime the Zilladar and the Gomashta threaten him and say: "You will be fined; it is the Government order that you should do so."

11775. (*Mr. Fanshawe.*) You stated that the Sub-Deputy Agent refused to pay the balance due and told the cultivators that they must go on cultivating poppy.

11776. (*Chairman.*) I think you ought to give the names.

The Commission adjourned for a short time.

11777. (*Chairman.*) (*To witness.*) When we adjourned you had just been making a statement with reference to certain abuses which you wished to put before the Commission in reference to the administration of the Opium Department. Having referred to those cases you said that you were not in a position to give the names?—No, my Lord.

11778. We think that as you cannot give the names, your evidence should be given in a more general way. I believe that what you wish to say is that you have been informed that there have been cases in which balances properly due to the cultivators have not been paid. But you are not prepared to give the names and particulars of evidence on this point?—That is not what I said. I only meant that the balance due in the month of June is generally paid in the month of October at the time of the first advance. Then when the ryots who object to take the first advance go and apply to the Agency for the balance of last year, and to be relieved from the obligation of poppy cultivation, the Opium Agent was reported to one as generally telling them to go and cultivate more poppy; and the Zilladars and Gomashtas telling them, "you should cultivate it, and if you do not, you will be criminally prosecuted and imprisoned."

11779. You now tell us that there have been cases in which pressure has been used to induce cultivators to continue cultivating poppy against their will?—Yes. The balances are paid in the month of October or November.

11780. The balances were refused unless the cultivators undertook to continue cultivation of the poppy?—Yes.

11781. You are not prepared to give names in support of that statement? No. The balances are not due for ever; they get it afterwards.

11782. (*Mr. Mowbray.*) You mean that when the people came to claim their balances in June they were told that they could not have them unless they went on cultivating for another year, but you say that the balances which were due, although not paid at once ultimately were paid in October; you do not make any charge that the balances due have been ultimately and altogether withheld?—No, they were paid after a few months.

11783. (*Chairman.*) You now say that the balances properly due to the cultivators in June were withheld until October or November with a view of bringing pressure to be put upon the cultivators to continue the cultivation of the poppy?—Yes.

11784. And you add that you are not prepared to give names?—No.

11785. (*Chairman.*) Then I must say from the Chair that as you are not prepared to give names and particulars you cannot expect the Commission to attach the weight to your statement which we might have given to it if it had been supported by evidence.

11786. (*Mr. Wilson.*) Have you any reason to believe that some memorials have been prepared to be forwarded by ryots?—Yes.

11787. Is it your duty to present them?—I have heard of some memorials being sent.

(*Mr. Wilson.*) Perhaps the Secretary can give us the translation of one of them.*

(*Mr. Hewett.*) They say that they do not benefit by the cultivation of opium, but, on the contrary, lose by it. They would be entirely bankrupt if they depended upon the cultivation of opium only. They are compelled to cultivate opium. They should be paid at higher rate for cultivating.

(*Mr. Wilson.*) Are there many signatures?—

(*Mr. Hewett.*) There are a number of signatures.

11788. (*Mr. Mowbray.*) What is the Association which you represent here?—It is a political association.

11789. A political association in Calcutta?—Yes.

11790. Not immediately connected with Behar?—Yes. It is connected with Behar. We have members from Behar.

11791. How long have you been making the enquiry which you have been deputed to make?—I came to Bankipore on the 19th of December, and this is the 5th of January.

11792. Were you acquainted with Behar before you came here, especially on this errand?—Yes. I came twice to Behar on famine duty.

11793. In what years?—Once I believe five or six years ago, and once the year before last.

11794. This is a political association, I understand, which does not concern itself exclusively with the cultivation of opium?—Yes.

11795. It deals with other subjects?—It is connected with the material condition of the people—that is the main object of our Association.

11796. I do not know whether you, like the last witness, found that the ryots had a moral objection to the cultivation of poppy as well as an economic objection?—The economic objection is that they are not paid sufficiently; the moral objection is that they are made to cultivate it, that they are under obligation.

11797. Did you find amongst the cultivating ryots that they objected to grow any poppy on the general moral ground that it is a bad thing?—From the villagers' point of view.

11798. (*Chairman.*) I understand that the main point of your evidence is to this effect, that the ryots are not paid enough for the opium which they produce?—Yes.

11799. You do not desire, I apprehend, that the cultivation of the poppy should be absolutely prohibited in Bengal?—I am not speaking about the moral objection; I speak from the cultivators' point of view.

11800. It has been suggested that it would be for their advantage that the cultivation of the poppy should be absolutely prohibited in Bengal. Do you agree to it?—The ryots will not be sorry if it is absolutely prohibited.

11801. If the cultivation of the poppy was prohibited in Bengal and in consequence of the cessation of the supplies from Bengal the cultivation was proportionally extended in Malwa and other Native States and other parts of India, do you think that the change would be for the benefit of the ryots in Bengal?—I believe so.

11802. Do you not think that it is best for the agricultural population of Bengal that they should be free to cultivate every kind of profitable crop?—Yes. If they are left to their choice they will not cultivate poppy, because it is a very risky thing.

11803. Have you formed any opinion as to the proposal which has been much pressed upon the consideration of the Commission to the effect that the use of opium should be absolutely prohibited to the people of India except under medical advice?—I will be silent on this point. I am not prepared to answer.

11804. You have no opinion?—I am not prepared to answer the question.

The witness withdrew.

MR. PARES NATH CHATTERJEE called in and examined.

11805. (*Sir William Roberts.*) I believe you are a practitioner in medicine and surgery, holding the diploma of the Calcutta Medical College?—Yes.

11806. Will you tell us your experience with regard to the opium habit?—My earlier experience was in the district

of Nuddia, where I was born. About 20 or 25 years back opium-smoking prevailed to a considerable extent in my native village, Meherpur, in Kishnagar, and probably all over the district. It prevailed amongst the spoiled young men of disreputable character, the rich people who inherited property in their youth, and was a general adjunct of

Babu
Rasik Lal
Ghosh.
5 Jan. 1894.

Mr. Pares
Nath
Chatterjee.

* NOTE.—These petitions are referred to in the Secretary's evidence at Delhi on January 24.]

Mr. Pares
Nath
Chatterjee.
5 Jan. 1894.

sensual indulgence. I have been practising for the last 16 years in Behar : for the first five years in Bhagalpore, and for the last eleven years in Patna. My experience in Bhagalpore was rather limited, although I had the knowledge of some cases of opium-taking amongst the Mahomedans and the Behari Hindus. In Patna my experience is large amongst the Mahomedans. The habit prevails amongst the rich Mahomedans, their sycophants or musahibs, and others.

11807. Do the Mahomedan ladies take opium?—I have known Mahomedan ladies taking opium, never smoking.

11808. What about your experience with regard to the giving of opium to children?—I have known and heard of the custom of administering opium in minute doses to children, both amongst the rich and the poor, with the object of protecting them from the influence of atmospheric changes and to keep them quiet.

11809. How long would the practice continue?—I cannot definitely say: till, I think, about the third or fourth year.

11810. In cases that you have been personally acquainted with, did it do any harm to the children?—My opinion is that the growth of the children is less satisfactory.

11811. What do you say is the proportion of those who take it in excess?—I think 90 per cent. of the cases take it in excess.

11812. That is a very large number; you state that two grains is the excess?—Two grains or more.

11813. I presume you would make allowances for individual differences?—There is a difference. Some people bear the effects of opium better than others.

11814. Do poor people spend much of their income on opium?—The poor spend a large proportion of their income on opium; the rich but a small part.

11815. Is there any tendency to increase the dose?—In my opinion there is a general tendency to increase the dose.

11816. What is the effect of the opium habit physically upon the consumers?—It is admitted that when opium is taken habitually, the system gets used to it and its poisonous and injurious effects are less apparent. In my experience the injurious effects of the habit in the long run are not the less for that reason. I have seen very few men indulging in opium free from ailments or complaints. Taken for a long time, opium undermines the nervous power of the system. The nervous system grows weak and degenerated, and in consequence of this lethargy and dullness, nervous debility, neuralgic pains, impotency and various other nervous complaints are the results. The internal organs are deranged; dyspepsia and costiveness are constant complaints, secretions and excretions are vitiated, especially of the bowels, liver and kidneys.

11817. (Chairman.) From your point of view it is exceedingly injurious?—Yes. In the long run.

11818. (Sir William Roberts.) Does what you have said apply to the use of opium in great excess or generally in regard to those who indulge in the opium habit?—The evils are less when opium is taken in a smaller dose; the evils are greater when it is taken in larger doses. But in my opinion there is always evil.

11819. Is that based on experience or on theoretical considerations?—To some extent on experience.

11820. But mainly on theoretical considerations?—Theoretical considerations and experience, both.

11821. How would you describe the confirmed opium-eater?—The confirmed opium-eater is lean and emaciated; he lacks the healthful ruddiness of complexion, in place of which he has pallor mixed with dark cyanotic tinge. There are evident marks that blood disorganisation goes on slowly and insidiously within the system for a length of time, till it culminates in this characteristic cachexia, and the difference between a larger or a smaller dose of opium as regards the production of the blood disorganisation, is one of degree only.

11822. What effects have you observed on the mental qualities of the opium consumer?—The higher mental susceptibilities are blunted. The mental atmosphere of the opium-eater is low and vitiated. His mind is degenerated. Its health, natural liveliness and vivacity are lost. The higher flights of the mind, the power of penetration and concentration are impaired. The opium-eater lives a life of perpetual mental perversion. The opium exhilarates him. The narcotic exhilaration has a profound hold on his mind. He is enslaved by opium. He cannot live without it. When his exhilaration ceases, he feels intensely uneasy and depressed, and experiences an irresistible morbid craving for the

narcotic, which he repeats, and keeps up a permanent narcotisation of his mind. The opium-eater has a singular life which may be called "opium life," and lives in a world of his own.

11823. You have told us that you have known persons who have been habitual opium-eaters?—In course of my medical practice I came to know some cases of opium-eaters.

11824. You have not known many?—I cannot give you the exact number.

11825. (Chairman.) Twenty cases?—It is difficult to say.

11826. Hardly so many?—It may be more than twenty.

11827. Thirty?—It is difficult to say the exact number of cases; my impression is that I have seen many cases.

11828. (Sir William Roberts.) Have some of them lived long?—Yes.

11829. Many years?—My impression is that the opium habit has not perceptible effect on the longevity of men. It does not necessarily shorten their lives.

11830. Were some of these persons engaged in business?—Yes.

11831. Were they incapable of doing their business?—They were not incapable.

11832. How do you reconcile that with the statement that the opium-eater lives a life of perpetual mental perversion?—I have stated that taking opium produces a temporary exhilaration. This exhilaration is followed by depression, which is removed by repetition of the dose of opium.

11833. Is it your suggestion that if the opium-eater is wound up regularly by his dose of opium, he is none the worse, but is restored and as good as if he was not an opium-eater?—It is a temporary effect only. The exhilaration only lasts for a short time and again he requires a dose of opium.

11834. He is restored by the new dose?—The depression is removed by the new dose.

11835. So that if he gets his dose regularly all his life, he is not much the worse for the opium habit?—I think he is.

11836. In what respect?—Although his mind is braced up by the repetition of the dose, there is, generally speaking, a mental degeneration.

11837. Is not that a somewhat strong expression that the opium-eaters live a life of perpetual mental perversion?—It is rather strong, but I do not mean it for moderate eaters. There are some opium-eaters who take it in excess, especially those who smoke opium. My description is meant more for those who eat opium in excess, or opium-smokers.

11838. Has the habit any effect on the moral system?—The habit undoubtedly leads to moral degeneration. The habit leads to sensuality. The opium-eater is of a mean, sneaking character. The moral susceptibilities and aspirations are blunted. In the vast majority of cases opium is taken for sensual gratification. It is a general belief amongst the people that opium enhances the capacity of sexual enjoyment and prolongs it. It is my impression that a very large proportion of the opium-eaters take to the habit with this object in view. The debasing influence of the drug on the moral nature of man, together with the abominable object with which it is often taken, immerses the partakers of opium into a depth of moral depravity which cannot be described.

11839. Would you also say that that applies to the opium-eaters in excess?—Yes.

11840. Not to the ordinary opium-eater?—Not to those who take it in moderation.

11841. You would have to extend your idea of moderation beyond two grains a day, would you not?—Those remarks were general. I could not make my remarks separately with regard to moderate opium-eaters and those who take it in excess; they are general remarks and opinions that I have formed from observations.

11842. But what you have just said would apply to those who take opium in excess?—Certainly.

11843. Of course excess in one man might be moderation in another man with more tolerance?—They are not equal; some people bear opium better than others.

11844. You have said a good deal about the effect on the sexual organs—that is what we call the aphrodisiac effect?—Yes.

11845. Are you a believer in the reality of that aphrodisiac effect?—My impression is that the result is rather the opposite, and that habitual opium-eaters become impotent

in the long run—a good many of them. I do not mean all but a great many become impotent. It excites the sexual passion.

11846. Do you think that the first effect is really an aphrodisiac effect, or only that there is a belief in it?—I think there is really an aphrodisiac effect.

11847. They tell us that in India, as in the East generally, the use of aphrodisiacs is very common?—In India it is very common.

11848. There are a great many substances used as aphrodisiacs?—Yes.

11849. Do you think that that is rather a popular delusion or that there is something real in it?—I know that people resort to these drugs. I cannot say with what result.

11850. Then I may take it from you that you are not really certain that opium, even in the early stages, has a real aphrodisiac effect?—I have had confessions from opium eaters upon which I found my opinion that it is an aphrodisiac.

11851. Have you heard of the use of opium as a protective against fever?—I never before this heard it to be a protective against fever, and I think that generally it is not believed to be so. It is not specifically a protective.

11852. Are you aware that 50 years ago in a Book on *Materia Medica* written in India the anti-malarial effect of opium was spoken of?—I do not know that.

11853. Are you aware that many years ago, when quinine was dear, one of the alkaloids of opium, namely, narcotine, was given out to dispensaries as an anti-periodic?—Narcotine I know is sometimes used as an anti-periodic, but I believe the effects of narcotine and opium are different.

11854. On what ground do you take that view?—It is only one of the alkaloids which compose opium.

11855. I suppose you admit that, inasmuch as narcotine is in the opium, it would have some effect in that direction?—Yes.

11856. Have you anything further to say on the subject?—It is a general effect of the opium to blunt the physical susceptibility to external influences, and therefore it may have a protective effect to some extent against malaria.

11857. What do you think of the use of opium in malarial districts?—It is not specially useful in malarious districts, neither is it believed to be so. Neither is it necessary, nor believed to be so, to enable working people to get through their daily toil. After exceptional fatigue opium used medicinally may have a soothing effect.

11858. "What is the common opinion on the opium habit?"—There is hardly any organised public opinion with regard to opium-eating. In young people, it is a matter of shame; in the old it is tolerated. *Madak* and *chandu* smoking are always disgraceful.

11859. I believe that *madak* smoking is always the smoking of the poor?—Not always; people of disreputable character take it who are not poor.

11860. I presume that your experience of *madak* and *chandu* smoking has been rather limited?—Yes.

11861. You would not be able to tell us perhaps what is the composition of *madak*?—I do not know.

11862. (*Mr. Wilson.*) I believe the substance of what you have told us is that, in certain cases of disease, opium is a very valuable medicine?—Yes.

The witness withdrew.

Assistant Surgeon SOORJEE NARAIN SINGH called in and examined.

11883. (*Sir William Roberts.*) I believe you are a medical practitioner?—Yes.

11884. Is there a medical school at Patna?—Yes.

11885. You are a teacher of *Materia Medica* there?—Yes.

11886. Therefore your attention has been specially directed to the effect of drugs and analogous substances?—Yes.

11887. What have you observed with regard to the effect of the opium habit?—Amongst all races of people in Bengal, the habit of taking opium is contracted more or less by a certain proportion of those of advanced age, seldom under 30.

11863. But apart from actual disease you consider that the habit of taking opium in any form is decidedly objectionable?—Yes.

11864. When you were at the Medical College at Calcutta, did any of your teachers instruct you to prescribe opium as a prophylactic against fever?—Never.

11865. Are you acquainted with any medical text books in which opium is recommended as a prophylactic against fever?—I have not read any.

11866. When you say that you never before this heard it to be a protective against fever, you mean until this Commission?—Until this Commission.

11867. I suppose you meet other medical men in practice here in certain cases?—Yes.

11868. European as well as natives?—Yes.

11869. Are you aware whether any of those gentlemen do prescribe opium as a prophylactic against fever?—I have never seen it.

11870. Many of the things that you have said in reference to opium referred to the excessive or immoderate use of it. But I wish to ask you whether or not you consider that it is a very insidious drug, and that the use of small quantities constantly leads to its use in larger quantities?—Yes.

11871. It is peculiarly liable to abuse in that respect?—It is.

11872. And more difficult to abandon than most other bad habits?—Yes.

11873. Do you know of any respectable man of any caste, race, or religion in this part of India who would recommend or permit his son to take opium habitually if he could prevent him?—No, I do not think so.

11874. (*Chairman.*) What is your view of stimulants generally?—I am a teetotaler. My opinion is that all kinds of stimulants are best abstained from.

11875. You think they are attended with evil?—Yes.

11876. The amount of evil depends upon the amount of stimulants?—My opinion is that stimulants, especially in this tropical country, are objectionable. I cannot express any opinion as regards cold countries. But in tropical countries they are always objectionable.

11877. You would no more like to see people indulge excessively in alcohol than you would like to see them indulge in opium?—The dangers of alcohol are much greater than those of opium.

11878. I understood you to say that you had not noticed in the case of moderate users of opium that there was any sensible diminution in the expectation of life?—No.

11879. In the case of those moderate users who are engaged in business, had you been able to discover that their capacity for business was impaired?—I have observed a general dullness of the mental faculties, but not to such an extent as to stand in the way of their doing business.

11880. With regard to those engaged in physical labour in this part of the country of India, do a considerable number of them eat opium?—I have no observation on that matter.

11881. You do not know the classes of agricultural labourers?—The labouring classes seldom take opium—that is my observation. It is by no means a general habit here.

11882. You would not tell us that opium was used by the population of this district to such an extent as to affect prejudicially the general moral condition of the masses of the population?—No.

*Mr. Pares
Nath
Chatterjee.*

5 Jan. 1894.

*Mr. Soorjee
Narain Singh.*

Its use by the pleasure-seeking is limited to a small minority among the consumers; the majority use it out of necessity. The consumption of opium varies according to races. The Chinese, Burmese or the Siamese may be said to be the constant smokers of the drug. The Marwaries and the Rajputs indulge in it generally in accordance with the custom prevailing in their native places. Among the people proper of this Province, the Mahomedans, especially of the Shia denomination, use it more extensively than the Hindus. While of the other races settled in Bengal, opium is taken recourse to inversely in proportion to their use of alcohol or hemp. District by district, the consumption is comparatively large in damp malarious places, such as Rungpur,

Mr. Soorjee Dinajpur, Purnia, Burdwan, Hooghly, Moorshidabad, Dacca, Narain Singh, etc.

5 Jan. 1894. 11888. Does the consumption vary according to race?—The consumption varies according to race.

11889. What is the effect of the habitual use of opium?—The habitual use of opium in moderate doses (i.e., $1\frac{1}{2}$ to 8 or 10 grains per diem) is seldom found to have had injurious effects on the body or mind. In excessive doses such use is attended in some cases with lassitude, disorder of the bowels or a quasi-hysterical condition; whereas cases have been known who could bear incredibly big doses with impunity. At the same time, it will be noted that opium, whether used moderately or in excessive doses, rarely causes organic change or leads to insanity, violent crime or any infringement of public decency.

11890. You say that there are rarely cases of organic changes: have you been able to identify any organic changes due to the opium habit?—I have never seen any organic change, except some opium-eaters may be dyspeptic, and they may show some changes in the stomach.

11891. Those would not be due to organic changes?—Not organic changes—some functional derangement of the liver or stomach.

11892. What is the effect of opium in regard to crime?—Party theft and pilfering are offences often attributed to opium. In my experience of the habits of the people such offences are never committed by the people because of their eating or drinking opium or of smoking it, although such offences are committed by a portion of those smoking *chandu* or *madat*, because the people who are addicted to this are generally indigent sots, who have not the means of procuring food or smoke and would steal on any account.

11893. In any case?—Yes. I have not been able also to ascertain whether opium-eaters have become more timid or brave thereby—only that they are always seen to be peaceful citizens and are family men. On the other hand the dietetic use of opium has saved many lives in times of famine; served as the cheapest home prophylactic in malarial places, for the poor; strengthened the ill-fet to go through the fatigues of hard work; relieved many wretched sufferers, among the poor and rich, from the effects of diabetes or agonies of innumerable painful diseases.

11894. On what grounds do you base your opinion that opium is of service in malarious districts?—My home being in Burdwan, and my relatives in Moorshidabad, I have had frequent communication with them, and talked with them, and I have seen that opium-eaters escape malaria much more than non-opium-eaters.

11895. You do not mean to suggest that opium is an absolute prophylactic against fever?—By no means. Although it is supported by able authorities, still I do not prescribe it as a prophylactic. It is not generally used, but there is a traditional idea among the people, and they take, and they do escape from malarious fever.

11896. It is partly prophylactic?—Yes, partly prophylactic. The evil effects of opium as described in some books and pamphlets are not met with in our ordinary practice. I cannot, however, say that the health of *chandu* and *madat*-smokers, among the poor people of Bengal, is satisfactory. This may be due to their bad nourishment, and habit of smoking through pipes seldom cleansed and containing accumulations of *chandu* residue. I have seen some wealthy zemindars who smoked *chandu* constantly, but kept up excellent health and mental faculties, probably because they were in easy circumstances and had the comforts of life about them. They had their clean and proper appliances for smoking.

11897. What is the disposition of the people of this province in regard to the use of opium for non-medical purposes?—Except persons engaged in missionary work, people generally do not look with opprobrium on the use of opium provided it be used moderately and not attended with degraded and depraved habits (as is generally the case with *chandu* and *madat*-smokers of the lowest order). At least opium-eaters are never disliked by the people, as are those indulging in alcohol.

11898. What is the sense of the people as regards their willingness to bear in whole or in part the cost of prohibitive measures?—The sense of the people is against bearing, either in whole or in part, any cost from loss of opium revenue or entertainment of prohibitive measures.

11899. Do you consider such prohibition possible?—I do not consider it would be desirable to prohibit the growth of the poppy and manufacture and sale of opium in British India, *1st*, because the people are unable to bear extra taxation, to meet the heavy loss in revenue it entails; *2ndly*, because many people will be deprived of the benefits of its dietetic use as enumerated in answer to previous questions; *3rdly*, because the class of peaceful citizens who now use opium to expel distempers or for enjoyment.

11900. Do you mean by enjoyment sensual enjoyment, or enjoyment such as that of wine or tobacco?—Like the use of wine and tobacco.

11901. Then would you say for legitimate enjoyment?—It is the less evil of the two; they will probably take to the pernicious intoxicant alcohol, and thus become a nuisance to society.

11902. Is it your opinion that any change, short of prohibition, should be made in the existing arrangements for regulation, and restricting the opium traffic in Bengal, and raising a revenue therefrom?—The consumption of opium in Bengal being very small, and limited mostly to the poor, any increased price of the drug will not materially increase the revenue therefrom. On the contrary, many poor people who could have saved their lives and sufferings from its cheapness, would be debarred from availing of the good effects of its dietetic use.

11903. You consider that the popular use of opium as a domestic remedy is a useful practice on the whole?—On the whole it is very useful to those who use it moderately.

11904. And you think the good done in that direction is greater than the harm entailed upon people from occasional excess?—Yes.

11905. What about Behar?—In Behar, the cultivation of opium is as popular with the zemindar as with the ryot. With the zemindar, *1st*, because, it gives him increased rent—Rs. 8 to Rs. 14 per bigha against Rs. 2 or Rs. 4 from cereal cultivation; *2ndly*, because he can collect rent from his ryots easily from the money advanced to them by Government. On the other hand, the price obtained by ryots from the yields of their poppy fields is so high that it enables them to pay rent, not only of the poppy land, but also of any other land in their occupation, as also make a little saving. It was owing to this popularity that the extent of poppy cultivation had until late years been increasing. Of late years it has been reduced. The Opium Department can explain why it has been reduced, but I can say that there was a bad season for four years—a very bad season owing to the north-western and hailstorms. It is a remarkable fact that poppy cultivators are very well off in comparison to other ryots, excepting those cultivating *diara land*.

11906. What is that?—Alluvial land on the river side—most fertile land.

11907. What are the views of the classes who as landholders, cultivators, or factory hands are concerned in the opium industry?—My answer is the same as that which I have given to a previous question.

11908. Probably as a medical man you have not paid as much attention to that branch of the subject as to the other?—My attention has chiefly been directed to the medical point of view.

11909. (*The Maharaja of Darbhanga*) You say that there are certain lands left for poppy from Rs 8 to Rs. 14; do you know any poppy lands paying as high as Rs. 14?—Rs. 14 is the highest.

11910. Do you actually know any lands paying as much as Rs. 14?—That is what I have heard.

11911. In what district?—In this district, in the interior. I have had conversations with zemindars and ryots.

11912. Do you know of any village where it is as high as Rs. 14?—I do not know of any.

11913. (*Mr. Wilson*.) May I ask whether you know about these agricultural questions of which you have spoken, or whether you have only told us what somebody has told you?—I have no personal experience, but I have had communications with ryots and zemindars, and I know as much as they have told me. I frequently see ryots as they come to take their advance, and as they come to make over their opium in the weighment season. My information is collected from them.

11914. Could you find out for us where there is any rent as high as Rs. 14, and could you refer to the person who told

you?—I can produce the men who told me. I have heard from several persons that it is as high as Rs. 14. It is generally from Rs. 5 to Rs. 10 or Rs. 11, but the best land can be let for Rs. 14.

11915. Will you kindly ascertain the names of some of the villages where land is rented at Rs. 14, and forward them to the Secretary for the information of the Commission?—This morning a man was telling me that it goes up to Rs. 14.

11916. Would you ascertain the names of a few villages where the land is rented at Rs. 14, and forward us the information?—I cannot remember the name of the man who told me this morning; he is an agriculturist.

11917. Again I will ask you to ascertain from him the names of a few of the villages where land is rented as high as Rs. 14 and forward the information to the Secretary?—I do not remember the name of the man at present. It is the general idea that I have heard.

11918. Can you answer these questions that you have put before us from an agricultural point of view?—I have not any personal experience.

11919. You have referred to Chinese, Barmans and Assamese—have you been in all those countries?—No.

11920. How has your knowledge of them been obtained?—When I was in Calcutta I saw them, and in other places. I saw Chinese carpenters in the steamer, and when I was in Calcutta as a student and a teacher at the Sealdah Medical School I frequently met with Chinese and knew them.

11921. You say that petty thieving and pilfering are offences often attributed to opium: by whom are they attributed to opium?—That is the general censure; I have heard it as a censure *madak*-smokers and *chandu*-smokers are thieves, and people condemn them as thieves: I do not say that all *chandu*-smokers and *madak*-smokers are thieves, but what I mean is that those who are indigent sots, and are addicted to *chandu*-smoking and *madak*-smoking steal as a matter of fact.

11922. By whom are those offences attributed to opium?—By the general public.

11923. Can you refer me to any medical text-books in which opium is spoken of as a prophylactic against fever?—I think I can; in Dr. Lauder Brunton's book there are a few paragraphs which distinctly speak of opium as a prophylactic in malarious fever, at least one paragraph distinctly says that it relieves chill and thereby does good, and it says that opium-eaters are often found in few districts. Then there is Waring's "Therapeutics" and Ringer's "Therapeutics."

11924. You have referred to the dietetic use of opium; do you mean that there is a dietetic use for it?—Yes, I think so.

11925. Have you ever recommended it to anybody as a dietetic?—I have not.

11926. Do you know any medical man who has ever recommended it as a dietetic?—I do not.

11927. Can you refer to any medical book in which it is recommended as a dietetic?—I cannot.

11928. You say that it is not generally looked upon with opprobrium?—No, it is not.

11929. Have you ever heard the expression "*goolikhor*"?—I have said that opium-eating is not looked upon with opprobrium, but I have distinctly stated that *madak*-smoking and *chandu*-smoking are resorted to by the degraded, and as such, it is condemned.

11930. Will you answer my question: Have you heard the expression "*goolikhor*"?—Yes, I have. *Mr. Soorjee Narain Singh.*

5 Jan. 1894.

11931. Is that a compliment?—It is not.

11932. You object to any increase in the price of the drug on the ground that it is a necessity?—Yes.

11933. Are you aware that the prices at which opium is sold in some of the most malarious districts of India are three times as high as in this district?—No, I am not.

11934. Would you think it a great hardship if the price were raised three times in this district?—Yes, it would be a hardship.

11935. Was the Temple Medical School founded by Sir Richard Temple?—Yes.

11936. Did he endow it or build it?—No, it was opened in his time.

11937. How many students have you there?—About 200.

11938. By whom is the school supported?—By Government.

11939. By whom is the teaching staff appointed?—By Government.

11940. (*Chairman.*) May we understand you to express a strong opinion to the effect that on the consideration of the whole subject you would consider it undesirable that the use of opium should be prohibited in India?—Yes.

11941. (*Mr. Pease.*) The dietetic use of opium you say has saved many lives in times of famine?—Yes.

11942. You have stated that nobody had recommended opium as a dietetic, and that it was only your personal opinion that it was a useful thing; could you give us any information on that point?—It was practically found that opium-eaters were saved in times of famine, and I think in some cases opium was supplied to the poor during famine.

11943. Do you call that using it as a dietetic?—Yes.

11944. Do you not think that it was rather a medical use, that the people were reduced by famine, and that opium was given as a medicine to alleviate their sufferings?—For the time being, but not for any particular disease; it was prescribed just to dull the edge of a sharp appetite.

11945. (*Sir William Roberts.*) The word dietetic is ambiguous; I presume you do not mean anything in the nature of food, but you mean that it is taken day by day, the habitual use?—Yes, other uses than for actual disease.

11946. Just as we call the use of tobacco amongst ourselves a dietetic?—Yes.

11947. And also the use of wine in the ordinary way?—Yes.

11948. You say that the use of it in famine is partly as an anodyne and partly to enable people to do with less food?—Yes.

11949. (*Mr. Wilson.*) Have you ever heard the term *afimchee*?—Yes.

11950. Is that a compliment?—No.

11951. (*Chairman.*) Those terms on which you have been asked to give an opinion are words applied to people who use opium in excess?—Yes, and to the degraded class.

The witness withdrew.

Adjourned to to-morrow at 11.

At the College Hall, Bankipur.

THIRTY-NINTH DAY.

Saturday, the 6th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (IN THE CHAIR).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.

MR. A. U. FANSHAWE.
" HARIDAS VEHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

The Chairman read a communication from the Archbishop of Calcutta addressed to His Excellency the Governor

General of India and Council.

Rai Isari
Prasad.

RAI ISARI PRASAD called in and examined.

6 Jan. 1894.

11952. (*Chairman.*) I believe you wish to make a statement to the Commission with reference to the subject-matter of our enquiry?—Yes.

11953. Will you kindly tell us what you have to say?—I am a zemindar of Mariwa, Kalyanpur and other villages, revenue paying estates in the district of Patna, and am heir of the late Maharaja Ram Narayan Sinha, Bahadur, Nazim of the Provinces of Behar and Bengal. There is poppy grown in those villages. I have made enquiries, and the result of this inquiry is that while the poppy cultivators get Rs. 40 to Rs. 42 from a bigha in these villages where the average yield is 7 to 8 seers per bigha, the expenses on calculation come up to Rs. 60 per bigha. The reasons why the cultivators cultivate at a loss are these:—(1) they keep no accounts, and are ignorant that they do cultivate poppy at a loss; (2) they get the advances at an idle time of the year when they most need it, and it is, therefore, a temptation to them; (3) there is some sort of pressure brought upon the poppy cultivators to grow poppy by the zilladars, etc. Poppy is dying out in many places. To my knowledge it has been given up by some ryots of Rikabgunge, etc. Yesterday I was told by one Goburdhan Singh that in a village called Barni, the cultivator who had been sowing poppy in previous years having cultivated potato in those lands during the present year, the zilladars have rooted out the potato crops and have tyrannised over them in different ways.

11954. You refer to alleged acts of oppression by zilladars: are they taking place at this moment?—No, they took place before.

11955. How long ago?—As far as my memory serves me I saw it about twelve years ago.

11956. Is it going on now?—It is even going on now.

11957. Can you name any place?—Barni.

11958. Do you say it is going on now?—Yes.

11959. Do you say it has been done this season?—Yes, only about fifteen or twenty days ago.

11960. (*Sir James Lyall.*) Who is Goburdhan Singh?—He is a tenant.

11961. It did not happen in his land?—No.

11962. Did he mention in whose land it was?—He said it was in the village called Barni.

11963. In what village does Goburdhan Singh live?—Very near here.

11964. How far is Barni?—I think it is about twenty miles from here.

11965. Did he say he had seen it himself, or did he hear it from a third person?—He heard it from his relatives, who are inhabitants of Barni.

11966. What relation are they to him?—That of course I cannot say.

11967. You put the expense of cultivation at Rs. 60 per bigha?—Yes.

11968. Did you make out that account yourself?—When

I went to my village I asked my tenants, and they gave me the account.

11969. Rs. 60?—From Rs. 60 to 62.

11970. Do you know whether they charge a money value for all labour?—Yes.

11971. Even for their women and children?—Yes, those who work in the field.

11972. (*Mr. Fanshawe.*) Kindly tell me how many villages you have in which poppy is cultivated?—I have four villages.

11973. Can you give me any idea of the number of cultivators actually cultivating poppy?—I have got petitions from my ryots which I want to put in.

11974. Can you give me the number of cultivators?—In one village there are 171, in another 89, and in another 55.

11975. Have these cultivators been giving up poppy cultivation of late?—About twelve years ago the cultivators in one of my villages gave it up, but of course certain pressures were brought upon them as well as upon myself that I should make them grow poppy.

11976. When you say "certain pressure," do you mean you were asked whether they would continue to grow poppy?—I was asked by some opium officials to make my ryots grow poppy.

11977. What did you do yourself?—I kept quiet: I kept neutral, and then the zilladars managed themselves with the ryots.

11978. Can you tell me what crops would be most profitably substituted for poppy?—Chillies, sugarcane, potatoes and onions.

11979. Market garden crops and sugarcane you think would pay best?—I think sugarcane pays them the best.

11980. Do you think that sugarcane could be substituted generally for poppy over a large area?—Some will substitute sugarcane, some chillies, and some potatoes, whatever circumstance will allow them.

11981. It will vary with the condition of soil and the tenants of different villages?—Yes, and the market which they can get for any of these things.

11982. (*Sir James Lyall.*) You say in one of your villages the ryots gave up cultivating poppy about twelve years ago?—They wished to give it up, but they did not give it up: they could not.

11983. They still cultivate it?—They do, though it has gone down to a certain extent.

11984. Some have given it up, and some have kept it on?—Yes.

11985. You say you did not use any pressure upon those who refused to cultivate?—I kept quiet, simply neutral.

11986. What pressure did the zilladars use? I am asking about your own villages?—They go and threaten them with prosecution, and they instigate the police officers

to do something to them. There are different ways of tyrannising over them.

11987. They instigate the police P—Yes.

11988. What benefit would the police get by doing it, what motive would the police have P—The motives are too many; I need not mention them here. It would not be advisable for me to say anything upon these matters.

11989. It is advisable for you to say everything, I should think. The police might do it for their own motives, but why should they do it at the instance of the zilladars P—There is combination between them, and they get something out of the tenants.

11990. Combination between the police and the opium officials P—Yes.

11991. How would they get anything out of them P—They go and say: "You have to grow poppy; if you do not grow poppy you will be prosecuted." Then they get something out of it. They say, "All right, grow poppy, and we will not prosecute you."

11992. You admit that a certain number of your tenants in this village did give it up; when the others saw that these people had given it up, and that no harm had happened to them, why were not they emboldened also, in spite of these efforts P—All people are not alike: some of them take courage and do not do it.

11993. When others saw that these had taken courage and did not do it, and that no harm followed, why did not they follow the example P—That is a question I cannot answer. It is for them to say why they did not do it.

11994. Does not that make you doubt whether they unwillingly consented to cultivate P—Every now and then when I go to my villages and ask them they say they cannot help it.

11995. Do you advise them not to cultivate, and do they say they cannot help it P—I often do.

11996. The zilladar is a man drawing from Rs. 5 to Rs. 7 per month, is he not P—I think they get more, like Rs. 10 a month, and then they get a commission. The more poppy grown the more commission they get.

11997. The zilladars are very petty officials, are they not P—Yes; but they are dreaded by the ryots much more than a Magistrate is dreaded in the town.

11998. Could you not have assisted your own ryots; you are a man of education and know English; you could hire a lawyer, and, if necessary, go and ask to see a high official: when you found your ryots were being oppressed by a coalition between the police and these zilladars and petty officials, could you not have gone and shown the matter up and got them justice P—I have grown up here and have experience of the country, and I know they would never have dared say anything against an official before another official.

11999. Are you now involved in litigation with the Government P—I have no litigation with Government yet.

12000. Is there any litigation pending to-day P—There is a criminal case in the Sessions Court.

12001. Against whom P—Against another man. I am complainant in that case.

12002. Is there not a case against you in which the Government is going to sue you P—I have not understood it.

12003. Is not there a civil suit being brought against you by Government P—Not as yet.

12004. Is not there a case coming on,—about the right to a gold-mine P—Yes; but it has not been instituted as yet: it is under inquiry.

12005. (Mr. Fanshawe.) You are aware that there is a very large body of poppy cultivators in Behar. We are told that there are some 637,000: do you wish us to understand that this large body of cultivators are cultivating poppy under compulsion P—Most of them.

12006. And you think that the compulsion is on the part of these zilladars P—Yes.

12007. You think that the zilladars have that power throughout this tract of country, and over such a large body of men P—That has been the experience.

12008. (Mr. Haridas Voharidas.) Do you visit your zemindari P—Yes.

12009. How often P—Two or three times a year.

12010. Then you have actual experience of this P—Yes.

12011. You have seen it with your own eyes P—Yes.

12012. It is not second-hand information P—Yes.

12013. Raja Ram Narayan has given us quite a different account of the poppy cultivation: how do you account for the difference P—Most probably he might have guessed something.

12014. Why guessed P—Because generally such big men never go to the villages. There are very few of them who go to the villages; and even if they do go there they do not have any conversation with their ryots.

12015. (Mr. Wilson.) Did you say you had some petitions or memorials you wished to put in P—Yes.

12016. Will you tell us what they are P—They are petitions from the tenants in my three villages. Here is a translation of the petition which is written in Hindi.

12017. Will you read the translation P—"To Lord Brasse, President, Royal Commission on Opium,—Cherisher of the poor, our salutations. We are the cultivators of Mouza Shreerannagar, well-known as Moriava, Pergunah Sarna, District Patna; we have heard that your honours have come from England to ask us whether we like to cultivate opium or not, and our prayer is written below—

"(1) When we calculate the cost of labour, etc., then we find that we suffer loss.

"(2) Sugarcane and potato cultivation we find much more profitable.

"(3) We would never cultivate poppy under Government were it not that pressure were brought to bear upon us.

"(4) If it were left to our wishes we would never grow poppy under Government.

"(5) We cultivate the poppy under pressure from Government, otherwise we would not do it, and our prayer is that we be released from this trouble."

12018. How many people have signed it P—89 have signed it in one village, 171 in another village, and 55 in the third village.

12019. (Mr. Pease.) I think you stated that pressure was put upon yourself P—Yes, it was an indirect pressure.

12020. Will you explain the matter P—I got a letter from some of the officials that I should make the ryots grow poppy, and after that I received oral information that if the rest would not grow poppy, there would be a prosecution against me for dissuading the ryots to cultivate poppy.

12021. Do you think there is any law which would interfere with your giving advice to your ryots P—I do not know.

12022. That was not in writing P—That was not in writing, but it is the case.

12023. What was placed in writing and sent to you P—Only that I should make the ryots grow more poppy.

12024. That would not be the wording of the letter P—I cannot remember the full wording.

12025. Did it say you were to make them grow poppy P—Yes, to make them grow more poppy.

12026. Who gave you the message afterwards P—He was some opium official. I do not remember his name, because it was a matter of twelve years ago: it was in 1882 or 1883.

12027. Has any pressure been put upon you since that time P—Yes. Lately I received a communication from the Opium Department to make my ryots grow more poppy.

12028. (Chairman.) Can you produce that letter P—I will search for it, and if I find it I will send it to you.

12029. (Mr. Pease.) When was that letter received by you P—About three or four months ago.

12030. (Chairman.) You have told us that you own a considerable tract of land upon which the poppy is grown: does that land carry higher rental than your other land P—Sugarcane carries higher rent than poppy.

(Mr. Pease.) If the letter could be found, I think it would be desirable to have it.

12031. (Chairman.) It is desirable that you should give us a copy of the original letter. We cannot attach much value to the statement unless you can produce the letter.—I will see if I can get the letter and send it over to you.

12032. Can you give us any further particulars regarding the letter of which you have spoken: from whom did you receive the letter,—what was the name of the writer P—It was in English, but he did not write his full name. It was from the Opium Department. So much I can say.

12033. (Sir James Lyall.) Do you mean that it was anonymous, that it was not signed by anybody P—It was signed in English, but not fully.

Rai Isari

Prasad.

6 Jan. 1894.

Rai Isari
Prasad.

6 Jan. 1894.

12034. That is the last letter P—Yes.

12035. Was the first letter you received twelve years ago a similar letter P—No. The first letter I got twelve years ago was in English, and this was in Urdu: it was signed in English.

12036. (*Chairman*.) I understand you to say that you received the letter you are referring to three or four months ago P—Yes.

12037. Do you mean to tell us seriously with regard to this letter which is of such importance, and which forms a very important item in your evidence, that you do not remember the name of the official who signed it: do you say that he was an English official?—He was a European gentleman.

12038. Do you mean to tell us seriously that you have forgotten the name of the European official?—The name was not written in full.

12039. Surely a letter from a European official would be fully signed P—I will search for it, and see if I can find it and send it on to you.

12040. (*The Maharaja of Darbhanga*.) Was it a circular, or what was it P—It was in Urdu, in letter form.

12041. If you could not read the signature, you would know the official designation?—Perhaps it was the Deputy Opium Agent.

12042. Of what place P—Patna.

12043. (*Chairman*.) You say perhaps?—I cannot say for certain.

12044. You cannot give us the name or the official designation P—I keep my letters in a box, and I will see if I can find this letter.

12045. It is a very important letter P—I did not know that I was going to be examined before the Commission, otherwise I would have kept it.

12046. (*The Maharaja of Darbhanga*.) Could you send it to us P—If I can find it I will send it.

12047. (*Mr. Wilson*.) Is it not a very common practice for officials in writing letters to have the letter written in one of the Indian languages, and to put their initials at the top corner of the letter P—Yes.

12048. And very often only the letters of their own name and not their full name P—That is generally done.

12049. (*Chairman*.) You would know the position of the gentleman whose initials are placed upon the letter P—That, of course, I would know.

12050. I should like you to give us generally a description of this letter P—As I did not attach much importance to that letter at the time, I did not take much notice of it.

12051. You did not attach much importance to that letter P—No.

12052. You say that it contained the expression of a desire that you would encourage your ryots to continue the cultivation of the poppy P—Yes.

12053. Though it may convey the expression of a wish it was not a letter which you felt yourself in any degree called upon to obey: there was no injunction that you were compelled to bear in that letter, was there?—The language was not so.

12054. You do not mean to tell us that you would have any hesitation in advising your ryots that it was not to their interest to grow the poppy, but advised them on the contrary to grow some other produce?—That I would hesitate to advise them, taking all the circumstances of this country into consideration.

12055. Why would you hesitate to advise your ryots not to grow poppy if you thought it was to your interest not to do so P—I am sure I would be put to some trouble.

12056. What kind of trouble P—It is difficult to describe it.

12057. Can you quote to the Commission a single instance

where a zemindar has suffered an injury or an act of oppression from the Government because he advised his ryots that it was not to their interest to grow poppy P—I have not heard that a zemindar has advised against the wish of the official.

12058. You never heard of a zemindar doing that P—No.

12059. You cannot quote a single instance of a zemindar who has suffered at the hands of the Government for giving his advice P—Not to my knowledge.

12060. You do not know a single case P—No.

12061. (*Mr. Wilson*.) If you had been a very poor zemindar and very much afraid, was that letter one which you would have felt obliged to comply with P—Yes, I would, looking at the custom and habits of our countrymen.

12062. (*Chairman*.) I should like to ask your opinion on the main question which has been referred to this Commission, viz., whether or no, it is desirable that the cultivation of the poppy and the use of opium should be prohibited in Bengal: what do you say about that P—If it is a loss to the tenants, it is desirable that it should be prohibited, or that the rates should be raised.

12063. What you chiefly desire is that the Government should pay a higher price for the poppy P—Or drop the poppy growing altogether.

12064. Supposing a more liberal price were paid to the ryot for cultivating the poppy, do you think that he would ultimately have to pay a higher rent to the zemindar for his land P—According to our new law, the Tenancy Act, I do not think the zemindar would be entitled to charge any more rent.

12065. You do not think the result of paying a higher sum for the poppy would be that the rent or payment from the ryot to the zemindar would be increased P—I do not think so.

12066. Do you consider that it would be for the moral advantage of the people of this country that they should be prohibited from eating opium excepting upon the advice of a medical man P—As far as I can see the opium-eaters become very idle; they do not like to do anything. On that ground I think it is better to prohibit it.

12067. Do you think the people would receive with favour a law which would prohibit it P—Those who had been addicted to taking opium would not like it.

12068. They would object to such a law being passed P—Of course they would.

12069. (*The Maharaja of Darbhanga*.) You say that letters have been sent to you from the Opium Department asking you to make the ryots cultivate opium: can you tell us in what way the zemindar can force his ryots to cultivate opium against his wish P—Under the law the zemindar cannot do so.

12070. Is it not the case, that the majority of the ryots, about 90 per cent., have rights of occupancy P—They have.

12071. Is it not also the case that you cannot enhance their rates, even by private contract, by more than 45 per cent. P—You cannot.

12072. Is it not also the case in some instances when those ryots get rights of occupancy, and if new lands are settled that they get their rights of occupancy on the new lands the very day that the settlement is made P—Yes.

12073. And is it not also the case that even if the ryots get consideration from the zemindar and if they write an agreement saying that after the expiration of the lease they will not have occupancy in the land, still at the end of the lease they can repudiate such a contract P—Yes.

12074. In what way do you think the zemindar can force the ryots to cultivate opium P—Poverty is the great drawback of the ryots under the zemindars: when combined with officials they can force them.

The witness withdrew.

MR. A. FORBES recalled and further examined.

12075. (*Chairman*.) You have been kind enough to attend this morning after having given your evidence the other day in order that you may answer any questions which members of the Commission may desire to put to you upon what you have already stated to us and upon any other points.—There are one or two remarks I wish to make. In my evidence on the last occasion I said, speaking about the use of opium, "no doubt the evils, if there be any, attendant upon an immoderate use." The inclusion of the words, "if there be any" was a slip of the pen, and they ought to be struck out.

There is another correction I wish to make. I said that "if the cultivators were deprived of the opium advances they would at once be thrown into the clutches of the mahajans, or forced in many cases to cultivate lands on the bhaoli (or metayer) system which they now hold at money rates." The last part of this statement is not strictly correct, as the zemindar cannot change money rents for rents paid in kind, and the large majority of the poppy lands are lands for which the rent is paid in money. It would have been more correct had I put my statement in this way: The

Mr. A.
Forbes.

ryots at present make use of the large sums of silver they now receive from the Opium Department in paying the rent not only of their poppy lands but of their other lands as well in hard cash. If it were not for these advances they would have either to sell produce when the market is overstocked, or else they would pay their rents in kind equal in value to the money rent due from them, but this system of payment of money rents in kind is a very expensive one to the ryot.

12076. This is meant to be a correction of the statement you have made on page 3 of your original draft of evidence as regards the payments by the ryots to the zemindar?—Yes, that is all I have to say regarding that point.

12077. You wish to show that the opportunity of obtaining an advance in cash, which is secured to the cultivator if he grows poppy, is a great advantage to him in certain circumstances?—That is what I wish to establish.

12078. Have you any further information upon that point?—Not upon that point, but with the permission of the Commission I wish to be allowed to continue my reply to the question asked me by Mr. Haridas Voharidas at the close of my examination last Wednesday with regard to the willingness of the ryots to cultivate opium.

12079. We shall be very happy to have any further information you can give us on that point?—My reply then was merely an introductory one, and what I wish to say now I should have added then had not my further examination been postponed. The question was: "In these cases where the opium crop is not so paying a concern as other crops are, do the cultivators grow opium willingly?"—The answer was: "As far as I know the cultivators grow it entirely of their own free will." I wish in the first place to submit to the Commission that the charge of improper pressure being brought upon the ryots to cultivate poppy has taken the Government officials here somewhat by surprise: no proper notice was given to us that this charge was going to be brought against us. The only manner in which the report reached me was in a rumour from Calcutta, on which I wrote a week ago to five or six leading indigo-planters whose factories are in the four opium districts to the north of the Ganges, asking them if they would appear before the Commission. Unfortunately, two of them, Mr. Hodding of Barhoga, and Mr. R. Hudson of Muzuffarpur, were away from home. Two of these gentlemen, Mr. Filgate and Mr. McRae, have been good enough to attend, but I regret to say that Sir William Hudson, who was to have been present to-day, telegraphed to me this morning that he is laid up with bronchitis, and cannot come. I have received Sir William Hudson's and Mr. R. Hudson's statements in writing, which, if the Commission will allow me, I will put in to be filed with the proceedings. If the Commission wish to ascertain the real opinion of the planting community on this matter, I would very respectfully suggest that the Behar Indigo Planters' Association should be invited to report their opinion on the subject. If proper notice had been given, I could have called any number of witnesses from among the indigo-planters to prove the entire groundlessness of the charge. All to whom I have spoken are unanimous on this point. I did not, however, consider myself justified in causing so much inconvenience to so large a number of gentlemen on the mere off chance of their evidence being required, as it was only after the Commission commenced its sittings here that it became known to me what was the exact line going to be taken by the opponents of the Government system. I would mention that, with the exception of the rumour from Calcutta, I was entirely unaware, until the information relative to what may be called the Gya incident reached me, that any enquiries were being made in the districts of my division by the opponents of the present system into its working. I wish the Commission to particularly note this statement, lest from what occurred in connection with that incident there may be a suspicion in the minds of the public that there has been any espionage by the police or any officers of the Government into the proceedings or movements of those interested in the anti-opium movement. I emphatically deny anything of the kind. As regards the question of compulsion being made use of to extend the cultivation, I beg to make the following remarks. In Regulation 6 of 1799 the cultivation of the poppy was declared to be optional, and it was laid down that engagements to cultivate should only be made with those ryots who chose to take them. This has always been and still is the direct policy of the Government, and any officer contravening it would expose himself to very considerable peril. Parenthetically I would observe that the Government of Bengal, in whose hands the administration of the department lies, is not financially interested in its success, the opium revenue being Imperial. It may also be noted

that the payment of all the superior officers, partly by commission, was put a stop to many years ago, in fact during the time of the East India Company. It is, however, my duty to inform the Commission that during the last few days, in the course of the special enquiries which I have been making into this matter, I have heard of three cases in which the action of certain individual officers, if what I have heard is true, was inconsistent with the Government policy and calls for strict enquiry. I would ask the indulgence of the Commission not to make any further statement on these cases to-day as the form in which they are at present before me is merely *ex-parte*, and most of the evidence, so far as it has reached me up to now, is merely hearsay. For the present I would only say that one of the officers referred to was a zilladar, another a Sub-Deputy Opium Agent, and the third a Collector, not now in this division. I shall make strict enquiries into all these cases and report the result through Government. I would say further that Mr. Wace has requested me to add that the report regarding the action which I object to on the part of the Collector in question did not reach us until after he had given his evidence on Wednesday. I merely mention these facts now to let the Commission see that, as in duty we are bound to do, we suppress nothing at all that has come to our notice.

12080. (Sir James Lyall.) Could not you state what the alleged action of the Collector was without going into any details?—My position is this, that I have not had an opportunity of calling upon him for an explanation. I may say that at first I proposed explaining the full facts in each of these cases, as reported to me, to the Commission, but after conferring with Mr. Wace on the matter we agreed that it was scarcely fair to bring charges in a public sitting before the Commission against individual officers on chiefly hearsay evidence, without their being able to submit their explanations.

12081. (Chairman.) I have not had an opportunity of consulting my colleagues, but I think the action you are taking seems to me to be the most just. It may be that what is charged is a charge falsely laid, and if so, it would be very damaging to the individual, and perhaps unjustly, that the matter should be brought forward before your enquiry has reached a more advanced stage. You have assured me that you will not allow the matter to be neglected, and that if there was anything wrong the man shall be punished. I do not think we need go further. Have you any further remarks to make?—With regard to the willingness or unwillingness of cultivators to grow poppy and the question of pressure being put upon them, I would say that there is every bit as much freedom of action among the cultivating classes in this country in relation to Government matters as there is at home, and of this they are perfectly aware. Any one with any experience of the subject can depose to their readiness to bring their grievances to prominent notice, and they would unhesitatingly do so, especially as the Opium Department is an entirely different department to that supervised by the Magistrate and the revenue officers of the district. In support of my opinion in this matter I would mention the following facts: first, in the whole course of my service aggregating 7 or 8 years in Behar, although I have been constantly going about among the people, I have never had a single complaint made to me of the ryots being compelled in any sense of the word to grow poppy. Secondly, the Opium Commission of 1883, of which I have before stated I was a member, made it their special business to enquire into the grievances of the cultivators. I take the following passage from the preface to their report:—"Having assembled on the 2nd of April we spent about six weeks in visiting four districts of the Behar Agency, and 12 opium districts of the North-West and Oudh; and we next made a careful examination of the work going on in the Sudder factories. That we have mastered every detail of the complicated system which we found in operation, is more than we can reasonably suppose. But we have at least spared no pains to make our enquiries as complete as possible. As the cultivators bring in, each for himself, the opium they have grown, they are to be found assembled in large numbers at the places of weighing; and we took every opportunity of conversing with these men, of enquiring into their feelings regarding the cultivation, and of ascertaining what grievances it might be necessary to remove, and what reforms it would be desirable to introduce".

12082. I notice in that report you give some 22 pages to the discussion of the grievances of the producers.—We went very thoroughly into the matter of their grievances. During our tour we visited among other places Ghazipur, Fatehpur, Farukhabad, Cawnore, Etawah, Aligarh, Moradabad, Budaon, Bareilly, Shahjehanpur, Lucknow, Fyzabad,

Mr. A.
Forbes.

Forbes.

6 Jan. 1894.

in all 12 districts in Oudh and the N.-W. Provinces, besides four districts in Behar, namely, Buxar, Patna, Hajipur and Chupra. At these places we met hundreds of ryots who had come in with their opium, our visit being purposely timed at the season of the year when active operations were going on. Although we carefully enquired from these men whether they had any grievances, and of what nature, we met not a single case in which any compulsion, in any sense of the word, was complained of. Grievances they had plenty, such as the low price paid to them, exactions of the native staff, the rigor with which unpaid advances were collected, and so on; these are all fully dealt with in the report of that Commission, but of the existence of anything like compulsion or unfair pressure we found no sign whatever. The declaration of that Commission on this point will be found in paragraphs 777 and 778 of their report. The latter part of paragraph 776 introduces it. It says "the main objects of the law are to ensure, first, that the cultivation shall be entirely free; secondly, that a ryot who receives advances shall cultivate the stipulated area; thirdly, that all opium produced shall be delivered to the officers of the Government; fourthly, that no adulteration shall be practised; fifthly, that the cultivators shall be fully protected from the exactions on the part whether of officers of the department, or of landholders; sixthly, that no uncensored cultivation shall be permitted." Paragraph 777 says: "The first of these objects is attained under the present system. Every ryot who cultivates the poppy is, and knows himself to be, a free agent in doing so". Going on to paragraph 778, it states: "Of the objects which have been enumerated, there are only two in respect of which the administration of the law is satisfactory, the maintenance of the free agency of the ryot, and the suppression of adulteration".

Secondly, I would point out that the four North Gangetic districts of this division are studded with indigo factories. The managers would be only too glad to get the cultivators to sow indigo instead of poppy, and were there any attempt whatever at coercion, the ryots would at once turn for help to the nearest factory—indeed, were Government in any way to obtain possession of lands for poppy by coercion, or any improper pressure, the indigo-planters would be the very first people to come down upon Government for using their authority in such a manner and so keeping them out of lands which they might otherwise have got for indigo cultivation. The ever-recurring rivalry between opium and indigo will be seen from the Opium Agents' annual reports. But these very men, these indigo-planters are, I think will be found, ready to come forward to a man to say that there is absolutely no foundation whatever for the present charge.

Thirdly, if Government wished to use any compulsion, nothing would be easier than to keep the cultivators in arrears in the matter of the repayment by them of their advances. This is a common system with mahajans, and used to be that adopted in former days by indigo planters in Eastern Bengal. So far however from any attempt in this way to retain a hold over the cultivators, it is one of the grievances of the latter that Government acts with unreasonable harshness towards them in insisting upon the punctual repayment, year by year, of all outstanding advances. See paragraph 657 *et sequitur* of the Opium Commission Report of 1883. The small outstanding advances—some Rs. 12,020 in 1891-92—as compared with payments of 70 to 80 lakhs is further proof of what I say. It has been the rule since 1878-79 to strictly recover advances, and this is still done.

12083. You say that it is strictly done?—I believe that it is. Mr. Tytler knows the working of the department better than I do however.

12084. Do you approve of the strictness with which the repayment of the advance is enforced?—My own view is that Government acts with too great harshness towards the ryots in this matter, only so long as it does not increase the price of opium. I think myself the proper policy of Government would be to increase the price, but still to recover the advances, in order to insure that the officials of the Opium Department should not be able to get an unfair hold over the ryots by keeping them under the advances, and in this view I do approve of the strict collection of advances. That I know was not the opinion of the majority at the time of writing the last Commission Report—it is my own opinion.

12085. To enforce the payment of the balance you would pay a higher price for the poppy that is grown?—Yes. Of course in exceptional cases, for instance, when a hail storm has destroyed the whole crops, it might be necessary to make a remission, but I would rather err on the side of harshness than leniency in the matter of collecting advances in order

to prevent the opium officials from retaining an unfair hold over the cultivators. There is another matter I would mention. Mr. Wace showed in his evidence that cultivation was falling off in a natural way in the *Kothis* adjoining the large towers and the Railway, where market produce and tobacco compete with it successfully, and he argued from this point that the ryot was able to hold his own against any influence departmental subordinates might bring to bear on him in their zeal for their department. He has now given me the following figures to illustrate what goes on in outlying *Kothis* where there is no demand for market produce. The figures are taken from the Board's Reports on the administration of the Opium Department. There are eleven opium divisions in this agency. Excluding the two divisions in which lie the *Kothis* where Mr. Wace shows cultivation is steadily decreasing, the ryots have in 1890-91 sown less land than they engaged for in two divisions; the decrease being 4.8 per cent. in one and .34 in the other. In seven they sowed more land. The excess in these was small, ranging from 3 to 1.5 per cent., but that there should be any excess at all is against the idea of wholesale compulsion.

There has been a suggestion made I believe by some witnesses that the system of advances had better be replaced by a system of cash payments for opium. This latter system was tried so long back as 1831, but was found quite impracticable. The fact is that Government must know beforehand what supplies to expect. This cannot be done unless some kind of reliable engagements are made beforehand for certain quantities to be delivered, and any engagement of the kind in this country is and can only be made by giving advances. It is what is done by the native mahajans in their business, by the indigo-planters, and in fact even in private matters, such as hiring a *palki*—in fact, in all matters.

The usefulness of opium advances will further be seen when it is considered that it has been found necessary to bring into action in this division in a very considerable degree the operation of the Agricultural Loans Act. In 1889-90 as much as one lakh ninety thousand rupees were advanced to cultivators in this division to secure them against the results of the then prevailing scarcity. In 1890-91 Rs. 84,000 were advanced to them, and last year, 1892-93, Rs. 77,760 were advanced. These advances would no doubt have been very much heavier indeed if it had not been for the advances made by the Opium Department. These opium advances often give means for the purchase of food and seed when other crops fail, and they are specially useful in enabling the ryots to wind up their annual accounts with the zemindars instead of selling their rain or badhai crops which they very generally would have to do to pay their rent if they had not the means of paying it in cash from their opium advances. With regard to the suggestions that have been made to substitute sugarcane for opium, I would like to mention that sugarcane close to a village would be considered a very insanitary crop. It would shut out the air and give the inhabitants of the village means of defalcating close round their house. An opium crop close to the village has none of these disadvantages.

(Chairman.) I thought it would be reasonable to comply with your request that you should have an opportunity of supplementing what you told us in your evidence on the former occasion, by making a statement on various points which naturally have been very much on your mind during the last few days, and I thought it was right that you should have the opportunity of giving us every information on the matter.

12086. (Sir James Lyall.) You are an officer of very long experience as a District Magistrate and as a Commissioner. I presume you heard the evidence of Rai Isari Prasad just now?—Yes.

12087. He said that on his estate the zilladars coerced the unwilling tenants into cultivating opium; and when I asked him what power such men had, he said that they got the native police to assist them by threatening to trump up false accusations and criminal offences: do you think the underlings of the Opium Department could possibly get the assistance of the police, or would try to get it if they could?—It is altogether improbable, and I should say in practice impossible. The two departments, Police and Opium, are entirely distinct. The subordinates of each department would be far more likely to regard each other with jealousy.

12088. (Mr. Wilson.) I think you intimated to me that you would be glad of a memorandum on the chief points on which I proposed to put questions, and I think you received a memorandum from me?—Yes.

12089. I think in that memorandum I drew your attention to the first point which you mentioned to-day as to the

phrase that occurs in your evidence about the "evils, if there be any, attendant upon an immoderate use" P—Yes.

12090. But, as I understand, it still remains that you do not think there is much harm in the moderate use of opium. I want to ask you whether you are aware, I think it was in 1881—the Bombay Government wrote to the Government of India: "The Government consider there are very strong objections to the introduction of an industry so demoralising in its tendency as opium cultivation and manufacture into a province where it is at present unknown." Do I understand you disagree with the view of the Bombay Government?—I was not aware of that opinion.

12091. You would not agree with it?—It is the first, I have heard of it.

12092. You would not agree with it?—I cannot give an opinion offhand. I should have to consider it.

12093. You are also aware that in very many despatches and reports of different kinds the authorities rather take credit to themselves for diminishing the consumption of opium by maintaining or increasing a revenue therefrom?—They take credit to themselves for the result of their action combining the minimum of use with the maximum of revenue.

12094. I only wish to see whether you are aware of that point?—It is not only in the case of opium, but also with regard to all excisable articles.

12095. You say "the idea is prevalent among natives that in malarious tracts opium is successfully used as a preventive against fever." Are you aware that the Government of Madras some time ago wrote: "The Government is aware that opium traffic is carefully watched by the agents and by their assistants, and that, so far from teaching the people to rely on opium as a febrifuge, we are doing all we can to gradually wean them from their hereditary habit of using it on all occasions" P—I know nothing about Madras.

12096. You had said—"I share the popular beliefs, which are generally supported by medical opinion." Can you tell me whether any medical opinion of that kind is recorded more than three or four years ago?—I am not a medical man and I do not make medical works my study, but I believe Mr. Lander Brunton held those views. They are views which I have certainly heard ever since I was in India, but I cannot say I have heard them from medical men.

12097. Then you have given us a statement with regard to the collection from direct taxation within the division of Patna. I do not want to trouble you at any length on that point, but could you very briefly give us some idea of what those taxes are and upon whom they fall?—The bulk of the land revenue was fixed by the permanent settlement and is realised from the zemindars. The road and public works cess is paid by the zemindars, who recover half again from the ryots.

12098. Is that on the same assessment as the land revenue or on a separate assessment?—It is on an annual valuation which under the law holds good for five years or longer, until the Government order a fresh valuation to be made. Income-tax is collected on all incomes of Rs. 500 and over at the rate of 4 pies in the rupee on incomes below 2,000 and 5 pies in the rupee on incomes above 2,000. The zemindari dak cess is levied at a percentage on the Government revenue of the different estates. It is levied from the landlords. The rate varies from Re. 1-9 per cent. of Government revenue in the district of Chumpanan to 8 annas per cent. in the district of Patna.

12099. What is its general application or purpose?—To maintain the post office establishment between the different police stations and the head-quarters of each district.

12100. Part of the post office administration?—It is partly under the administration of the Postal Department and partly under the administration of the Magistrate of the district.

12101. Then with regard to the embankment cess, I presume that is to provide against floods?—Yes, it is levied under the zemindars, partly under the contract system and partly under the tuccavi system.

12102. Are the chowkidars village constables?—They are village constables. My figures gave the estimated pay of 19,983 chowkidars in the division taken at R3 each per month.

12103. It is for the village constables?—For the village constables.

12104. I see that you give us the various payments by the Opium Department to the cultivators month by month?—I think you had better ask Mr. Tytler with regard to details. He knows the working of the department better than I do.

12105. You have referred to the increasing impoverishment of the agricultural classes. What do you think that is due to, and what do you think their prospects are, wholly irrespective

of any possible changes in the law or regulations of poppy cultivation?—I think it is due to general improvidence combined with the system of early marriage and the consequent pressure of population upon the soil.

12106. Is it going on daily?—Yes; it is.

12107. What is the prospect wholly apart from any change in the poppy question?—Do you see any hope, or must it go on?—So far as I can see, the Government has no means of restricting the increase in population.

12108. You read us another statement and I wish to ask one or two questions on it. You gave calculations of the cost, and I would like to ask what are the ordinary wages of a labourer or coolie in this district, roughly speaking?—One and a half to two annas a day.

12109. In your estimate of the cost of ploughing you put down two annas per plough. If that represent the wages of the man there is nothing left for the bullocks?—With regard to all these attempts at fixing the profit on the different crops with its relation to labour, I deprecated any attempt of the sort being made. I simply gave this as an answer that had been laid before me as the report of one of my subordinate officers.*

12110. I do not propose to go into the statements in detail to see if the ploughing is given at 2 annas. I will simply ask you whether there is an apparent mistake in the cost when it is put down at 2 annas per plough?—I would rather you asked these questions from Mr. Filgate, who will be examined presently, as he is aware of the particulars.

12111. Would your request on that point be the same with reference to the produce?—I wish to say that this is professedly given as an average simply of the best lands. Here I am speaking of lands in which potatoes, tobacco, and garden produce compete successfully with poppy, not of the inferior lands in which garden produce is not produced at all, but for lands of a superior class, viz., the *dih* lands of the village irrigated with well water. I do not think seven and a half seers on the large bigha, which is one and half times as large as the poppy bigha, would be too much for such lands. Seven and a half seers on this bigha would come to something like 5 seers on the poppy bigha.

12112. We might take this as a calculation that relates only to the very best land?—The average of the best land.

12113. I think you have explained to us verbally that Mr. Lyon's calculation to which you have referred as to the profits of the potatoes refers to the larger bigha, and not the poppy bigha?—To the bigha of 4,225 square yards, the same bigha regarding which this poppy calculation has been made.

12114. You refer further to the disastrous effect that any interference with poppy cultivation would have upon this district, where it is such an important industry, but it appears to me from the statement before us that the poppy only occupies 2½ per cent. of the cultivated land. Would the change from poppy from that 2½ per cent. of the cultivated land really produce depression in the prices of the other crops to which you have alluded?—It would practically be like the closing of a gold mine.

12115. The closing of a gold mine would diminish the produce of gold, but what you put before us shows that

* [NOTE.—The following letter, dated 6th February 1894, was received from the witness upon this question:—

"In cross-examination by Mr. Wilson on the 6th ultimo at Bankipore I was asked to reconcile Mr. P. C. Lyon's report of the charge for one ploughing being two annas with the fact that a single coolie's daily wage is from 1½ to 2 annas.

2. I now enclose for the information of the Royal Commission the accompanying copy of a further report from Mr. Lyon, which fully explains the apparent discrepancy. The matter was also explained by Mr. Filgate in his evidence."

Extract from Mr. Lyon's report:—

"I understand that some doubt has been expressed as to the correctness of my statistics of the cost of cultivation of the poppy in the matter of the expenditure on ploughing, and that it has been presumed that because a day labourer's wages amount to annas 1-6 or annas 2, it must be impossible to procure a plough, a pair of bullocks, and a ploughman on hire for a day's ploughing for annas 2. This figure is, however, undoubtedly correct. The rate for the hire of ploughs is 8 ploughs for the rupee, and this includes the services of the ploughman, the bullocks, and the hire of the plough. The payment is made in grain, of course, in many cases, but is made at the above rate. Moreover, this payment is a full and final one, and there is no additional payment made in the shape of contribution to the feed of the bullocks or meals for the ploughman.

"The explanation is a very simple one. The day's ploughing does not constitute a full day's labour for a labourer. The plough is used for three or four hours only, from 8 or 9 a.m. to 12 noon, and the ploughman is freed for labour in his own fields or elsewhere for the rest of the day. Should he be engaged to drive the cultivator's own plough and bullocks, his pay for the day's ploughing will be 3 pice (*deba*) or about 5 pies, and ½ seer (*kutchra*) of *satua* valued at 5 pies more, or 10 pies in all.

"For the purpose of comparison I may note that the ordinary hiring rate of a cart, a cartman, and a pair of cart bullocks for a full day's work is only four annas, and for this amount the cart will carry a load for 10 miles, returning the same evening without further payment. Cart bullocks are more valuable animals and much more expensive to keep than the ordinary plough bullocks, and the cost of a cart is about twenty times that of a plough."

Mr. A.
Forbes.

6 Jan. 1894.

the stopping of the poppy cultivation, while it would produce a certain additional amount of grain, would produce so large an amount of grain that it would seriously reduce the prices. I am putting it now that it is only $2\frac{1}{2}$ per cent. P—I said taking the special crops, tobacco and potatoes, which would replace opium on such lands and I added that the market was already overstocked with tobacco.

12116. You said in reference to potatoes and tobacco, "if the market was rapidly overstocked, prices would fall and the land would have to be put under less paying crops." What I wish to know is, considering poppy only occupies $2\frac{1}{2}$ per cent. of the total cultivated land, would the addition of that $2\frac{1}{2}$ per cent. to other crops really produce the change in price?—The addition of that $2\frac{1}{2}$ per cent. under other crops would not produce anything like the same purchasing power as the produce of the $2\frac{1}{2}$ per cent. under opium—the purchasing power for food.

12117. If $2\frac{1}{2}$ per cent. were added to the produce of various other crops, would that be likely to produce a very serious decrease in the market value of other crops throughout the district?—It depends upon what the other crops are. I instanced tobacco and potatoes as the two crops which compete most with poppy, and in the case of those two articles what I stated about the market becoming overstocked would hold. If that $2\frac{1}{2}$ per cent. were put under less paying crops, such as wheat or barley, of course the effect on the market would be so small that one cannot say it would be overstocked. But the value of such a crop would be very much less than the value of an opium crop or of a potato or tobacco crop if the market were not overstocked.

12118. (Chairman.) May we not take it from you that the chief disadvantages to the cultivator from the cessation of the growth of the poppy, under the system pursued under the Government monopoly, would be the loss of an advance of cash which comes to the ryot at a very convenient season?—Quite so.

12119. The main advantage of the poppy cultivation to the cultivator is that he gets an advance without interest at a convenient season?—Yes, for the payment of his rents.

12120. When if he required money he would have to sell other descriptions of produce at a disadvantage?—Yes. At a disadvantage, or he will have to borrow from the mahajan at a heavy interest.

12121. Other advantages have been stated to us, but that is the chief advantage?—Yes; that is the chief advantage. It materially increases the comforts and conditions of the grower.

12122. (Mr. Wilson.) You have referred to the report of 1883. I think you were a member of that Commission which enquired into the opium question?—Yes.

12123. I believe that Commission made a number of recommendations?—Yes.

12124. Can you tell us which of those recommendations have been acted upon?—I have no special knowledge on the subject. Ever since writing the report I have been entirely disconnected with the Opium Department, and I have therefore no special knowledge on the matter.

12125. There was a very definite recommendation that the Act of 1857 should be repealed: do you admit that?—Yes.

12126. That act has not been repealed, and it is now ten years since the recommendation was made?—That is so.

12127. And it is in force to-day?—Yes.

12128. On page 247, paragraph 683, referring to the action of the Government with regard to the cultivator, it states—"The Government promises the ryot Rs 5 a seer for his opium, but it distributes the money through underpaid subordinates and thus makes itself an accomplice in their peculations." Can you tell us if any steps have been taken to remedy that state of things?—Personally I know nothing on the subject. I know nothing of what has happened since this report was sent in. I have been disconnected with the department since then. Mr. Tytler will be able to give you that information.

(Sir James Lyall.) Would it not be better, instead of questioning the officers of another department, to ask the Government of India to report to us on the matter?

[The room was cleared and the Commissioners deliberated in private.]

12129. (Mr. Wilson.) At page 247 of the Report of the Opium Commission of 1883 do you find these words—"The cultivator who has kept back a part of his produce may fairly urge that if he has broken his contract with the Government, the Government has not fulfilled its engagements with him. It promises him Rs 5 a seer for his

opium, but it distributes the money through underpaid subordinates, and thus makes itself an accomplice in their peculations. The remedy lies in the hands of the Government, and it is equally the duty and the interest of the Government to secure its application" P—Yes, I find those words.

12130. At page 250 do you find it stated—"There are altogether 1,595 zilladars, of whom about half get Rs 5 a month, about a fourth get Rs 6, and the remainder Rs 7, except in the Benares Agency, where 44 sudder zilladars are paid Rs 10. We recommend that there shall be two grades of zilladars, the lower on Rs 7, and the higher grade on Rs 8" P—I find those words.

12131. Are you able to tell us whether or not any change has been made in that respect?—I am not able.

12132. Will you look at page 267, paragraph 684, and do you find these words—"The authorised commission of the lumbaris is one rupee a maund, payable only on good opium." We recommend that this commission be raised to Rs 4 a maund, a rate which will be equal to 2 per cent. on the price of opium at Rs 5 per seer P—I find those words.

12133. Are you able to tell us whether that rate has been raised or not?—I am not.

12134. Look at page 298, paragraph 779:—"The present form of the license as we have already remarked, is defective, and should be amended, but the spirit of the engagement is, on the whole, faithfully kept; and if a prosecution under section 10 of Act XII of 1857 has to be instituted, the fault will generally be found to be quite as much with the settling officer as with the cultivator. Again, the measures taken to repress unlicensed cultivation are unnecessary, and do more harm than good. We believe it may be said with confidence that unlicensed cultivation for the purpose of fraud is unknown in the poppy districts. The measurement of an assamee's lands by officers of the revenue department is a vexatious proceeding, and we recommend that it shall be no longer permitted." Do you find that?—I do.

12135. And in paragraph 781:—"We have already represented, with the plainness which the circumstances of the case appeared to us to demand, that the first step towards the abolition of illegal gratifications must be the grant of adequate salaries to the native establishments. Unless this step is taken, it will not only be useless to look for official purity, but it will be unreasonable to require it." Are you able to tell me whether any action has been taken upon that?—I am not.

12136. Please look at paragraph 787:—"Measurement by pole should be discontinued, and a chain should be the instrument employed. In the hands of native surveyors a pole invariably gives results short of the true area. A native will always lay the pole on the ground and turn it over, a process which leaves, at each repetition of the operation, a part of the ground unmeasured. The error may be only a few inches each time, but it is always in one direction." Are you able to tell me whether any action has been taken upon that recommendation?—I am not. Mr. Tytler would be able to answer all these questions.

12137. I think you read from that report a paragraph in which it is stated the ryot is and knows himself to be perfectly free to cultivate or not as he pleases?—Quite so. It appears in paragraph 777:—"Every ryot who cultivates the poppy is, and knows himself to be, a free agent in doing so."

12138. Do you think there would be any objection to the wide distribution by all possible means of a notification in distinct and definite terms in the vernacular, to be exhibited at post offices, police stations, at opium agencies, weighing-places, and other public places to that effect?—I think there would be a decided objection to anything of the sort. Anyone who knows how suspicious the population of this country is, and how easily the people are agitated will understand that they would probably entirely misunderstand its meaning.

12139. You think it would not be desirable to publicly inform the ryots of that which your Commission stated they knew already?—I think it would be undesirable to inform them of it in the manner suggested. They would probably look upon it as a general prohibition to cultivate.

(Chairman.) I dare say you will recognise the peculiar circumstances of the Government of India.

12140. (Chairman.) The report which has been placed in our hands and to which your attention has been directed in the questions which have been put to you by Mr. Wilson is

a report in which you yourself were very directly concerned. You are one of the three gentlemen who signed the report. There are a number of recommendations in that report which were very earnestly pressed upon the Government of India, and among those recommendations there is a particularly emphatic recommendation that a more thoroughly satisfactory action throughout among the subordinate officials of the Department should be secured by raising their salaries: has any action been taken upon that recommendation?—So far as I understand, I think no action has been taken.

12141. Do you to-day agree with the view you expressed when you took upon yourself the responsibility of signing this report? Do you still agree in the opinion that evils necessarily arise from the employment of underpaid officials in subordinate places?—I entirely agree with the views expressed in this report, not only with regard to under-payment, but also with regard to the system of granting payment by commission.

12142. Do you think that the minor peculations which are alluded to in this report, and which you would like to prevent, would probably be diminished and ultimately removed if the staff were more liberally dealt with?—Most undoubtedly. It would be minimised, though I cannot say it would ever be entirely removed.

12143. Looking at this question in the broadest possible way, you desire to express to the Commission your conviction, looking at the great mass of the cultivators, nearly a million in number in the two Agencies, who are engaged in cultivating the poppy, that that cultivation is willing and eagerly undertaken upon the terms which the Government offer?—Quite so. That is my firm opinion.

12144. I presume that a very main inducement with the cultivator of the poppy is that he gets an advance from the Government free of interest at a time when the money comes in very conveniently?—Quite so.

12145. Is it your opinion that if the Government paid a higher price to the cultivator for the poppy, ultimately the benefits arising from an increased price of the poppy, through competition among the tenants for the occupation of the land, would go to the zemindars and owners of the land and would not remain with the cultivator?—In my opinion it would remain with the cultivator.

12146. If the Government paid more for poppy, you believe the cultivator would directly benefit?—The cultivator would directly benefit.

12147. Have you any view as to the sufficiency of the price which is now paid by the Government to the cultivator: do you think it is adequate?—I think it is certainly not adequate in neighbourhoods where the competing crops are now ousting the poppy.

12148. The fact that other crops are taking the place of poppy is a proof that the terms offered to the ryots are not adequate?—I think so.

12149. (*Sir James Lyall.*) Reference has been made to the petty extortions and peculations which were reported to prevail among the Opium Department underlings by the Commission of 1883: do not the same sort of peculations and petty extortions prevail in the case, for instance, of the Canal Department and other departments which have to deal directly with the natives?—I have no personal experience of the Canal Department: it is not under me; but I have no doubt that peculations of the same kind do go on wherever any underpaid native subordinate has the opportunity of making them.

12150. (*Mr. Fanshawe.*) We have been told that Behar has been denuded of mango trees owing to the demand for mango wood for the purpose of making opium chests: have you any information you can give us upon that point?—This is a matter into which I made special enquiries last year in connection with the question of the diminution of rainfall.

12151. Could you tell us shortly the results of those enquiries?—The result of the enquiry was to show that during the last three years the area covered by the mango groves which had been cut down in this division was 3,926 acres, while the approximate area covered by new plantation was 4,654 acres,—some 700 acres more having been planted than cut down.

12152. What conclusion would you found on that?—The new plantations consist as a rule of trees from cuttings; the plantations which have been cut down for their wood consist chiefly of trees from seedlings; the trees from cuttings

produce better and more fruit than the trees from seedlings: so that on the whole the food-supply of the division from mango trees appears to me to be rather increasing than decreasing.

Mr. A. Forbes.

6 Jan. 1894.

12153. You do not regard the cutting down of mango trees as tending to the loss of mango fruit?—I should mention that in the district of Muzaffarpur and Durbhanga, there is a balance against the area which has been planted compared with the area over which the trees have been cut down: so that in these two districts the supply has to a certain extent diminished, but not very materially. I apprehend no danger whatever to the food-supply owing to the supply of mango wood for opium and indigo chests. Even were the trees not replanted other crops would take their place.

12154. From the results of your enquiry you apprehend no particular danger?—I apprehend no particular danger from the cutting down of trees for opium and indigo chests.

12155. You have spoken of the absence of any complaints as to the compulsory cultivation of the poppy; is it the case that district officers or the Commissioner are in the habit of receiving complaints from cultivators, in matters connected with the Irrigation Department, for instance, or other matters affecting their cultivation?—Every district officer receives freely all kinds of complaints during his camping tour; and in my experience the villagers have no reticence whatever in making complaints of any nature.

12156. So that you see no reason, with regard to the Opium Department, if there were complaints to be made, why they should not be made just as they are with regard to other matters, say, in the Irrigation Department?—None whatever. The charge in my opinion arises entirely from the ignorance of the gentlemen who, no doubt in good faith, have conceived an entirely mistaken idea of the relations between ourselves and the inhabitants generally of the country. Every native knows that he is perfectly free to come and present himself before us, and they take every advantage of the liberty.

12157. You have referred once or twice to statements made by Mr. Wace. We shall have to examine the figures which you have given us, and I should like to know whether you and Mr. Wace have been working from the same figures with regard to the estimates of poppy cultivation?—We have been working altogether separately. Until the last few days I have been out in camp, and Mr. Wace has been at headquarters. Our different statements have been made entirely without consultation. Mr. Wace tells me that the bulk of his statement was recorded before the Commission began to sit in Calcutta. We have arrived at our conclusions working separately and from our own points of view.

12158. (*Mr. Haridas Voharidas.*) Do you receive complaints in connection with the Revenue Department?—I receive complaints from every one who chooses to make complaints.

12159. From the other departments?—Certainly, if they have anything to complain of which they think ought to be righted, they would bring it to me.

12160. Would they not naturally go to their department?—It depends on what the class of complaint is. If it is a complaint against the conduct of a subordinate in the Irrigation Department, he would probably make a complaint to the Executive Engineer; and if it was a complaint by a opium ryot, he would probably make a complaint in the first instance to the European Opium officer. If he did not get righted, he would come to the Collector. The people look upon the Collector and the Commissioner, officers of the Covenanted Civil Service, as their natural protectors.

12161. They would naturally come to you afterwards?—Yes, they would be perfectly certain to come to the Collector of the district, whom they look upon as their natural protector: they have been accustomed to regard him as such for many years past.

12162. Do you conclude that?—Yes, that is my general view.

12163. In the Irrigation Department, if no complaint came to you, you would conclude the same thing?—Quite so. There is no doubt that the tendency of the low pay and of payment partly by commission is naturally to cause the lower subordinates to press the opium cultivators unfairly; and those are matters which ought to be remedied by the Government.

The witness withdrew.

Mr. A. G.
Tytler.

6 Jan. 1894.

Mr. A. G. TYTLER called in and examined.

12164. (*Chairman.*) You are, I understand, Sub-Deputy Opium Agent in the Behar Agency?—Yes.

12165. How many years' experience have you had?—I have had 30 years' experience, 22 in Behar.

12166. I should like to direct your attention to one particular point, namely, the return to the cultivator for the poppy with the advance from the Government as compared with the return which he may look for from his land from other descriptions of cultivation: I believe you have prepared a note upon the subject. You say that in your district, which is a very poor one, the vast population finds in the cultivation of poppy a most paying crop and the means of supporting their families?—Yes.

12167. Will you continue?—Where the entire population depends for existence on the soil, and where every square yard of land is under cultivation, it is of the greatest importance that their most paying crop should not be taken from them, specially when it occupies comparatively so small a portion of the total area. The area of my sub-division is about 1,600 square miles, the area under poppy only about 40 square miles; the population is about 1,000 souls to each square mile. I cannot give the exact Government revenue of my sub-division, as the figures are not at my disposal, but I am not far wrong in saying that it amounts to about Rs. 6,00,000 per annum. We have had in succession four partial failures of the poppy crop, and yet the average annual payment for opium during the past ten years has amounted to Rs. 11,72,593, this sum being the return from about 40,000 bighas of land. As an example of what their receipts from opium mean to the ryots, I have a few figures taken at random, which moreover are those of a year of partial failure. Figures of a similar nature could be given for more than a thousand villages.

12168. The figures are designed to show, I believe, that in the case of the villages named upon a very limited area under poppy a very large relative return is obtained by the cultivator?—Yes.

12169. And that the return from that small area more than covers the rents, generally speaking, of the entire village?—Yes.

12170. Will you proceed?—The cultivation of the poppy appears to be specially adapted for districts which are densely populated by agriculturists, and where labour is cheap, as is the case both in China and Behar.

12171. Are you of opinion that any changes are desirable in the existing arrangements for dealing with the cultivation of the poppy under what is called the Bengal monopoly system?—I do not think any change from existing arrangements would be beneficial, as no system would better control the quick delivery of the opium. At present it does not remain more than one month with the ryots.

12172. Do you consider that the ryot derives a substantial advantage from the opportunity which he has when growing poppy of obtaining advances at different periods from the Government?—They are of the greatest importance. The vast majority of the ryots live and die in debt, and they have to borrow in order to enable them to meet their liabilities at different intervals throughout the year. The average poppy-growing ryot has a running account with his mahajan, to whom he mostly pays over all that he gets from his opium, both advances and the price of opium when delivered. The sums are placed to his credit, and in the meantime the mahajan advances for his rent, etc. On all money overdrawn, interest is charged; generally speaking, in the case of the better class at the rate of 12 per cent. per annum, and for the rest at 12 per cent. per *fasl*, or half-year, that is 24 per cent. per annum.

The fact of being a poppy-cultivator gives to the ryot a reputation for stability and solvency; the money-lender (who takes no security bonds) is certain of receiving at fixed times as a lump sum in cash all that the ryot receives for his opium; and he is sure of this without having to take any precautionary measures, such as guarding the ripening crop, watching the reaping or superintending the sale of the produce, in order that his own claim may be first met. On the other hand, the average ryot, who does not cultivate poppy, also has his mahajan, or money-lender if he is lucky, for it is not the man who is in debt that is considered unfortunate, but the man who is in debt and can get no one to carry him on. In this case the

money for his rents and expenses is not so readily advanced, as the mahajan, having nothing definite to rely on in the way of cash repayments at regular intervals, naturally first waits to see how the applicant's crops progress, and later on, as they mature, if the ryot is much involved, the money-lender, either personally or through peons, lays an embargo on them, watching the pressing of the sugarcane or the threshing of the grain preparatory to taking it over or superintending its sale, all of which operations require attention, take time, cost money, and involve risk and anxiety. Again, when the average opium ryot runs short of money for food, etc., between harvests, the mahajan makes him a cash advance, to be returned in cash *plus* interest in cash; but when the average ryot who does not grow poppy runs short of food for his family and wants grain, the mahajan advances him, say, a rupee worth of grain to be repaid in kind. It is most probable that at the time between harvests, when the grain is borrowed, it will be selling dear, or, say, at seven *panchseris*. At the next harvesting the mahajan will take in repayment a rupee's worth of grain at the *highest* price touched by the new grain at the local village marts, even though the rates may cheapen the following day, or, say, nine *panchseris plus* one or two *panchseris* extra as interest, having already, at the time of giving the grain advance, deducted a gratification of 2 seers; that is, for seven *panchseris* he will receive in return, say, eleven *panchseris* and two seers,—and all this for an accommodation of four or at the most five months, amounting for both "*fasls*," or the twelve months, to cent. per cent. or more. If, however, a ryot who does not cultivate has the means to borrow and repay in cash, he is charged, like the poppy ryot, interest at 12 or 24 per cent., as the case may be; but the majority borrow in grain to be repaid in kind, the terms of their loan thus comparing disastrously with those allowed the poppy ryot, bad as those are. It must, however, always be borne in mind, in partial extenuation of the mahajan, that he seldom takes bonds for such advances except in the case of sugarcane, that he frequently has bad debts, and that he very often has to carry on a ryot indefinitely in the hope of some day recovering his money by the occurrence of a bumper crop. I am convinced that three-fourths of the poppy-growing ryots in my district would be ruined if not allowed to grow poppy. The accompanying statements will show what the difference between the profits from poppy and from other crops is, and how much it means to the ryots. They could never pay their rents but for the opium receipts, and eventually landlords, owing to the accumulation of arrears, would either have to submit to a reduction of their rents, or to keep the ryots in a state of virtual bondage, working off impossible arrears. The landholders as a class would be seriously affected—the larger ones because the opium advances and payments enable them to get in their rents easily from the ryots, because the mahajans, as has been already explained, advance freely to the poppy cultivators; the smaller landlords would be still more affected, because anything which interfered with the ryot's power to pay his rents would seriously incommode them. Strange as it may seem, and light as is the burden of Government revenue through the permanent settlement these men, like the ryots themselves, are for the most part in a chronic state of impecuniosity, and they generally have not got the ready cash to pay their instalments in time to the Government treasury. As punctuality in the payment of revenue is rigorously enforced, they would be in serious difficulty were it not for the opium advances to the ryots, upon which, as has been explained, the mahajans advance the instalments of rent payable to the zamindars. Let it be supposed, for example, that the area of a village is 500 bighas, of which 25 bighas are in poppy, and the Government revenue on it is Rs. 250; the zamindar has to pay that sum to the Government in four instalments of about Rs. 62-8 each in September, January, March and June: an opium advance of Rs. 100 (at Rs. 4 per bigha on the 25 bighas) would be paid to the poppy ryots in September, and if they have not already paid their rents, these men (with the consent of their mahajans) would at once pay this over to the zamindars for despatching to the Government Treasury; a second opium advance of Rs. 75, at Rs. 3 per bigha, in January, serves the same purpose. In March the zamindar pays his instalment from the rents already recovered, and in June from the same source for the great payments for opium received will have been made to the ryots in April and May. In a good year these payments at the opium weightings, which are made in one month, amount to over ten lakhs of rupees in my sub-division alone. I may mention, to show the import-

ance attached to the advances, that in September last a hitch arose about the opium advances of a certain village, and I wished another headman to be chosen for my work : upon this the small resident zamindars sent in the villagers to beg of me to send the money at once by any one I chose, but to send it quickly.

It is difficult to predict with any certainty what the effect would be of a stoppage of the large amount of cash which now flows into the poppy-growing districts through the Opium Department, but all the natives whom I have consulted have been of one mind in thinking that in my own district money is fairly plentiful only by reason of the annual opium payments, and that if these ceased, and with them the money-borrowing capacity of most of the ryots, the business of money-lending would be paralyzed. The immediate consequence of this would be the abolition of cash rents : most of the ryots would have to borrow in grain, the burden of which is ruinous, and to pay rent in kind, which is equally oppressive, as in such circumstances the rule is to take one *pancheseri* more per rupee than the highest rate touched in the market. In other words, such a change as that proposed would practically involve in ruin more than a million persons in the Saran district alone.

12173. Your attention has necessarily been called to the relative value of the return per bigha from different kinds of crops. We should be glad to hear any information you can give us on that point?—It is essential to point out that no correct comparison can be drawn between the returns of any two crops for one season only, since some crops greatly exhaust the soil, which gives in consequence poorer returns later on, while others have not this effect. It has therefore been necessary to show the returns from poppy, wheat, barley, sugarcane, etc., and their subsequent rotations for four seasons, *i.e.*, for two years. No comparison has been drawn in these tables between potatoes and poppy, because in purely agricultural districts the cultivation of potatoes has only to be increased for their selling value to fall greatly in proportion; and as regards tobacco, it can only be grown with success in certain kinds of soil which are not commonly found in the Sewan sub-division.

The soil of Northern Behar is of two main distinctive kinds, called locally *Bungar* and *Bhat*. The former cannot be successfully cultivated without a great deal of irrigation, but under irrigation it gives, class for class, better returns than the other. The latter with cultivation retains its moisture in a measure and requires less irrigation. No poppy can succeed properly in any soil without irrigation, and the opium ryots have made departmentally about 4,000 masonry wells for the better cultivation of the poppy. These wells represent about Rs 5,00,000 of capital invested on account of poppy cultivation in the Sewan sub-division alone, while, besides these departmental wells, there are as many more in existence made privately either by ryots or landholders. There are different kinds of soil. I therefore drew a comparative statement, having consulted at least 500 ryots, and added to it of my own knowledge.

12174. You have your tables here?—Yes.

12175. Those tables which you have so carefully prepared, and which are of great value, will appear in the appendix, and will come before us when we come to make our report. You can perhaps give us now the general result?—On the very highest class, dry soils, in two years, ordinary rotation, a bigha of poppy would give Rs. 225-8 with its ordinary crop rotation. The same in mustard seed, etc., Rs. 105. The same in wheat, etc., Rs. 95-8. I may mention that sugarcane, if planted in such extra fine lands grows splendidly, but the "*goor*" will not form and the produce is dark, and can only be sold as the cheaper "*sira*," or treacle. At the very best with the succeeding crop of kodo it would realise Rs. 130, while occupying the land for four *faisls*, or two years. In good land for the two years the poppy and its rotations will give Rs. 150-5: the same in sugarcane Rs. 98, the same in wheat Rs. 63-8. The next quality of dry fair lands in two years will give Rs. 89-10, the same in barley and peas, etc., Rs. 62, the same in wheat, etc., Rs. 45. Wheat is excessively exhaustive, and it has to be followed generally by a fallow, or nothing will grow. On the other hand, the Bhat or moist lands that require less irrigation, poppy and its rotations in 2 years will give Rs. 209-8: the same in mustard Rs. 105: the same in wheat Rs. 89-8. The same remark applies to sugarcane, which would grow beautifully, but the produce is not good and would not fetch more than Rs. 130 at the most. Good land of the same sort gives Rs. 130 poppy, Rs. 78 sugarcane, and Rs. 69 wheat. Ordinary land gives with poppy and its rotations Rs. 89,

the same in sugar cane Rs. 58-8, the same in wheat Rs. 57-8. Fool and, poppy and its rotations for two years Rs. 63, the same in wheat, etc., Rs. 40-8, showing that there is a tremendous gain in the poppy.

Mr. A. G.
Tyller.

6 Jan. 1894.

12176. Are there any other matters that you wish to mention?—Then there is the cost of cultivation, a very important matter. A working household of six amongst the true agriculturists is sufficient to entirely cultivate from first to last one bigha of poppy, *i.e.*, 20 *kuthas* of land. The poppy cultivation last year in the Sewan sub-division amounted to bighas 38,696, and the number of ryots who received licenses to cultivate this amounted to 84,651. In this densely-populated district there are few households that do not contain three working hands at least. Consequently, roughly speaking, 10 *kuthas* of poppy could be easily cultivated by each household; but if, for argument's sake, the total cultivation of bighas 38,699 be equally divided, it gives about 9 *kuthas* per household or within their working capacity. However, as a fact, some households do more than they can themselves manage; and other less. Also, some of the cultivators are high-caste Hindus whose wives and daughters do not work in the fields, and the same remark applies to the upper class of Mahomedans, and in such cases the men of the household are supplemented by hired labour, which is always paid for in grain, excepting during the lancing and gathering, when in cash at the rate of twelve to fourteen hands for the rupee. Under the above circumstances, any statement of the cost of cultivation of crops in Sarun must be read more with a view to understanding their laboriousness than as a true guide as to what they cost the cultivators who, for the most part, do the work themselves, failing which they would be idling their time, as there is no local demand for their labour. Speaking roughly, about three-fourths of the poppy cultivation is done free of cost in Sarun by each household, and one quarter with an additional outlay of about from Rs. 5 to Rs. 8 a bigha, and exceptionally Rs. 10 a bigha. The men who engage in this labour are those who have fine lands, large yields, and generally fairly large holdings, with spare grain in their granaries. In sugarcane similarly the cultivation is mostly done with home labour, but a heavy deduction has to be made for the cost of pressing and boiling, which in the Sewan sub-division is paid for by deduction from the weight or value of the sugar made. If the sugarcane press, boiling pans, press bullocks, practised stoker, and workmen are all hired it comes to five annas in the rupee, one anna for each item, while there is an equivalent saving for as much as is home supplied. Lastly, soils differ greatly in Sarun, more so probably than anywhere else in India, because the very dry soil of the South Gangetic districts, the damp soil of Bengal, and a medium description all exist, adding to the difficulty of estimating the cost of cultivation. For instance, the first requires for poppy seven irrigations, the second none, and the third description two, three or four, as the case may be. With the foregoing explanation, the following statement will show what some crops would cost. If only hired labour was employed; poppy would cost per bigha in highly irrigated land Rs. 20-5, sugarcane in similar soil Rs. 47-10. But then, to compare it properly, you would have to put in two poppy crops which would be Rs. 40-10 *plus* the cost of: one rain crop, because sugarcane extends over three *faisls*.

12177. You take the cost of growing poppy per bigha at Rs. 20-5?—Yes.

12178. You say the outturn per bigha is Rs. 150?—Yes; Rs. 225-8-0 for two poppy crops *plus* a rain crop, that is, in the highly irrigated lands.

12179. Which would be the proper receipt to compare with this estimate of cost?—A poor man would use his own labour; he would never hire any. You may compare against it Form No. 1, the highest class.

12180. The cost of sugarcane is Rs. 47-10?—Yes.

12181. What do you take to be the value of the product?—If you compare it with the highest quality Rs. 120.

12182. Wheat costs Rs. 10-8, what is the receipt?—On the highest quality, and that is the only way to compare it, Rs. 41.

12183. The cost of potatoes is taken at Rs. 40?—I cannot compare it, because in the district there is no sale for potatoes. If the railway is handy, they will have a sale.

12184. You do not know what they would sell for in Patna?—I do not know. In any district the moment they get cheap it does not pay them.

Mr. A. G.
Tytler.
6 Jan. 1894

12185. So that it is the lowest paying crop?—Not the lowest; sometimes it is a very highly paying crop. If there is a blight, and there are few potatoes they sell high. Natives do not eat potatoes as a food; but they rather take it with what we call curry. They consider it a heating food, and they take a small amount. It is not an article of diet.

12186. Have you now given us the main points of your evidence?—Yes.

12187. (Mr. Fanshawe.) Will you kindly explain how the Khatadar is selected in your division?—For the last 20 years he has been elected on absolutely the most perfect elective system that I know of in India. I do not know that there is any other elective system so good.

12188. What is it?—The ryots used to come to me when they wanted a change of Khatadar, and file past myself and register their votes as to the man they wanted. The man whom the majority chose I selected. I found afterwards that this was a little hard, because they are all poor and busy men, and just then the rains are heavy; accordingly I said that if they would collect in the villages a Punchayat, and meet together where there is nothing hidden, and if before the zilladar, or any responsible man they would have a written paper, with a list of the names of all the men who wished to serve, and if 5 or 6 representative men came with that list, I would dispense with the attendance of the rest. The man was thus selected by the majority of the votes in his village. I have a note upon the subject. I never permit any one to be a Khatadar who is any one's servant. They (the ryots) choose their Khatadar, and I ratify the choice if I consider him a good man. That is the only action I take. If I think he is dishonest, or has other influences, I do not accept him, and I choose another. If he is the servant of the zamindar, or the servant of the zamindar's gomastha, or if he has anything to do with an indigo factory, I do not accept him on the principle that a man cannot serve two masters. His interests might conflict, the man is absolutely an independent ryot, and chosen from the ryots and by the ryots.

12189. Is he generally able to read and write himself?—Generally, perhaps, he can stumble through some kind of Hindee document, but very often he cannot. Certainly he cannot keep the accounts; as a rule, the Patwari does that for him.

12190. I suppose the Patwari is paid for this work?—He pays the Patwari something.

12191. Is the Khatadar generally a cultivator himself? No man can be a Khatadar unless he does cultivate, and that to a considerable extent makes him more or less responsible for his actions.

12192. Can you tell us how he is paid for his work as a Khatadar?—He gets very little according to our view, but then in the district very little means a good deal to them. For instance, he gets Re. 1 per maund from the Government as a commission; and then the asamees bring in their opium in little earthen platters of different sizes, according to the amount which they have. The Government allows little wooden wedges made of the hardest wood to scrape out the opium. They are wooden, because if iron were used it would take a little of the earth off the pot, and then the opium would be adulterated and not pure. There is a little varnish of opium left, and that is the Khatadar's perquisite. He takes it and scrapes it with a little iron scraper, and what comes out of that is his. The men are very clever at it. There is a Departmental order that no more is to be left at the bottom of the platter than would make 4 chhattaks per maund of opium.

12193. He has this perquisite and Re. 1 per maund; is that the whole of what he gets?—From Government. Then the cultivators allow him *kharcha*, or travelling allowance, or expense money. In my district, when I went there, it was high. I said long ago that it must be fairly assessed. It now ranges between 6 annas per bigha and 10 annas. It certainly is not more than 10.

12194. The Khatadar comes in to make a settlement on behalf of his cultivators?—That is so.

12195. In the account that has been put before us it is stated that he brings in with him a list of the cultivators who are willing to cultivate opium: is that the case in your sub-division?—Yes.

12196. We were told yesterday that in some cases the Khatadar does not really obtain the consent of the cultivators before he comes in, but has his list written up at the head-quarters of the division; is that within your experience,

or not?—Certainly not; for this reason, that, as a rule, there are only certain lands fit for the poppy in the village, and those are owned by the same men. They have rights of occupancy, and the lands are not changed. There is very little tenancy at will. The men would desire to sow nothing but poppy in those fine lands, and consequently, as a rule, the same ryots go on over and over again.

12197. Do you know whether he actually consults them or not, before he comes in to make a settlement?—Most decidedly I should say so, because it is an accepted fact that they are mainly looking out for an advance. I have no personal knowledge that he talks it over with them; but I am sure he does.

12198. The first advance is made at the time of the engagement I understand; what check is exercised to see that each Khatadar obtains the full amount due to him?—In my district, and I suppose it is the same everywhere else, the opium godown is more or less a square with one gate, and the treasury is inside. The money is drawn, and arrangements are made for payment. Separate portions are assigned to sub-divisions under me, and according to the list which the gomasthas have already given me I withdraw the money from the treasury, and distribute the amounts to each Khatadar. The Khatadars cannot go out of the gate when they have the money, until they have come either before me or before my assistant, who is a gazetted officer, and being asked, "How much have you received, and how much are you going to sow?" The Khatadar mentions both the items. Then there are certain papers. There is his own license, and then there are our books, which are in some respects a copy. These are initialled; the man says, "I received so much," and walks off. The gomastha actually makes the payment to the Khatadar; but some officer satisfies himself before he leaves the premises he admits that he has received the whole amount. I think the gomastha actually distributes it, because we have a great deal of work to do, and if we did not sub-divide it we should never get through it. No man can leave until he has first acknowledged the money to myself or my assistant. Sometimes the ryots are very ignorant and very stupid, and they may say Rs. 10 less or more by mistake, and in that case the bag is counted before myself. I only mention that to show how carefully it is done.

12199. I believe the weightment of the opium is carried out in April or May?—Roughly from the 1st of April.

12200. Is any payment made then?—The following day.

12201. Direct to the cultivator?—Not with us, unless he puts in a petition to say that he wishes the money paid there, and not at the village, in which case I have him paid before myself. It is generally paid to the Khatadar: that is our system, because he has been chosen by the ryots.

12202. At what time is the account finally settled?—That requires a slight explanation. We can only pay at what would be called in liquor "at proof," that is to say, at 70 consistence. Anything above 70 we only pay when we get the accounts back from the factory. The opium in going down dries a little, and on the way it goes up a little in consistence. The difference in value is made out in the opium godown and instead of Rs. 5 a seer the man may get on an average Rs. 5-10 on a seer.

12203. Then the account is finally settled when you get back the information from the factory?—It cannot be settled before.

12204. What month is that?—The papers begin to come back from the end of May throughout June. We are hard at work making them out all July. There are 85,000 ryots whose accounts have to be made up, and we get the thing finished, speaking roughly, during the first week in August. We then send for them and clear them off long before the new year's work begins.

12205. The balance is paid about August?—Roughly between the 7th and 15th of August.

12206. Is any date laid down in the standing orders?—No; it depends upon how we can manage to finish the accounts. We are only too desirous to do the work quickly.

12207. Is any balance allowed to remain over to the time when the settlement for the next year begins, in September or October?—It is absolutely against all orders, and I have never seen such an irregularity committed. There is a recent circular on the subject. I have one dated the 20th of April this year.

12208. Do you know the effect of it?—It is merely to say that they desire us to finish our adjustment accounts on the 31st of August each year punctually.

12209. You have a standing order that they must be finished by the 31st of August?—Yes; the new payments begin on the 30th September.

12210. Will you explain what the system is of granting licenses and receipts: in the first place, when the Khatadar comes to engage, what documents does he take away and what documents do the cultivators get?—The whole system has been altered during the last three months. There has been a new manual prepared. The present system in vogue is this, that he takes away a license—it is a very large paper now, with numerous heads. The men's names are here, with different headings, showing all the payments made to each ryot, and the different valuations that are placed to his credit for opium leaves, passewa, and everything. At the end there is a line drawn showing the whole of his account.

12211. When does he take that?—From the first September when he comes in.

12212. When he comes to make the engagement?—Yes, and there is a corresponding paper which is called an acknowledgment, or an agreement, that he takes away. This also has the names of the ryots and the lands they engage to cultivate. They sign that, or put their mark to it, to show that they have received the money and entered into the engagement to sow.

12213. Does each cultivator have a separate agreement?—It is a big joint agreement. It was in that way some years ago. The men had not a separate license to grow poppy, and the only valid license was the one that the Khatadar took away. The Government, in order to legalize it, gave each man a license, and that is initiated by my assistant, and the Khatadar takes them all away. That was merely to legalize the growing of the poppy by each ryot. It was thought that it would be a convenient form to have his account also entered on it, but that is not the essential reason for the asamiwar license. I have the document here.

12214. That is the original acknowledgment given to each cultivator?—Yes, it is given to him as a license.

12215. What subsequent use is that put to? It has been said that there no details are entered of the amount of the crop or the money due?—It does not follow that they are ever filled in, I am sorry to say. All the details of the man's accounts are entered in these papers that I have described, which the Khatadar holds. We have duplicates of these in our office. It was subsequently an idea to fill in the man's accounts into his assamiwar document, but the men are so careless and ignorant about it. I have known thousands absolutely refuse to take them. They say, "What are we to do with them," and they ask the Khatadar to keep them in a lump together and to bring them in again. They cannot read; they rely entirely on the Khatadar. Some desire to have them written up, and then we are instructed by the Manual to have them written up. We are instructed to have them written up at the time of the weightings—filled up for that one entry; but, although we work 12 hours a day, you can easily realize the fact that with 85,000 of these accounts to be filled in, besides all our other work, we have not time to do it. They do not present them at the time, and we cannot delay a second, for the work is so pressing. There is no provision made in the Manual for filling it in September. They wish it filled in at the weightment, but there are no instructions to have it filled in in August. I heard a witness say that the August accounts had not been filled in, but there is no provision made in the Manual for filling it in in August.

12216. When is the payment made for leaves and trash?—Hitherto it has always been made in August, but we have orders this year to pay on delivery.

12217. You have not done that until this year?—No, it was recommended by myself I think some years ago.

12218. If you give advances for wells, is there any understanding that the cultivator who takes those advances must continue to grow poppy until the advance is paid off?—There is no written law on the subject.

12219. There is an understanding?—There is an understanding. He says, "give me an advance for the better cultivation of my poppy fields."

12220. In that case you would be justified in saying, "You must go on growing poppy until the advance is paid off"?—We should be justified in saying it, and he would be the first to acknowledge that he had to do it, because it is repaid from the price of the opium.

12221. Over what period do the advances continue for the wells?—I think it is the better part of two years before it is repaid. It is in small instalments, so as to be light on them. It is for agricultural improvement really.

12222. Have you ever had to call on the zamindars to assist you in getting their cultivators to cultivate this crop?—

Never in my life.

12223. It has been stated that it has been done in some instances, so that there may be a difference of practice?—I have heard so since I have been here.

12224. So far as you know it has never been done?—Absolutely.

12225. Is there any rule on the subject?—None whatever that I know of.

12226. One of the witnesses in giving his evidence asked, "Why is it necessary to give advances without interest for poppy cultivation": will you answer that for us as an officer of the Department?—They are not absolutely necessary, but it adds to the ryot's profits, as he gets the money free of interest; otherwise he would have to borrow at a high interest.

12227. (Sir James Lyall) Yesterday the Reverend P. N. Chand said that he was in the habit of talking very freely with the opium cultivators, and that he knew all their circumstances. He said that the mahajans will not advance to opium cultivators. I see that that contradicts your statement that the mahajans advance freely and readily on the poppy crop?—It is difficult in my district to get a mahajan, unless a ryot is well off; to advance to a man who is not a poppy cultivator.

12228. Do you think there is anything peculiar in the circumstances of Gya?—I have never been there, but I should not say so.

12229. (Mr. Haridas Voharidas.) Does the Khatadar receive all these licenses for each cultivator?—Yes.

12230. And he distributes them to the cultivator?—Yes; we see through our zilladars, to the best of our ability, that they have been distributed.

12231. Do they go and inspect?—Yes; in every village; their instructions are to see that they have been distributed, but as I said many of the cultivators will not take them.

12232. As the advances are made to the Khatadar, the balances are also given to the Khatadar, and he is responsible for distributing them to the cultivators?—Yes, and every ryot who has a complaint comes straight to me if he does not get all that he ought to get.

12233. The Commission has learnt in Calcutta that from head-quarters an estimate is sent for the new year as to what quantity of opium they require; do you receive anything of that kind, and from that do you issue instructions, saying that so much land should be cultivated, and that so much opium is wanted for the next year?—No; I have received no such intimation, except one year, 1888-89, when I was told summarily to reduce my cultivation ten per cent. The former year I had 44,178 bighas, and when I reduced it to 39,748 (which is not exactly ten per cent. reduction, but about it) the ryots begged me not to reduce it. I believe at the time that I wrote to the Opium Agent about it, but it was disallowed, and it was said that the orders must be carried out peremptorily; upon which the ryots came to me privately, as they know me very well, asking if they might not sow it all without advances. I said I hoped they would not do so; otherwise, they would get me into trouble, as well as themselves. Then I had drums beaten in the villages to say that they must not do it. Notwithstanding all precaution they sowed 1,500 bighas out of it, which I reported to the Opium Agent, who said that as it had not been done in bad faith he did not wish to take any notice of it and prosecute them.

12234. You do not regulate the cultivation of the poppy according to the demand?—My district is so thickly populated, and there are only certain lands fit for poppy, so that there is no room for an increase; they never increase more than a little. The year's measurements do exceed each year's engagements, but the amount is not large. There is a slight increase in the measurements every year. In the "Notes on the Supply of Opium" page 3, the rates at which these advances are given are for irrigated lands Rs. 5, and for non-irrigated lands Rs. 4. I work cheaper. I give Rs. 4 for first advance and Rs. 3 for second advance.

12235. What is the nature of non-irrigated lands? I thought the opium was an irrigated crop?—There is a small portion in my district, chiefly to the north of the river, where the lands are never irrigated. They retain their own moisture.

12236. Without being irrigated does the opium grow?—Yes; as it costs less to cultivate the advance is less in my district where irrigation is not so frequently repeated as in South Gangetic districts.

Mr. A. G. Tytler.

6 Jan. 1894.

Mr. A. G. 12237. Without any well irrigation?—Yes.

Tytler. 12238. (Mr. Wilson.) We had a witness yesterday who put the profits of opium cultivation at Rs. 150 : do you get as high as that?—I must refer to these statements, which I have made with the greatest care. The seasons vary. If there is a failure of crops, partial or total, the profits are very small; if it is a good year they are more fortunate; the last good year we had was four or five years ago. When I was trying to make these tables for the Commission I asked in the villages as I walked through. One man took me to his field and said that four years ago from $1\frac{3}{4}$ cottas he weighed off at my godown as 30 seers and 5 chittaks of opium of the highest quality.

12239. What would that be worth?—Roughly 18 seers a bigha, that is, about Rs. 90. Then there is the seed, which is a most important thing, but which is left out of so many accounts : about Rs. 110 altogether.

12240. You do not get as high as Rs. 150 profit, I ask again if you get as high as that?—Certainly not, it is impossible.

12241. A witness told us in Calcutta that it would pay to cultivate poppy for its seed, and the valuable manure it produces without reference to the opium?—It would not certainly, in my district; but there is one thing to be added, the ryots often in conversation say that where no hired labour has to come in, the price of the seed pays for the cultivation of the crop.

12242. You do not know any case in which it would really pay to cultivate without reference to the opium?—I do not.

12243. Am I to understand that the poppy cultivation would pay if there were no opium at all? We have been told that it was possible for the seed to amount to Rs. 37 per bigha?—I should say that the seed cannot possibly be more than Rs. 15 per bigha.

12244. You think that was all a mistake?—Few people are so well up in the matter as I am, as I have passed all my life in it : probably it was a mistake.

12245. I am anxious that we should get it right?—I should say it was a mistake.

12246. It was the Opium Agent of this division who told us so?—The Opium Agent has been a Commissioner, and has only lately come.

12247. Have you the Behar Opium Manual at hand?—I have a portion of it.

12248. Will you look at page 39, paragraph 169, "All Khatadars should be made to understand their position as paid agents of Government, their remuneration being the commission on the yield of their licenses and "*khurchun*" or scrapings from the cultivators' pots. They should be held responsible, therefore, for the engagements of suitable lands, for the progress of the work of distributing advances to cultivators, who should be trustworthy men, and for the proper cultivation of the lands within their licenses. Sub-Deputy Agents and Assistants in independent charge should exercise their discretion in punishing lazy and inefficient Khatadars by withholding their "*khurchun*" and commission, or by removing them from their posts, if necessary;" and it then goes on, "The appointment and dismissal of Khatadars will invariably be under the written authority of the officer in charge?—Quite so.

12249. Is that quite consistent with their being representatives of the cultivator?—It is consistent. They are the representatives of the cultivators so long as they do their work. I could not have a Khatadar who would do nothing; he has to help my men, to show them the lands, and when they go to measure he must go with them to name the people. If he refuses to do that, how can I do my work? I could not retain him.

12250. I only want to draw your attention to the fact that he is to be regarded as the paid agent of the Government more than of the cultivators?—I see it noted here : he is really to be regarded as the mutual agent of both. I had not read this section before.

12251. Will you refer to paragraph 108 of the same book, "It is usual in cases where advances are given for improving the means of irrigation in the village to stipulate for a certain increase in the cultivation of poppy?—Yes.

12252. I think in your statement you show that well advances are solely for poppy?—Not at all. They are primarily for poppy, but they are used for all their other crops.

12253. Will you refer to your own statement?—I may not have used the word primarily, but I can explain it.

12254. You say that these wells represent about Rs. 5,00,000 of capital invested on account of poppy cultivation?—Because if the poppy had not been there they would not have been made.

12255. Will you look at page 120 of the Appendix of the same volume. You will see there a form of which I will read a translation, headed "Behar Opium Agency Agreement, Security Form (Well advances)," and it says, paragraph 4, "I also agree that if I do not improve the poppy and do not sink a well, the two objects for which I take this loan, according to agreement, I will return the loan when called upon to do so with interest at any rate that may be fixed by the Sub-Deputy Agent without any objection on my part or that of my heirs, and if I fail to repay the loan the Sub-Deputy Agent will have the power to realize it from me or my heirs and inheritors, and so long as the loan remains unpaid to the full amount of capital and interest thereon, the said Agent will have the right to impose any fine that he may please, and realize the same together with the capital and interest by any means, and I or my heirs or inheritors will have no objection to the same or to the paying of interest" P.—That is quite correct. This has come into force this year; I have never had one of these agreements yet in use.

12256. Did you notice from what I have read that he has to pay interest at any rate that may be fixed?—I heard it. I am ashamed to say I have not read this statement myself; I have not had occasion to use it.

12257. You also hear that the Sub-Agent will have the right to impose any fine he may please, and to recover it by any means?—I heard that.

12258. Do you think that is a fair power to put into the hands of anybody?—I do not.

12259. Did you ever hear any case, in any civilized country, of such a power being put into the hands of any one?—I do not think it is a right thing. I think the way in which we have done it hitherto is quite right. I may add one thing. This Manual has only just come out; it has only just come into use. The faults in it that are being found practically day by day are being corrected, and no doubt that will be corrected.

12260. May I ask if this is the correct title "The Opium Manual, Part II, District Procedure for the Guidance of the Behar Opium Agency, Published under the authority of the Board of Revenue, Lower Provinces, Calcutta, Printed at the Bengal Secretariat Press, 1892"?—Yes.

12261. And the Preface states that it is a revised edition intended for the use of officers in the Behar Agency only, and that it contains the rules and forms relating to district procedure?—Yes.

12262. And is the agreement that has been read the form provided for well advances?—It is so, but in my case it has not come into use yet.

12263. (Chairman.) You admit that it is the form prescribed?—Yes.

12264. (Mr. Wilson.) Is the Preface dated from the Board of Revenue, Lower Provinces, 29th of July 1892, signed by T. Inglis, Officiating Secretary?—Yes.

12265. Will you now look at page 147, while I read a translation of Security Bond.

BEHAR OPIUM AGENCY.

SECURITY BOND.

<i>Khatadar</i>	<i>Number</i>	<i>Mouza</i>
<i>Pergunah</i>	<i>in concern</i>	<i>Zilla</i>

I according to my own will and pleasure give in security the property of Khatadar or Asamis mentioned in of Mouza Pergunah and hereby agree that if for failure of crop for attachment or produce or for the death of cultivator or for the absconding of the cultivator, or for the reason of defective cultivation or abuse of advance money or for the disappearance of produce or for any other reason the payment to the sircar for the year A.D. fall due, in that case, if I, Khatadar, be not able to make the Asamis repay at once the advance money I will from my own property repay the same. But if I fail to do it, the Sub Deputy Agent will have the right according to Section 16 of Act 13 of 1857 (C.E.) to realize the amount by the amount disposing of my own property. In this, I, or my heirs or inheritors or the Asamis for whom I stand responsible will have no objection, for which I sign this bond that it may come to use when required.

<i>Date</i>	<i>month</i>	<i>year 189</i>
-------------	--------------	-----------------

12265A. Is that a correct translation?—Yes.

12266. Did I understand you to say that the new agreement began on the 1st September?—Yes.

12267. Would it be proper to begin them earlier?—Each year closes at the end of August.

12268. Will you look at paragraph 154, "It should be very carefully explained to every khatadar that he should engage strictly with reference to the capability of his village, and that should he or any of his cultivators sow less than the area engaged for, each defaulting ryot would be liable to punishment under section 10 of the same Act." What is the punishment in that case?—Three times the amount of the advance. If he has taken Rs. 1 he is fined Rs. 3.

12269. Is it lawful under any circumstances to pull up the crops?—Certainly not; because he has done an act which is not correct, and he can be fined according to the law. You do not take upon yourself to put him right.

12270. Do you think that pulling up the crops by an officer of the Opium Department is ever practised?—Not to my knowledge.

12271. It would be quite illegal?—As regards legality I do not know.

12272. There is no provision in this book for any such punishment?—No; I think not.

12273. (Chairman.) Is it within your knowledge that such a thing has ever been done?—No.

12274. (Mr. Wilson.) Do you keep a list of dismissed Khatadars?—I do not, because I know all my men. It would be a useful thing, and I ought to keep it for my successor.

12275. You know that it is prescribed in the book?—I know that it is.

12276. How many have you dismissed lately?—Very few have been dismissed.

12277. For what kind of offences would it be?—If he misappropriated some of the ryots' money he would be a man not fit to give money to, or any act of that kind which takes from his character. He must essentially be an honest man, because he takes away the bag and has the whole of the money.

12278. What do you say was the rate of payment that they might fairly charge as an allowance?—How much do the ryots give them?—In my district I have reduced it to what I thought fair, and it ranges between 6 and 10 annas per bigha, according to the wish of the ryots. They themselves reduce it in this way: the Khatadar asks, say, for Rs. 10, another man of equally good character talks to them, and says, "I will do it for Rs. 8 if you will let me," and so they reduce it amongst themselves.

12279. Are you at liberty to vary it?—Not at all. I merely use my personal influence to do what I think is fair,—to help the poor, that is the main object.

12280. You give the average annual payment for opium during the past 10 years as Rs. 11,72,593, or about 40,000 bighas?—Yes.

12281. That gives an average of 29 per bigha?—I have not worked it out, but you must add to that the value of the seed, which is one-fifth of this amount.

12282. This is the whole of the money paid by the Opium Agency on an average during those 10 years?—Yes.

12283. Will you refer to your tables and tell me if it quite agrees, and whether you have not got the average produce in every case, except one, much above that?—No; there are different kinds of soil. Suppose there is one bigha producing 16 seers, there may be three more that produce 9. That will make 25, which would come to 6½ per bigha if you want a general average. The highest quality of soil here is not a thing generally found, but such soils exist.

12284. This is the average on the first page?—Yes; the average payment.

12285. You have given the value of the outturn in these tables and some of them are very much above Rs. 29?—Very much.

12286. Which of them are so much below the Rs. 29 as to restore the average?—I cannot say, because the average would be made in addition to these statements of fields where the crop has failed, where nothing has been produced. When you have 40,000 bighas to deal with, all the lands do not succeed.

12287. (Chairman.) You have not given the areas of the different qualities of land?—That I could not do.

12288. (Mr. Wilson.) In the tables you have given us there are no examples of such low rates as would reduce the average to what you have stated on the first page?—Because there are no lands which will produce less than my lowest estimate, 3 seers, unless some calamity happens.

12289. (Chairman.) Is the crop subject to frequent failure?—Not frequent, but failures do occur.

12290. Then the best land might not give 3 seers?—Yes; that is the real reason.

12291. (Mr. Wilson.) I do not think that in your statement you have alluded to failures being so frequent as to pull down the average materially?—The averages have fallen. This Commission has come at a time when the Opium Department shows up very badly. In 1884 the amount was 12 lakhs; the next year Rs. 13,10,000; the next year Rs. 15,09,000; the next Rs. 13,10,000; the next Rs. 15,19,000. Then we had four bad years. This year it is Rs. 11,96,000. It is these bad years that have pulled down the average.

12292. Looking at the tables you have put before us, do not the later pages convey an impression as to the profitable character of opium cultivation which is not borne out by the fact that the total payment from the department is only Rs. 29 on an average?—To one not acquainted with agriculture. The same liability exists with all the other crops. Wheat, for instance, gets rust, and then the production is immediately lessened. I have seen the wheat not worth Rs. 5 per bigha.

12293. (Mr. Wilson.) Will you explain to me how or why it is that when you give us opium in the second year in some instances it is at half the price of opium in the first year?—Because I have begun with all these crops as following a fallow as giving the best; then when these crops have been in the ground the next year the cultivation is called "jurri." They do not follow the fallow; a fallow enriches and restores fertility.

12294. We have it in evidence that the poppy does not pay so well in the first year, but that it pays better in the second, and still better in the third, and still better in the fourth. Your tables appear to be at variance with that, and I thought you might be able to reconcile it?—I can reconcile that. It is true that when you take up new land it does not pay so well the first year, but these are old established lands. I have presumed in these tables that it first follows a fallow, and the yield is good. The rotation shows how it goes down until you have another fallow, and then it goes up.

12295. You say that the statement that it improves in the first year, that in the second it is better, and the third better, and the fourth still better, relates to the cultivation of new land?—Yes, in new land it is not so good the first year, because it is not highly manured.

12296. The tables you have given relate to old cultivation?—All my cultivation is old.

12297. In these tables you do not take credit for the trash: is there not a small sum paid for trash?—I could not arrive at the figures. I was away in the districts working the whole day long.

12298. There is a small allowance for trash?—Yes.

12299. A witness said yesterday that he did not believe that the people were always paid for leaf and trash?—I see everything paid before me. Whether other officers are not so careful I cannot say.

12300. You say that the zamindar has to pay the Government in four instalments of Rs. 62-8?—Those are not equal instalments. I am not a Revenue officer. I divided the amount into those sums because I thought they would probably be approximately equal.

12301. As a matter of fact they are not equal?—I do not know. It is not my work.

12302. You have told us that the commission paid to the Khatadar is Rs. 1 per maund?—It is.

12303. Is the measurement of the land managed by a pole of a certain length?—Yes.

12304. You have been asked about balances. There are balances left at the end of the financial year?—There are scarcely ever any with me.

12305. But there would be in some cases?—Last year was a disastrous year.

12306. With regard to 1890-91 you state that there were balances of Rs. 55,000. Does that relate to the same balance that Mr. Fanshawe was asking you about?—I suppose so. The meaning is that in some of the districts the poppy failed.

12307. I understood you to say that there was no balance; I notice here that there is a balance; I want to know how it is arrived at?—Occasionally in Districts there are outstanding balances if the crop has not succeeded. If the ryot has no poppy crop the advances received are called outstanding advances.

Mr. A. G. Tytler.

6 Jan. 1894.

Mr. A. G.
Tytler.

6 Jan. 1894.

12308. You have been more fortunate in your district; that is the difference?—That is the difference, I suppose.

12309. Are you anywhere near Monghyr?—No. I am on the north-west frontier of Bengal.

12310. Do you know anything about a riot that took place there in 1891?—No.

12311. Have you had a riot in your district?—This year in August, but it was not about opium.

12312. About cow-killing?—Yes.

12313. You mentioned in your statement the large amount of money that Government has advanced for the sinking of wells. It is understood that that is not a gift, but that it is repaid?—Yes, without interest.

12314. (Mr. Fanshawe.) With regard to Mr. Wilson's question about balances; those, I understand, are balances due to the Government from the cultivator?—Yes.

12315. The question I asked had reference to what balances were due to the cultivators in settling their accounts?—Yes, that is quite another matter.

12316. (Chairman.) In the discharge of your duties you have to travel about—have you not, through your district a great deal?—Yes, I go, roughly, through 15 or 20 villages a day.

12317. You spend a large portion of the year on tour?—4 months.

12318. In that way, and at that time, indeed at all times, you have come very widely into contact with the ryots who are engaged in the cultivation of the poppy?—I am pretty well all day amongst them.

12319. You are well acquainted with their general views and feelings?—I am perfectly confident I am. I do not think any one can mix with them more than I do in my work.

12320. Do you confidently believe that if the cultivation of poppy in this district were prohibited such prohibition would be disapproved by the people?—In my own district, I cannot realise the result; in the majority of cases, I think it would be financial ruin.

12321. As regards the opinion of the people, can you speak with confidence?—I have asked them. I have tried to explain it to them. I did not say it to too many of them, because they would get alarmed. They said they did not know what they would do if it was stopped.

12322. So far as you have had opportunities of judging of their views, they would greatly regret the prohibition of the cultivation of the poppy?—I am confident of it.

12323. Are you acquainted with the report of the Commission appointed by the Government of India to enquire into the working of the Opium Department which reported in 1883?—Yes.

12324. Have you read that report?—Years ago; not since.

12325. Reference is made in this report to certain defects in the administration of the department, more particularly with regard to the lower grades of native officials employed. It is suggested that it may frequently happen that they receive gratifications from the ryots; are you acquainted with anything of the kind?—I am sure that they do, but how they receive it and at what rate I cannot say. I have always done my best to unravel any complaint made to me, but I do not consider it consistent with my position to try and ferret out things unless people complain.

12326. Can you suggest a remedy for this state of things. Do you know what was recommended in the report?—I think an increased salary.

12327. What do you say to that?—I should say it would be a capital thing. It would give them more self-respect, and I think they would be more chary of risking their appointments by committing any irregularity.

12328. The report alludes to the repayment of advances by cultivators: do you consider that sufficient allowance is made in the event of a failure of the crops—a sufficient

time to return?—Of course, it is my own inclination to be generous, but one has to think of the general tax-payer. These men have taken their money from the Government and the general tax-payer should not be the loser. They ought to pay it as soon as they fairly can. It is never collected from them until the other harvests comes in because, as a matter of fact, they never have money to pay.

12329. Do you agree with the recommendation of the Commission that the principle of considering the paying capacity of the cultivator, and not the extent to which his crop has failed from circumstances beyond his control, is an unjust principle?—I do not think that it is right, because he would get slack in his work, and the tax-payer would be paying for his slackness.

12330. Have you any other suggestions to make for improving the work of the Department with which you are so familiar?—I have not. I must confess I should like to see a little more given for the opium.

12331. You would recommend that better prices should be given for the opium?—Yes; it is infinitely more paying than any other crop even now, but it is risky—the hail destroys it, and it is liable to blight.

12332. Do you think if a better price were paid for the opium, the advantage would permanently remain with the ryot, and would not ultimately go to the zamindar or land owner?—I think not, because the majority of men in my district have rights of occupancy. There are a certain number of tenants-at-will, but the number is comparatively small in Sarun.

12333. In your district the majority are secured against increased demands for rent by the enjoyment of rights of occupancy?—Yes.

12334. To conclude, you would tell us generally that you believe the opium crops is one to which the people of this district attach great importance, and which they would be sorry if they were no longer permitted to cultivate?—Certainly, as regards Sarun.

12335. (Mr. Pease.) May I ask whether any of your sub-agents, gomashas, or others, make requisitions upon the ryots for food for themselves and their horses?—They are not allowed. It is my constant habit to explain to my ryots that they are to give nothing, even if it is asked for. I explain to them that the men are paid by the Government and receive emoluments of different kinds for their sustenance, and that they are not sent there to harry the natives in any way.

12336. I asked whether you know that that has been the practice?—If you stay long enough in India you will know how it is with the subordinates of any establishment: it is not the case of opium merely. Travelling in the country you may fairly well say that they pay nothing for their food. I do not mean the zilladar, who is there always; but when the gomasha is passing through, probably the Khatadar or the asamis will give him some grain.

12337. (Mr. Wilson.) Is it the fact that the first grade zilladars are paid Rs. 7; second class Rs. 6; and the third class Rs. 5 a month?—Yes, and burkundazes Rs. 4; you must necessarily attach three or four to each gomasha, because he has no means of sending the senior officer's communications to his subordinates unless he has people to run with messages.

12338. They are messengers?—And they themselves ultimately become zilladars. When there is anything to be done in a zillah, if the zilladar wants assistance in measuring, one of these men is deputed to help him. In that way he learns the work, and when a vacancy occurs, if he is a good man, he is put in.

12339. Are all these men engaged the whole of their time?—Yes, in my district always engaged.

12340. Are they at liberty to undertake other occupations?—Certainly not.

The witness withdrew.

Mr. T. R. FILGATE called in and examined.

Mr. T. R.
Filgate.

12341. (Chairman.) I believe you came to India in 1876?—Yes.

12342. You are Manager of the Burhowlie Indigo Factory in Chupra, and General Manager in India for the Fungal Indigo Manufactory Company, Ltd., of Manchester?—Yes.

12343. You have been an indigo planter in Behar for the last seventeen years?—Yes.

12344. For the last nine years you have been Manager of the Shapur Miroha Indigo concern in Tirhoot?—Yes.

12345. In your position have you come in contact

largely with the ryots?—In my own particular district and my particular factory certainly.

12346. What do you say as to the disposition of the ryots to enter into engagements with the Opium Department to grow opium, receiving, as they do, at the commencement of the engagement an advance?—They are most favourably disposed to it. The ryots apply for advances of their own accord, and are always ready to take the Government advance, and, as far as my own personal experience goes, a ryot who grows poppy pays most of the rent, if not all, from his profits from his opium lands. Government make advances on the small bigha, whereas a ryot pays his rent on the pergunnah bigha which varies from $5\frac{1}{2}$ -bath to an 8-bath bigha. In the Shapur Mircha Dehat from 1 to 2 annas of the Dehat area is under poppy. The Government advance is Rs. 3 per bigha in light lands, and Rs. 6 in the banghur lands; the advance is made in Bhadon (August—September). The crop is sown in Kartik (October—November), but can be sown as late as December 15th. The produce is collected in Magh (January—February). The ryots dry and turn it over several times, and finally it is weighed out in Bysack (April). A ryot grows from $\frac{1}{16}$ to $\frac{1}{4}$ of his holding in poppy. Light lands give from 4-7 seers per bigha; Banghur lands 10-15. The ryot receives Rs. 5 per seer per first quality; at the time of weighments he receives $\frac{2}{3}$ of the price, and in Bhadon his account is made up, when he receives the balance as well as his new advance. The seed comes from Telpa in the Chupra district. The ryot sows at the rate of $2\frac{1}{2}$ seers of seed per bigha. In addition to the opium weighed out to Government the seed is sold for oil and used by the ryots for lighting and culinary purposes. In some lands for which the ryot receives an advance the poppy does not do well. Government always takes back the advance made. Poppy grown in Banghur lands on irrigation pays much better than in light lands, and the ryots are very keen to take advances. A ryot prefers a Government advance to one from his mahajan; as to the latter he has to pay high, if not exorbitant, interest, whereas in the other his interest charges are *nil*. A ryot can get a Bhadoi crop, then poppy, and in many cases indigo, within the year from the same land. Have never known of a case where a ryot takes an advance and then refuses to grow poppy. I don't think tobacco could replace poppy. This year, for instance, there is some 40 or 50 per cent. more cultivation under tobacco than last year, and there will be a fall in price, as a good deal of last year's crop is still unsold. Tirooth-grown tobacco is unsuitable for Hamburg and Amsterdam. As a rule opium is grown in the best lands. If ryots are not disturbed and unsettled by unscrupulous agitators, they are perfectly satisfied and contented. Petty Mooktars stir up a lot of bad feeling between ryots and their landlords for their own ends. The ryots know their rights thoroughly and would not grow poppy under compulsion. If the cultivation of poppy was to be abolished, and the advances called in, undoubtedly it would be a very great hardship on the ryots in Behar. Were Government to allow free trade in opium in a very short space of time, the Behar indigo planter of to-day would be able to retire to his native country. The Tirooth Koeri is an excellent cultivator and has very little to learn from our best agricultural chemists and tills his land every bit as well if not better than many a home farmer, certainly better than most peasant proprietors in Brittany and Normandy.

12347. Have you any observations to make with reference to the use of opium?—Opium is used largely in the villages as medicine. It is looked upon by the natives as one of the most valuable drugs they have. I have met with occasional cases of confirmed opium-eaters; have never noticed that they were less robust or less capable of work than non opium-eaters. I have known a case in which a Sub-Registrar was an opium-eater. I have observed that after he had his dose was quite a different man and perfectly clear-headed. I have observed that a man who takes toddy or ganja to excess is a drunkard in every sense of the word. An opium-eater is not.

12348. Have you any thing to tell us with reference to the feeling of the population of this country in contemplation of any serious change in the present regulations affecting the production or consumption of opium?—Radical changes may or may not be undertaken in the old country, but they are distinctly dangerous in India. Western ideas should be introduced very gradually, and with the greatest caution, and undoubtedly the members of the Anti-opium party would pause did they for a moment realize that the outcome of their action may be instrumental in applying the spark to the mine that every

deep-thinking man in this country knows to exist, and should the horrors of 1857 be repeated, which God forbid, how they would reproach themselves.

12349. You come here in a position which makes you entirely independent of Governmental influence?—Certainly.

12350. So far as your personal interests are concerned as an indigo planter, how would they be affected by the withdrawal of the Government from the cultivation of opium?—They would be seriously affected financially.

12351. How would indigo planters be affected by the withdrawal of the Government from the manufacture of opium and dealings with the cultivators in the purchase of opium if free trade were allowed, how would your interests be affected?—As indigo planters we should undoubtedly benefit by it.

12352. The way would be opened to you to enter into the trade?—It would be open to us to deal in purchasing and growing poppy.

12353. Therefore you come here as an entirely independent witness in giving evidence in support of the existing system?—Certainly.

12354. Do you suppose that there are any serious abuses in the management of what you call the Bengal monopoly system?—As far as my own experience goes, none whatever.

12355. You know nothing of any acts of speculation or oppression on the part of the minor officials towards the ryots?—No.

12356. Do you think that if such practices extensively prevailed you would have heard of them?—I should be bound to have heard of them, I think, if they had prevailed. Of course, I am speaking as to my own particular district and my portion of the district.

12357. (Mr. Wilson.) Mr. Forbes gave as a calculation as to the cost of ploughing, in which four ploughings were to be done at 2 annas: I did not understand how it could be so low a figure?—The cost of ploughing for cultivation we calculate at 8 annas per bigha.* A plough receives 2 annas per day, but really the man only works for about three hours in the morning. He ploughs a quarter of a bigha twice: that is, it takes four ploughs to plough a bigha. Eight annas is the actual cost. It is not for a whole day; we pay 2 annas for a plough, and that is for a quarter of a bigha.

12358. It seems a little complicated, but you say six ploughings would cost Rs. 3?—Yes, for ploughing a bigha.

12359. To have a bigha ploughed six times would cost Rs. 3?—Yes.

12360. You say that Government always takes back the advance made; what do you mean by that?—When a ryot has had an opium advance, and his land is not suitable for opium or does not grow well, or if the crop has failed, and he wishes to return the advance, it is taken back, if he does not wish to continue growing opium.

12361. The advance is settled at the time he receives payment for the opium, is it not?—He gets his advance, but if his crop does not cover the amount of the advance, it is taken back. He is not compelled to keep on his advance; if he does not wish to grow opium of his own accord he can relinquish the cultivation of it.

12362. Did you hear me read the translation of an agreement in which the Khatadar undertakes to pay if the crop fails or if the man dies?—Certainly, but I am speaking of the ryot, not of the Khatadar, but of my own ryots through their Khatadar.

12363. Supposing a ryot gets a license to cultivate, and he receives an advance, and neglects to cultivate, what happens?—In my own personal experience in my own particular portion of the district, I have never known a case where a ryot has received a Government advance and has refused to cultivate.

12364. If the crop failed?—If the crop fails, and he has no opium, he returns his advance. When the new advances are made, he goes in to settle his accounts (or it is done through the Khatadar) and his advance is returned.

(Mr. Fanshawe.) He has not to keep up a running advance.

12365. (Mr. Wilson.) The Government takes back the advance?—Of course, anybody who lends money tries to get it back.

12366. (Mr. Fanshawe.) You mean that the man is not forced to go on cultivating?—Yes.

Mr. T. R. Filgate.

6 Jan. 1864.

* NOTE BY WITNESS.—“An indigo planter always pays 8 annas a bigha for ploughing a field east and west and north and south. We don't consider only one chase a ploughing. Six ploughings would mean six east and west and six north and south.”

Mr. T. R.
Filgate.

6 Jan. 1894.

12367. (*Mr. Wilson.*) If the ryot was prohibited from growing any more poppy, of course the present year's proceedings would be finished up, and after that there would be no more advances; therefore there would not be anything called in?—The men now receive their advances, and they pay their rents at the time of the advance. They would find themselves in great difficulties.

12368. You do not mean that the advances are called in, but that no more advances are given out?—Yes.

12369. (*Mr. Fanshawe.*) Is it the custom for indigo planters to make advances for indigo growing?—In some cases under different systems advances are made.

12370. It is the custom in some parts of Behar?—Yes.

The witness withdrew.

Babu
Dirjpal.

Babu DIRJPAL called in and examined.

12371. (*Chairman.*) I believe you are a zamindar from the district of Gya?—Yes.

12372. Is opium extensively consumed in the province of Behar?—It is not consumed largely, but in large cities it is.

12373. It has been proposed that the growth of the poppy and the manufacture and sale of opium should be prohibited, and that the use of opium should be prohibited in British India, except for medical purposes: what do you say to that?—The growth of the poppy and the manufacture and sale of opium should not be prohibited in British India. It will cause a palpable diminution of the revenue without bringing about a corresponding good. Its prohibition will be an unmitigated evil, and will cause much bodily pain and suffering to the very class for whose benefit it is going to be prohibited. It will, besides, put them to extra expense, and thus render a country already so poor still poorer and more wretched in its condition. Any prohibitive measure will be very unpopular, and will never be supported by any man who has the good of India at heart.

12374. Assuming that the manufacture of opium by Government continues, and that the use of opium is not prohibited, do you consider that any changes are desirable in the existing arrangements?—In my humble opinion, considering the question in all its phases, no change is needed in the existing arrangements for regulating and restricting the opium traffic in Bengal. Perhaps it might be a question to consider whether it will or will not be better, from the Government as well as the public point of view, to raise the price of opium both at the time the Government purchases, and also at the time that the Government sells. It will increase the revenue, will be a great help to the cultivator, and will also be a surer check to the immoderate consumer.

12375. In the district of Gya, in which you are an extensive land-owner, what are the advantages to the ryot from the cultivation of the poppy under the system of Government purchase and advance?—In the district of Gya poppy is cultivated in almost every village. The cultivator gives his best attention and the greatest amount of his labour to the poppy. He sets apart his best plot for this crop, and the landlord charges very high rent for it. This crop is of the greatest service to the landlord as well as the tenant, and it is of great importance to both. It is by the help of this crop that the tenant pays his rent, and thus has the whole of his paddy left to himself for the support of his family, and it is from this income that the landlord is able to pay his Government revenue so punctually. The time for the payment of the advance (Dadni), the sale of opium to the Government (Mal Tol), and the last settlement of account between the Government and the cultivator (Farkhati) are so well arranged that they fall exactly a few days before the dates fixed for the payment of the Government revenue. It thus renders great help. If the agriculture of poppy be prohibited, many families of the tenants would starve, and the estates of many a zamindar would be sold for arrears of the Government revenue.

12376. Speaking on behalf of the land-owners, whom you specially represent, how would they regard the prohibition of the growth of poppy and the manufacture and sale of opium?—The land-holders as a class would strongly oppose the prohibition of the growth of the poppy and the manufacture and sale of opium in British India.

12377. (*Sir James Lyall.*) How many villages do you own?—Three hundred.

12378. Do you live on your own estate?—Yes, and manage my own affairs.

12379. Do many of your tenants cultivate poppy?—The whole zamindari; almost every ryot.

12380. Some witnesses have come before us and told us that the tenants generally are unwilling to cultivate poppy, and that they cultivate it under some compulsion or improper pressure by officials of the Opium Agent, or by some Commissioner or zamindar: is that true?—I never heard of such a thing; it never happened in my zamindari.

12381. What makes these witnesses come forward and say that there is a general unwillingness?—I cannot understand why these witnesses can have made such a statement. It never happened in my zamindari. No opium official has tyrannised over the ryots.

12382. Do you think they could stop a ryot from ceasing to cultivate by threatening him, or in any other way?—No.

12383. (*Mr. Wilson.*) Do the tenants all know that they are free to cultivate or not to cultivate?—They pay their rent in money, and they can do as they like. They can cultivate any crop.

12384. Do they all know that?—All my ryots, as far as I know, know that there is such a rule, and I have taken pains to explain it to them.

12385. Do they all understand that?—As far as I know all the ryots know that they are at perfect liberty to cultivate whatever crop they choose.

12386. Why did you take the trouble to explain it to the ryots if they all knew it?—Some ryots may not know it. I considered it my duty to explain it to the ryots.

12387. Are the Shias more or less connected with the Lucknow people?—These men who eat opium in Gya are companions or servants of people who live in Lucknow.

12388. Do you mean the old court of Lucknow?—Not specially connected with the court-people.

12389. How is the consumption of opium looked upon by the higher classes of Hindus?—They do not consider it a good habit.

12390. Do they consider it respectable?—They do not.

12391. Is it the case that people who can afford a large quantity of milk and ghi do not suffer much from opium?—Yes.

12392. And that poor people who cannot afford it suffer a good deal?—Yes, the weak people who cannot afford it always suffer.

(*Mr. Fanshawe.*) The witness added: "If they use it in excess."

12393. (*Mr. Pease.*) Are you aware that by far the greater part of the opium is sold by auction, and that therefore the Government cannot fix the price; and is your recommendation that the retail price should be increased?—I have heard that Government receives nothing less than Rs. 16 per seer.

12394. You say that the price of opium ought to be raised?—Yes, I speak of excise opium.

12395. (*Mr. Wilson.*) May I ask what word the witness used when he said "in excess"?—

(*The Translator.*) The word "Ziyadah."

The witness withdrew.

Mr.
Alexander
Cowan
Wilson

Mr. ALEXANDER COWAN WILSON called in and examined.

12396. (*Mr. Wilson.*) Will you tell us what you know or have heard about the destruction of crops at Barni?—In consequence of hearing that a crop had been destroyed because opium was not grown on the land I went yesterday to the village of Barni near Masaurhi, to inquire into the circum-

stances. I had a long conversation with the Khatadar and others, Mr. Gupta acting as interpreter. They stated that on the 19th of December last a European Opium official, whose initials are C. U. G. or C. U. S., came there with native subordinates, and by his directions a crop of potatoes

was uprooted. On the same day another cultivator's land was cleared of chillies by the same officer's directions.

12397. (*Sir James Lyall.*) What Mr. Gupta is it who went with you?—A gentleman to whom I was introduced in Bankipur.

12398. Do you know what his profession is, or how he

The witness withdrew.

MR. KARUNAMOJ GUPTA called in and examined.

12401. (*Sir James Lyall.*) What is your profession?—I am a merchant.

12402. Where do you live?—At Bankipur.

12403. What kind of merchant are you?—Seeds of all kinds,—oil-seeds.

12404. Where are you a native of?—Vikranpur.

12405. Are you a Hindu?—Yes.

12406. You went to this village?—Yes, with Mr. Wilson.

12407. When?—Yesterday.

12408. What did you see there?—I saw a portion of land where it was reported that potatoes were uprooted by one of the Sub-Deputy Agents, whose name and particulars they could not give.

12409. Who reported that to you?—I was told here by Mr. Wilson.

12410. Who told you in the village?—The cultivator himself, the khatadar.

12411. What was his name?—Jermatto.

12412. What was his caste?—I did not ask him.

12413. What was the cultivator's name?—He is the cultivator.

12414. I thought you said he was the Khatadar?—He is khatadar and cultivator, both.

12415. Did he say what rank the European officer was?—Afm-saheb.

12416. He did not mention any particular rank?—No; he said Afim-agent-sahib.

12417. How long before your visit did he say it happened?—Eight days.

12418. You did not see the land yourself?—Yes.

12419. You could not tell whether it happened or not?—There were one or two potato plants there at the corner of the land, and other new poppy-seeds had been cultivated there; the plants are not yet grown.

12420. You are a Bengali by birth?—Yes.

12421. Do you speak Hindustani?—Yes.

12422. Were there many people present?—Many.

12423. You called the village together?—When we went there many people came and crowded round.

12424. I suppose you asked the Khatadar whether he had taken the advance?—He had.

12425. He admitted that?—Yes.

12426. Did he say why, after taking the advance, he had cultivated potato instead of poppy?—He showed his form from the Opium Department in which the advance money taken by him was written.

12427. Did he explain why he had cultivated potato in land that he had promised to cultivate poppy in?—That was beyond the land.

12428. Over and above?—Over and above what he had taken the advance for.

12429. Then I suppose the question was between him and the Opium Agent how much land he had agreed for and whether the measurement was correct?—Yes, he asserted he had grown as much poppy as he agreed.

The witness withdrew.

can be found?—He is in the room at the present moment.

12399. Was anybody else with you?—No English-speaking person.

12400. You relied upon Mr. Gupta for what the natives said?—Certainly.

Mr.
Alexander
Cowan
Wilson.

6 Jan. 1894.

12430. And the opium man, I suppose, said he had not?—His report was that the Opium Agent wanted him to cultivate more land than he had taken an advance for.

12431. (*Mr. Haridas Feharidas.*) You say there was another piece in which opium was grown formerly?—Yes.

12432. Were the plants grown?—Yes.

12433. In the adjoining piece the newly cultivated plants were only small?—In the part where the potatoes were there is no plant now; only seeds have been sown.

12434. Could you see the seed?—No.

12435. The cultivator said the seed had been sown?—Yes.

12436. (*Mr. Pease.*) When the Agent asked the Khatadar to root out the potatoes did the Khatadar do it himself, or did the Agent employ somebody to do it?—He did not do it himself; it was reported that boys and other people under the orders of the Agent or Sahib uprooted those plants.

12437. Do you think that these persons were paid by the Opium Sahib to uproot the potatoes?—I did not ask.

12438. They did it under his orders?—Under his orders they were uprooted.

12439. Were these boys the servants of the Opium Sahib?—No, the boys of the village.

12440. They were under his orders?—Yes.

12441. (*Sir James Lyall.*) How much land should you think it was in which potatoes had been cultivated and then uprooted?—About 2 cuttals, or $\frac{1}{16}$ th of a bigha.

12442. Did you ask any other people when the Khatadar told you this story?—There were many people present.

12443. And they corroborated?—Yes.

12444. Can you mention any people who were there and who corroborated the story?—One Zahur.

12445. Anybody else?—There were three or four Khatadars present who also said that the potatoes had been uprooted.

12446. Khatadars of other villages?—Of the neighbouring places. In the village there are three or four Khatadars. Four or five Khatadars told us that these potatoes were uprooted.

12447. (*Mr. Haridas Feharidas.*) Were the chillies uprooted also?—Yes.

12448. Who told you that?—The name of the cultivator was Bulanpasi.

12449. What did he say?—That the chilly was uprooted from his land also.

12450. Did you see that?—No.

12451. He was not a Khatadar?—No, he was a cultivator.

12452. (*Sir James Lyall.*) Suppose a cultivator agreed to cultivate half a bigha and took the money, and the Opium Department official came round and found that he had cultivated two cuttals less and pointed it out, and proved it to him, might not the cultivator then agree that the deficient area should be made good, and that some of the crop which he had sown by mistake should be rooted up and poppy sown?—That is not my province. I have not studied the subject. I do not know what the opium law is.

12453. They said it had been done forcibly?—Yes.

12454. Against his will?—Yes.

Mr.
Karunamoi
Gupta.

(*Chairman.*) The statement we have heard from Mr. Wilson practically charges misconduct against a subordinate official of the Opium Department. We shall take care that this statement is forwarded to the Government of India for inquiry; and when we receive the report we will take it

into consideration. Obviously it is not possible to expect an immediate explanation from the local authority. I feel sure that the Government would desire that any matter affecting the discipline of the service should be conducted through head-quarters.

Mr. A.
Forbes.

Mr. A. FORBES recalled and further examined.

6 Jan. 1894.

12455. (*Chairman.*) You wish, I believe, to correct some figures in your previous statement?—Not to correct figures. It was with reference to the questions how I made out 34 lakhs worth of seed. What I referred to was the results of the experimental growing of opium by an indigo planter, Mr. Lawrence Crowdie, described in paragraph 15 of the Behar Agency's Report, 1891-92. The produce of 24 bighas

was 144 seers of opium. The amount of resulting seed was 84 maunds, which he sold at Rs. 4 per maund. My calculations were based on those figures. Taking the average outturn of opium for the last three years in the Behar Agency, the result will be found to come to between 34 and 35 lakhs of rupees per annum.

The witness withdrew.

Adjourned to Monday next, at 11 o'clock, at Benares.

At the Old Mint House, Benares.

FORTIETH DAY.

Monday, 8th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (IN THE CHAIR).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PRASE.
" HARIDAS VECHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

Mr. T.
Stoker.

Mr. T. STOKER called in and examined.

8 Jan. 1894.

12456. (*Chairman.*) You hold, I believe, the appointment of Commissioner of Excise and Stamps and Inspector-General for the North-Western Provinces and Oudh?—Yes.

12457. And you attend here to-day for the purpose of putting in a Memorandum on the History of the Opium Excise Administration in the North-Western Provinces and Oudh?—Yes.

12458. That Memorandum will be carefully perused by the members of the Commission. We propose to ask you to attend a little later for the purpose of answering any questions that may be put to you by the members of the Commission with reference to that Memorandum, and also for the purpose of giving any further oral evidence which you may be prepared to give.—I shall be at the disposal of the Commission during its sittings in these provinces.

The witness withdrew.

Surgeon-
Lieutenant-
Colonel
G. C. Hall.

SURGEON-LIEUTENANT-COLONEL G. C. HALL called in and examined.

12459. (*Sir William Roberts.*) I believe you are Superintendent of the Central Prison in Allahabad?—I am.

12460. What opportunities have you had of studying the use of opium in your district?—I have been Superintendent of the Jail for the last 17 years, and during that time I have only had two demands from prisoners confessing that they were opium-eaters, and wanting to be supplied with the drug as they felt the want of it—one was a European and the other was a native.

12461. Have you had occasion to make special enquiry as to how many prisoners did take opium?—I have.

12462. When was that?—I think it was on the 31st of October last.

12463. What proportion of the prisoners did you find in the jail who took opium?—I found only 161 out of my 2,000 prisoners who acknowledged to having taken opium when free. We took a census of the whole of them. I was not aware of this until the census was taken.

12464. Have you had any other experience?—I have had a great deal of experience in my ophthalmic work. I have an eye hospital, and since I have had it I suppose about 50,000 patients have passed through my hands.

12465. Have you had experience of dispensary work in the North-Western Provinces?—Yes. I have years ago, before 1876.

12466. Amongst other things the opium habit as a cause of disease would come under your notice?—I have never noticed any diseases due to the opium habit.

12467. What is your opinion as to the moderate uses of opium?—I think the moderate use of opium is not harmful. In many cases I think it is beneficial.

12468. In what cases do you consider it beneficial?—I consider it as a tonic: it is midway between a stimulant and a tonic. It is much more lasting than a stimulant, but not so lasting as a tonic, that is to say, it has to be repeated daily. As far as my experience goes, if a man takes an ordinary dose of opium in the morning, it will last him till evening. He will feel the effect of it the whole of the day. He is perfectly contented to go on without it till he gets his second dose in the evening. Men who have come under my observation have asked me sometimes whether or not they should continue their opium. My general experience has been in the habit of taking two doses a day.

12469. What would be the amount of the doses?—They would take about three grains at a time of moist opium.

12470. Have you noticed whether there was any tendency to increase the dose?—No. From enquiries I have made, and these cases are mostly old men, I have found that they do not go on increasing their daily doses. I have generally found that for years that they kept to a regular quantity averaging some 8 grains a day. When they have come under my care, I have allowed them to continue it. I may mention that I tried the experiment of drying the opium so as to bring it to the condition of powdered opium as we have it in England. Medical men at home always speak of so many grains of opium as powdered opium, whereas out here it is the raw opium as it is taken off the poppy. If it is dried it will be found that 3 grains of the moist opium comes to about 2 grains of powdered opium. A pill of 3 grains of opium such as is taken here, I consider to be equal to about 2 grains of English opium.

12471. You have not seen much of the opium habit in young people?—I have never seen any case in young people.

12472. Were a large proportion of the elderly people who came under your notice opium eaters?—A good many.

12473. About how many?—I should say about half.

12474. Could you tell that they were opium-eaters by their appearance?—No. I have never seen a case of excessive opium-eating except two cases that came under my notice in the jail.

12475. There is not much malaria in your district, is there?—No. It is not excessive.

12476. You do not know that opium is used as a protective against the effects of malaria?—I have not seen it used in that way.

12477. (*Mr. Pense.*) Would you advise a person in good health to commence the practice of taking opium daily?—No, certainly not.

12478. I rather gather from what you said that that would be your advice. You say that the moderate use of opium is actually beneficial?—If a person came to me and told me that he felt low and asked me if he should take some opium, I should advise him to do so.

12479. You said that a moderate use was actually beneficial?—I mean exactly on the same principle as a glass of beer is beneficial. If a person wanted a little stimulant and asked me if he should take a glass of beer I should advise him to take it, and in the same way if a man came to me wanting some stimulant, I should certainly advise him to take from 2 to 4 grains of opium a day.

12480. (*Sir William Roberts.*) In the case of a perfectly healthy man if he asked you about beer or opium, I suppose you recognize that it is question rather of a social nature than a question for a medical man?—Yes.

12481. Both habits are risky. I presume you would say in the case of a healthy man that he must take to those habits at his own risk?—In speaking of opium I was referring to natives of India and not to Europeans. If a native of India came to me and asked my advice as to beginning to take beer or spirits or opium, I should certainly advise him to take opium.

12482. But if he was perfectly healthy, you would not advise him to take anything?—If he was perfectly healthy, I should not advise him to take anything at all.

12483. (*Mr. Wilson.*) In what way did you take the census of the prisoners; did you take it personally or did you get subordinates to take it?—It was taken first by subordinates and then I went over the men. They picked out the 161 men and then I inspected them personally. I got their statements from them individually as to how much they took, how long they have been in the habit of taking it, their then condition of health and their condition of health on admission into jail. Those particulars were sent in to the Inspector-General of Jails.

12484. Will you tell us generally what those men said as to the circumstances under which they had taken opium?—They generally said that they had been taking it for years. Some of them had taken it for 15 or 20 years. I also asked them whether they had been increasing their doses. They all declared that they had not been increasing their doses, and they were satisfied with a certain amount and kept to it.

12485. You have referred to the case of beer. Do you regard beer under certain circumstances as having a certain dietetic value for daily use?—Certainly.

12486. Do I understand you to say that you regard opium as having some dietetic value?—I do to a certain extent.

12487. To what extent?—To the extent I have described. It is a stimulating tonic. In my opinion it is midway between a tonic and a stimulant.

12488. You made no qualifications with reference to beer, but with regard to opium you said to a certain extent: will you kindly explain that?—A man could not live on opium entirely, but I think opium would assist his digestion, and

stimulate his appetite in the same way as beer would do. A man could not live on beer but a glass of beer acts as a tonic and gives an appetite in the same way as opium would do.

12489. Have you had frequent occasion to advise opium for that purpose?—No. I should not advise men to begin opium, but I have often been asked whether they should continue their opium or not.

12490. You say that the moderate use of opium is not only not harmful but actually beneficial?—In some cases.

12491. In what case?—If a man came to me saying that he was feeling in low health and asked my advice as to whether he should take some opium, I should certainly advise him to do so. In that case I consider it beneficial.

12492. You limit it to the case of a man in ill-health?—I limit to the case of a man who wants a stimulant.

12493. I want to know in what number of cases that has occurred to you; to what extent you have found it desirable to give men opium?—In lots of cases of operation I have given opium and made them go on with it for a time. In the case of sloughing ulcers in jails I always prescribed a grain or a grain and a half of opium with the best effects. In the cases of senile gangrene I always prescribe opium and with the best effects.

12494. I understand that what you said relates solely to the medicinal effects of opium under medical advice?—No. If a man were to come to me saying that he has no special disease but felt ill and rather down and asking me to advise him to take opium, I should certainly advise him to take it.

12495. You mentioned the proportion of the perfectly dry drug to the moist opium?—Yes. I tried the experiment myself. I weighed 3 grains of moist opium and brought it down to a little over 2 grains. I could not tell the exact amount for I had not sufficiently delicate scales.

12496. (*Mr. Mowbray.*) I understand you to say that there is an use of opium which may be described as a quasi-medical use?—Certainly.

12497. Including that in the medical use of opium do you think with your experience and knowledge of the medical facilities in India that it would be possible to provide for that and to limit the consumption of opium to that and nothing else?—I do not think so.

12498. Do you think that there would not be sufficient facilities for providing opium legitimately required for quasi-medical purposes?—I should not say there would be. I should like to say that I have now been 21 years in India and have a great deal to do with the natives. I have never yet seen a case in which I could say to a man "you are taking opium to excess," nor have I in any *post mortem* discovered any case in which I could put down any organic disease as being caused by the excessive use of opium. Whatever the excessive use of opium does, it does not cause organic disease that you could say was due to opium in the same way as you can say that organic disease is due to spirits or alcohol.

12499. (*Mr. Haridas Voharidas.*) You say you have only met with two cases of prisoners confessing that they were opium-eaters and wanting to be supplied with the drug?—Only two. That is not out of the 161 prisoners I mentioned who had taken opium when free, but in the course of my 17 years' experience.

12500. So that all the rest of the prisoners gave up the habit at once?—I did not know that they were opium-eaters until I took the census.

12501. (*Sir James Lyall.*) It was then that they told the jail authorities?—Yes.

I presume from what you say that the use of opium is not very prevalent in that part of the country which sends prisoners to the Allahabad Jail?—I should say not from that census.

The witness withdrew.

The Honourable Raja RAMPAL SINGH called in and examined.

12502. (*Sir James Lyall.*) I believe you are Talukdar of Kalakankar, Partabgarh District, Oudh?—Yes.

12503. I think you are member of the Lieutenant-Governor's Council, are you not?—Yes.

12504. How were you elected?—The system of election of the members for the Local Board is this. Each district of a province sends one representative. That representative is elected by the members of the Local Board, and the 21

representing the different districts meet at Allahabad to nominate one for the Local Legislative Council; and I am the elected member of those 21 district representatives.

12505. Then you represent 21 districts?—Yes; 24 meet at Lucknow, and they nominate another.

12506. You are Honorary Magistrate?—Yes.

12507. And a member of the District Board of your district?—Yes, and President of the Local Board too.

Surgeon-
Lieutenant-
Colonel
G. C. Hall.

8 Jan. 1894.

The Hon.
Raja
Rampal
Singh.

*The Hon.
Raja
Rampal
Singh.*

8 Jan. 1894.

12508. I believe you have travelled in England ?—I have been ten years there.

12509. I think you have written on many public subjects ?—Yes, I have a daily paper of my own. I am the editor of it as far as the Hindustani portion of it is concerned.

12510. I believe you have taken part in social progress movements and the National Congress ?—Yes; I take an interest in social movements, but I take more interest in politics.

12511. Would you kindly state what your experience has been with reference to the effects of the consumption of opium ?—It is greatly consumed, and not only by Hindus, but by Mahomedans, who are not supposed to take any intoxicating thing: they take opium as if it were not intoxicating at all.

12512. They consider alcoholic liquors prohibited by their religion ?—Yes.

12513. But they do not consider opium prohibited ?—No.

12514. Have you noticed any bad effects from the moderate consumption of opium ?—No, I have not.

12515. Is it at all common in your part of the country ?—Very common.

12516. Among what classes ?—Even my uncle used to take it. He is dead.

12517. Did he take it as a young man or as an old man ?—As an old man, of course; he was advised by his hakim, his doctor, to take it; and it did him a great deal of good. But one day he could not get it; he got angry, and left it off. He suffered for about a week, but he did not take it again.

12518. Do the cultivating classes take it at all, or is it confined more to the people of the town ?—I do not think they take much: some of them may; but they cultivate it for the profit they make. It is a source of income. If a tenant has four or five bighas of land, he will keep one bigha for the cultivation of opium, because it is so profitable: it pays all the rent of the season.

12519. What would the people generally think of an order prohibiting the cultivation or the use of opium ?—They would be very much against it.

12520. If the cultivation of opium were prohibited, and there was a deficiency in the Government revenues, what then ?—That would be a very bad thing for the Indian taxpayers, because they are already very heavily taxed. If any tax were added now, they would feel it very much.

12521. Do many of the tenants of your estate cultivate opium ?—Yes, a great many of them.

12522. It has been asserted that they do not do it willingly, and that they are pressed to do it ?—They are most willing. I am an indigo planter and I am doing very well. At first when I began it I had to persuade them to do it, but they would rather sow poppy than take to indigo planting. They now see that they now benefit by indigo planting, and they are now taking to it.

12523. Do some people cultivate both poppy and indigo ?—Yes. Indigo is not so difficult. Poppy takes a great deal of trouble, labour and manuring and other things.

12524. If it takes a good deal of labour and manuring, how is it that it is so popular, can you explain that ?—They get a good price. Everything of the poppy is useful. They even make cakes of the flower and sell them. Then there is the opium itself, and they get a pretty good price for the seed: they are quite recompensed for the trouble they undergo in cultivating it.

12525. A great deal of labour has to be used in poppy cultivation: is that labour done by the cultivator's own family generally, or does he get outside labour ?—Men, women and children—all his family work. Sometimes they go and work for one another. When one man is in want of help, the others go and help him. They give return labour to one another.

12526. I suppose there is a temperance party in India who would like to do away with all alcohol, opium, hemp and every thing ?—Alcohol of course: I never heard of opium and other things. But since the European abstainers have joined them, they are becoming converted to this faith.

12527. Some of them ?—Yes. Formerly I did not hear of it, but I now find some. The movement has entered upon a different phase.

12528. There are some, but they are few ?—They are very few.

12529. (*Mr. Pease.*) You stated that many of the opium cultivators have given up cultivating opium and grown indigo, is that so ?—They objected at first. They would not take to indigo planting until they knew the advantages of it. It is, as I stated, that many of those who now grow opium grow indigo. They grow both at the same time. The opium cultivation existed for a long time. I introduced indigo planting myself since I returned from England.

12530. I want to know whether indigo is now being grown upon land that once grew poppy ?—Indigo does not require so much trouble as poppy. It would grow there too.

12531. Is it at the present time being grown upon land that once grew poppy ?—When I first wanted to persuade my people to grow indigo, they were rather unwilling to do it. Now they have seen the advantages of growing indigo, and cultivate it, but not at the cost of the poppy.

12532. (*Chairman.*) Many of your cultivators had been accustomed for many ages past to grow poppy; then you wished to introduce indigo. At first there was an objection to undertake the growing of indigo, but they ultimately yielded to your persuasion and consented to grow indigo as well as poppy ?—Yes, but not at the cost of the poppy.

12533. They do not grow it as a substitute for the poppy, but they now grow both ?—Yes.

12534. (*Mr. Pease.*) Are those who grow indigo growing as much poppy as they did before ?—I have not taken any account of that, but I think they grow almost the same amount of poppy as they did before.

12535. You stated that persons who have 5 bighas of land devote 4 bighas to other crops: could they grow on these 5 bighas more poppy, or is it that it pays them best to grow 1 bigha of poppy and 4 bighas of other crops ?—It is a great trouble to grow poppy. They have to make great preparations for it. They therefore cultivate as little as they can help.

12536. It is not worth their while to pay for labour and grow a greater quantity of poppy than one-fifth ?—I gave that as an idea that they do grow poppy, but I could not tell you exactly whether it is one-fifth, or one-fourth, or one-tenth.

12537. But there is land that could grow poppy that is not devoted to it because of the labour that it involves ?—If they undertook more than they could do, it would not pay them.

(*Chairman.*) I think the witness has made it clear that poppy is a kind of cultivation which involves a great deal of labour. The cost of labour provided by the wife and children and members of the man's family is not material; but if the cultivation is extended, and hired labour has to be introduced, the expense of the hired labour makes cultivation of poppy less remunerative.

12538. (*Mr. Wilson.*) What is the general rent of land such as you are referring to ?—It varies from Rs. 2 per bigha to Rs. 8 per bigha.

12539. Taking the cost you have mentioned as an illustration, what might we take as the average value—how much rent is usually paid for 5 bighas of land ?—There are three kinds of land. The lowest rent paid is Rs. 2 per bigha, and the highest rent paid is Rs. 8 per bigha. For opium growing it must be first class or second class land, not third class.

12540. Then it would be about Rs. 8 ?—Yes, Rs. 8 is the highest. They can sow poppy on first class land and second class up to Rs. 4, but not below that.

12541. Five bighas would be from Rs. 20 to Rs. 40 rent ?—Yes, it varies.

12542. What is the profit that can be got from one bigha of poppy land ?—I have not gone into this matter. I am no authority.

12543. You have stated in your paper that the profit on each bigha of poppy land would pay the rent of 5 bighas of land. I want you to explain that ?—When a tenant cultivates 5 bighas, sometimes he gets only one first class bigha for which he pays Rs. 8 and 4 bighas for which he pays Rs. 2. He takes that first class land for opium. Sometimes he has 2 bighas for which he pays Rs. 4. Perhaps he would pay Rs. 12 altogether for the 4 bighas. He takes his first class land for opium. The opium raised from one bigha I am sure would fetch him more than Rs. 12. That is what I mean.

12544. You say that the people are not willing to bear any part of the cost of prohibitive measures ?—Certainly.

12545. Are you aware that anybody has ever proposed that they shall bear any part of the cost?—I do not know.

12546. Do you know that Mr. Webb moved a resolution in the House of Commons upon this subject against the opium trade. Part of his resolution was:—"Recognising that the people of India ought not to be called upon to bear the cost involved in this change of policy."?—I may have read it, but it has escaped my memory.

12547. You do not remember that?—No.

12548. Do you know that he also moved with reference to this matter: "That enquiry should be made if any temporary assistance from the British Exchequer should be required in order to meet any deficit of revenue which would be occasioned by the suppression of the opium traffic"?—I do not remember it now that you have brought it to my mind, but the thing is this: if the tax were to be increased, then such a resolution as that referred to would not protect the tax-payers of India.

12549. Do you know that the only proposal that has been made with reference to this question was that India should not have to pay the cost?—I remember it now.

12550. (*Mr. Moubray.*) In reference to what you have just been asked, in order that there should be no mistake, I would put this question to you. Are you aware that Lord Kimberly, the Secretary of State for India, in reply to a deputation from the Anti-Opium Society, saying that England would be ready to bear the cost in case the opium revenue were abolished, used these words:—"I am bound to say that I have not the slightest reason to suppose that there will be any disposition on the part of the treasury to place a heavy burden upon the tax-payers of this country" (that is to say the United Kingdom) "for the purpose indicated. I do not think there is any warrant for that. I am speaking as the Minister responsible for India, now, and I do not think that such a proposal to the Treasury, no matter what the Government in power, would be likely to meet with a favourable response?"—I have read that.

The witness withdrew.

BRIGADE-SURGEON-LIEUTENANT-COLONEL A. CAMERON, M.D., called in and examined.

12560. (*Sir William Roberts.*) I believe you are Civil Surgeon of Benares?—Yes.

12561. And Superintendent of the Benares Lunatic Asylum?—Yes.

12562. What opportunities have you had of studying the opium habit?—My service of 25 years has been confined to the North-Western Provinces and Oudh. As Civil Surgeon in various districts, I have come in contact with all classes of the population. As a Jail Superintendent, I have seen much of the criminal classes. I have also been Superintendent of a Lunatic Asylum for over a year.

12563. Is the consumption of opium for non-medical purposes confined to any particular class or caste?—No. The consumption of opium for non-medical purposes is not confined to any particular class or caste. Amongst the rural population, the number addicted to the habit is small probably not more than one or two in a hundred,—that is a high estimate, I would even put it at less than that,—and the evil effects from it are practically *nil*.

12564. What about large towns like Benares?—In large towns like Benares the habit is much more common. Probably not far from 20 per cent. of the people use the drug in some form or other. Mahomedans are said to use it more than Hindus, and I am assured that there are few Mahomedan families in Benares in which one or two opium-eaters or smokers may not be found. Nor is its use confined to men. Many women and children also use it.

12565. In what form do they take it?—It is taken in the solid form or smoke, and I believe a drink is also concocted of it which is used at social functions.

12566. What is the effect of the habit?—The excessive consumption of the drug is undoubtedly harmful, but its evil effects on the free population have not forced themselves on my attention, and particular inquiries have to be made in order to learn anything about the habit in ordinary life. From this I conclude that its evil effects are not of any great magnitude in these parts of the country at least.

12567. Are many addicted to the excessive use of opium?—Amongst prisoners I have seen many who were addicted to the excessive use of the drug, but they formed a small proportion of those admitted into jail, 4 or 5 per cent. at

12551. I should like to ask you which you regard as the most valuable declaration?—The one you have read, I believe. That comes from the Cabinet Minister.

12552. With reference to a man increasing his cultivation of poppy, I suppose it is the case that a man could not increase it without permission from Government?—He receives an advance and then he cultivates. The Government officials go about and see whether a certain man is capable of cultivating a certain number of bighas. If he has not got enough implements and bullocks and servants, he is not allowed to do it.

12553. Have you known any instances in which people have wished to cultivate opium and have not received permission to do so?—Yes. The arrangement is entirely with the opium officer, as I have said. I am not very well informed on that subject, because I have never taken trouble about it. They dare not cultivate unless they have special permission.

12554. Have you known cases in which permission has been asked and refused?—I do not remember now, but I believe I have heard that such has happened.

12555. (*Mr. Haridas Voharidas.*) Are opium crops liable to failure as well as indigo crops?—Yes. There is a good and bad season for every crop.

12556. You said that your uncle had given up the opium habit, and that he suffered from it?—Yes. Opium-eaters always suffer when they discontinue the habit at once.

12557. Can you give us the nature of his sufferings?—No. I am quite unable to tell you. I am not a doctor. I was in England when he gave it up, so I do not know.

12558. (*Mr. Fanshawe.*) Is it the case that the cultivator, as a rule, has only a small portion of land fit for growing poppy?—Yes. It requires a good deal of trouble.

12559. I am speaking of the character of the land. Is it not the case that, as a rule, the cultivator would only have a small portion of land fit for growing poppy?—That is so. It is a peculiar soil that is required for poppy.

*The Hon.
Raj
Rampal
Singh.*

*Brigade-Sur-
geon-Lieuten-
ant-Colonel
A. Cameron,
M.D.*

most. That is a high estimate, too, I think. These have certainly been miserable specimens of humanity as a rule, and, deprived of their customary dose of opium, have suffered acutely. Emaciated and enfeebled in body, loss of sleep and of appetite, with supervening dysentery or diarrhoea, have often brought them to death's door, and I have frequently had to allow them opium in order to save their lives.

12568. To save their lives?—Perhaps that is a little strong. I have not frequently had to do it to save their lives, but I have often had to give them opium to relieve the symptoms. The effect in such cases is magical. Nor need the allowance of the drug be continued for a long time. By gradually diminishing the dose the habit can be broken.

12569. What in your view is the worst feature of the opium habit?—It is in the liability to these terrible sufferings when the supply of the drug is suddenly stopped that, to my mind, the evil of the habit chiefly consists; and, without doubt, to escape these tortures the opium-eater would not hesitate to commit a crime. So long as the craving is satisfied, however, the habit is not one that conduces to crime or immorality.

12570. Have you actually known in your experience crimes that could be traced directly to the opium habit?—No, I only conclude that the sufferings are so great that a man would be tempted to commit crime.

12571. What is your experience with regard to the relation of the opium habit with insanity?—As far as I have been able to ascertain insanity is rarely, if ever, traceable to the use of opium. Cases are, no doubt, admitted to the asylum in which this is the alleged cause of insanity but it will generally be found that the insane has been addicted to the use, not of opium alone, but of *ganja*, alcohol and every other kind of intoxicant within his reach.

12572. What is your view with regard to the moderate use of opium as a habit?—Still even when used in moderation for non-medical purposes, the habit is not to be defended. Unless required for some bodily ailment a man is better without it. Its habitual use, except in the smallest quantities, causes emaciation and enfeeblement of the body, saps the energy and dulls the mental faculties.

12573. What have you gathered is the opinion of the natives?—The general opinion amongst natives themselves

Brigade-Surgeon-Lieutenant-Colonel A. Cameron, M.D.
8 Jan. 1894.

is that in positions where energy, alertness, a clear head or good memory is required, an opium-eater is not to be trusted. The money spent in gratifying the craving for the drug, also, can no doubt often be ill-spaced (that is theoretical), and in this way the habit must often be productive of privation and misery to those dependent on the opium-eater for their support.

12574. You mean poverty comes in there?—Yes.

12575. You have two things,—poverty and the opium habit?—Yes. It is not confined to the man himself if he is a poor man, because those who are dependent upon him suffer.

12576. What is the disposition of the people?—The disposition of the people in regard to the use of opium for non-medical purposes is largely one of indifference: that is to say, on the part of those who do not use it themselves. A few of the better educated strongly condemn its use even in moderation, though even these will make an exception in the case of elderly people who, it seems to be the universal opinion, derive decided benefit from the moderate use of the drug. The aches and pains of old age are relieved by it and life made pleasanter: while on the other hand the drowsiness and mental inactivity produced by it are of less consequence than in the young or middle-aged.

12577. That is a little contradictory to what you said just now, when you stated that it was not to be defended even in moderation. Would you make an exception with regard to old men?—I say that is the native opinion. I have no opinion on the subject myself at all.

12578. What is your opinion with regard to the excessive use of the drug?—The excessive use of the drug is universally condemned, and the habit considered more or less disreputable, but the general opinion seems to be that its moderate use is not so harmful as to call for prohibitive measures. Many also fear that if the use of opium were prohibited, the people might be driven to the use of some more harmful intoxicant, such as alcohol.

12579. Would you regard the opium habit in India as more risky and productive of more evil than the alcohol habit in our own country?—I do not think the two are to be compared. The effects of the use of alcohol are far more pernicious than those produced by opium. The opium-eater only hurts himself: he does not annoy other people.

12580. I think you are connected with several dispensaries?—I have a number of hospitals.

12581. Have you had occasion to observe whether opium is used as a popular domestic remedy amongst the population here?—We very seldom see opium-eaters in hospitals.

12582. Is opium used as a popular domestic remedy?—I believe it is. Mothers give it to their children in small quantities to keep them quiet.

12583. You have not much personal experience?—No. I have no personal experience of that at all.

12584. Do you know any native who would be willing to contribute anything towards the cost of prohibitive measures?—I never heard of any.

12585. Have you any further general remarks to make?—As a medicine opium is one of the most valuable drugs known to the Pharmacopoeia, and there are many complaints from which the native of India suffers that are most readily relieved by the drug; and, though I do not regard it as a safe domestic medicine, I am not in favour of putting difficulties in the way of obtaining it, either by greatly enhancing its price or placing heavy restriction on the sale of it. To treat it as a poison only to be obtained on the certificate of a medical man is impracticable in this country, where an intelligent medical body exists only in the large towns and is not likely to exist for many a day in the rural districts. I know of no other way in which moderation in the use of the drug could be insured. I have no experience of the use of opium as a febrifuge. Its use for this purpose in these parts is, to say the least, not common.

12586. (*Sir James Lyall*.) In talking about the proportion of the rural population who take opium and the proportion of people in the towns, you say that the consumption of opium amongst the rural population is probably not more than 1 or 2 in a hundred and in large towns about 20 per cent. of the people use the drug in some form or other: do you mean that on the adult male population or on the total population?—I mean it on the total population, but, as I said, I am inclined to think, that is a high percentage.

12587. You say,—“The general opinion amongst natives themselves is that in positions where energy, alertness, a clear head, or good memory is required, an

opium-eater is not to be trusted.” Do you think that would be the general opinion in respect of a man, say a Mahomedan, who took nothing but small doses— from 2 to 4 grains a day?—I do not think that would have much effect upon him. I should not say that one grain three times a day would have any perceptible effect upon the mental faculties. It would stimulate them probably slightly. I have one clerk in the jail in my mind who used to make mistakes and forget things. That was how it was explained. It was said,—“He takes opium.” That is the idea in the native mind, that a man who takes opium is apt to forget and not to be accurate. That is what I meant to say.

12588. In these cases when it becomes apparent, the habit is generally excessive, is it not?—Yes.

12589. (*Chairman*.) What quantity do you suppose this clerk was taking?—I could not say but probably he was taking 5 grains three times a day or something like that.

12590. (*Mr. Mowbray*.) Is it your opinion that people deprived of the use of opium might go to alcohol?—I think that if they could not possibly get any relief, if they could not get a dose of opium to relieve their sufferings or the craving for a stimulant,—they might take up alcohol instead.

12591. That is your own opinion?—Yes.

12592. Is it your own opinion that alcohol for that class of persons would be more harmful than opium?—Yes. I think so.

12593. (*Mr. Pease*.) Are you aware of anybody who has suggested that opium should only be supplied under a medical certificate?—I have not gone into that question.

12594. (*Mr. Wilson*.) You have said “a few of the better educated strongly condemn its use even in moderation.” I presume that the better educated natives would have the best knowledge of what was good or bad for their countrymen, would they not?—There are some men who are very religious Mahomedans who would object to any forms of indulgence whatever. It is chiefly men of that sort that I had in my mind. There is certainly a prejudice against the idea of opium-eating in the native mind.

12595. In reference to your statement that you have no experience of the use of opium as a febrifuge, have you any knowledge of medical men who have advised the use of opium as a prophylactic against fever?—No I have heard of it, but I have not seen it given. I have never given it myself.

12596. Have you heard it before the sittings of this Commission begun?—I have heard of one constituent of opium being given against fever—narcotine, but not opium itself.

12597. (*Chairman*.) The impression left upon my mind by your evidence is, that in your view the use of opium, except in the case of decidedly elderly people, is very rarely beneficial and is for the most part an evil?—Surely that is what I think. A man is better without it, even in moderate doses, and it is bad for him if he takes it in large doses.

12598. In large doses it is productive of evil results of a serious nature?—Yes. The man renders himself a slave to the habit, and if he stops it he suffers frightfully. He cannot do without it. Probably if he keeps on taking opium, he is little the worse. It is in consequence of discontinuing the dose that the evil occurs. As long as a man gets his opium, he is probably not much the worse, though his health suffers, no doubt.

12599. Your life here, I presume, has brought you a great deal in contact with the people?—Yes. With all classes of the people.

12600. Supposing the use of opium were prohibited excepting for medical purposes, how do you think that such a restriction would be regarded by the mass of the people?—I think the people generally are indifferent upon the question altogether. Only those who take the drug itself would object to its being stopped: the rest of the people would not care at all.

12601. You think that a few educated people would approve of it?—A few educated people would like it stopped. What they fear is that even if a man takes it moderately, he will by and by go on to take it excessively.

12602. There would be a more active sentiment if the cessation of the opium revenue involved additional taxation?—There is no doubt about it.

12603. That would create an active feeling?—Undoubtedly that would create an active feeling.

The witness withdrew.

SURGEON-LIEUTENANT-COLONEL J. McCONAGHEY, M.D., called in and examined.

12604. (*Sir William Roberts.*) I believe you are Civil Surgeon in Allahabad?—Yes.

12605. And Superintendent of the District Jail?—Yes.

12606. What opportunities have you had of studying the opium question?—During a residence of 21 years in India I have had many opportunities, in my various capacities of Regimental Surgeon, Superintendent of civil hospitals, jails and lunatic asylums, of observing the effects of the consumption of opium both in moderation and in excess.

12607. What conclusions have you formed with regard to the opium habit?—In moderation I do not consider it is harmful.

12608. What is your opinion if it is taken in excess?—It would depend a great deal upon the quantity taken. Taken in excess it might cause diarrhoea, dysentery and emaciation, perhaps, when taken for a long time.

12609. Would you recognise excessive consumption of opium as one of the causes of dysentery?—Yes, I have seen dysentery produced by it.

12610. Among what classes of people is the habit most common?—It is most common among criminal classes, chiefly prisoners in jails. The habitual use of opium in moderation does not, in my opinion, cause any physical or mental degeneration, or tend to lower the moral condition of the people. If taken in excess for a prolonged period, more especially by those who are underfed, it may produce diarrhoea and emaciation.

12611. What is your impression generally as to the effects of the opium habit, does it do more harm than good?—I think it is almost passive—the moderate use.

12612. Would you compare it with the tobacco habit?—I think so. It has about the same influence and effect as the tobacco habit.

12613. Is there a tendency to go to excess in the opium habit?—A very small proportion of people take it to excess.

12614. Have you had any experience of its use as a febrifuge?—No. In this province I do not think it is much used as a febrifuge. I have heard of its being used, but I have had no experience of it.

12615. This is not a very malarious province, is it?—No, except in the Tarai districts.

12616. Have you recognised that opium has special relations to different constitutions?—Yes. Of course it has a greater influence upon some constitutions than upon others. Some are more tolerant of it than others.

12617. Of course you know that opium is taken largely not for any complaint, but as a solace, or comfortor or restorative?—Yes. It is taken by a number of people.

12618. Do you think that that is a justifiable use of opium?—I do.

12619. In the same way as you would justify tobacco?—Yes; or very moderate consumption of alcohol.

12620. In the case of perfectly healthy persons?—Yes. In the cases of perfectly healthy persons.

12621. Then the prohibition of the growth of the poppy in India would not meet your approval?—No.

12622. Speaking as a medical man you think it would be harmful?—I think it would be very hard upon the general population if it was stopped.

12623. Have you had any experience of opium as a popular domestic remedy—is it much used?—It is used a great deal by Mahomedan races as a popular remedy.

12624. For what purpose?—For minor ailments, such as chest affections, bronchitis, and other ailments of that kind. It is also given to children in small quantities.

12625. Have you observed whether any evil results have followed from its use in the case of children?—No. I have never seen any evil results from it.

12626. Have you been able to notice or been led to the opinion that there is a difference between the European constitutions and the constitutions of the natives of India in their relation to opium?—I do not know that there is much difference.

12627. But I presume you distinguish the two parts played by opium. I mean as a medicinal agent or drug,

The witness withdrew.

Pandit SHRO RAM PANDE called in and examined.

12648. (*Chairman.*) Are you a medical practitioner on the Ayurvedic system?—Yes.

and as a comfortor or restorative like tobacco: you recognise those two distinct things?—Yes; I recognise them.

12628. With regard to its medicinal effect as an anodyne and hypnotic, I presume Indians and Europeans are on the same level?—If they are not addicted to opium, a smaller dose would be necessary—as in the case of other medicines.

12629. With regard to the other part played by opium, namely, its use as a comfortor or restorative like tobacco, would you in that matter draw a distinction between the relation of opium to the constitution of the natives of India and that of the Europeans?—Yes. I should.

12630. Distinctly?—Yes. I think they would be less able to take other kinds of stimulants such as alcohol. It would have a worse effect upon them than upon Europeans.

12631. Would you go so far as to say that comparatively few Europeans could get the full comforting and restorative effects of opium?—I have had Europeans under my treatment who were quite as much addicted to the use of the drug as natives.

12632. But not in nearly the same proportion?—Taking the population of Europeans I meet with,—it would be very nearly the same proportion.

12633. (*Mr. Wilson.*) You have not used opium yourself as a febrifuge?—No.

12634. Have you used it as a prophylactic against fever?—No. I have not. I have heard of its being used.

12635. Have you heard of its being used until the last two or three years?—Yes. One of its ingredients, narcotine, was used over 50 years ago.

12636. I am speaking of opium?—It was used probably for the action of the narcotine in it.

12637. I believe when there are considerable outbreaks of fever, and so on that physicians, or at all events apothecaries are sent down into those districts with medicines?—Yes.

12638. Are they sent with supplies of opium?—In outbreaks of cholera they are.

12639. But I am speaking of outbreaks of fever?—No. It is not sent down in cases of fever, because quinine is so easily procurable now.

12640. You have spoken of it as a solace. If you had a son 20 or 25 years of age, would you like him to begin to take opium as a solace?—No.

12641. Have you seen the evidence given before the Commission in Calcutta by Dr. Crombie and others?—I have seen an account of it in the papers,—so much of it as was published.

12642. Do you agree with what has been reported in the newspapers of the evidence of what I may call the official doctors in Calcutta,—Dr. Crombie, Dr. Harvey and others?—In the main I agree with what they said.

12643. In what respects do you not agree with them?—Unless I had the evidence before me I could not very well say. There might be some minor points, but with the general views I think I agree.

12644. They gave very strong opinions as to its advantages as a febrifuge?—As far as that is concerned, I have no experience.

12645. (*Mr. Pease.*) You have said that medicines are sent down in cases of outbreaks of cholera, are the medicines sent down for persons to take who are suffering from cholera, or are they given to those who have not been attacked?—They are given in both cases. Opium is considered a good medicine for cholera itself; and even as a prophylactic it is given.

12646. (*Sir James Lyall.*) I understand that the common country people in the North-Western Provinces are very little addicted to the opium habit?—Very little—a very small proportion.

12647. Much less probably than the people in the Punjab or Rajputana, or the Central Provinces?—Yes; I should think so.

12647A. On the other hand, they are a good deal given to alcohol, liquors, are they not,—the common country people?—Yes. They do take a certain amount of alcohol liquors. I should say it is more general than the opium habit.

12649. Have you had experience with all castes of Hindus and Mussalmans?—Yes.

Surgeon-
Lieutenant-
Colonel J.
McConaghey,
M.D.

8 Jan. 1894.

Pandit Shro
Ram Pande.

Pandit Sheo Ram Pande. 12650. How long have you had a knowledge of them?—15 years.

8 Jan. 1894. 12651. What special opportunities for observation have you had?—The inhabitants of my locality are accustomed to the use of opium. Many of my acquaintances are addicted to it. In the course of my professional practice I have had considerable opportunities of making such observations, and have made a special study of the effects of the intoxicants and narcotic drugs.

12652. Have you any idea how far opium-eating or drinking is prevalent amongst them?—75 per cent. of Mussalmans, 30 per cent. of prostitutes, 80 per cent. of fakirs and bad characters, 20 per cent. of Hindus, 15 per cent. of Christians, 1 per cent. of Europeans (in the shape of chlorodyne, and morphia).

12653. Are you speaking of adults?—Mainly young people, rarely the old people.

12654. What motives induce people to take opium?—Young people generally take opium to stimulate sexual passion or merely for the sake of intoxication. The idlers or bad characters generally take to it without any special object in view.

12655. Is it easily given up either at once or gradually?—The habit cannot easily be relinquished, and in no case at once. Habitual consumers literally writhe in agony, as if stung by a scorpion, when they cannot obtain their dose at their usual time.

12656. Is there a marked difference between the moderate and the excessive consumers?—Yes.

12657. What proportion of their income do habitual consumers spend on opium?—Well-to-do men, who take to opium, do not suffer any appreciable drain on their incomes. Men of very moderate means, specially the labourers, artisans, and other low class people, spend about half of their income on it.

12658. Is there a general tendency to increase the dose?—Yes.

12659. What are the results of the habit, physically, mentally and morally?—It is used for sexual purposes; but afterwards causes impotence. An opium-eater requires sweets to eat with relish. He has a greater craving for water to satisfy his thirst. Diminution in dose of opium considerably lessens his appetite. This also happens when he does not get his usual dose. The secretion of his intestines gets dry. His mouth becomes dry. Finally, the man succumbs to dysentery and diarrhoea. When an opium consumer suffers from these diseases, it is difficult to cure him. In fact opium consumers generally die from these diseases. They are generally constipated, consequently they suffer frequently from piles. They long eagerly for smoking tobacco continually, so much so that in some cases they have to take their smoking pipe (hooka) to the privy for smoking. The opium consumers sleep in the latter part of the night, because opium produces wakefulness at night. Their blood gets deteriorated and has a leaden hue, as appears from the blueness of their complexion. Opium induces perspiration and consequently diminishes the normal quantity of urine. In the case of females, sexual appetite is stimulated by opium but not diminished afterwards, as in the case of males. In small doses opium increases the menstrual flow, but in large doses it checks it. A habitual use of opium renders females barren. When opium is administered to pregnant women, it kills the child in the womb, or at least does harm to it. Opium exercises a greater intoxicating effect on children and young persons than on old persons. It is very harmful to infants and often proves destructive to their lives. It weakens their mental power and sometimes leads to imbecility. Opium-consumers are generally pale and emaciated. Their eye-lids are always drooping and they seem to be dozing at all times. Their intellectual power falls considerably below the average. Morally it exercises a most debasing effect on the character of those who consume it. They become very timid. Their

power of discriminating between right and wrong is lost for ever. They are unable to exercise any control on themselves. In order to get their dose of opium they will do anything.

12660. In what proportion of cases do injurious result become apparent?—In 80 per cent. of cases.

12661. Is opium generally believed to be a protective against fever?—People do not believe opium to be a protective against fever, but the consumers of opium do.

12662. Is it in fact a protective?—No, on the contrary when the opium consumers happen to suffer from fever, it is comparatively difficult to cure them.

12663. Is it specially useful in malarious districts, or believed to be so?—It is not useful in malarious districts, although the opium consumers consider it to be a protective against all diseases.

12664. Is it necessary, or believed to be necessary, to enable people to get through their daily toil?—It is believed only by the opium consumers that opium enables working men to get through their daily toil quickly, but it tells on their system in the long run and brings them prematurely to the grave.

12665. Is the habit of taking opium looked upon as disgraceful?—Yes; no man, even if he be an opium consumer, would like to be called an *aimchi* (opium-eater) or *chanduddy* (opium-smoker), these terms being universally regarded in India as implying contempt and disgrace.

12666. If a measure of prohibition were adopted, would it be desirable to make special provision by establishing a register of opium consumers for the want of those who are already habituated to the use of the drug?—Yes, as has been done in Burma.

12667. What would be the best mode of providing for the sale of opium for medicinal use?—All the medical practitioners, whether following the European, the Greek or Ayurvedic system, should be registered, and their names with addresses furnished to all opium-sellers, who might be directed to sell opium on the certificates of the former.

12668. What class or classes of persons should be entrusted with the sale for medical use, and under what conditions as to supervision, or otherwise?—The same regulations should be observed as obtain with reference to the sale of arsenic and other poisons in this country.

12669. Are you of opinion that the use of opium has any effect on succeeding generations?—The evil effects of opium are transmitted to the succeeding generations.

12670. (*Sir William Roberts.*) What is your position in regard to the use of alcohol—do you regard alcoholic beverages as injurious in all proportions?—I consider alcohol very injurious.

12671. Which do you consider is the most injurious—alcohol or opium?—The evil effects of the two are quite distinct.

12672. Do you object to the use of opium and alcohol on moral and religious grounds?—Whatever I have said has been from a physiological point of view, and not from a religious point of view.

12673. Do the statements which you have made with regard to the proportion of men who take opium to excess and the results therefrom apply simply to the people of Allahabad, or are you speaking generally?—They apply to many other districts.

12674. Do you think that opium stimulates the sexual passion more than alcohol or any other stimulant?—I think that opium not only has a greater exciting power, but it has also the power of retarding the seminal discharge.

12675. Are there not many other drugs used in India for the same purpose?—Opium is mostly used. The property of retarding the seminal discharge is possessed almost solely by opium.

The witness withdrew.

Dr. E. J. Lazarus, J.P.

Dr. E. J. LAZARUS, J.P.,

12676. (*Sir William Roberts.*) How long have you practised in Benares?—Over 40 years.

12677. What medical qualifications do you possess?—Doctor of Medicine and M. R. C. S. of England.

12678. Are you connected with the Indian service in any way?—Not at all.

12679. Are you an independent practitioner?—Yes.

called in and examined.

12680. Has your practice been mainly amongst the natives of India?—Chiefly amongst the natives of India, because they are in excess.

12681. What observations do you wish to make with regard to the use of opium?—From my observation in this district I would say that the use of opium as a medicine, preventative and sustainer of the system, is very common among the people, the well-to-do classes using it largely.

The Muhammadans, especially the higher classes, are more habituated to it than the Hindus. With few exceptions I have not observed its habitual use to have ill-effects on the mental, moral, or physical being of the people; the exceptions being chiefly where spirituous liquors or gauja are taken along with opium.

12682. What is the sentiment of the people in this neighbourhood with regard to the popular use of opium for non-medical purposes?—The people of this part of the country, as far as my observation extends, are not adverse to the use of opium for non-medical purposes, and certainly do not desire that the present culture, preparation, and sale of opium should be interfered with, as it ensures them an opium of known strength, unadulterated and procurable every where under certain restrictions.

12683. What has been your experience of the opium habit?—I have had no experience of the effects of opium-smoking. As regards opium-eating, I am of opinion that, on the whole, its use is more beneficial than harmful. Where hurtful, it is when used along with alcoholic drinks and *ganja*, etc. Possibly in these cases it is the liquor that is injurious. I have never known of a case of murder, robbery, riot or family dissension the result of taking opium. Opium-eaters are to be found on all sides, carrying on their usual avocations with zeal and exactitude, and are not distinguishable in any way from non-opium-takers. They are met with in our courts of justice, public and private offices, in their shops, in the bazars, and even waiting on us at our tables. There is nothing in their manner and conduct to mark them as opium-eaters.

12684. Your remarks of course apply to what we may call moderate opium-eaters?—Yes.

12685. You would not make that statement with regard to excessive consumers of opium?—No, I would not.

12686. I think you were not born in this country?—I was born in Wales.

12687. Have you known a great many opium-eaters personally?—A great many. For many years I have been in the habit of asking patients when they come to me how much opium they take.

12688. What is the usual dose an opium-eater takes in this neighbourhood?—From 3 to 10 grains. Some take even more than that.

12689. I think you implied, when answering a question of mine, that excessive opium-eating is injurious?—If carried to very great excess it is injurious.

12690. What are the symptoms that you have observed in excessive opium-eating?—A state of drowsiness and inability to work. I have seen very few cases like that.

12691. You have not seen any specific disease developed from it?—No, simply drowsiness and indifference to everything around them; but the cases I have seen like that are very few.

12692. You have had a long experience of the people in this neighbourhood?—Yes.

12693. What has been your experience with regard to the domestic use of opium, that is, opium as a domestic remedy—is it a common remedy?—Yes, it is.

12694. For what ailments?—Rheumatism, dysentery, general pains in the body, and a number of ailments. Usually it is commended by the people to one another.

12695. Have you any opinion as to its effect in malarious fevers?—I have had no experience of it.

12696. There is a belief existing among the people here that it does act as a protective in some degree?—I cannot say anything about it in the Benares district, because there is very little malarial fever here.

12697. You have also had experience of the opium habit here apart from medical purposes?—Yes.

12698. What does it compare with in your mind? Does it compare with tobacco, alcohol or what?—I mean when used non-medically?—I cannot compare it with alcohol, because I think that is most deadly in its effects; I do not consider opium so.

12699. How does it compare with the use of tobacco?—I think that it would compare with tobacco and with betel chewing.

12700. Is it taken sometimes as an aphrodisiac by young people?—Not to my knowledge.

12701. Perhaps you would be scarcely confided in in a matter of that sort?—They would confide, but they usually use other remedies for that purpose.

12702. What are they?—Of late years they have gone *Dr. E. J. Lazarus, J.P.* strongly in for phosphorus in its preparations. The native doctors use strychnine very largely for that purpose. Opium may be given by the native practitioners, but I am not aware that it is given by the regular practitioners.

8 Jan. 1894.

12703. I presume that you yourself have no belief in aphrodisiacs?—I do not believe it is an aphrodisiac in any particular sense as an aphrodisiac, but it acts as a stimulant in many cases, the same as spirits would.

12704. Have you observed a distinction in regard to the non-medical use of opium between the constitution of the natives of India and the European constitution?—I have not observed any.

12705. After your long experience do you think on the whole that opium does harm or good to the natives of India?—I think much more good than harm. The harm that it does in a few cases is quite overbalanced by the good that it does to the multitude.

12706. (*Mr. Pease.*) You are Agent to the Maharaja of Vizianagram—in what capacity are you his Agent?—I am Superintendent of all his estates here, and have the general management of all his affairs in Benares.

12707. Is there any considerable growth of poppy upon his estate?—Poppy is grown on some of his estates, but not very largely.

12708. Do you know how many tenants you have under your supervision who are poppy-growers?—In the Ballia and Ghazipur District there are a few, but not many: it is not grown very much.

12709. Are these districts under your charge?—They are under my charge.

12710. Can you give us any information as to the readiness or otherwise of the people to grow poppy?—I do not from my observations see that they have any objections whatever to grow poppy.

12711. Do you observe that they are anxious to take out licenses to grow poppy?—I cannot say that they are anxious, but it pays them to do so.

12712. Has there been an increase or a decrease in the growth of poppy upon the Maharaja's estate?—There has not been an increase or a decrease—it is about stationary—there is not very much grown there.

12713. (*Mr. Wilson.*) What did you say was the average dose per day for an opium-eater?—Three or four grains a day ordinarily without having any effects of intoxication at all.

12714. What would you consider an excessive dose?—When it comes to about 60 grains.

12715. I suppose there is no doubt that opium may be classed as an intoxicant?—It is an intoxicant when taken in large doses; but those who are habituated to its use are not intoxicated by it. It acts then simply as a stimulant and as a sustainer of the system.

12716. I have before me a report of the Benares Total Abstinence Society—Are you a Vice-President of that Society?—Yes.

12717. Is this the pledge that the members take: "I hereby solemnly promise, God helping me, to abstain from the use of all intoxicating liquors as beverages and from the use of all intoxicating drugs except medicinally, and to employ all proper means to discourage the use of and traffic in the same"?—Yes.

12718. How do you reconcile your views with regard to opium, and with regard to the Society of which you are Vice-President with reference to intoxicating drugs?—Opium is not employed generally as an intoxicant in the same way as one takes liquor. It is used as a sustainer of the system.

12719. I suppose you are aware that a large number of persons take brandy without ever getting into a state of intoxication—you would not deny therefore that brandy is an intoxicant?—I would not.

12720. Do not you think that what you have been telling us is a little inconsistent with this pledge against all intoxicating drugs?—I have been stating my opinion, I cannot do more than that.

12721. You would rather not answer my question?—I have been stating what is my candid opinion on the opium question.

12722. And you do not think that it is in any way inconsistent with this pledge?—I think not.

Dr. E. J. Lazarus, J.P. 12723. (*Mr. Mowbray.*) Would it in your opinion be better to abstain both from opium and alcohol?—Yes, it would be better I think.

8 Jan. 1894.

12724. (*Mr. Haridas Veharidas.*) Do you take opium?—No.

12725. Do you express this opinion on behalf of the people?—Yes, on behalf of the people.

12726. (*Sir James Lyall.*) You are a gentleman who has lived a long time in this country, and mixed very much with the natives. I should like to ask you what you think would be the political effect of an order coming out here issued by the Government of England prohibiting the growth of poppy and the consumption of opium?—My idea of the people is that they are very inflammatory, easily led, and very suspicious, and if opium were to be prohibited, being led by a number of persons that are ready to grasp

The witness withdrew.

Mr. JOHN STALKARTT called in and examined.

12728. (*Chairman.*) Are you an Indigo-planter in the Mirzapur District of the North-Western Provinces?—Yes.

12729. You have been over 20 years in India?—Yes.

12730. And the whole of that time has been passed in indigo districts, such as the Behar, Allahabad and Benares divisions, and being resident in these districts you have seen a great deal of the cultivation of poppy?—Yes.

12731. Is the cultivation of the poppy under the system which obtains the Government monopoly a popular crop?—Yes, as far as I have seen.

12732. Will you give us your reasons?—It is a crop which pays well, and is much liked, because—amongst other reasons—the cultivator is quite sure of getting payment without unnecessary delay, and because the landlord and his servants cannot hurry them in their cultivation of it as is often done with other crops; nor can he get hold of the money except from the cultivators themselves. I know in this district some four or five years ago, when orders were issued to decrease the area under poppy, and the two Parganas in which my factories are were closed, the cultivators subscribed several hundred rupees amongst themselves and sent a deputation to Ghazipur, and appeal the matter wherever it was possible; and there was much rejoicing and triumph when they were at last allowed to grow poppy again.

12733. The cultivation of the poppy being in your opinion a profitable crop to the cultivators, I presume it follows that in your opinion if the cultivation were to cease under prohibition from the Government, it would be a cause of discontent?—Exactly so. If the loss of the opium revenue involved further taxation, it would be very unpopular indeed. To stop a man growing a crop, of which he not only likes the cultivation but which also yields him a handsome profit, and to put another tax on would make it much more unpopular of course.

12734. As an indigo planter, speaking of the question merely from the standpoint of your own private interests, is it of any advantage to you to come here and speak in favor of the poppy cultivation?—No, in fact during the two years when the cultivation of poppy was closed, my cultivation of irrigated indigo increased, simply because I could get them to grow for me when they could not get advances for poppy. When the men were able to grow poppy, I could not get them to cultivate indigo; and when they started to grow poppy again, my supply of indigo decreased. I am speaking of irrigated indigo because poppy is a irrigated crop. Round about my district there are very few wells, and a man cannot do much. There is no crop, taking all the circumstances into consideration, which pays them so well as poppy.

12735. (*Mr. Pease.*) Are any advances made by the indigo planters to the ryots?—Yes.

12736. Are they as favorable as the terms on which the Government make advances?—I think we give about the same advance at first; but Government give advances later on for weeding and cultivation, which we give, but we do not give so much as Government. Of course the poppy crop pays much better than the indigo.

12737. (*Mr. Wilson.*) Can you get as much indigo cultivation as you wish?—No. I should be glad to get five times as much as I have. I do not get nearly as much as I would like.

at anything against the Government, they would at once suppose that this was a laid plan by the people in England just as the small end of the wedge coming in. They would think there was something behind it, and they would say "They have stopped our opium now, presently they will stop something else, and by degrees they will stop our religion." The great Mutiny of 1857 arose from a quarrel between two men in the Arsenal. One of the men said "There is fat put on the cartridges, and you will have to bite them, and fire them off." That quarrel spread right through the country, and it is possible that if total prohibition is allowed to take place with regard to the cultivation of opium similar reports will be spread over the country, and cause great dissatisfaction.

12727. (*Chairman.*) You wish us to understand that the light in which you regard opium, whether on the one hand as an intoxicant or on the other as a sustainer, depends essentially on the quantity taken—is that so?—Yes.

12738. Poppy pays so much better that people prefer to cultivate it?—I do not think the poppy hurts my indigo in that way, because poppy is grown on a comparatively small portion of land, but if the poppy were stopped I should get more indigo, although even then I should not get as much as I should like.

12739. If poppy pays so much better than indigo, do the people cultivate as much as they are allowed?—Yes, as much as they can. Of course they are only allowed to grow practically as much as they can with reference to the amount of cattle, labor and land suitable for it. A man might like to grow more than he is able. In the same way with indigo, when a man wants to cultivate, I have to look at his wells, and see what cattle he has, what lands he cultivates, and so on, and frequently I would not give him as large an advance as he would like.

12740. Does poppy pay as well now, in comparison with other crops, as it did four or five years ago?—It pays as well as indigo, and I should think as well as sugarcane, but wheat and barley certainly pay better now than they did, whereas poppy does not pay better than it used to.

12741. Are you aware that some years ago the Opium Department was greatly concerned, because some of the cultivators were unwilling to grow poppy?—No.

12742. You never heard of that?—No.

12743. Are you aware that Mr. Rivett-Carnac wrote a letter on the subject?—I am not aware of it.

12744. (*Mr. Mowbray.*) When you make your advances for indigo, do you fix the price at which you buy the indigo?—Yes.

12745. In the same way as the Government?—Yes, ours is a fixed price.

12746. There is a distinct analogy between your cultivation of indigo and the Government cultivation of opium?—Yes, distinctly so.

12747. (*Sir James Lyall.*) Some native gentleman appeared before us at Bankipur, and he stated that the ryots were intimidated by the officials of the Opium Department into cultivating poppy, do you think the ryots, as far as you know them in this part of India, are people who could be intimidated into cultivating this or that crop?—I do not think so. I think that living out in the country as I do I should have heard a good deal of it if there were any intimidation.

12748. Do you think if an official of the Opium Department or a Sub-Deputy Agent tried to intimidate the ryots by telling them it was an order of the Government, they would obey him?—No, I think it would be so much the worse for him, the Sub-Deputy Agent, because the matter would be handed up without delay to his superiors, and I do not think the cultivators would stand intimidation of that sort at all.

12749. (*Mr. Wilson.*) Is any of the land on which you grow indigo suitable for poppy?—Yes.

12750. May I ask then why you do not grow poppy instead if it is much more profitable?—I really can hardly explain. I have been an indigo planter all my life. I understand the cultivation of it, and how to work it, whereas I do not know how to work poppy, which requires a totally different system of working; for instance, a man with his whole family, his wife, children and ploughmen and their children can all work at it—it is a crop that helps them at the time

Mr. John Stalkartt.

because they have little coming in. I do not suppose a man could grow 4 or 5 bighas of poppy because of the looking after of it, and the great care which it requires. We could not possibly do that with indigo; we simply pay for the plant and manufacture the indigo—that is where our profit comes in. It is almost an axiom that indigo pays better to a European than to a native, because he takes the time and trouble over the work that a wealthy native will not do. If a native is wealthy enough to start an indigo factory, he would prefer others working it for him. We

The witness withdrew.

Mr. G. R. Fox called in and examined.

12751. (*Chairman.*) You are a landholder and planter of Gahmar in the Ghazipur District, North-West Provinces?—I am.

12752. You have been in this part of the country for the last 24 years?—In Shahabad.

12753. (*Sir James Lyall.*) What class of people mostly cultivate opium?—The Koeri caste. They cultivate all the homestead lands. These lands being immediately adjoining the villages are well manured and have wells for irrigation. For the Koeris the opium crop is invaluable beyond all other crops, and to these men the suppression of this cultivation would bring serious consequences.

12754. What particular advantages has this crop over other crops for the people?—It is unlike sugarcane, tobacco, potatoes and grain crops of various kinds, because it cannot be in any way consumed during the period of its growth. It is like a savings bank to the small cultivator. As a crop it is beyond the reach of thieves; practically it cannot be attached for the rent. It affords at the healthiest season most healthy occupation for women and children. It is a crop benefiting the actual cultivator most, middlemen in opium cultivation being, I believe, unknown; and even hired labor to any extent works at a distinct disadvantage. It is essentially a small or poor man's crop. It excludes the money lender, as cash advances are given by Government without interest. The cost of the seed is practically nothing; landlords will almost invariably let the rent for opium land stand over until the produce is sold; the returns are quick; the operation of gathering the crop is entirely to the advantage of the small man and to the disadvantage of middlemen or even hired labor. As regards its bulk the opium crop has the advantage over all other crops, a very important matter this in carriage and for the poor man—I mean a few seers carry a large value. It is a fact to note that in many Koeri villages sugarcane is not to be found; in others no tobacco or no potatoes are grown; but I do not know a single Koeri village in which opium is not sown to some extent. On my property in Ghazipur the former lessees gave up the cultivation of tobacco.

12755. Will you give us the result broadly when your lessees gave up the cultivation of tobacco?—There were about 150 bighas that the lessees were bound to put under cultivation and when that lease was withdrawn the tobacco dropped down to one bigha—in fact it was dropped all together—leaving 150 bighas which has been taken up by opium for nearly one-half and by sugarcane and small crops for the rest.

12756. At first you leased this land to these people for the cultivation of tobacco for a certain amount?—The ryots held their lands on condition of putting a certain amount under tobacco; and, when that tobacco clause was struck out, they substituted half of the land for opium and nearly one-half for sugarcane, of their own free choice.

12757. You are speaking of the tobacco land?—Yes.

12758. You have made some calculation as to the comparative cost of the cultivation of opium and other crops—can you give us the net profit per bigha only according to that calculation for opium, sugarcane, potatoe and tobacco?—According to the calculation I put forward opium gives exclusive of rent Rs. 40 a bigha, net profit for its crop, sugarcane gives Rs. 38, potatoes give Rs. 39 and tobacco gives Rs. 46. Of course, looking at that calculation, you have got to see the period over which the crops take up the land.

12759. What period does opium take up the land?—About six months, and it enables other crops to be put in immediately afterwards. Sugarcane takes up the land, roughly speaking, about 18 months; potatoes take from October to March—the same as opium, and they allow other crops to come in. Tobacco takes up roughly about a year.

12760. Does opium land require a rotation of crops?—The same land can be constantly resown. Sugarcane and tobacco require a complete rotation.

could not work the poppy cultivation as far as I understand it. May I state that, as far as I know, poppy cultivation is not considered in my district as a degrading occupation. I mean the man who would grow poppy would not be looked down upon. If I was giving advances to a native and I did not know him, the fact of my finding out that he was a man who grew poppy regularly would be a considerable bias in my mind in favor of his having an advance for growing indigo—I should know he was a responsible man and had good lands.

Mr. John
Stalkartt.
8 Jan. 1894.

12761. I suppose there is less uncertainty about the price of opium than other crops?—It is the steadiest market in my opinion of any of the crops that can in any way compete with opium.

12762. Is it a popular or unpopular crop?—Essentially a popular crop in my experience. In talking with the people and discussing improvements of the land with them they have said to me that if I would put down a well they would grow poppy as an acknowledged thing, in the same way as a man talking of his strain of horses would say that such a horse had racing blood in him to show his superiority. In the same way they say about land—"If you put down a well we can sow poppy." That is, the highest thing they can say—they talk of it as the best improvement.

12763. Have you heard of any cases of any licenses being withdrawn from these cultivators?—It has not come before me, but I have heard of them. When opium cultivators have their license withdrawn it is not unusual for them to enter into arrangements with an accepted cultivator to get him to increase his crop a little, which they share. They dodge it in that way.

12764. You have no special knowledge I suppose of the effects of opium?—No.

12765. Do you think the cultivators are much addicted to it?—Not out in the district. I do not think so myself.

12766. What do you think would be the effect in this country if it was announced that an order had come out from the Government of England prohibiting on moral or temperance grounds the cultivation of the poppy and its use except for medicinal purposes?—As far as I know the people themselves as a population, wherever their interests are affected, they will resent it; where their interests are untouched they will remain indifferent.

12767. You do not think it would be thought an arbitrary thing by the people of this country?—Those whose interests are affected would certainly think it very arbitrary.

12768. (*Mr. Fanshawe.*) I would like to ask you a direct question as to cultivators cultivating poppy under compulsion. Has that come before you in any way?—It has not come before me at all. I should not think that it could be done to any extent from my knowledge of this part of the country.

12769. Will you tell me what your experience has been in the Shahabad District—how long were you there?—I was there for seven years, and I now have a few factories in the western portion of Shahabad.

12770. Is it your experience that there has been any pressure exercised by the Opium Department in order to make cultivators grow poppy in that district?—I have heard that there has been a falling off. There has been an effort made to bring it up to its old mark again, but people will not do that.

12771. You say an "effort." I was asking whether there had been deliberate compulsion?—Not to my knowledge.

12772. You have not heard of that in the Shahabad District?—I have heard that the zemindars have been requested or asked to take an account of the falling off of opium, and to try and get the people to bring it up to its old area.

12773. The zemindars have been addressed by officers of the Opium Department and asked to give their assistance, if possible?—I have heard that, but it is not within my knowledge.

12774. Direct compulsion you have not heard of?—No.

12775. (*Mr. Moubray.*) You have told us that those whose interests were affected would probably regard the interference in the matter of the prohibition by Government as an arbitrary act. Can you with your experience of the district tell us whether, among those whose interest is not affected, there is any desire to see opium prohibited?—I do

Mr. G. R.
Fox.

Mr. G. E. Fox. not think there is any desire to see opium prohibited at all among any of the people.

8 Jan. 1894. 12776. (*Mr. Pease.*) Do you think it legitimate for the officers of the Opium Department to use the influence of the zemindars to induce unwilling ryots to grow poppy?—I do not think ryots who do not want to grow poppy could be in any way compelled to grow it.

12777. You said it practically cannot be attached for rent. If a ryot did not pay his rent or his debts when he received his money for his poppy, could not all his property be attached?—It depends on what the man who has the claim chooses to attach. I understand he cannot touch an opium crop, but a man doing it would do it at his own risk.

12778. I said when a man who had sold his opium crop owed money for debt or rent, would he not be liable to have his house and other goods attached?—I believe he would.

12779. Is there any advantage therefore in not being allowed to have his opium crop attached?—I think if I was sowing a crop I should value that it could not be attached, it would be so much cash value in my pocket.

12780. (*Mr. Wilson.*) Are you aware of the complaint that was raised by the Opium Department some time ago, and of the correspondence that took place with the Secretary of State in reference to the increasing difficulty with regard to poppy growing?—Nothing to my knowledge.

12781. You never heard that?—Never.

12782. You have said that for the Kories poppy is valuable beyond all other crops?—Yes.

12783. If the profits on poppy are so great, is there not a margin left to make it profitable to employ hired labour?—The crop, at the time of gathering, is so subject to thieving, that it practically debars any one going in for it on a large scale. At the time of gathering, excepting some of the household, if you put hired labour into the field, the crop is very easily secreted and carried away. The owner would find he did not get anything like the produce from the land. An explanation is necessary from me as to the point of thieving of the opium crop, as I have in the early part of my evidence said it was not subject to thieving. During growth the crop is valueless to a thief. Only during gathering in of the produce could one of the gatherers secrete some of the juice. Most other crops are of a value to a thief at very early stages of their growth and until removed from the threshing floors.

12784. Does poppy suffer especially from hail more than other crops?—It is liable like other crops. In February and March just at the gathering time hail coming down then is injurious, and ruinous if it comes severely.

12785. Is it not the case as well with other crops?—If it is severely damaged by hail, poppy is practically destroyed, so is wheat under a heavy hailstorm. It gets beaten down and you hardly know what the crop was.

12786. (*Chairman.*) You mention the risk of hailstorms as a special one attaching to poppy in your evidence?—I mentioned the risks of the different competing crops, I did not mention wheat.

The witness withdrew.

The Reverend H. LORREER called in and examined.

12799. (*Mr. Mowbray.*) I believe you are a Missionary of the German Lutheran Church in Ghazipur, North-West Provinces?—I am.

12800. Will you tell me what is the position of the German Lutheran Church in India?—We have a station at Ghazipur, another at Buxar, another at Arrah, one at Muzaffarpur, and one at Darbhanga. These are stations here, in these parts of the country, and besides these we have about twelve stations in Chota Nagpore.

12801. So that you have several stations in the opium-growing districts?—Yes.

12802. How long have you been in India?—Twenty-eight years.

12803. Where have you been during that time?—Five years in Chota Nagpore and two years in Tirhoot. During the remainder of the time, with the exception of absences on leave, I have been at Ghazipur.

12804. That is to say you have been at Ghazipur for more than 20 years?—The first time I came to India I was sent to Ghazipur. After six years I was sent to Chota Nagpore, then I went back again, so that I have been there about 18 years.

12787. You specially mention hailstorms as one of the sources of injury to poppy?—According to the extent of the storm it might ruin the whole crop or a portion of it.

12788. (*Mr. Wilson.*) With reference to the crops on the ground at the time of preparation and the tables of profit and so forth that you have given us, is it not the case that where poppy is not grown it is possible to grow several other crops at the same time coming to their harvest at different times during the year?—Yes, it is possible, but these crops are grown on the outstead land, not on the homestead lands.

12789. They could not be grown on the homestead lands?—Yes, they could.

12790. And they would be the best because they are the homestead lands?—Yes, they could get the manure and irrigation better.

12791. You say it is commonly the case where licenses are withdrawn for the ryot to share the crop with his neighbours, how does he manage that without a license?—Supposing a man is cut off for his half a bigha, he will go to another man and say "I have been struck off, you increase your area of cultivation, and I will work the increased area."

12792. In reference to this matter of compulsion—"compulsion" is a strong word, supposing I called it persuasion—is there not a great deal of persuasion on the part of the zilladars and zemindars?—Certainly not in my own experience. If I was told such a thing, however, knowing what the zemindars and zilladars are, knowing what they are about the country, it would be no surprise, but I am not speaking myself of what you would call strong persuasion. A zilladar is naturally interested in keeping up his area of opium. He has an interest in that, and where his interest lies in it he will do his best to carry on the cultivation.

12793. Are you aware that the Lambadar is paid a commission on all the opium that comes from his district?—I believe he is.

12794. Therefore he has an interest in using a little persuasion?—He has an interest in the cultivation.

12795. Of all his district?—Of what he is Lambadar of. Of course he has the interest of his commission to think of, but he would have to be careful of how he worked that to any damaging extent.

12796. (*Sir James Lyall.*) You spoke of four or five crops growing together at the same time and on the same land: I suppose these are crops of inferior value?—Quite inferior.

12797. And the total produce of these crops would be less than the profit on the opium?—Quite so; the rain crops and pease, cotton and indigo all grow together, they get a little out of each crop.

12798. (*Chairman.*) The main gist of what you intended to tell us in your evidence is that you believe the poppy cultivation to be on the whole advantageous, and therefore popular, as far as you are able to judge?—That is my experience.

12805. I believe you are also a medical man, as well as a Missionary?—Yes, I practise medicine.

12806. What opportunities have you had of mixing with the people?—I go freely with the people, and I and my catechist preach to the cultivators in the district and cities and fairs, and when they assemble at Ghazipur, and other places for the opium weighments, during which time they come to Ghazipur in thousands; and I have the opportunity of speaking to them daily during six weeks. I then sit down amongst them and they talk freely to me and tell me of all their complaints. I believe I have their confidence and they speak to me freely as they will not to officials. There are some 600 Native Christian cultivators scattered in ten villages in the Ghazipur District, whom I constantly visit, and who come to me every week, and from them I know much of what goes on in the villages.

12807. Will you give me your own personal view with regard to the use of opium?—As to the use of opium I have been opposed to it before I came to India by reading in Germany tracts and other books about the use of opium by the Chinese. I am also strongly opposed to the use of spirits, also to the use of chlorodyne, hemp and all intoxicating drugs. My objection to opium is that those who use

The Rev. H. Lorreer.

it habitually cannot stop it, and there is the danger of using it in excess. On the same principle I object to the use of spirits. On the other hand, stimulants in a very moderate form may be medically necessary for some persons in certain conditions.

12808. Will you tell me whether the opinion which you formed with regard to opium before you came out to India has been in any way modified by your residence in India?—To some extent.

12809. Will you give me the benefit of your experience of the use of opium during your residence here?—During my residence in India I have never seen any harm done by the moderate habitual use of opium. I have never been inside the opium dens. I believe there are cases of excess, but I have no knowledge of them. Going about amongst the people I have not seen such cases. I am confident that as a rule the Hindu opium cultivators do not use it habitually: some few Mahomedan cultivators do.

12810. Has your experience been of opium-eaters or of opium-smokers?—Opium-eaters.

12811. Will you tell me anything with regard to your medical experience?—I do not believe in the efficacy of opium as a medicine, so much, as many medical men do. But the people do believe in it, and are also advised by their native physicians to use it. It gives no doubt temporary relief in suffering, though I do not believe it cures all cases in which it is used. Its popularity as a medicine comes from the relief it gives: it is easily procurable and cheap. In some cases opium would even be necessary to make the system susceptible for other medicines. The natives of this country are of opinion that if opium is taken after attaining the age of 40 it prolongs life, and Persian books say that "opium is the staff of old age."

12812. I rather gathered from you that the people believe in it more than you do. I should like to ask you if the people have that belief what would be their feeling if the use of it were interfered with?—I have made enquiries, and believe that the people would be discontented if the opium cultivation were stopped. These and other districts are over populated; in the Ghazipur District the people are poor. They run into debt with the mahajan, and their only hope of keeping out of debt is by the cultivation of opium; and in many cases I have heard that the mahajan would only advance money on the condition that they would sow opium. To prohibit opium in India would cause great discontent and trouble because people who habitually use it cannot leave it; then so many cultivators must have some compensation, and the thousands who would be thrown out of employment must have some other occupation.

12813. Have you had any experience of the use of opium among your own teachers?—I have had teachers in my own school who have taken opium moderately without its affecting them physically or mentally. One of them was a Christian. I have still one such teacher, a Mahomedan, who is the best Persian teacher in our school. He has been nearly 25 years in the school, and I have had no occasion to find fault with him.

12814. Could you sum up your experiences of your 28 years in India with regard to the use of opium?—After my 28 years in India I could not show that the people of India are demoralized by the use of opium. Persons who use it with an immoral view are generally bad characters before they take to opium. I do not consider that the use of opium impedes the progress of Christianity in India. All our converts were made from opium cultivators, and some of them cultivate it still occasionally when they are in pecuniary difficulties.

12815. In your opinion, if opium were prohibited would there be a risk of the people going to alcohol?—Yes.

12816. And in your opinion is alcohol better or worse?—Worse.

12817. You have been in the centre of the Opium Department of Ghazipur, I should like to know whether you have heard of complaints being made by cultivators that they have been induced or forced to cultivate poppy?—They come in thousands to Ghazipur every year during the opium weighments, and I go for one or two hours every day to preach to them. I sit down amongst them and talk with them freely, but I never heard of any force being used to make them cultivate opium. There are different other complaints, but not as to the cultivation of opium.

12818. Supposing it were decided to prohibit the use of opium except for medical purposes, do you think it would be possible to devise a practical scheme for supplying opium

for medical purposes only and prohibiting it for other purposes?—I should say it must also be prescribed for those persons who use it habitually as well as medically, because it will be impossible for such persons to leave it.

12819. And, would it therefore be necessary in your judgment to have as many centres for the distribution of it as there are at present?—I think if there were not so many licenses given to different persons, but fewer licenses given to persons who might be trusted, trustworthy persons, and if they would keep lists of all the habitual opium-eaters, and if they were allowed only to sell it to such persons then gradually opium might be given up.

12820. Do you think it would be possible to find trustworthy persons?—It would be rather difficult.

12821. (*Mr. Wilson.*) Have you practised medicine?—Yes.

12822. Have you had a medical education?—I have not passed University Examinations.

12823. What makes you think that the natives will speak to you more freely than they will to officials?—Because I mix much more with them.

12824. Do not the officials mix with them?—No.

12825. They have not the means of getting the information?—The officials will only come to them as the rulers of the country and I come to them like a brother.

12826. You have formed some opinion adverse to opium in China?—Before I came to India.

12827. May I ask you how your experience of what the people do in India can affect what is going on in China?—I have no experience of China.

12828. Opium may or may not be good in China or it may or may not be good in India?—Yes.

12829. There is no necessary connection between the two?—I do not know about that.

12830. Are they connected in your own mind?—I do not think there is any connection.

12831. Do you believe in the efficacy of opium as a medicine as much as some people do?—No, I do not.

12832. In what diseases do you differ from them?—I use it very seldom, because I have other medicines which I use and prefer to opium. It is used very much in cholera, diarrhoea, dysentery and asthma. It is used in eye diseases very largely and for rheumatism.

12833. Wherever it is used largely as a medicine there would be more difficulty where the patient had taken it before. You would require to give a larger dose?—A larger dose would be required.

12834. There would also be more difficulty with regard to a man who was thoroughly habituated to opium when administering other medicines?—Yes, quite so.

12835. I do not quite understand what you said about some of the converts who still cultivated opium occasionally when they are in pecuniary difficulties—will you explain that more fully?—I do not wish them to cultivate opium, neither do they like to do it, but they are poor, and this is the crop which gives the best profit.

12836. Why do you not wish them to grow it?—I do not think there is any necessity for them to grow it.

12837. Is it not a very profitable crop for them to grow?—Yes.

12838. Why do you not wish them to grow it?—I have stated from the beginning that I always objected to opium.

12839. (*Mr. Pease.*) Did the teacher in your school who took opium take it originally for medicinal purposes?—He used to take it so originally and he has to take it now because it has become his habit.

12840. You say he is one of the best Persian teachers in your school, have you several who teach Persian?—Yes.

12841. How many children attend your school?—About 400.

12842. Do they all learn Persian?—They learn English, and they also learn Persian. My school is an Anglo-Vernacular School, they have to learn English and the vernacular, and in the vernacular they have generally to learn Persian.

12843. Why are they taught Persian here?—Because it is used in the courts: it is a court language.

The witness withdrew.

*The
Rev. H.
Lorbeer.*

8 Jan 1894.

Raja
Muhammad
Salamat
Khan.

RAJA MUHAMMAD SALAMAT KHAN called in and examined (through an interpreter).

Jan. 1894.

12844. (*Mr. Fanshawe.*) In what districts is your zemindari situated?—In Azimgarh and Gorakhpur.

12845. What number of villages have you?—I do not remember.

12846. Can you not tell me in a general way?—Seven or eight in Gorakhpur, and possibly the same in Azimgarh.

12847. Is there any poppy cultivation in your zemindari?—It is not generally cultivated in Gorakhpur, but there is some cultivation in Azimgarh.

12848. Will you tell us from your general knowledge whether poppy cultivation is popular with the cultivators?—Very popular. There are several reasons for this. The chief reason is that the Government advances money, and that the advance to the cultivators serves to meet the requirements of the ryots as well as of the landholders.

12849. What is your opinion of the opium habit?—I am of opinion that the consumption of opium by persons over 40 years of age is distinctly advantageous. At that age, when there is a probability of weakness developing itself in the eyes and ears, the consumption of opium wards off this predisposition and tends to maintain general health. I am not prepared to give any opinion as to whether the consumption of opium increases the physical powers and endurance of the consumer. To persons under 40 years of age the use of opium is debilitating unless the consumer is inclined to obesity, when its use is desirable. In the case of children it is an article of common medicinal use, and is supposed to maintain them in general health up to four or five years of age.

12850. I understand you to say from your experience that opium is more generally used by persons in middle life?—Yes, it is beneficial after 40; in damp districts it is generally beneficial.

12851. In what light is the habit of taking opium regarded by the people?—It is not considered disreputable to consume opium. I object to *chandu* and *madak* smoking, which I consider injurious.

12852. Is smoking considered injurious because of its associations, or because it affects the health?—It does injury to the health.

12853. How would the prohibition of poppy cultivation be regarded by the people?—First, it is unnecessary; secondly, the cultivators as well as the Government benefit by it; and

The witness withdrew.

Miss
Sturmer.

MISS STURMER called in and examined.

12867. (*Chairman.*) I believe you are proprietor, with your sister, of the Kajha Estate of about 11,000 bighas in the Azimgarh District?—Yes.

12868. You have personally managed the estate since the death of your father in 1887?—Yes.

12869. During the lifetime of your father you assisted him in its management?—Yes.

12870. You have resided on the estate since your father's death and before, with the exception of occasional visits?—Yes.

12871. Can you read and write in Hindi?—Yes, the accounts are kept in Hindi and sent to me, and I translate and keep them.

12872. We shall be glad to know what estimate you have formed from your personal experience of the value of the opium crop to the proprietor and tenant?—I find from the estate records that we have in the present season sixty-six tenants with 57½ bighas engaged in opium cultivation. I can confidently say that opium cultivation is an advantage to us as proprietors; the opium cultivators, chiefly Koeris, are our most industrious and satisfactory tenants; they are seldom in arrears of rent; they hold (and I know from experience that they are correct) that opium is the most paying crop on certain soils and under certain conditions; that is to say, water must be readily available, and there must be labour available in the household for the several processes of cultivation and collection. Other crops, such as potatoes, are said to be more remunerative; little, if any, are cultivated in the Kajha Estate. The reason of this is, that the soil is not suitable, the labour and expense are much greater, and there is no certain market.

12873. Living in this district and being acquainted with the condition of the cultivators, has it ever come to your

if Government took away the opium revenue they would have to impose further taxation on the country, which would be ruinous.

12854. (*Mr. Wilson.*) Do the members of your family who are more than 40 years of age eat opium?—Yes, some of them, those who suffer from disease or cold, and for whom it has been medically prescribed.

12855. Not otherwise?—No. The doctor who practises after the Greek system prescribes it for the cold, and it does good.

12856. (*Sir James Lyall.*) Does the doctor prescribe the habitual use?—The habitual use. Immoderate indulgence does injury.

12857. (*Mr. Pease.*) Have you ever asked any of the ryots in your zemindari to grow opium?—It is not necessary to do that; they do it themselves.

12858. (*The Maharaja of Darbhanga.*) In what way is the zemindar of the North-West Provinces benefited by the cultivation of opium?—When the cultivator gives up his land if it does not hereditarily belong to him, it may do some service to the zemindar himself.

12859. Do you mean land in which the ryot has no rights of occupancy?—I mean land which the land-owner can call in at any moment from the cultivators.

12860. Your idea is that by the cultivation of opium the productive powers of the land are increased?—Yes.

12861. And that the zemindars benefit by it inasmuch as if the land is given up they are able to settle it at a higher rate?—Yes.

12862. What is the proportion of land in your province in which the ryots have no rights of occupancy?—I cannot say.

12863. There are some lands in which the ryots have rights of occupancy, and in others none; to which class does the majority of the land belong?—I cannot say.

12864. What profit per acre do you think the ryot is able to make from poppy, or what profit per bigha?—I cannot say.

12865. (*Mr. Wilson.*) Are the ryots sometimes refused a license by the Opium Department?—I have no experience of it—I do not know.

12866. You have never heard of it?—No. If opium be put a stop to the consumption of alcohol will be increased.

knowledge that the cultivators are placed under pressure to induce them to cultivate opium?—I have never heard of the cultivators being forced in any way to cultivate opium, and such an idea would appear to me to be preposterous. If any one were to attempt to put pressure on any tenant of ours to cultivate opium or other crop against his will, he would immediately appeal to us, and we would not allow this for a moment. I have no hesitation in saying that on the estate a resident proprietor has much more influence than any Government Opium official could have over the cultivators. Our own success depends on the prosperity and solvency of our tenants, and any interference with their interests would be strongly, and I believe successfully, resisted by us. It would be quite impossible for us to induce the cultivator to sow any crop if he did not consider it his interest to do so; and even were he in arrears of rent, we could not force him to sow any crop against his will. We have a certain amount of sir land (home farm) over which we have power, and in our interests and that of the cultivators we insist on their sowing a certain amount with sugarcane to improve the land, but they invariably ask for permission to sow poppy, and select our sir land when suitable for this purpose. When I am making a settlement for sir land they say "we have no land suitable for poppy, and how are we to go on without poppy?" We have a great deal of sir land in our estate, and they always wish to know whether they can sow poppy; it is a great matter for them; it helps them with their rent and it helps us with our revenue.

12874. If poppy cultivators were prohibited from poppy cultivation, how would they regard it?—It would be very hard on both tenants and zemindars. There is another point to which I wish to call attention. When the last land settlement was made for thirty years, fields that had poppy were increased from Rs. 2-9 to Rs. 5-5 per bigha. If poppy cultivation is stopped the zemindars and tenants will have

a very great grievance. Government will have to make some reduction or some change in the Land Revenue.

12875. Have you any instance in your recollection of a remonstrance being addressed to you or to the official authority when a poppy grower's license had been withdrawn?—Yes, it was the case of one of our tenants. The Manager wrote some years ago to say that Government was restricting cultivation, and this man's license was withdrawn. I wrote to the officer and said it would be a great deprivation and asked if the license might be renewed. He was then allowed to sow, and he has been sowing until this year. He could not get suitable land this year, and he has not sown. It is optional with them; there is never any compulsion.

12876. You have appeared here as a pre-opium witness; how do you regard alcohol and *ganja*?—I am very averse to them. I am a water drinker myself. My father would never allow any *ganja* or liquor shops to be opened in our estates, and we have kept that up. Some years ago a man who had taken a license for tapping trees in our part said he was going to tap the trees in our estate. My father was in Calcutta at the time. The Manager wrote saying that the man had said that he would not only tap the trees in the estate but would tap the palm trees in the garden. My father wrote to the Collector and I have a copy of his letter which I will read:—

"To

The Collector, Azimgarh.

Sir,

"I beg to intrude upon you, consequent on my Mooktear Lalla Seoshai Lal of Talooka Kajha, Pergunnah Mahomedabad, having been cited, at the instance of the Abkari Collector, to attend your Court, to show cause as to why the palm and date trees of my said talooka are not to be tapped.

"I respectfully beg to state that I do not wish my trees to be tapped, as I do not care to encourage my people to take to drinking, either by letting out my trees or permitting grog shops on my estate

I have the honour to be,

Sir,

2, Moira Street, Calcutta, Your most obedient servant,
1st January 1887. (Sd.) A. J. STURMER."

12877. So that although you are here in a sense as a pre-opium witness you still come as one who has a great aversion to excess in liquor?—Or anything of the sort.

12878. Are there any circumstances peculiar to the present time, which, in your view, render it undesirable to attempt, by prohibitory enactment, to deal with the opium habit so far as it exists here?—There are lots of people who take opium in small quantities; I cannot say that I know of a single man in our estate who takes it in excess. I have enquired of the servants, many of whom have been there over 20 years, some 30, and they do not know of a single case. No doubt many of them take it in a small way medicinally.

12879. You think that a prohibitive enactment would affect more people than one might suppose?—Yes. There are three small dispensaries besides the Sudder one at Azimgarh. Many people who are ill have to go 30 or 40 miles to a dispensary to get medicine. To such people it would be a very great deprivation.

12880. (Mr. Wilson.) The proportion of poppy cultivation on your estate is exceedingly small?—Yes, I can tell you some of the villages.

12881. You say that there are 57½ bighas out of 11,000?—Yes. A good deal of the land is not under cultivation.

12882. Am I right in saying that the proportion is about ½ per cent. of the land?—Yes, it is a very small percentage.

12883. So that it does not seem as if poppy cultivation were very popular with your tenants?—It is a thing that varies. Government has been reducing cultivation. Some of our Lambadars used to sow 100 bighas; now I think they have only 20 or 25. It depends also on the amount of

land they have under cultivation. Many of the tenants have very little tenant-right land, and then they depend on getting suitable sir or other land to sow

12884. Do the Lambadars form the medium of communication with the Opium Department?—They do, but I think many of the tenants go themselves.—I cannot say—I am not qualified.

12885. You have mentioned a case in which a license was struck off, and the Lambadar begged you to intercede?—He happened to be the only tenant in the village; he was Lambadar and tenant—there was nobody else.

12886. The Lambadar, besides the payment for his own opium, gets a commission from Government of Re. 1 per maund?—I was not aware of that. In this case the man is Lambadar, and he was the only tenant who sowed in that village. He is not sowing this year because he has not suitable land.

12887. (Mr. Mowbray.) When was the settlement you speak of at which the rate on the opium land was raised?—It was about 17 years ago when the increase was put on.

12888. Was other land raised at the same time?—Yes. Sugarcane lands were raised to Rs. 4, but nothing above that. Rajputs and Brahmins of course pay less than other tenants. The lower classes always pay more. They were increased to Rs. 6 per bigha, but there is an allowance of 2 annas on every rupee for the higher castes. They cannot plough themselves, and Government makes them that allowance. That brings it to Rs. 5-4. There is 1 anna added for the Patwari cess, and that makes it Rs. 5-5. There was one tenant a Rajput having 6 biswas (a biswas is the twentieth part of a bigha), that was Rs. 2-9, and the rent has been raised to Rs. 5-5, because it had poppy when the measurements were made, but the rest of the field, 1 bigha 1 biswah, was sown with peas; for that the rent used to be Rs. 2-9, but now it is Rs. 3-9.

12889. That is the tenant's rent?—The zemindar's revenue is increased according to the tenant's rate, according to the class of land.

12890. (Mr. Fanshawe.) You are quite satisfied that the increase of the revenue or rent was due to the fact that those fields were under poppy cultivation?—I have copied the numbers from two of the villages where the poppy is chiefly sown.

12891. It was not made with reference to the class of the soil?—It is called Korar land, which is chiefly where they sow poppy. Some of them had a few vegetables, but most of them were under poppy.

12892. Have you any direct connection with poppy cultivation?—Yes, because the Koeris work up their land very much for poppy. It is not an exhausting crop, but rather improves the soil. It wants a great deal of working up.

12893. (Sir James Lyall.) With your knowledge of your tenants and the common people of the villages; if the cultivation of the poppy were prohibited what explanation do you think they would give of it?—At present they cannot understand it; they do not understand anybody, but Government being able to stop it. The masses know nothing about it. We have been talking a little to our people, but they cannot understand it at all. They say it will be a most dreadful loss. Yesterday, coming along, a man came flying over the embankment to me and said, Dohni! Miss Sahib, I beg of you, do all you can not to have the poppy prohibited, because we cannot possibly live if it is stopped. It is the most paying crop they have.

12894. (Mr. Wilson.) You said that the Brahmins and Rajputs do not pay so much rent as the lower castes; why is that?—It has always been the custom. They have always been allowed to have their lands at reduced rates, because they cannot plough and do many things which would be against their caste. They have to employ labour, and Government has always allowed them a certain remission in the rate. The lower classes can plough. There are very few Rajputs or Brahmins, people who wear the holy string, who can follow the plough.

12895. What is the difference?—They are let off 2 annas on every rupee.

LIEUTENANT-COLONEL E. BINGHAM called in and examined.

12896. (Sir James Lyall.) How many years have you served in India?—Nearly twenty-eight, over twenty-five, with the 13th Bengal Infantry.

12897. To what class do your men belong?—We are now

enlisting Rajputs in Rajputana proper. The regiment has been recently reorganised. We are ordered to enlist three companies; and we are now eliminating the men of other districts and getting in Rajputs from Rajputana proper.

Miss.
Sturmer.

8 Jan. 1884.

Lieutenant-
Colonel.
E. Bingham.

Lieutenant-Colonel E. Bingham. 12898. What part of Rajputana do they come from?—We are trying to get men from Bikanir, Jodhpur, Jaipur, Shakawati, the Western Rajputana States.

8 Jan. 1894. 12899. At present do you know how many consume opium in your regiment?—In the 13th Bengal Infantry there are 16 regular consumers.

12900. (*Mr. Pease.*) Out of how many?—I am only speaking of the head-quarter wing, which is 400. There are others who take it in moderation at odd times, when they feel fatigued or overtaxed, or suffering from some slight malady.

12901. (*Sir James Lyall.*) In past years was there any difference?—Before the re-constitution of the regiment there were 100 men who were regular consumers of opium. I am giving the numbers as low as I can. There may have been more; there were certainly 100 to our knowledge, and there may have been others in the regiment without our knowledge. There are some men whom I have not noticed to be opium consumers, but who have confessed it. There is a native officer here. I did not notice that he used to take it occasionally, but he told me that he had been taking it. Judging from his personal appearance I should never have thought it. The proportion of those who use opium in moderation in the regiment is, amongst the Sikhs 50 per cent., amongst Rajputana Rajputs 20 per cent., and amongst the Rajputs of the Eastern Provinces and Bengal 5 per cent. The average consumption of opium per man is from five to fifteen grains per diem for moderate eaters, and as much as thirty grains per diem for those who take it in excess, or perhaps even more. The majority of those who take this drug eat it, but a few smoke it. I have known both Native officers and men who have been addicted to taking this drug utterly prostrated and unable to do their duties when they have not had their usual dose of it, but these very men have proved themselves capable of enduring any amount of hardship or fatigue when they have had their usual allowance.

12902. When you say that at present there are some 16 men with the head-quarter wing who use this drug, what do you mean?—Regular consumers, who would succumb altogether if they did not get it.

12903. I suppose rather excessive consumers?—They take it in excess; they take, I should say, as much as a chittack a day.

12904. How much is that?—Two ounces.

12905. (*Chairman.*) Are they fit for service?—Yes, they have been lately with me; they have been to the Manipur expedition.

12906. Where do your Sikhs come from; what part of the Punjab?—The majority come from between Umballa and Jullunder. They used to be enlisted between Jullunder and Lahore and Ferozepur. I may mention that native officers have said to me, "What does the Government mean by wishing to stop our opium; why do they not try to do something to stop alcohol: it has ruined numbers in the country, whereas those who take opium are quiet and orderly, and it does more good than harm."

12907. (*Mr. Fanshawe.*) You know that a chittack is five tolas: do you mean that a man takes five tolas in a day?—That is what he told me, that a chittack was their allowance.

12908. Do you think that he consumed a chittack, five tolas?—Yes, I have given an ounce myself out of an ounce bottle.

12909. In the day?—Yes, when a man has been utterly prostrated and begged me to give him an ounce. I was afraid to give it, but for fear he should succumb I have given an ounce.

12910. (*Mr. Mowbray.*) Do you serve out opium with the rations?—They have sent it up on service when the men have run short of it. When the men were running short I knew it would be good for them, and I have sent it on two or three different occasions.

12911. Was it served out to them free?—The men purchased it.

12912. As they would at a canteen?—Yes, just as they take liquor.

12913. If you were going on service would you go without opium?—Certainly not. There is no regular provision made for it, but every man is allowed to take a small quantity for his own supply. If any is required we endeavour to procure it locally, and let them purchase of the man who has charge of it.

12914. On service you carry a sufficient supply to obviate the risks you mention of the men becoming prostrated?—Yes.

12915. (*Mr. Wilson.*) Is it not the case that on service you are allowed to requisition the Commissariat Department for opium?—I have not been aware of that. I never take any opium for my men from the Commissariat Department. The only occasion on which I recollect opium being taken was when the native troops were going to Malta, then they issued a small quantity to the regular opium-eaters.

12916. Can you tell me what that chittack would cost?—I think it is about Rs. 80 per seer; that would be Rs. 5 per chittack.

12917. Rs. 5 a day for this man's opium?—Yes.

12918. Was he a soldier?—A native officer.

12919. He would be able to afford Rs. 5 a day?—There are many of them who do take it.

12920. This particular one was in a position to afford it?—He could afford it.

12921. About what age do your men generally join the regiment?—18 or 19; most of them under 22.

12922. (*Mr. Haridas Veharidas.*) A native officer's pay could not be more than Rs. 100?—He had private means. He did not serve merely for his pay but for the love of his profession. He was one of our finest native officers, and retired on a pension of over Rs. 180.

12923. (*Mr. Wilson.*) Are the majority of your men opium-eaters when they join?—I am given to understand from a native officer of the regiment that the majority of my men take it from their earliest childhood.

12924. A certain number?—Nearly all of them take it from their earliest childhood; they are more or less addicted to the habit from the days of infancy.

12925. At any rate there are only 50 per cent. who take it?—Because we have such a small proportion at present. The regiment has been recently reorganised, and we shall have in time a greater number.

12926. Do you think it is of advantage to the 13th Bengal Infantry to have native officers and men who are prostrated and unable to do their duties when they cannot get opium?—We take them when we find them fit for duty. We are not aware that they are taking it till afterwards. There are very few of those who are in the habit of taking it in excess. They are the men who get prostrated, not those who take it in moderation. Those who use temperance are never prostrated.

12927. Is it an advantage or a disadvantage to the 13th Bengal Infantry to have its ranks, officers and men, becoming prostrated when they cannot get opium?—It would not be an advantage if they were prostrated.

12928. Would you not rather have men always also to do their duty?—Yes.

12929. (*Mr. Pease.*) You stated that your regiment had been reorganised, that at present there is a small proportion of opium-eaters, but in a short time you will have more?—Because we are enlisting from districts where they are inveterate opium-eaters.

12930. (*Sir William Roberts.*) You say that 50 per cent. of your Sikh soldiers are habitual opium consumers?—Yes.

12931. Therefore there are 50 per cent. who are not?—Yes.

12932. Comparing them, can you tell by their appearance which of the men consume opium and which do not?—Those who consume it in excess I can tell, but those who take it in moderation or temperately I cannot detect until I make enquiries.

The witness withdrew.

Jamadar Sispal Singh.

JAMADAR SISPAL SINGH, 13th Bengal Infantry, called in and examined (through an interpreter).

12933. (*Sir James Lyall.*) Do you take opium occasionally?—Yes, when I have a cold, or am fatigued or suffering hardship.

12934. What have you to say on the subject of opium

consumption?—A large proportion of the residents of Rajputana proper, and the district from which I come, commonly consume opium. But the majority of opium consumers are chiefly Rajputs, the other castes consume it also,

but in a lesser degree. A good number of the Rajputs have been addicted to taking opium in moderation from the earliest days of their childhood, but the majority take to the habit of consuming this drug when between five and twenty and forty years of age. As a rule, the Rajputs of Rajputana are regular consumers of opium and take it in moderation, the average daily consumption being from 1 grain to 100 grains for excess eaters. This habit is chiefly cultivated with a view to render themselves able to bear extra fatigue and hardship when they feel their powers declining with increasing years. They also use it largely in combination with other drugs for medical purposes. Opium is not easily procurable as it is an expensive article, and its sale is very much restricted in British territories. But in Native States where the opium is not quite so good it is far cheaper as the restrictions on its sale are

not so stringent. Should the sale of opium be entirely prohibited, it would cause a great deal of suffering to a vast majority of persons, and such a measure would be most distasteful and cause widespread dissatisfaction, more especially if in the event of the loss of revenue to the Government from the stoppage of the sale of opium the people were to have additional taxes imposed on them. I myself am in the habit of taking doses of opium in moderation to the extent of one grain occasionally, but only when I feel fatigued or suffer from the effects of a cold.

12935. (*Mr. Pease.*) Do you think it is good for persons in health to take opium?—It increases their strength and does them a little good if it is taken with nourishing food.

12936. Why do you not take opium yourself?—I do not wish to get addicted to the habit of taking it.

The witness withdrew.

MUNSHI DAYA SHANKAR called in and examined.

12937. (*Mr. Fanshawe.*) What position in life do you hold?—I am principal Revenue Officer to the Maharaja of Benares.

12938. Your work I suppose has brought you in contact with a large number of your own countrymen?—Yes.

12939. Will you tell us what you know about the opium habit?—As an intoxicant opium is either eaten raw or smoked. If used in moderate quantities with plenty of nutritious food no perceptible harm is caused to health. I even know of a few cases where emaciated and weak constitutions have benefited by moderate use and good food. Smoking is more harmful than eating. About 2 per cent. of the population in large cities and towns use it in either form, and more people use it where Muhammadan influences prevail, e.g., Lucknow, Rampur, Delhi, etc. Only such persons come to grief as do not keep within temperate limits, or cannot afford to have nutritious food. Their number may not be more than five in 100 opium-eaters.

12940. What do you think would be the general feeling with regard to the prohibition of the cultivation of poppy and the use of opium?—The total abolition of the cultivation of opium would result in more harm than good. There would be an enormous loss of revenue which would have to be recouped by fresh taxation, and that would be a much greater evil than the one proposed to be eliminated. Then it is a fact that throughout the country a large number of men habitually use it, and it would very likely be a great hardship to them to be deprived of it altogether. I have known opium-eaters suffer agonies if they failed to get their dose at the appointed time. Again, the Rajputana semi-independent States grow and use opium in large quantities. There would be considerable difficulty in abolishing the cultivation there, and there be no result whatever of our abolishing it if they were allowed to continue to grow it.

12941. You mean that there would be no result from its abolition in British India?—Yes.

12942. In saying that opium-eaters suffer a great deal if they fail to get a dose at the appointed time, are you speaking of those who take opium in large or excessive quantities?—Those who take opium habitually in whatever quantities.

12943. They all suffer a great deal if they cannot obtain their dose?—Yes.

12944. Have you any other remarks to make upon the subject?—I should think that something more might be done to discourage its use than is already being done. So far as I know it is sold at Rs. 16 per seer at the Treasury and at about the same rate by the contractors. It might be made dearer, so as to be within the reach of fewer people. Then the quantity which may be legally possessed and purchased at present might be reduced. A person may, so far as I know, purchase and possess a rupee's worth. This may be reduced to annas 8 worth. But besides these or similar measures which would discourage its use nothing

The witness withdrew.

LALA KASHI PRASAD called in and examined (through an interpreter).

12957. (*Mr. Fanshawe.*) In what district are you a zemindar?—Allahabad.

12958. What is the size of your zemindari?—My family pay about Rs. 37,000 land revenue.

12959. What is the number of your villages?—I have also villages in Fatehpur: there are about 52 villages in all.

12960. What do you know about the consumption of opium in these districts?—So far as my experience goes and I have seen, the consumption of opium produces no bad effect on the moral and physical condition of the people. People of all castes use opium more or less with a view to protect themselves from the attacks of diseases like asthma. People in

most cases use opium with a view to preserve their health, and in cases of illness to abate the pain of the disease.

12961. What is your opinion as to the willingness of the people of the country to bear the cost of prohibitive measures?—I think natives of India will be unable to bear in whole or in part the cost of prohibitive measures, the introduction of which they will never like.

12962. Is there any poppy cultivation in your zemindari?—Very much,

12963. Is the cultivation of poppy popular amongst the people of your zemindari?—As far as I can ascertain from inquiry, opium is cultivated in an area of about 4,000 bighas in Pargana Kara of the Allahabad district. The income from price of opium, poppy seeds, etc., amounts to Rs. 55 per bigha, while the expenditure on cultivation, together with the rents paid to zemindars, amounts to Rs. 35 per bigha. Thus a profit of Rs. 20 per bigha is left to the cultivators. In the month of October the cultivators get an advance of Rs. 8 per bigha, and many of them get advances for cultivation of wells, etc., also. The advantage they gain thereby is that they are not required to pay any interest on the money thus received. The advances help them much in the cultivation of opium as well as other crops. Moreover, the cultivators find it very easy to pay up the rents both of the land under poppy and of other land when they have sufficient money in their pockets by sale of their opium. The advantages to the zemindars are that the rents due to them are very easily realized and the quality of the soil is improved.

12964. You speak of the Pargana Kara, is that the Pargana in which your zemindari is situated?—Yes.

12965. (*Mr. Haridas Vekaridas.*) What is the area of land cultivated by poppy in your zemindari?—About 1,000 bighas.

The witness withdrew.

Mr. H. SHARPE called in and examined.

Mr. H. Sharpe.

12973. (*Mr. Mowbray.*) I believe you reside at Rampur?—Yes.

12974. You are not in any way connected with Government?—Not in any way.

12975. You yourself have written to the Commission offering to give evidence on the subject?—Yes.

12976. What opportunities have you had of studying the opium question?—I have been seven years residing in the district amongst the natives of India, and I have become thoroughly acquainted with the villagers. As an indigo planter I have had every opportunity as far as my district is concerned.

12977. Have you been living with other Europeans?—No, entirely alone.

12978. What opinion have you formed with regard to the consumption of opium in the district where you have been living?—I think if you take opium from the natives of India it will be unfair, unnecessary, dangerous, and would ruin a great industry. It would be unnecessary, because the consumption of opium in the district is confined to a very few of the upper classes of the native community, those who are able to afford the luxury, the influential class.

12979. You say it would be unfair: what do you mean by that?—If you take opium away from the native of India you leave him no stimulant to fall back upon, and owing to caste prejudice you can give him nothing in exchange. The religion of the Hindu caste and of the Mahomedan forbids intoxicating liquors, and save opium and *ganja* he has practically no other stimulant on which to fall back. A Brahmin cannot even smoke tobacco. The natives of these districts are nothing if they are not abstemious. They have few luxuries, and certainly cannot afford to give up one of the few luxuries available to them.

12980. Have you formed any opinion as to the effect of opium upon the health of the people amongst whom you have been living?—I know many an opium-eater, and I believe that opium taken in small quantities is more beneficial than otherwise, especially when accompanied by a light, inexpensive diet—a milk and agricultural produce diet.

12981. Is that view founded on your own personal observation?—On my own personal observation, also on the opinion of many natives whom I have asked on the point.

12982. Have you seen any persons who take opium in large quantities?—Yes, to excess; and I think there is

12966. Do you get any more rent on account of your poppy cultivation as compared with other crops?—More is paid for poppy rents.

12967. The rate of rent is not fixed?—It is a fixed rent. Poppy is sown in higher class land.

12968. But on the same land if any other crops are sown will you get the same rent?—The rent is fixed, but occasionally where a tenant sub-lets a little land to another tenant, or sublets his own farm, he gets a little higher rent: in place of Rs. 4 he gets Rs. 5 if poppy is sown.

12969. You say they have not to pay any interest on their money advances: are you sure of that?—Yes.

12970. Are you acquainted with the forms issued by the opium Department for advances for poppy and for sales?—A register is kept in which entries of the advances are made. When the Lumbardar and tenants go to get advances the entry is made in the register, but I do not know of any lease or written undertaking.

12971. Do you know whether these forms in the Benares Agency are similar to those in the Behar Agency, permitting the Sub-Deputy Agent, under certain conditions, to impose any penalty he pleases, and to recover it in any way he thinks fit for any failure of compliance?—I am not acquainted with any such condition. When they get an advance the officer of the Department goes to see that the quantity of land for which he has taken the advances is actually cultivated. If he fails to cultivate the quantity the money is recovered at the end of the cultivation.

12972. You do not know the exact conditions?—There is no such condition as you have mentioned.

(*Mr. Wilson.*) I am informed at this moment by Mr. Kivett-Carnac that the condition in the Behar agreement is not in the Benares agreement.

nothing debased about them as there would be if they drank to excess.

12983. What do you mean by excess?—Large quantities, but I will not go into weights.

12984. Have you any idea of what you mean by excess?—A man, for instance, who will spend two annas a day on opium takes it in excess.

12985. Have you formed any opinion as to the comparison between opium and alcohol?—Alcohol affects a man in a very different way. I do not think opium will affect his constitution as alcohol will. Of course if he becomes a confirmed opium-eater he cannot give it up.

12986. Is there much alcohol consumed in the district where you live?—No, only among the lower castes.

12987. You say that prohibition would interfere with a profitable industry?—Yes; poppy is one of the best paying crops to the cultivator that he can sow, considering the cost of seed, the labour required, and the short time for which it occupies the land, whereby a grain crop may also be sown and reaped within the year. The actual opium extracted from the poppy is the chief, but not the only, source of profit to the cultivator; the seed being also valuable as an oil seed, fetches a good price. The seed is largely used in the country, and is also exported to Europe.

12988. Have you known instances in which persons who have cultivated opium have been refused permission to go on cultivating?—Yes; in a few villages in my neighbourhood during the last three or four years the selling of opium has been discontinued. I should like to hand in an expression of opinion signed by over 300 cultivators who have suffered from this.

12989. Are they personally known to you?—Yes, they are the chief zemindars and cultivators of the villages in question.

12990. You can vouch for the authenticity of it?—Yes; I have also another expression of opinion that I wish to put in signed by 1,445 of the chief zemindars, landowners, and cultivators of the various villages in the immediate neighbourhood of my factory, pointing out the loss they would incur if poppy cultivation were done away with.

12991. Can you give me any opinion with regard to the precise question I asked as to the persons who had been refused permission to cultivate—whether they have tried to get permission?—They often come to me and ask me to

assist them in getting the cultivation of the poppy reintroduced into the villages, and as a matter of fact I have heard it said that it was probably because it would affect my indigo sowing that I did not assist them.

12992. I understand the petitions, for the authenticity of which you vouch, are to the effect that poppy cultivation is a valuable one, and one which the petitioners would object to be deprived of?—Yes.

12993. (*Mr. Wilson.*) Where is Rampur?—On the borders of Ghazipur and the Benares districts.

12994. How far from Ghazipur?—About 28 miles.

12995. What are you engaged in?—Indigo planting.

12996. When did you come to this country?—Seven years ago.

12997. You think that opium is actually beneficial?—When taken in small quantities by the natives.

12998. I presume you take it?—No, I do not touch opium. To begin with, I am not a native: the native is a vegetarian, and I am not. That is one reason. For another thing I do not think it is good to begin a bad habit of that description. I do not touch spirits.

12999. Are you aware that several witnesses have told us that the evil effects of opium are very much obviated by a good rich diet?—I think just the reverse. I think that a light milk and agricultural produce diet is far more desirable—especially milk diet. The natives tell me so.

13000. Are the petitions in the vernacular?—They are in the vernacular. The following are translations of them:—

I. "We the landowners and cultivators of the villages of Sayadpur, Dahan, Aunrehar, Karampur, Dahra Kalam, Newada and Chakia, Hasanpur and Bhadsen, Dinoura and

Bhabhaura, Gagadharpur, Sadi-Badi and Mamudhpur, Gaibipur, Kathgara, Dadara and Gothali, Mapur and Mammakha, Daulatpur and Pahapur, Mourish and Bambhnauli, Muyanpur and Lunripur, Parsani, Hyramanpur, Ramarypur, Unchaury, Shorifpur, and Kandheipur, Mattia and Madhela Pargan, Sayyidpur, Zilla Ghazipur, understand from Mr. Sharpe of Rampur, Khanpur, Ghazipur, that a Royal Commission has at this time been appointed on opium, and, therefore, we respectfully beg to point out, that if the Government stops the sowing of poppy, we shall in every way suffer loss and inconvenience, for the cultivation of poppy is in every way profitable, and by its help we are enabled to pay the rents to the sircar and, landowners; and if the cultivation of poppy is put an end to, there is no other crop that can adequately fill its place, and we shall certainly have difficulty in paying the sircar's rents. For these reasons we make known our opinion and petition.

Signed by one thousand four hundred and forty-five (1,445) of the zemindars (landowners) and cultivators of the above-named villages."

II. "We the Landowners and cultivators of the villages of Rampur and Inchevel, Pharidaha, Ghogowa, Bahora, Naikut, Rajesti, and Baheri, understand from Mr. Sharpe of Rampur, Khanpur, Ghazipur that a Royal Commission has at this time been appointed on opium, and therefore we respectfully beg to point out that for the last three or four years, in consequence of the cultivation of poppy having been discontinued in our villages, we suffer great loss and inconvenience, and with difficulty pay our rents to the Government and landowners; for poppy is in every way a profitable cultivation, and greatly assisted us to pay the Government's rents. For these reasons we make known our opinion and petition.

Signed by three hundred and nineteen of the chief landowners and cultivators of the villages named."

Adjourned till to-morrow at 10-30.

At the Old Mint House, Benares.

FORTY-FIRST DAY.

Tuesday, 9th January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (IN THE CHAIR).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PHASE.
" HARIDAS VEHARIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. MADHO PRASAD called in and examined.

13001. (*Mr. Wilson.*) Are you the Editor of an Indian Newspaper?—Yes.

13002. What is the name of it?—*Khichri Samachar.*

13003. What is the meaning of those words?—It means a mixture of three things.

13004. Where do you live?—In the Mirzapur District.

13005. What can you tell us as to the classes, or races, or castes, amongst whom you have experience?—All classes of Mussulmans, and among Hindus, Brahmins, Kshatryas and Vaisyas.

13006. For how many years?—25.

13007. What special opportunities have you had for observation?—Whilst I was in the Police Department as Sub-Inspector, as well as in several other capacities as a Government servant. I have also received local information during the time of my Editorship.

13008. How far is opium-eating or drinking prevalent?—In the Mirzapur District nearly 4 per cent.: males 30 per cent., females 4 per cent. and children 5 per cent. In other districts 75 per cent.: children have opium given for medicines, etc.

13009. Do you mean 30 per cent. of grown up males?—Yes.

13010. Is there any smoking, and if so, what is the proportion?—About 10 per cent.

13011. Mostly males?—Yes.

13012. At what age is the habit generally acquired?—20.

13013. What motives induce people to form the habit?—The society of consumers, and desire to stay for a longer time with the opposite sex in cohabitation.

13014. Is the opium habit easily relinquished at once or gradually?—It is very difficult to give up at once the long acquired habit, but sometimes is done under compulsion.

13015. Is there a marked difference between moderate and excessive consumers, and if so, what is the proportion of excessive consumers?—The number of excessive consumers is very small in comparison with the moderate consumers.

13016. What proportion of their income do habitual consumers spend?—Nearly one-fourth of their income; sometimes one-third.

13017. What class of society are you speaking of: do you mean poor or rich people?—Rich persons.

Mr. H. Sharpe.

8 Jan. 1894.

Mr. Madho Prasad.

9 Jan. 1894.

Mr. Madho
Prasad.

9 Jan. 1894.

13018. You mean that rich persons spend as much as one-fourth of their income?—One-third.

13019. Wealthy people with plenty of money?—Yes.

13020. (Chairman.) They spend one-third of their income?—Yes.

13021. Are you clear upon this point? The question is what proportion of their income do habitual consumers spend on opium? You have said nearly one-fourth, and sometimes one-third?—Yes.

13022. If a man has many hundreds of rupees he cannot possibly spend one-fourth on opium, can he?—He does not eat it himself: he also induces others.

13023. (Mr. Wilson.) Is there a general tendency to increase the dose?—Yes.

13024. What are the results physically, mentally, and morally?—It makes one ugly and thin. They grow weak in mind as well. The young ones are debauchees and have no principles.

13025. In what proportion of cases are injurious results apparent?—In 10 per cent. of the total consumers.

13026. Is opium generally believed to be a protective against fevers?—It acts as a medicine in cases of fever, asthma, cold, dysentery, etc., and it is also applied externally.

13027. Do you really think it is a protective against fever?—Yes, somewhat.

13028. Is it specially useful in malarious districts, or believed to be so?—It is often useful in malarious districts.

13029. Is it necessary or believed to be necessary to enable working people to get through their daily toil?—Yes, the working people would feel inconvenient and uneasy unless they get their daily dose of opium.

13030. I suppose you mean those who are in the habit of taking it?—Yes.

13031. Those who are not in the habit of taking it can manage their work very well without it?—Yes.

13032. Is it looked upon as disgraceful?—Yes.

13033. Is it desirable to prohibit the sale of opium except for medical purposes?—Yes.

13034. If that were done, would the public approve of it?—Yes.

13035. If prohibitive measures were adopted, would it be desirable to make a special provision, by establishing a register of opium consumers, for the wants of those who are already habituated to the use of the drug?—Yes, it would be desirable to keep such a register with the Civil Surgeon of the District and the sale of opium also ought to be superintended by him. New consumers should not be allowed.

13036. In what poppy-growing districts have you had experience?—Mirzapur, Cawnpur, Jaunpur, Allahabad, Benares and Basti, etc.

13037. Is the cultivation of poppy popular?—No.

13038. Is the poppy crop more profitable to cultivators than other crops?—The cultivation of the poppy is not more profitable than that of any other crop considering the trouble and expenses of the cultivators.

13039. Is any pressure brought to bear by Government officers to induce cultivators to grow poppy in preference to other crops?—Yes, some pressure is brought by the Government such as advancing money, etc.

13040. Have you any general remarks to make on the subject?—The cultivators are pressed to grow the poppy by payment in advance called *Dādni* at the rate of Rs. 5 to Rs. 8 per bigha. No person is allowed to pass by the places where the poppy is grown; if a man passes by, he is accused of plucking off the poppy buds. In order to get the advance money, the cultivators have to pay something as a bribe to Lambardars as well as to other subordinates in the Opium Department. At the time when crop is ready, persons charged with the office of measuring the poppy field use small measurement and wrong weights in weighing. Sometimes they play tricks with the cultivators by secretly throwing some *kachi afim* in their houses through the help of the policemen. In the same way they have to give a bribe to the officers who make the contracts. They have also to pay something to the Treasury people when crediting the money in the Treasury, the thekādars mix *amiltas*, *kutha* and *gur*, in order to get more profit by increasing the weight, and they sell using false measurement by previously sticking in the scale pan some heavy thing with wax or with similar other things.

13041. Can you tell me what thekādars are?—They take the contract from the Treasury, paying about Rs. 4,000.

13042. They are persons who are licensed to sell opium?—Yes.

13043. Have you any further general remarks to make?—The poppy is grown in nearly 6,000 bighas of land. The annual consumption of opium in the Mirzapur District is about 40 maunds, of which nearly 18 maunds is sold by the Treasurer at the rate of Rs. 17 per maund (it costs him only Rs. 16). The Treasurers don't pay for the sale of opium to the men they engage for the purpose. The thekādars have no fixed price; they can charge any amount they like, and sometimes they sell at the rate of Rs. 23. Their aim is always to make up anyhow the money they have to pay to the Government, which for this year is Rs. 4,000. In order to get a reward the Police often tries unfair means in throwing opium into the houses of persons and getting them arrested. People in their family-quarrels sometimes take a large dose of opium which poison them.

13044. With regard to the complaints and charges that you have alluded to, do you know any of these things yourself, or have you been informed in reference to them?—I have been informed in many cases.

13045. By persons whom you believe?—Yes.

13046. Do you think it is really correct?—Really correct.

13047. (Mr. Haridas Vekharidas.) I believe you were a Police officer before you occupied your present position?—Yes.

13048. You say that there were mal-practices in the Police Department?—Yes.

13049. Have you had any personal knowledge of them?—Yes, I have personal knowledge.

13050. Have you taken part in them?—When I got information and made enquiry, and when I found that a charge was quite false, I left the accused: I never convicted the man. Therefore I left the Police Department.

13051. (Mr. Fanshawe.) I understand that the newspaper of which you are Editor is a weekly newspaper?—Yes.

13052. Will you tell me what is the average number of your subscribers?—About 400.

13053. Do you issue as many as 400 copies to your weekly subscribers?—No, about 250; I send 150 to correspondents and other persons.

13054. You say that 40 per cent. of the adult population of the Mirzapur District consume opium. Are you aware that the population is over one million?—It is 11 lakhs.

13055. It appears from the papers before us that 46 maunds of opium are consumed among a population of a million?—Yes.

13056. Then how can 40 per cent. of the population consume opium?—18 maunds are easily sold by the Treasury.

13057. There is a consumption of 46 maunds among a population of a million: how can that work out to 40 per cent.? Does not that seem an excessive estimate?—I believe out of 100 persons there are 40; 30 males, 4 females, and 6 children.

13058. Your remarks as regards poppy cultivation are not, I suppose, founded on personal knowledge of cultivation. You are not an agriculturist yourself?—I have information on the subject when I was in the Police Department. I had often occasion to make enquiry, and I find that such things often occurred.

13059. But not from actual acquaintance with the conditions of poppy cultivation?—Yes.

13060. Did you intend to say that there was a large number of suicides owing to opium when you spoke about family-quarrels?—Yes.

13061. Are there many suicides attributed to opium in the Mirzapur District?—If I saw the Crimes Report of this year I could tell you.

13062. Can you say, speaking generally, whether there are many?—Yes.

13063. Do you mean 8 or 10 in a year?—About 10 I should think out of a hundred.

13064. (Chairman.) How long were you in the Police Force?—Nearly 10 years.

13065. What was your rank?—Sub-Inspector.

13066. Why did you leave the force?—There were dishonest things to be done, and therefore I resigned and started my press, doing work for the public good.

13067. You wish to tell us that during your service in the Police you were engaged in perpetrating acts of

dishonesty?—Dishonesty. I made my statement before the Police Commissioners in 1891.

13068. A public statement?—Yes, before the Police Commissioners, of the mal-practices of which I had knowledge and had seen.

13069. (*Sir James Lyall.*) That was after you left the police?—Yes.

13070. (*Chairman.*) What is your opinion with reference to the proposal which has been made, that the use of opium should be prohibited in India unless upon medical prescription?—It should only be given for medical purposes.

13071. You would recommend that?—Yes.

13072. What would you recommend with reference to alcohol?—Alcohol also is bad, worse than opium.

13073. Therefore you would desire to see that still more strictly prohibited, if possible?—Yes.

The witness withdrew.

Mr. ISAN CHANDRA ROY, M.P., called in and examined.

13081. (*Sir William Roberts.*) Are you a medical practitioner in Benares?—Yes.

13082. You have a medical degree I believe?—Yes.

13083. Where did you get it?—In Calcutta Medical College.

13084. You are in private practice here?—Yes.

13085. What have you to tell us about the consumption of opium in India?—The consumption of opium in India has been in vogue from a remote period for purposes both medical and non-medical more or less amongst all races throughout the length and breadth of the country. The drug is extensively used in the Punjab, in Rajputana, in Assam, in the Deccan and in several districts of Bengal.

My observations as to the effects of opium use, extending over a period of about 8 years, is confined to certain districts of Bengal and Benares mainly. Benares being an important seat of Hindu religion, one has the opportunity of seeing representatives of almost all the races inhabiting India in the form of small communities who have settled here. Professionally I have to come into contact with a certain section of the people who habitually indulge in the drug in question.

13086. What do you mean by a certain section of the people?—The Mahomedan section of the people.

13087. What is your experience amongst them?—About 75 per cent. are addicted to the use of opium in one form or another.

13088. (*Sir James Lyall.*) Do you prefer to Mahomedans generally, or one particular class?—Mahomedans generally.

13089. Benares Mahomedans?—Yes. About 75 per cent. of the Benares Mahomedans are addicted to the use of opium in one form or another, and about a third of these have recourse to smoking. The habit is acquired either in infancy, in youthful age, or in advanced years. Among well-to-do classes opium is given to infants to protect them from the influence of colds, etc., but the lower classes usually dose their infants to keep them quiet during working hours. Young people use it to increase their sexual vigour. Among retired Bengalee gentlemen who spend their last days in Benares I have occasion to see them forming the habit for getting relief from chronic ailments, such as diarrhoea, diabetes, gout and rheumatism, etc.

13090. Is there any marked distinction between moderate and excessive consumers?—Amongst all people who habitually use the drug there is a marked difference between moderate and excessive consumers. I should think 90 per cent. of them may be classed under the latter head.

13091. Do you mean 90 per cent. of consumers consume it to excess?—Yes.

13092. That is, only 10 per cent. use it in moderation?—Yes, I mean people who habitually use the drug.

13093. Both Mahomedans and Bengalees?—Yes, there is an invariable tendency to increase the dose which in some instances is kept in check only by persons naturally possessing strong will. Although the use of opium is observed amongst all sections of the community, yet I find the Mahomedans mostly addicted to it.

13094. Do you find that the use of opium under its varied forms of eating and smoking is much the same?—The sensible effects are much the same.

13074. (*Mr. Wilson.*) What was the nature of the dishonest acts which you yourself performed while you were a Sub-Inspector of Police?—Police officers always try to get convictions. If a Police officer will not do it he will not get his promotion. Therefore I thought that as the Department was not for a good man, but for persons who tried to convict, I left the service.

13075. Did you think those things were wrong?—Yes.

13076. Why did you do them?—My conscience does not allow me to do such things.

13077. But you did do them?—No, never.

13078. (*Mr. Haridas Voharidas.*) Were you dismissed?—No, I resigned.

13079. Do you say you made a statement after you resigned?—After my resignation.

13080. How long after?—I think about a year.

Mr. Madho Prasad.

9 Jan. 1894.

13095. Varying, of course, with the quantity taken?—Used in any of the different ways its sensible effects upon the constitution are pretty nearly the same, varying, of course, with the quantity taken, with the constitution of the consumer and the frequency of its use.

13096. What is your experience as to the effects of moderate use?—When taken in a moderate dose, the usual results of its action are that the mind is exhilarated, a general warmth is experienced, and a pleasurable condition of the whole system ensues. But after a few hours when the effects pass off the consumer feels depressed and a sense of general discomfort supervenes, giving rise to a train of peculiar symptoms such as yawning, lassitude and a general aching sensation in the body particularly the calves.

13097. What would be your general estimate of a moderate consumption in point of quantity?—About 8 or 10 grains of crude opium per day.

13098. Would you consider that moderate?—Yes. These after-effects are a source of great misery to the opium-eater. The pleasurable and stimulating influence of the drug is almost invariably followed by a corresponding depression. He becomes less susceptible to external impressions, and his muscular energy is considerably lessened, a desire for repose becomes a paramount necessity and a tendency to sleep ensues. The mouth and throat become dry, hunger diminishes and the bowels become torpid.

13099. What are the effects of the habitual excessive use?—All the above effects are hastened and heightened in proportion. The period of depression comes sooner. The prostration increases to actual stupor, muscles become relaxed and emaciated. The attenuated body, the peculiar withered and blasted countenance with a characteristic gait, will reveal the opium-eater at a passing glance. His digestive organs become highly disordered, and he scarcely eats anything. His mental and bodily powers are destroyed. In fact, he becomes impotent.

13100. You have told us that 75 per cent. of adult Mahomedans consume opium?—Yes.

13101. And that 90 per cent. of these take it in excess?—Yes.

13102. That is, more than one half of the male Mahomedan population of Benares take opium in excess, and these effects are seen in them: do you mean to say that half the Mahomedans in Benares show themselves attenuated in body with a peculiarly withered and blasted countenance, and with their mental and bodily powers destroyed?—Yes, that will be noticed in the majority of them. Of course this description does not apply to every case. When the habit becomes confirmed, it is simply impossible to break it off. When the opium-eater is deprived of the stimulant, his torments become horrible. After long indulgence, the subject suffers from complaints which are not relieved even by opium. Of course all these effects are modified by the constitution of the individual, length of time of use, and the peculiar circumstances of the consumer.

13103. What is the effect on the morals of the rich?—They are made idle and dreamy, and little sensible to impressions from without, good actions calling forth the display of physical and mental energies have little or no charm for them. Frequently they give themselves up to luxurious enjoyments, proving themselves useless members of Society.

Mr. Isan Chandra Roy, M.P.

Mr. Isan
Chandra
Roy, M.B.

9 Jan. 1894.

13104. Does that description apply generally to the rich Mahomedans of Benares?—It may apply to others as well.

13105. You are not a Mahomedan yourself?—I am not.

13106. What is the effect on the morals of the poor?—It is among the poor that the most degrading effects are manifested. They are made lazy and unable to work for their living, but at the same time they must satisfy their opium-craving! They are necessarily driven to have recourse to all sorts of vicious acts such as petty thefts, pick-pocketing, giving false evidence, etc. But it is a noteworthy fact that opium-eaters are seldom found entangled in daring acts of crime such as robbery or dacoity, simply for the reason that they are physically incapacitated by the effects of opium, and not from any want of motive. Falsehood and exaggeration are their invariable attributes. It is true that opium, when indulged in excessively, produces the most melancholy effects both on the mind and body, and it is also true that either having a strong will power or on account of good nourishing food some can maintain their health and activity of mind and body without becoming slaves to it, but still, in my opinion it is of all indulgences most wonderfully seductive, and to break off the habit becomes an impossibility to the majority of its votaries. It is, therefore, reasonable to conclude, that in a people or a nation, if the vice becomes widespread, it becomes a serious obstacle to progress as a whole.

13107. What is the opinion of the people with regard to the non-medical use of opium?—The disposition of the people of India with regard to the use of opium for non-medical purposes, with but few exceptions, seems to be unanimous. Even the confirmed opium consumers condemn the habit and would fain give it up if they could. All sections of the people believe it to be a pernicious and most degrading habit.

13108. Are you in favour of prohibiting the growth of the poppy?—No, I am not. I am for limiting the use of opium strictly for medical purposes. Its use as a narcotic indulgence should be prohibited by laws, of course making allowance for those who are already confirmed in the habit. But at the same time the people of India are unwilling to bear in whole or in part the cost of prohibitive measures.

13109. When you speak of opium from a medical point of view you mean in regard to its medicinal use?—Yes.

13110. What are your proposals with regard to poppy cultivation?—Prohibition of export-trade is not likely to fulfill the cherished objects of those who want to reclaim China from the opium-habit, inasmuch as such a measure would only stimulate indigenous cultivation and larger supply from other countries, as has been so forcibly urged by the Bengal Chamber of Commerce. I would, therefore, venture to propose the following measures:—

- (a) Cultivation of the poppy and the manufacture of opium should be left intact, as it is, for purposes of export and medical use.
- (b) The consumption of opium as an indulgence by the Indian people should be put a stop to by legal prohibition.
- (c) The cost of partial prohibitive measures and the loss of revenue from less consumption in India should be recouped by economical reforms in certain departments of State where there are rooms for such reforms.

13111. What is the general effect of the use of opium?—Opium is one of the most invaluable therapeutic agents known. No other drug can compare with it in its power of assuaging pain, soothing nervous irritability in its various forms, and as a sedative and soporific it stands unequalled. But it is none the less a poison. Like all other good medical agents its use is prescribed by even laymen, and people often betake themselves to it without any proper medical advice. I have very often seen men who commenced its use for the relief of a certain ailment, but under its seductive influence had to increase their daily dose and passed on to the habitual consumer of the drug. Its use as an indulgence on health is to pervert the normal functions of the system and to reduce its votaries gradually to a most deplorable state of helplessness both mentally and physically.

13112. Have you observed its effect in the case of infants?—There is a common practice among the women of the labouring classes to dose their infants with a small quantity of opium before going to work. But children being very susceptible to the action of opium many of them are sacrificed. I believe there is hardly any physician who has not come across such a melancholy case. I believe the practice is so common that there must be many more deaths than are brought before the public eye.

13113. I presume that is a supposition?—The last portion is supposition only.

13114. Have you any observation about the use of opium in cases of suicide?—Opium being easily obtainable in the bazar, it is very frequently made use of, especially by females of this country for suicidal purposes. The joint family system is the rule in India amongst all races, and one can fairly imagine that trifling causes often become the source of family broils, and it frequently happens the quarrel ends in the suicidal death of a much-abused *Bahu* (daughter-in-law). Cases of suicide by opium are so numerous and common that a medical man, whether as a student in our local colleges or as a practitioner afterwards, is bound to meet with a lot of such cases, and I am sure if statistics were taken of the known cases of suicidal deaths by opium, it would simply reveal a most harrowing detail of human misery. If opium be not so easily procurable, I am led to think that cases of suicide would be less common.

13115. You are aware that statistical accounts have been taken, the result of which is not quite in accordance with that?—I have not seen them. In my opinion if the drug opium is classed and sold as a *poison* under penal regulations and made purchasable from chemists only, the appalling number of infant mortality and that from suicides, would be very much reduced.*

13116. What is your view of opium as a febrifuge?—To me it seems a popular error. I was for three years practising in a malarious district of Bengal. I did not see people there use opium for the purpose. On the contrary, I have seen opium-eaters suffering from malaria just as those abstaining from it. In Benares I have to treat many cases of ague among my opium-eating patients, and nothing but quinine relieves them.

13117. (Chairman.) You say that except for medical purposes opium should be stopped by legal prohibition: would you recommend the same process in regard to the use of alcohol?—Yes.

13118. And in regard to *ganja*?—Yes, with regard to all drugs of the hemp plant, *ganja*, of course, is very injurious, but *bhang* is not so injurious.

13119. You would not of course include tobacco?—No.

13120. (Mr. Maubray.) When you say that the disposition of the people of India with regard to the use of opium for non-medical purposes, with a few exceptions, seems to be unanimous, are you speaking of what you believe to be the general opinion of the people of India, or of the people with whom you have been directly in contact?—The people with whom I have had occasion to talk on the subject, that is, the people of Benares.

13121. You use the expression "the people of India:" do you think it probable that their opinion would agree with what you have heard in Benares?—Yes.

13122. You are not a Mahomedan yourself?—I am not.

13123. But the evidence you have given principally refers to the consumption by Mahomedans, does it not?—Yes.

13124. Not being a Mahomedan, do you think that you are in as good a position to express an opinion as to the views of the Mahomedan population with regard to the prohibition of opium as if you were a Mahomedan?—I see Mahomedan people very frequently. I am family physician to the ex-Royal Princes of Delhi, resident in Benares. They are a very influential family, and they have a large number of Mahomedan dependents. They are located in a Mahomedan centre, and as their family physician I have frequently to go and see them. I come in contact with all sorts of Mahomedans there, the upper classes as well as the lower. Besides that I have an extensive practice amongst the Mahomedan raises (gentry) of the city.

13125. From your evidence it is clear that a very large number of the Mahomedan population are addicted to the use of opium?—They are.

*[NOTE BY WITNESS.—In the course of my examination before the Royal Commission on Opium yesterday, it was pointed out to me by Sir William Roberts that my observation regarding the number of suicides by opium contained in my printed "Abstract of Evidence" was not borne out by the statistics already taken. As I had not the advantage of seeing any such statistics, I could not on the spur of the moment venture any opinion in the matter. I now beg to point out that no reliable statistics of such suicides can possibly be obtained; because only an insignificant number of suicidal deaths come to the knowledge of the authorities, post-mortem examinations and coroners' inquest being unknown here except in Presidency and Zilla towns, and even there in rare instances. Medical practitioners know and have the opportunity of knowing more than Government statisticians. By the words "if statistics were taken, etc.," in my abstract, I meant to convey that "if it were possible to take statistics of suicidal deaths by opium with any degree of accuracy," etc., etc.

I would desire and venture to hope that my evidence on the point may be considered with the modification noted above.

It is needless to add that people generally try to conceal and suppress such occurrences in order to escape scandal and social degradation.]

13126. You think you have had an opportunity of gauging their opinions, and you believe that they would not object to have the drug prohibited?—At least as far as I have sound in their opinion on the subject, without an exception they are unanimous of opinion that the drug is injurious. With regard to confirmed opium-eaters their only objection on it is that if it was prohibited they might be put to serious difficulties, but if they got their allowance without any trouble, they would not have the slightest objection to prohibition.

13127. You say that the consumption of opium as an indulgence should be put a stop to by legal prohibition have you thought out the means by which you would supply opium for medicinal purposes only?—Other poisons, such as arsenic and strychnia are sold, and if opium were sold in the same way I think that would do.

13128. Your idea is to put opium under the same restriction as poisons in this country?—Yes.

13129. Can you explain what the law in regard to poisons is?—I am not aware of any particular law on the subject. So far as I know crude arsenic can be had from the bazaar from the banias. They sell it, but not to every man. I think they have a certain sort of license to sell such poisons, but they do not sell it to all who go to them. They must have prescriptions from Hakims or Vaidas, otherwise they will not sell.

13130. I suppose there is no large body of people in the country who are anxious to take arsenic habitually?—Certainly not. In the case of opium they are, and there is much greater difficulty.

13131. Much greater difficulty than in dealing with arsenic. Have you any idea how many of these banias there are who sell arsenic, comparing their number, for instance, with opium shops?—I think there are more of bania shops than licensed opium shops.

13132. Then your proposal if adopted would increase the number of places where opium could be bought?—Yes, that would be so.

13133. I admit that if people who wanted to purchase could only purchase under certain conditions, and if you could get thoroughly trustworthy people to sell, you might work it; but I should like to know whether in your opinion you could get such a large number of trustworthy people with respect to a drug which is so much desired as opium?—In the case of opium, certainly we shall not find it work so satisfactorily as with other poisons.

13134. You admit that there is much greater difficulty?—Certainly.

13135. (*Mr. Haridas Vacharidas.*) I believe these licenses for poisonous drugs are issued by the Magistrates?—I believe so.

13136. There are of course drugs, like arsenic and others equally poisonous with opium?—Yes, more poisonous.

13137. Do the people get those drugs more freely?—They are instructed not to sell to every one, so that people cannot get them so easily. If a female member of a family wishes to commit suicide she quietly asks a female servant to get her 4 annas worth of opium. She could easily get that, but if it is classed as a poison the seller will not part with the article so easily.

13138. Opium is easily got although it is a poison—more easily than other poisonous drugs?—Yes.

13139. Do you mean to say that opium should be recognised as a deadly poison, and that its sale should be restricted in the same way as arsenic and other things of that kind?—Yes.

13140. (*Sir James Lyall.*) What is your medical degree?—B. M.

13141. Where did you take it?—At Calcutta Medical College.

13142. Do you administer medicine on the European system?—On the European system. We have to modify it sometimes when we see people of a particular disposition. Generally speaking, we practise on the English method, but we sometimes adopt our practice to the disposition of the people.

13143. Do not a great number of Mahomedans prefer the *Yunani* system?—Yes, some of them do prefer it; but now-a-days most of them give preference to the English system.

13144. There is very little work for the *Yunani* Hakims now in Benares?—They too have an extensive practice in comparison with other practitioners.

13145. The Hindu Vaidas also?—Yes.

13146. They have an extensive practice?—Yes.

13147. You say that opium should be made purchasable from chemists only: what do you mean by chemists?—I would include the banias who sell native drugs.

13148. I suppose there must be thousands of their shops in Benares?—I could not give you an exact idea, but, of course, in every lane you meet one or two shops.

13149. Would these banias supply opium at discretion, or would you make it a rule that you would only give opium on a medical prescription?—They might give it on medical prescriptions, or registered men might be allowed to get their opium; when they are confirmed in the habit it is impossible to deprive them.

13150. You would limit it to medical prescriptions?—Certain men would get a certificate or permission from a Magistrate or public man.

13151. Would it not be very unpopular to make it a rule that a man must not get opium without an order from a Magistrate?—Certainly it will not be looked upon in a very good light by all people, at least by opium consumers.

13152. If you allowed prescriptions, would you also be liberal in that respect, would you allow the *Yunani* Hakims and Vaidas to prescribe?—I do not think they do prescribe large quantities.

13153. Would they have the power to give a prescription to enable a man to get opium?—Certainly not.

13154. Who would be the medical people who would be allowed to give a prescription?—For medical use of course Doctors and Hakims and Vaidas should be allowed to prescribe opium as they do other poisons.

13155. It would be a very good thing for the Hakims and Vaidas if nobody could get opium without their prescription?—Certainly from a professional point of view they might make a good deal out of it.

13156. Have you any experience of the use of opium by villagers, or is your experience practically confined to the city?—Practically to the city.

13157. When you were talking of 90 per cent. of consumers taking it in excess you were talking of the city?—The city of course, but I have some idea of the villages. They do not use opium so largely as the city men do.

13158. You have mentioned that particular patients of yours among the Mahomedans are members of the Delhi Royal family—they are retainers?—Yes.

13159. They are very idle, are they not?—They are Government pensioners.

13160. They are necessarily a very idle class?—Yes, very.

13161. More addicted therefore than other Mahomedans, I suppose?—Of all people here they are mostly addicted to it.

13162. (*Chairman.*) Summing up your evidence, it comes to this, does it not, that in your view the use of opium, like that of alcohol and other stimulants, is productive of much evil, and you would desire to see opium as you would desire to see alcohol and other similar stimulants, prohibited except for medical purposes?—Yes.

13163. And you believe that such a prohibition would be received with favour by the people?—Yes.

13164. As regards the cultivation of the poppy and the manufacture of opium you would leave existing arrangements undisturbed?—Yes.

13165. You do not desire to see any step taken by the Government to interrupt or put an end to the trade in opium with China?—That is so.

13166. (*Mr. Wilson.*) I wish to call your attention to a letter of which I will read a copy from the Secretary of the Government of the North-west Provinces and Oudh to the Inspector-General of Civil Hospitals, North-west Provinces and Oudh, dated Allahabad, 4th December 1893. "Sir, I am directed to inform you that the Royal Commission on Opium will visit these Provinces early in January next and will probably hold sittings at Benares on January 5th 6th and 8th. Lucknow on January 9th to 11th, and at Agra on January 12th to 14th. This Government has been requested to submit to the Government of India a list of witnesses competent to give evidence before the Commission on one or more of the points specified at the foot of this letter, and it is understood that you have selected seven Civil Surgeons, a number of

*Mr. Isan
Chandra
Ray, M.B.*
9 Jan. 1894.

Mr. Isan
Chandra
Roy, M.B.

9 Jan. 1894.

Assistant Surgeons and Hospital Assistants and some non-official Medical practitioners for inclusion in the list. The Commission have asked to be furnished with an abstract of the evidence of each witness, and I am to ask you to obtain from each a brief memorandum of the evidence which he would be able to place before the Commission, that is to say, a statement of facts within his knowledge and of his opinion on the several points, and to submit the memoranda as soon as possible. It might be advisable also, particularly in the case of officials, for the memorandum to contain some short mention of the length and nature of the experience on which the witnesses' evidence is based. I have the honor to be, Sir, your most obedient servant, (Sd.) J. W. , Secretary to Government, North-Western Provinces and Oudh.

Points of evidence :—

(1) The consumption of opium by the different races, and in the different districts of India, and the effect of such consumption on the moral and physical condition of the people ; (2) the disposition of the people of India in regard to (a) the use of opium for non-medical purposes, and (b) their willingness to bear in whole or in part the cost of prohibitive measures ; (3) ; (4) ; (5) the effect of the use of opium from a medical point of view and the matters connected therewith observed by the witness in one or more capacities ; (6) ; (7) the consumption of opium as a ferbrifuge in malarious tracts." This letter has been endorsed as follows :—" Forwarded to Babu Ishan Chunder Roy, M.B., with the request that he will be good enough to furnish the abstract required by the Commission at his very earliest convenience. (Sd.) A. Cameron, Civil Surgeon, Benares, 13th December 1893." —Will you tell me if you received that letter ?—Yes, it was forwarded to me.

13167. Now I will read a letter from the Collector of Benares addressed to yourself, dated 31st December 1893. " Subject.—Has the honor to inform him that the 9th of January has been fixed for his examination at Benares before the Royal Opium Commission. The time and place where he will be required to attend will be communicated to him as soon as it has been settled. (Sd.) J. H. Cameron, for Collector."—Did you receive that ?—Yes.

13168. I will now read another communication from the Collector of Benares to yourself, dated 3rd of January 1894—" Subject.—In Continuation of this office No. 839, dated 31st December 1893, has the honour to inform him that under instructions received to-day from Government, he is not required to attend to give evidence before the Royal Commission on Opium. (Sd.) R. H. Brenton, Officiating Collector." Did you receive that ?—Yes.

13169. Will you tell me when it became known what was the character of the evidence that you were likely to give here ?

The witness withdrew.

(Mr. Dane.) I shall be glad to be allowed to make a statement on the subject.

(Chairman.) We will call an officer representing the

Mr. Ram
Kali
Chaudhuri.

13186. (Mr. Wilson.) I believe you are a retired Subordinate Judge ?—Yes.

13187. And late Member of the Legislative Council of the North-Western Provinces and Oudh ?—Yes.

13188. Have you had experience of all classes of people ?—Yes.

13189. For a long time ?—A very long time.

13190. How long ?—Half a century ; I am now in my sixty-sixth year.

13191. Will you tell us what, in your opinion, are the results of taking opium physically, mentally, and morally ? —The results of the habit of opium-eating, whether considered physically, mentally or morally, are bad and condemnable. The consumer as a general rule, becomes both physically and mentally weak and inactive ; and as a consequence loses courage, and his moral conduct suffers so far as it depends on the energy of body and mind, such as the performance of duties requiring activity. In the early stage of the habit sexual virtue is disregarded where the initial motive was to increase sexual vigour. Where there

—On the receipt of the first letter I prepared my abstract according to the wishes conveyed in that letter, and I sent it in.

13170. To whom ?—To the Civil Surgeon.

13171. (Chairman.) On what date ?—I do not remember the date.

13172. (Mr. Wilson.) You can probably say whether you sent it before the receipt of the second letter or before or after receipt of the third letter ?—Before the receipt of the second letter.

13173. Did you have your evidence printed yourself ?—Yes.

13174. Did you send a printed copy in ?—No, I sent a written copy. I got it printed only three or four days ago. When I received an intimation that I should not be produced as a witness by the Government I got it printed myself.

13175. Can you tell us at what period in connection with those two letters you sent in your written statement ? —I think I got the first letter about the 6th or 7th of December.

13176. If you will look at the date of Dr. Cameron's endorsement you will see that that is not likely ?—Probably it was the 13th when I got the first letter.

13177. Can you give us any idea how long you were preparing and sending in your statement of evidence ?—About a week.

13178. That is some considerable time before the second letter was received ?—I think so.

13179. Are you aware whether any other gentlemen of this city have been placed in a similar position to yourself ? —Yes, I know that three or four other gentlemen have been asked to furnish abstracts and have not been required subsequently to give evidence.

13180. (Chairman.) Can you give us the names of those gentlemen ?—I think Dr. Purn Chander Banerji, Assistant Surgeon.

13181. You yourself are not in the Government service ?—No.

13182. Is the gentleman whom you mention ?—Yes.

13183. Are there any others ?—Hakim Mahomed Jaffer.

13184. Where does he reside ?—In this city ; and there is another Vaid whose name is Kanhya Lal Dikshit. I have not had any talk with them.

13185. Is the precis of the evidence that you sent to Government the same as this ?—Nearly the same I think. I added only the third and fourth paragraphs.

Government at the earliest possible opportunity with reference to the statement we have just heard.

Mr. RAM KALI CHAUDHURI called in and examined.

is little or no means the habit leads the consumer to commit petty thefts and trickeries.

13192. Is opium necessary or believed to be necessary to enable working people to get through their daily toil ?—The consumption of opium is not necessary, nor is it believed to be necessary, to enable working people to get through their daily toil. As a rule, working people have no habit of using opium. Examination of people employed in a mill will prove this.

13193. Is the habit of taking opium looked upon as disgraceful ?—Yes, the man loses the esteem of the people—he suffers in his reputation when he takes it as a matter of indulgence.

13194. Is it desirable to prohibit the sale of opium except for medical purposes ? Is public opinion in favour of the adoption of such a measure, and in what way could the loss of revenue resulting from such prohibition best be met ?—It is desirable to prohibit the sale of opium, except for medical purposes ; and I consider the public opinion to be in favour of such a measure. But I am absolutely opposed—and I think my countrymen in general are too—

to the prohibition of the sale unless and until the loss of public revenue resulting therefrom be made up in a way without entailing the least financial burden on the poor and already over-burdened people of India, as well as to measures of economy affecting the underpaid and over-worked body of the subordinate service. The loss can be met by retrenchments in the Home charges, Military charges, and those incurred in carrying out what is called the forward policy beyond the natural frontier of India. Burma is a burden to India; it should be separated, and made to pay its own expenditure. I may add that experience has proved the efficiency of the natives of India in the Government service. Their service being cheaper, they should be substituted for Europeans in every possible case; this would result in a great saving.

13195. Is it your opinion that if some prohibitive measure be adopted it will be desirable to make special provision by establishing a register of opium consumers for the wants of those who are already habituated to the use of the drug?—Yes; it is desirable.

13196. (*Sir William Roberts.*) Is there a marked difference between those who take opium in moderate quantities and those who take it in excessive quantities?—Yes.

13197. What do you think is the proportion of moderate consumers to excessive consumers?—I cannot exactly say the percentage of excessive consumers. I very seldom see them in public. Perhaps in a hundred I may have met one or two.

13198. Does the statement you have made in answer to Mr. Wilson as to the results of opium-eating apply to moderate consumers or to excessive consumers?—Both to moderate and excessive eaters.

13199. (*Mr. Mowbray.*) You state that an examination of people employed in a mill proves that working people have no habit of using opium: have you had any practical experience of that?—I have had some experience. I was some years ago at Cawnpore where there are mills. I went to them, and I do not recollect to have seen any working man there taking opium.

13200. Were you directly interested as a partner in any of the mills?—No; I was in the Government service at the time—I was a Subordinate Judge.

13201. Did you ask the people in the mills whether they took opium or not?—No.

13202. All you mean is that you did not see from their appearance that they took opium?—Yes.

13203. You are aware that many people have said that from looking at a man it is not very easy to say whether he takes opium or not?—In the case of moderate eaters it is difficult to say, but an excessive eater can be easily distinguished. In support of my view in this matter I may say that I have built a large house in the city where more than 100 people were employed, and I did not see anybody taking opium in order to do his daily toil.

13204. They might have taken it before they came to work in the morning?—They might.

13205. Is not that the usual time for opium-eaters to take their pill—in the morning or evening?—They are poor people. It is very unlikely that such people would do it.

13206. All you can say is that you never saw them taking it?—Yes.

13207. And that you did not observe any traces of excessive consumption; you never saw that they had been opium-eaters?—No.

13208. What do you mean by "medical purposes." Supposing a man has been once recommended by his native doctor to take opium for some bowel complaint, and he has found it do him good, and he then goes on and takes it, I suppose that is a very common case?—Yes.

13209. Do you consider that a medical use of opium, when the man goes on taking it without any further orders from his doctor?—After the termination of the disease, if he continues the use of the opium I should not say that he is taking it for medical purposes.

13210. In fact you would only allow medical uses to be those for which a doctor prescribed opium?—Quite so.

13211. Would you allow all classes to prescribe opium?—No. as far as my experience goes I have found that doctors brought up in the English system of medicine have the best knowledge that can be obtained in the present age, and that they are the best practitioners. I can only rely on them. I cannot rely on Indian doctors or hakims.

13212. Then what it comes to is that opium for medical use means that which is given to a person who has it recommended to him by prescription from a European medical man?—A European or a native learned in European science.

13213. Do you reside in Benares?—Yes.

13214. Taking the district of Benares, how many men are there qualified in that way as Europeans or natives practising according to the European method to whom you think the power of prescribing medicine could be satisfactorily entrusted?—There may be 25 or 30 throughout the whole district, including the city, who pretend to practise according to the English method of treatment, but I have not much reliance on them; they are mere quacks. It is only some three or four perhaps on whom I can rely in the city.

13215. Can you say anything about the district outside?—As far as my knowledge outside goes there is no English doctor outside the city.

13216. None at all?—None.

13217. I presume from what you have said that you would not be in favour of allowing every bania who may sell arsenic to sell opium in the same way?—Not indiscriminately. I may allow such banias of whose knowledge I have a personal knowledge, but not all banias who sell drugs and other things.

13218. Do you think it possible for anybody to draw a line and say that he would authorise one bania to sell and not another?—It will be the duty of those who are in power who dispense licenses in this matter to make acquaintance with the dealers in the city and then, after having personal knowledge of them, to give them a license.

13219. I suppose you can realize the danger of untrustworthy people being allowed by a license to sell opium as they at present sell arsenic: there being a greater demand for opium than there is for arsenic, would there not be a risk in that case of untrustworthy persons allowing people to get as much opium as they please?—Quite so.

13220. (*Mr Haridas Veharidas.*) As you have been all your time in the Government service, I presume that from your youth you have been addicted to the European method?—Yes.

13221. And you have been treated in that manner?—Yes.

13222. I believe you know that there are many natives, the majority of natives, who trust in Hakims and Vaidas?—I know that.

13223. You are speaking of your own view?—When I commence getting myself or any member of my family treated by a doctor, I always considered what persons I should prefer to call to my house. As far as my knowledge goes with regard to medicine, physiology, anatomy, and other things, European practitioners have gone so far that our countrymen have not yet dreamt of it, and that consideration has led me to prefer European doctors. Of course medicine is an uncertain thing and can only be established after a long experience, but there are other subsidiary sciences to the mere science of medicine in which Europeans are far advanced, and that is a consideration with me in preferring the European system of medicine.

13224. That is your own individual opinion?—Yes, I do not say it is the universal opinion.

13225. You think that natives brought up in the English method of medicine may be trusted, but not Hakims and Vaidas?—That is my opinion.

13226. You will remember that you are dealing with the mass and not only with a limited number of educated people?—At the same time you are dealing with the health of our people, and if you trust to imperfectly educated persons the health of our people will not be served.

13227. You propose that in every village there shall be a medical man trained up in the European system?—It is a very difficult thing and up to the present time it cannot be controlled.

13228. Will you compare the effects of opium with those of alcohol?—I am not used to alcohol. I belong to the Total Abstinence Society.

13229. But the effects of opium and alcohol are the very opposite?—Alcohol makes a man violent; opium deadens a man.

13230. Is alcohol prohibited by our religion?—Yes.

13231. Is opium so expressly prohibited?—I think so. I have not read in the Shastras.

13232. You know that alcohol is prohibited?—Yes.

Mr. Ram
Kali
Chaudhuri.

9 Jan. 1894.

Mr. Ram
Kali
Chaudhuri.

Jan. 1894.

13233. You do not know that opium is expressly prohibited?—I know that things which are intoxicants are prohibited.

13234. But opium is not as expressly prohibited as alcohol is?—Perhaps opium was not known as a medicine in India when those injunctions were laid down. It may have been imported into India from other countries. *Aiphen* has a certain resemblance to *Aiphen*.

13235. I mean that opium is not expressly prohibited by our religion, but, as you say, opium has not such bad effects as alcohol has?—I do not exactly say that opium has no such bad effects as alcohol. I said that opium deadens a man.

13236. Alcohol and opium are two different things?—Yes.

13237. Would you put alcohol on the same footing as to its bad effects? In comparing the two cases I should say that alcohol is worse than opium.

13238. If a person were inclined to take some stimulant or indulgence, would you like him to take alcohol in preference to opium, or opium in preference to alcohol?—I should like him to use neither.

13239 (*Mr. Fanshawe*). Is it not the case that among the cultivators and poorer people opium is used as a domestic remedy in the case of pains, rheumatism, and other ailments?—Yes.

13240. Your proposals would not provide for these people being able to get opium for that purpose; that would be one of the great defects of any such proposals?—Quite so.

13241. We have been told by a number of witnesses that people in middle life frequently take opium as a restorative, is that within your experience?—No, it is not within my experience. I was also advised to take opium.

13242. You do not know of any cases where people in middle life have taken opium as a restorative; but if people in middle life do take it in this way, is it to be said that they lose the esteem of their friends and the people around them?—Yes, they do.

13243. As much as others?—They would lose their reputation.

13244. Do you think that if opium were prohibited there would be any danger of an increased consumption of alcohol or *gunja*?—I do not think so.

13245. If you took away opium from the classes of people who now consume it, do you think there would be any likelihood of their turning to another stimulant?—I do not think so.

13246. Your opinions generally would apply to the North-Western Provinces of which you have experience?—Quite so.

13247. (*Sir James Lyall*) It is a fact, is it not, that opium consumption in the North-Western Provinces excepting amongst Mahomedans and in a few cities, is probably smaller than it is in any other part of India?—My experience runs, as I have said, in the North-Western Provinces, but I have no experience of other parts of India. From information that I have received in Rajputana and the Punjab, and perhaps in the Central Provinces, there is more consumption of opium than in other places.

13248. And in Bengal?—In some parts, not in all.

13249. When you speak of public opinion being in favour of prohibition you are only answering for the North-Western Provinces I suppose; you do not mean public opinion throughout India?—It applies to all India. I know the views of almost all respectable people throughout India.

13250. How do you know their views?—I belong to the Total Abstinence Association of Benares, and as such I have occasionally the advantage of receiving communications from other parts of the country. I hear from other friends and I get information in papers. Those are the sources of my knowledge.

13251. Those communications and these papers I suppose

are mainly written by Abstinence people?—Those who wrote in the papers may be so.

13252. (*The Maharaja of Darbhanga*). With regard to the feelings of the ryots, do you think they like cultivating opium or not?—I have no personal knowledge of this part of the subject, but I have information on the subject from people who have been engaged in the cultivation of opium. I have asked them and they have said that they do not hold it in any dislike as people did indigo in Bengal before the indigo agitation.

13253. Is it a paying crop?—It is as paying as wheat and other crops.

13254. Are potatoes and sugarcane more paying?—Sugarcane is a more profitable crop, but it requires greater labour than other crops.

13255. How about potatoes?—Potatoes too.

13256. With regard to the rent payable for opium land in the North-Western Provinces, I believe you know that in Behar and Bengal in the permanently settled districts the rent of the land is fixed according to the quality of the land. Yesterday we had a witness who told us that there was a special rate for land on which opium was cultivated; what is your experience with regard to that point?—Opium lands have not a fixed rate of rent. When I was in Government service I was sometimes in places where there was opium cultivation, but opium is generally cultivated in lands adjoining villages, and such lands are generally very fertile. In the villages they are generally rented for five or six or seven rupees per annum.

13257. You mean to say that in the North-Western Provinces rent is not fixed according to the crops grown, but according to the quality of the land?—Yes.

13258. (*Chairman*). Do you take any interest in the proceedings of the Indian National Congress?—Yes, I do.

13259. Has the subject of the prohibition of the use of opium, except under medical certificate, ever been considered by that body?—No.

13260. They have never expressed any opinion in favour of such a prohibition?—No, up to the present time the Congress people have not taken up the question of opium. They took up the question of temperance, and by that they meant that liquor was not to be sold or used.

13261. Has the Congress made any recommendations with reference to the restrictions upon the sale of alcohol?—Yes, they have some resolutions.

13262. But they have not so dealt with opium?—No, opium is not dealt with.

13263. We may gather from that circumstance that the members of the Congress entertain a more decided opinion with reference to the restrictions upon alcohol than they do with reference to restrictions upon opium?—I think that when the resolution about the prohibition of liquor or restriction upon liquor was carried by the Congress there was no thought of comparison between opium and alcohol. They had no idea of opium at the time, that is why opium was left out.

13264. You agree, do you not, that the state of opinion as represented in that Congress is less advanced and matured with reference to opium than it is with reference to alcohol?—They have given us no opinion about opium.

13265. They have not felt that the state of opinion was sufficiently settled and determined upon that question?—When they carried that resolution the question of opium was not in their mind at all so that there was no comparison between opium and alcohol at that time in their minds. We only took up the alcohol question, and resolved upon restriction.

13266. We must not analyse motives of which we know nothing, but the simple fact is that recommendations have been made with regard to restrictions upon alcohol and no resolutions have been passed with reference to restrictions upon the use of opium?—That is so.

The witness withdrew.

MOHUNT KESHO RAM ROY called in and examined.

Mohunt
Kesho Ram
Roy.

13267. (*Mr. Wilson*). Will you tell us what is the meaning of the word "Mohunt"?—It means a man whose duty it is to make people virtuous.

13268. A teacher?—A religious teacher.

13269. Were you formerly in the public service?—Yes.

13270. As station master and school master?—Yes.

13271. Also teacher to several Rajas?—Yes.

13272. What have you been doing the last ten years?—While I was station master at Behar I was very much displeased with the present management of the Government

about intoxicants and other evils going on in the city; so I left my service and shut myself in a room determined not to see the world again; but after being ten years shut up I made up my mind to come out again and cry before the public to see if they could be moved. I then came out and worked and have been working and making my countrymen sensible of their duty in the world.

13273. Have you been in Benares preaching total abstinence?—Yes.

13274. Can you give us any idea of how many persons you have induced to sign the total abstinence pledge?—We first make people half abstainers; it is very difficult to make a man a total abstainer at first. I think I have made about 50,000 men abstainers in Benares. and in other places—Mirzapur, Agra, Allahabad, Cawnpore, Fyzabad, Lucknow, Delhi, etc.—about the same number.

13275. I believe the pledge engages those who sign it to be total abstainers from drink and drugs and includes a promise to honour father and mother, to support wife and children, not to give false evidence, not to visit gambling houses and brothels, to pray to the God in whom they believe every morning that they may receive help to keep this pledge?—Yes.

13276. What do you think of opium unless it is prescribed by a doctor or physician?—It is only prescribed by those doctors who have not much acquaintance with medicine; properly speaking, it is not a medicine at all.

13277. What do you think of opium when it is not prescribed by a doctor at all?—It is very bad.

13278. Is it taken by young men for sensual purposes?—Yes.

13279. What is the effect of the habit otherwise? Do you think it has a bad effect in regard to constipation?—Yes.

13280. And the digestive powers?—Yes.

13281. Are the people inclined to be sleepy?—Yes.

13282. And idle and useless members of society?—Yes.

13283. Are they tempted to become thieves?—Yes. They commence stealing shoes when people put them off outside the doors, which is a custom amongst us.

13284. What do you say as to those who take opium moderately without increasing the dose?—There is no moderation. First moderation, and then indulgence—that is the case with all sorts of intoxicants.

13285. Is opium taken by old men after 40 to keep up their health?—Yes, by some when they are advised by a Hakim or doctor.

13286. Does it produce a good result?—I have not seen any improvement in their health by taking medicine in old age. They have a belief in these doctors and they lose their health.

13287. Is it your opinion that it produces evil results?—Yes, because I have seen many.

13288. They have become idlers and die miserably?—Yes.

13289. What do you think of the opportunities given for the sale of opium?—The best thing in my humble opinion would be to have a proclamation in each city to the effect that all opium-eaters should declare that they are opium-eaters and get a ticket. That would reduce the number and they would become good men afterwards.

13290. You think there is too much used at present?—Not too much used at present in Benares; it is only used in Mahomedan cities not in Benares. Still to please men is generally the view of the present Government, and that would be the best plan.

13291. To give tickets to those who are to be allowed to have it?—Yes, to consumers.

13292. If you could have your own way you would do away with it entirely?—Yes. Two years ago there was a riot in Benares and hundreds of opium-eaters and the consumers of other drugs were caught by the police and

sent to jail and remained there some of them for two or three months without any sort of intoxicants.

13293. Do you think that if there was some law severely restricting or entirely prohibiting the sale of opium, except for medical purposes, that would meet with the approval of the great mass of the people?—Yes, and all men in India, especially the women, will pray to their God for long life to Queen Victoria, our Empress.

13294. If that were done?—Yes, not only with regard to opium, but all sorts of intoxicants.

13295. (Mr. Mowbray.) You are not a Mahomedan?—No.

13296. You are giving us the views of the Mahomedans?—Some Mahomedans say ten per cent. those only who have no faith in the Koran, or are not strict followers of the Koran, indulge themselves.

13297. They are the principal consumers of opium in Benares?—Yes.

13298. You come to express the views of the Mahomedans as to their desire to have opium prohibited?—I can express their views also. I represent the whole of Benares and the whole North-Western Provinces. I could get the signatures of all Benares to-morrow if I liked.

13299. (Mr. Haridas Voharidas.) Is not Mohunt a word which means the head of a particular Mut?—Yes.

13300. Where the Gosains live?—Yes.

13301. Are you the head of a Mut?—I am not that sort of Mohunt; there are several sorts.

13302. What are you the head of?—I am the head of the whole of Benares. All India regards me.

13303. You passed ten years of your life shut up?—Yes.

13304. Of course you are not a family man?—Now I am not a family man.

13305. You were?—Yes.

13306. Before you were a Mohunt?—Yes.

13307. Do you keep money with you?—Yes, I keep money and I keep books. I keep house and everything. I simply keep aloof from bad things.

13308. Perhaps you have not a clear idea of Mohunts?—I can explain if you like. There are many kinds of Mohunts.

13309. You say that in order to get a piece opium-eaters become thieves?—Yes.

13310. Do you mean all classes who take opium, or only the poor?—Most of them.

13311. You mean those who can hardly earn their bread; you do not mean that a rich man becomes a thief to get a piece?—Rich men will not be allowed by their parents or guardians to take opium. If they do it they will necessarily become thieves because their parents would be displeased and not give them money, and they must steal it from their houses or others.

13312. But suppose these rich men are themselves masters of houses: will they also, in order to get a piece, become thieves?—If masters become consumers they will ruin their whole families.

13313. (Sir James Lyall.) Did I understand you to say that not much opium was used in Benares, but that it would be advisable to have some new rules to please the present Government?—Yes.

13314. What present Government do you mean?—The English Government by whom we are governed.

13315. By whom the Commission has been sent out?—Yes.

13316. You do not think it necessary yourself, but that to please the Government it may be as well to have some new rules?—Yes, because the country is being ruined; we are all starving; there are 50,000 people in Benares half starving.

13317. I understand that you made yourself a Mohunt, that you conferred the honour upon yourself?—Yes, there are certain rules binding on Mohunts.

The witness withdrew.

Dr. A. C. BANARJEE called in and examined.

13318. (Sir William Roberts.) I believe you are a medical practitioner in Allahabad?—Yes.

13319. You are a fully trained and qualified man?—Yes.

13320. You have lately been House Physician at the Medical College Hospital, Calcutta?—Yes.

13321. How long have you been a medical practitioner?—For the last 13½ years.

13322. What have you observed?—In the course of my practice, extending over a period of 15 years and a half, among a mixed population of Hindustanis, Bengalis, Mahomed-

Mohunt
Kesho Ram
Roy.

Dr. A. C.
Banarjee.

Dr. A. C.
Barnaji.
9 Jan. 1894.

ans and Christians, I have not found any deterioration in the moral and physical condition of the people which can be attributed solely to the use of opium in moderate doses. The excessive use has in some cases produced symptoms of inactivity of brain power.

13323. What do you think would be the feeling of the people with regard to prohibitive measures?—The mass of the people will not like the prohibitive measure introduced by Government. The people will be unable to bear the extra taxation likely to be imposed if the revenue from opium is reduced.

13324. What have you noticed to be the effect of opium?—In the following chronic diseases opium has been found to be of great use when taken habitually: rheumatism; diabetes, diarrhoea, asthma, and bronchitis. It is an invaluable medicine in cases of peritonitis and after-pains, and in all kinds of inflammatory and nervous pains.

13325. As a medical man, a native of India, and practising among Indians, I should like to ask your opinion with regard to a point that has often been referred to by the Commission, namely, the use of opium as a promoter of sensual appetites. Do you think that opium has any real aphrodisiac power any more than any other stimulants such as alcohol?—As far as I can understand, it is more as a benumbment of sensation, and therefore prolongs the sexual act.

13326. You have no precise knowledge on the subject?—No.

13327. You know that we in Europe do not believe much in aphrodisiacs?—I also do not believe in aphrodisiacs.

The witness withdrew.

Mr. Jagdeva
Prasad Gour.

Mr. JAGDEVA PRASAD GOUR called in and examined.

13338. (Mr. Wilson.) Have you been nominated by the Kashi Sujan Somaj of Benares to give evidence before the Commission?—Yes.

13339. Will you give us a translation of the title of the Society?—It means an association of good people.

13340. Do you consider that opium is a good thing?—Never.

13341. Except for medicine?—Except for medicine.

13342. You think that opium-smoking is demoralizing in this country?—Yes.

13343. Doing a great deal of harm?—Yes.

13344. Do you think that opium-eating is doing a great deal of harm?—If it is advised by a doctor and taken medicinally, I do not think it does any harm; but if people take it themselves to satisfy their lust and pleasure, I think it is the worst thing.

13345. You think that the habit of opium-eating, except under medical advice, is very bad?—Yes.

13346. Do you know anything about the cultivation of the poppy?—Yes.

13347. Do you think it is as profitable as other crops?—No, it is not profitable. Opium cultivation does not give so much profit to the cultivators as corn and sugarcane would do.

13348. Do high caste people use it?—No, they do not generally sow poppy.

13349. Why?—Because it is considered very disgraceful. If high caste people use it they are not looked upon very well by their caste people. I have a particular instance of this. I have a relation living at Nizamabad in the Azimgarh district who sowed poppy. Unfortunately by mistake some opium was found in his house. The officials of the Opium Department troubled him very much, and from that day all high caste people in the pargana did not like to take any interest in opium cultivation.

13350. If the opium traffic were discouraged, what would people think about it as regards fresh taxes?—People will consider that they are tyrannised over, and they will lose confidence in the Government. They will think that Government is bent upon adding taxation upon taxation. They will also think that Government is inclined to bring misery upon the people.

13351. If the loss of revenue was paid by England or in some other way without fresh taxation, what would you think about it then?—They would be very glad, and would be unanimously of opinion that the opium traffic should at

13328. You think they are fanciful?—Yes, it is more the imagination. The physician says that such a medicine will do good, and therefore the patient thinks it will do him good.

13329. You do not think as a matter of fact that opium produces a demoralizing effect in regard to the sexual function?—I do not think so.

13330. I believe that a great many substances are popularly used in India as aphrodisiacs?—Yes.

13331. Would you name a few?—Nux Vomica seeds, preparations of iron, Cantharides, also preparations of crude Phosphate of Lime called burnt crabs.

13332. Are there any that you know of that are peculiar to India, that are popular and not borrowed from European sources?—There are some medicines mentioned in the Hindu Pharmacopoeia that are used as aphrodisiacs and prescribed by Vaidas and are also in the Yunani Pharmacopoeia prescribed by Mahomedan physicians.

13333. You know that from your own reading?—Yes.

13334. You think that opium only takes rank as one of these numerous aphrodisiacs in use?—Not more than that.

13335. (Mr. Pease.) Do you think that taking opium is a good habit?—For chronic diseases.

13336. For persons in health?—I do not think it is; it is a bad habit for persons in health.

13337. (Mr. Wilson.) Do you think that opium is of any particular use in warding off malarial fever?—I have no experience of that.

once be stopped in this country except for medicinal purposes.

13352. (Mr. Mowbray.) Where do you live?—I have been living in the Azimgarh district.

13353. Where are you living now?—My family lives at Nizambar; I generally live in Benares.

13354. In the city?—In the city.

13355. How many people belong to this Society of yours?—I do not remember exactly the number of members, but we have close on 50 members.

13356. I hope they are not all the good men in Benares?—I do not think they are good men all over the earth. Everywhere there are good as well as bad—London, Paris, and elsewhere.

13357. But this is a special society of good men in Benares?—Yes, first we test them to know what kind of men they are, then they are accepted as members.

13358. There are 50 of them?—I think close on 50.

13359. You have come here as their witness?—Yes.

13360. Have you any practical knowledge of agriculture?—I have a little.

13361. Of what kind?—Not sowing corn. I do not sow, but I have some land in the name of my wife and it is sown.

13362. By your tenants?—By the tenants and paid labourers.

13363. That is your practical knowledge of agriculture?—Yes.

13364. (Mr. Haridas Veharidas.) Do you grow poppy on your land?—I would never advise any of the men under me to do it because it is a great misery.

13365. Are you a Brahmin?—No, a Khayasth; I am a total abstainer and a member of the Benares Total Abstinence Society.

13366. (Sir James Lyall.) What is your age?—About 28.

13367. Have you any profession?—I am a Government servant.

13368. In what office?—I am a clerk in the Sub-Registry and Notary Public Office, Benares.

13369. What is your salary?—Rs. 20.

13370. Have you been there long?—For ten years.

13371. On Rs. 20?—Yes, the reason being that I do not like to leave Benares; I do not wish to go anywhere else.

The witness withdrew.

PANDIT KANHIYA LAL DIKSHIT called in and examined (through an interpreter).

13372. (*Mr. Wilson.*) Are you a Vaidya?—Yes.

13373. That is, a Hindu doctor?—Yes.

13374. I believe you are also a landholder and proprietor of ten villages?—Yes.

13375. You have had experience among Hindus, Mahomedans and Christians?—Yes.

13376. For how many years have you known anything about opium?—50 years.

13377. How old are you?—72.

13378. What special opportunities have you had for observation?—In the course of my medical practice I have gathered experience of opium consumers. In one of my villages poppy is cultivated. From my professional practice I have come to know that opium is a poison and that its consumption leads to other consequences.

13379. What are the results of taking opium, physically, mentally, and morally?—The opium dries the entire system—the blood, semen, muscles, and the bones—and the man becomes lean and weak and loses his appetite.

13380. What is the effect on the man's power of work?—It diminishes his power of work.

13381. In what proportion of cases do you think injurious results follow the taking of opium?—Twenty-five per cent.

13382. Is opium believed to be a protective against fever?—No.

13383. Do you think that it is really a protective?—No.

13384. Is it necessary to enable working people to get through their work?—They can do their work without it.

13385. Is the taking of opium disgraceful?—It is very disgraceful.

13386. Do you say that in reference to smoking, or eating or both?—Both.

13387. Does the existing system of granting licenses tend to spread the habit of taking opium?—Yes, it tends to spread it.

13388. Is it desirable to prohibit the sale of opium except for medical purposes?—It should be given when prescribed as a medicine. It should also be given to habitual consumers, because if they do not get opium they will die.

13389. If there were some measure of prohibition except for medicinal purposes, would the people at large approve of such a measure?—Yes.

13390. Is the cultivation of the poppy generally popular, and if so, why?—The people get their money in advance, therefore they like to cultivate it.

13391. Is the poppy more profitable than other crops which might be raised on the same soil?—It is not so profitable as sugarcane.

13392. Why do not the people grow sugarcane?—Such is the order of the officials.

13393. Is there any pressure brought to bear by Government officials to induce cultivators to grow poppy in preference to other things?—Girdawars move round and when the people do not cultivate opium as much as is desired they are punished.

13394. How?—I am not in a position to say.

The witness withdrew.

MAULAVI AMANAT-ULLAH called in and examined (through an interpreter).

13413. (*Sir James Lyall.*) Will you state who you are and where you live?—I am sixty-one years of age, am a son of Hazrat Maulana Muhammad Fasih Sahib Rahmat-ul-Lah Allva, and am a resident of Ghazipur. I am the Murshid (High Priest) of the Mahomedans of India, and am looked upon by them as their guide. From time immemorial my family has been highly respected.

The Moghal Emperors and Amirs of India have also held my family in high esteem. The Emperors of Delhi were the disciples of my forefathers. Even now the Princes of Delhi resident at Benares are my disciples. I have frequently to go out on tour to visit important cities from Calcutta to Delhi, also to Bombay, etc., with a view to propagate the name of God and to see that my disciples are acting up to the tents of my religion.

13395. Have you known anyone who was punished?—If they used to cultivate 4 bighas, and then only cultivated 3, they are asked to pay for the one that they have not cultivated. They are fined and called upon to explain why they did not cultivate.

13396. (*Sir James Lyall.*) Do you know anyone who has been fined?—I cannot mention any name.

13397. Do you think that if the Zilladar left the people alone and did not press them there would be as much poppy grown as there is now?—It would be diminished.

13398. Do the people know that the ryots may please themselves and do as they like?—They are under the impression that if they do not cultivate the poppy they will be punished in some way. If this impression were removed, they would prefer to cultivate sugarcane which is more profitable.

13399. (*Mr. Fanshawe.*) Do you wish us to understand that all cultivators who grow poppy can also grow sugarcane in the same conditions and on the same soil?—It is more profitable to grow sugarcane.

13400. Can all cultivators in the village who are in the habit of growing poppy grow sugarcane in the same place?—Yes, opium requires more labour.

13401. (*Sir James Lyall.*) You say that cultivators are under the idea that they will be fined if they do not cultivate the poppy; is it not the case that a great many cultivators do stop cultivating poppy?—It is only low people who do it on account of fear. High class people do not.

13402. Do not many low caste people give it up?—They have to tender their resignation, and when the resignation is accepted they can do it.

13403. You think it is only if a man stops cultivation without his resignation being accepted that he is fined?—Yes.

13404. Where are your ten villages?—Three villages in this district and seven in the district of Azingarh.

13405. You say that people who want opium for medical purposes should be allowed to get it on certificate, who would give those certificates?—Doctors, Europeans, Hakims and Vaid.

13406. Cannot anybody who likes set up as a Hakim or Vaid without any degree or education?—Yes.

13407. If any Vaid or Hakim could prescribe opium, and that was the only way of getting opium, would not a great many young men set up as Vaid and Hakims?—No, that would not be the case.

13408. (*Chairman.*) You have expressed a strong view as to opium, what are your views with regard to alcohol?—From a religious point of view or a physiological point of view?

13409. Both?—Anything which intoxicates or stupifies the intellect of man is bad.

13410. Therefore it is desirable to prohibit its use, except for medical purposes?—Yes.

13411. (*Sir William Roberts.*) How far are opium-eating and opium-smoking prevalent among Mahomedans, Hindus and Native Christians?—75 per cent. of Mahomedans, 25 per cent. of Hindus, and 5 per cent. of Native Christians are opium-eaters and opium-smokers.

13412. Do you mean 75 per cent. of the adult male Mahomedans, or of the whole population?—Only men.

Pandit
Kanhya Lal
Dikshit.

9 Jan. 1894.

Maulavi
Amanat-
ullah.

13414. What is your opinion with regard to poppy cultivation?—There are thousands of cultivators who are benefited by poppy cultivation. If this privilege be withdrawn, or if any change in existing arrangements be made, the distress amongst the agricultural class would be great. So far as I have seen, the cultivator feels greatly aggrieved if he is for any departmental reasons prohibited from the right of cultivation and does his very best to regain it. I have during my tours frequently come across such aggrieved cultivators. The advantages of the cultivator are two-fold. He gets an advance without interest at a time when he has to pay a portion of land rent, and which, even after making this payment, leaves him a margin for defraying the expenses of sowing, weeding, and watering of the poppy and other crop, and as opium finds a fixed market without any fluctuation, he considers the produce of his field as

Maulavi
Amanat-
ullah.

9 Jan. 1894.

money itself and he is almost free from the troubles which the villa e mahajan generally causes to others not cultivating poppy.

13415. Have you heard of what the common people think about the proposal to abolish the cultivation of the poppy?—The people here are afraid that by the abolition of the Opium Department taxation will be doubled or trebled. The masses of India are not yet so educated as to understand fully the motive and policy of the Government. It would then be unfair to place the peoples of Hindustan on the same level as the peoples of the other civilised countries of the globe. Under these circumstances, to abolish a trade which is profitable in a very high degree both to the rulers and to the ruled would by no means be politic or desirable. The result of closing the production of such a valuable crop would be most disastrous to the country. Distress will prevail and crime will increase, attended perhaps with other troubles also.

13416. What proportion of people that you know take opium?—Amongst the Indian populations the proportion of those who take opium in some shape or other is very large. Of these there may be some who have become addicted to the vice for the sake of the gratification of sensual pleasures, but the rest have undoubtedly taken to it for the cure or relief of diseases for which medicine has no effect. At the birth of a child a decoction of opium known as *ghotee* is given to it for 40 days, and I do not think that there is any Indian who has not used the drug for some reason or other four or five times in his life. Upon opium-eaters different diseases do not easily have an injurious effect. The adage in Persian is that "opium is in itself a disease, but it is a remedy for all diseases." For sore-eyes and rheumatism opium is most efficacious.

13417. What effects have you observed of the opium-eating habit?—Opium-eaters are seldom found to be affected with severe diseases, and during my tour for the propagation of the name of God I have never come across an opium-eater who is afflicted. Cough, cold, etc., are soothed as efficiently by opium as ink by blotting-paper. Under such circumstances when the very existence of crores of persons depend upon the use of opium, to prohibit its cultivation would be sending so many, as it were, alive into the grave, and it is obvious that should the cultivation of poppy be prohibited, the use of liquor, *bharg* and *ganja*, all of which are forbidden by all religions, will increase. There are thousands of my disciples who are opium-eaters, but I have never seen that there has been any injurious effect from its use. The *Ain-i-Akbari* shows that opium was largely used in Malwa, and in a footnote of that book, page 384, it is stated that Jallaludin Khorasani used to take opium as cheese from his "mother's hands."

13418. Is there any prohibition of opium in your religious books?—According to our religious books all intoxicants are forbidden, but opium, if taken in moderate doses in the way of medicine, does not come under the same category as alcohol. There is no religion in which the use of liquor is not forbidden. As the effects of alcohol are very injurious, it is therefore necessary that steps should be taken to prohibit or reduce the consumption of liquor to a minimum.

13419. What is your opinion upon the proposals to prohibit poppy cultivation?—I would desire to state that I feel firmly convinced that the prohibition of poppy cultivation and the use of the drug will cause serious and widespread discontent amongst the people. It is now more than 40 years that I have been travelling through the districts of Western and Northern India, Rajputana and other provinces, and I can say from my own experience that opium in some shape or other is used by the Indian princes, the nobles, and the middle and the lower classes. Thus in that large section of the population which uses opium all classes of the community are represented. Will not then the discontent caused by the prohibition of poppy be general?—Granting that the opium-eating class forms a minority, there remains the fact that the use of opium is not looked down upon and is not forbidden by religious books. The sufferings of the opium-eaters to whom opium is more essential than food will naturally therefore draw round them in immensely large numbers of sympathisers, and in the cases of princes and nobles, their subjects and retainers, who will misunder-

stand the wishes of Government, exaggerate and magnify the unfairness with which they were treated, and thus in no time discontent and dissatisfaction will prevail throughout India, which might lead to serious results in the future. Under these circumstances the only policy that should be adopted in the interests of both the Government and the people is to leave matters alone and not interfere with existing arrangements.

13420. (The Maharaja of Darbhanga.) You say that the Priests of Delhi resident at Benares are your disciples?—Yes, my family was also loyal to the existing British Government, and for that reason the Government have exempted me from the operation of the Arms Act. I earnestly pray that the British Government may continue to exist in India in peace and prosperity.

13421. You say that you are the Murshid or High Priest of the Mahomedans in India, do you mean that all Mahomedans in India are your disciples?—No, most people consider me to be their Murshid or Priest.

13422. Some of them?—50,000; or a lakh.

13423. What is the population of Mahomedans in India?—I do not know.

13424. Is it a million, or two millions?—I cannot say.

13425. You say there is no religious injunction against the use of opium, by that I mean that the Koran does not forbid the use of opium?—No.

13426. Does the word "Khum" mean an intoxicant?—It means wine.

13427. In the Hadis, how is the word Khum defined?—It means that which intoxicates.

13428. Does it not mean that which prompts lassitude, and if I show you a passage in the Hadis where it is so defined, will you accept it as conclusive evidence?—For a long time wine has been prohibited, but opium has not been prohibited.

13429. Do you mean that opium is not intoxicating?—It does not intoxicate.

13430. (Mr. Wilson.) Do you consider that the existing arrangements of the Government with reference to the cultivation of the poppy are perfect?—Yes, perfect.

13431. Do you consider that the existing arrangements of the Government with reference to the sale and distribution of opium in India are perfect?—They are also perfect.

13432. Can they be improved?—They cannot be improved.

13433. When you travel about propagating the name of God, do you advise your disciples to take opium?—No.

13434. If it is so good, why do you not advise them to take it?—It is one thing to call it a good thing, it is another thing to use it.

13435. Do you advise them to take it?—I neither advise them to take it nor dissuade them from it.

13436. You are perfectly indifferent?—I neither order nor prohibit. I come not preaching on matters of religion. I do not deal with the question of opium at all.

13437. Will you explain what you mean by saying that the "sufferings of opium-eaters (to whom opium is more essential than food) will naturally therefore draw round them immensely large numbers of sympathisers"; do you mean that there are persons who can live upon opium and without food?—Opium is dearer to them than food. If at any particular time they do not get food, that will no matter much, but if they do not get opium, they will nearly die.

13438. (Mr. Hariadas Veharidas.) Do you advise that alcohol should not be used?—Yes.

13439. Why?—It is considered to be prohibited according to my religion.

13440. Alcohol is expressly prohibited, but opium is not?—No.

13441. (Mr. Fanshawe.) Can you tell us whether among your co-religionists the use of opium is generally in moderation or in excess?—Every man takes it in moderation according to his own light; if he took more than would suit him he would die.

The witness withdrew.

Mr G. M.
Gregory.

Mr. G. M. GREGORY, called in and examined.

13442. (Chairman.) What is your present position?—I am an officer in the Opium Department as Sub-Deputy Opium Agent. I have been nearly twenty years in the service of Government as an officer of the Opium Department.

13443. In what districts have you served?—As a district officer in connection with the cultivation of poppy, I have served for two years and a half in the Sarun, Champaran, and Shahabad districts of the Behar Opium Agency, and for

three years and half in the Chota Nagpore Division of Bengal, where I was employed for the purpose of opening up new cultivation of poppy. The extension of cultivation proved a failure, and I assisted in closing up cultivation in this part of the country in the year 1877. Since 1879 I have been employed for the greater part of my time in connection with the manufacture of opium and the opium alkaloids at the Ghazipur Factory, first as an assistant, then for about four years at the head of the factory, as Factory Superintendent. I have also for about three and a-half years been employed in looking after poppy cultivation in the Ghazipur and Mirzapur districts of the North-Western Provinces. My experience, therefore, covers both the cultivation of poppy and the manufacture of opium. I may add that I am a Fellow of the Chemical Society, London.

13444. Have you reason to believe that the cultivators and the landholders in this province are favourable to the continuation of the cultivation of the poppy under the present system?—They are entirely favourable as far as I can judge. I have had no complaints whatever against the Government system. Any complaints that have been made to me have been on the other side, where there has been any attempt at prohibiting the cultivation.

13445. Looking at the question first of all from a landowner's point of view, how do the rents of lands upon which there are cultivators licensed to grow poppy compare with other agricultural lands?—Where cultivators have occupancy rights there is, of course, no difference, but in a large number of cases the cultivator has no occupancy rights. In these cases I have known opium lands go up to Rs. 15, Rs. 20, and Rs. 25 per bigha. That is for specially prepared land for opium. These cases refer only to tenants-at-will, who can be turned out of their holdings if necessary.

13446. Looking at the question from the point of view of the cultivator, will you describe what the benefits are which accrue to the cultivator from holding a license under the Government for the cultivation of poppy?—The main benefit is the ready money which he gets. He looks to that to pay his rent for all the lands that he possesses. As a rule the man who holds from 5 to 7 bighas of land cultivates about a bigha or two in poppy, and the advance he gets for that helps in a large measure to pay the rent of the other lands.

These advances come in as ready money very conveniently at seasons of the year when the cultivator would sell other descriptions of produce at a disadvantage.

13447. Is there an advantage to a small cultivator of the poppy from the opportunities it affords for utilising the labour of his family?—Yes. He can utilise his entire family. It keeps him entirely out of the clutches of the mahajan and bania. If he had no land under poppy, he would probably have to sell his crop before it was ready at a great loss; and of course the members of his family would not be so useful to the same extent in other crops as they are in poppy.

13448. Is it the case in this country that the agricultural class is universally dependent upon advances from some quarter or other?—Yes.

13449. If they do not obtain advances on the favourable terms upon which they obtain them from Government, they would have to get advances from other sources at a heavy and exorbitant rate of interest?—Yes. Firms are now following in the footsteps of the Government in the matter of making advances for country produce, but their terms are not nearly so favourable as those of Government.

13450. Can you refer to any evidence which would tend to prove to the Commission that the cultivators would be opposed to prohibition, or an extensive reduction of poppy cultivation?—Yes, certainly. I can speak from personal experience. I have lived among the cultivators myself, and I know from personal knowledge, for I have made enquiries myself. In one particular instance I know of a pargana, not far from here (between here and Ghazipur) which was considered to encourage illicit dealings in opium. Orders were issued that this pargana was to be struck off our books some years ago. Ever since then the men have tried to get back again. Sir Henry Harrison, then a member of the Board, came to Ghazipur. These men got wind of his coming, and flocked round his carriage, and begged and prayed that they might be let off. Every year they have petitioned asking to be permitted to sow again. We have declined, on the ground that it was close to Benares, and that there was a tendency to illicit dealings in opium. We have strongly opposed the re-introduction of poppy in that pargana. We have had similar instances from other parts of the districts, where there has been partial prohibition. Only within the last fortnight I have had two petitions from cultivators and their entire families who were prohibited some years ago from growing poppy. These men are

trying hard to get back. In one instance, I did let them go back, as the original offender was dead. I allowed the family to come back on our books. These are isolated instances. Of course I have had numbers of instances during the last fifteen or twenty years of my experience.

13451. It has been represented to us that pressure is sometimes used to induce reluctant cultivators to undertake the cultivation of poppy. What do you say upon that point?—No such instance has ever come under my notice. I certainly have never come across any such compulsion. It is well-known among the cultivators that it is against the orders of Government. In fact the tendency here is to crowd in at times of settlements, and there are hundreds who are turned back. The evidence, as far as I know from personal experience, is entirely the other way. Hundreds are turned back from our settlements and godowns every year. Of course we discriminate between cultivators, and we take those cultivators who give a good average outturn. In certain years when the average is fairly high we fix the limit for giving advances to those whose average outturn is 4 seers a bigha and above. Hundreds of men come that we turn off; and we will not have anything to say to them. As far as cultivation is concerned in this agency, we could get 50 per cent. more next year if we really needed it.

13452. In the administration of the Opium Department, I apprehend that it is necessary to employ a large number of what I may call minor officials?—Yes.

13453. Does it come within your knowledge that in any case the conduct of these officials has been unsatisfactory?—Such cases occasionally do occur.

13454. Has your attention ever been called to the report of the Commission of 1883?—Yes.

13455. Is it within your recollection that in that report it is suggested that the minor officials are not in all cases as trustworthy in small matters as they might be, and that it is suggested that it is desirable that their position should be improved, and that it should be made less independent of petty perquisites?—Yes.

13456. Do you support that recommendation?—My idea is that no addition to the pay of the class of men from whom we draw these zilladars and others will make them any better than they are. If we doubled their pay they would be precisely the same as they are now.

13457. Would you say that the nature of their duties is such that it would hardly justify the employment of a totally different and much more expensive class of men?—I think they are perfectly suited to the class of work we expect from them, which is a kind of coolie driving. They look after these men and drive them into weighments and bring them into settlements. We would not require educated men for that kind of work.

13458. You said "coolie driving": what do you mean by that?—Collecting them together and bringing them for weighments, and so on.

13459. "Organise" would more correctly express it. You do not mean to imply that a harsh and improper method of arranging with the cultivators is resorted to?—No. There is no harshness at all. At the time of weighments and settlements they look upon it as a kind of holiday; they come into head-quarters as people do on market days.

13460. Turning your attention to another point, in the case of failures of crops, what measure of indulgence, if any, is granted to the cultivator who has received an advance to enable him to grow poppy?—We give him grace as far as his own circumstances will admit. If a man is able to pay up, we recover the money; if he is not able to pay up we give him grace for a year, or perhaps two years. I have known the grace extended up to several years.

13461. The indulgence consists in allowing the cultivator to repay?—Yes.

13462. In the event of the failure of the crop you do not withdraw the claim on the part of the Government to the repayment of the advance?—In some cases, where the man is not able to pay anything, we recommend the Government to remit altogether. There have been a large number of cases where advances have been remitted altogether when the man has not been able to pay up. That has been in the case of an entire failure of crop and when he has lost everything.

13463. Assuming the hypothesis of an entire or very large failure of the crop, do you think there should be more indulgence shown in reclaiming the repayment of advances?—I think at present they have sufficient indulgence. Of course, looking at it from a commercial point of view, it may be more to the interest of the State to show greater leniency; but at present I think people are fairly well satisfied.

Mr. G. M.
Gregory.

9 Jan. 1894.

Mr. G. M.
Gregory.

9 Jan. 1894.

13464. Are there any essential points of difference in the administration of the Behar as distinguished from the Benares Agency?—Very many.

13465. Would you indicate what they are?—The great difference is the system we have of engaging with the cultivators. There the system is to engage with the headman of the village, the Khatadar. Here, though we have a corresponding man, a Lumbaradar, the engagements are made with individual cultivators in, I should say, nine-tenths of the agency, and this system is gradually extending. I expect in another few years the entire Agency will be settled on the Asaniwar system, that is, engagement with individual cultivators. That is the essential difference between the two agencies.

13466. In what respects do you consider that the Benares system is superior to the Behar system?—A man comes up to engage for land. We settle with him personally. We pay the advance into his own hands. The man brings his own opium to be weighed. The value of the opium is paid into his own hands. There is less liability to black-mailing by the underlings of the Department. If there is any black-mail levied it is the man's own look-out. In the other system, however, the Khatadar is settled with. He has perhaps a hundred cultivators under him. The first thing he does is to levy a percentage on the land. For every bigha of land sown under the Khatadar the cultivator has to pay four annas, for what is called the expenses for coming in and taking the money and distributing it. The system here is entirely free from all those objections.

13467. From the cultivator's point of view the Benares system is distinctly better than the Behar system?—It is distinctly better, and I think it is that which makes it more popular here.

13468. Do you recognise that there is some unpopularity attaching to the cultivation of the poppy in Behar?—The cultivation has been going down gradually. A good deal of the country, however, is being opened up there by railways and other means. Lands are going out, and the cultivation is falling, which is, of course, an indication that it is gradually being reduced in area.

13469. Do you mean that other crops are taking its place?—Other crops may be taking its place too. Of course labour is utilised in other ways there.

13470. Looking at it from the Government point of view, do you see any disadvantage to the Government from introducing into Behar the system which you carry out in the Benares Agency?—I should say it would be a decided advantage. It can only be gradually done; it cannot be done at once.

13471. But you would recommend the gradual introduction into the Behar Agency of the system which you pursue in the Benares Agency?—I would certainly. I did so three years ago, when I was a member of the Commission, which drew up the Manual for the two Agencies. I then recorded a dissent about the Behar Manual, and recommended that the system in force in Benares should also be the system in force in Behar—that though they could not conform to it at once, it should be a gradual assimilation.

13472. In the Behar Agency are the officials to a certain extent paid by commission on the output of opium or on the area under cultivation?—On the output of opium.

13473. Does that system apply also to the Benares Agency?—No.

13474. The officers here receive fixed salaries and no commission, I believe?—Yes.

13475. You think that the payment of commission is objectionable?—Yes.

13476. I think you said you were in charge of the Ghazipur Factory?—It is only two months ago that I was relieved of the charge there. I was four years in Ghazipur at the head of Factory.

13477. Can you explain in what way the persons employed in the Ghazipur Factory would be affected by a change in the present system of dealing with opium?—It would be throwing thousands of people out of employment; the population of Ghazipur may be taken at forty thousand. There are in busy seasons about four thousand hands, or 10 per cent, of the people employed in the Factory. Little hamlets have grown round the place simply because of the factory. The people depend entirely for their living upon the factory; whole families go to work there. In ordinary times, about two thousand hands are daily employed; but during the busy seasons the number goes up to about four thousand; men, women, and children are employed;

sometimes whole families go and work there; and they are dependent entirely for their living upon the factory.

13478. (Sir William Roberts.) I believe you are connected with the Factory Laboratory at Ghazipur?—Yes.

13479. We have heard a great deal about *chandu*. Have you made any analysis of it?—Yes. I have made an analysis of *chandu* prepared from good opium at the factory. I have also obtained *chandu* from the shops in Calcutta, having purchased it in the bazar myself; and I have had also illicit *chandu* which has been seized in the North-Western Provinces. I can give an analysis of the three descriptions of *chandu* if necessary.

13480. Will you give us the general result?—*Chandu* made from pure opium at the factory contained 10·17 per cent. of morphia; of the two descriptions of *chandu* purchased by me in Calcutta, one gave 9·19 per cent. and the other 9·07 per cent. of morphia. The illicit *chandu* seized in the North-Western Provinces contained 2·10 per cent., showing that it was highly adulterated.

13481. You found that honestly prepared *chandu* was more than twice as rich in morphia, as compared with crude opium?—Yes.

13482. I suppose some of the *chandu* was prepared by Chinamen?—The samples I procured in Calcutta were prepared by Chinamen.

13483. Have you anything to say about *madak*?—I obtained two samples in Calcutta purchased in the bazaar. They give an infinitesimal quantity of morphia. One sample gave only ·18 per cent. and the other ·21 per cent., showing that it is about $\frac{1}{50}$ th of the strength of *chandu* as far as morphia is concerned.

13484. Can you tell us something about narcotine?—Narcotine was produced largely about twenty-five or thirty years ago. The medical officers in charge of the factory had great faith in its powers as a febrifuge. Large quantities were supplied direct to the Medical Department. With the introduction of quinine and the falling price of quinine narcotine has been gradually superseded. The Medical Department refused to issue it to their medical depôts, and the factory has ceased making it.

13485. Is narcotine the principal alkaloid in Bengal opium?—In Indian opium narcotine represents the largest percentage.

13486. What percentage is there in Bengal opium?—You may take 6 per cent. as roughly being the average.

13487. What is the proportion of morphia?—About 4 per cent.

13488. How long has narcotine been sent out expressly as a febrifuge?—There were indents on the factory from the Medical Department. About fifteen or twenty years ago they used to indent regularly on the factory.

13489. What evidence have you that the issue of it was at the request of medical men for its febrifuge properties?—I have not got the report, but Dr. Palmer, who was in charge of the factory, distinctly states that narcotine (he calls it a narcotine) is valuable as a febrifuge.

13490. Have you seen that report?—It was handed in.

13491. Perhaps it would be well if you prepared at Ghazipur the necessary documents and presented them to the Commission with a view of showing that narcotine was prepared in the factory and distributed expressly as an anti-periodic?—Yes.

13492. I suppose you would naturally infer that if narcotine had that power, although not equal to quinine, crude opium itself would possess the same power in a very much less degree?—Yes, I have been told by doctors, although it is not supplied by the Medical Department, that in some descriptions, of fever, they prefer narcotine. Narcotine has effects where quinine has no effects. I have been told that by doctors.

13493. (Mr. Pease.) I do not know whether you were present this morning when a witness told us that some of the ryots cultivated the poppy here under the feeling that it was expected of them by the Government; can you tell me whether that has been your experience?—No; it has not been. The cultivators are pretty shrewd in their own interests. They know perfectly well what is compulsory and what is not, and by their action at the time of settlements, we know perfectly well that they are fully aware of the intentions of Government under that head.

13494. During what months of the year does the poppy occupy the ground?—The seed is sown from the end of October until about the end of November. The opium is collected about February and March, sometimes even as late

as the beginning of April; but that is rare; it is generally in February and March.

13495. What crops follow the poppy?—There is generally a crop of Indian corn in these parts.

13496. Is indigo planted as a summer crop?—Occasionally. There is not much indigo in these provinces to compete with poppy.

13497. Indigo-planters, I presume, have a direct interest in having poppy planted in preference to sugarcane?—I dare say they do have. I think there is very little indigo sown in poppy lands.

13498. You stated that about 3,000 hands were employed in the busy season; what is the occupation of those hands at other times of the year?—As a rule some member of the family works in the factory. Very little keeps these men going. A man earns perhaps Rs. 4 a month at the factory. He and his son between them perhaps earn about Rs. 7 or Rs. 8 a month. They consider themselves lucky in the busy season to get the rest of the family in; during the rest of the year they live on what the head of the family earns.

13499. How long does the busy season last?—About three months in the hot weather; then again two or three months in the cold weather. About five or six months in all.

13500. Do you think these persons employed in the factory are idle during the other six months of the year?—They get what they can pick up. It is not very much?—They do not go away from their homes.

13501. What are the wages you pay in the factory?—We pay men from two annas to three annas a day. The women get about from one to one and-a-half annas, and boys get from one and-a-quarter anna to one anna.

13502. These men live all the year round on two annas a day for five months in the year?—The heads of the families probably work all the year round in the factory.

13503. (Chairman.) How do these wages which you have quoted compare with ordinary agricultural wages of the district?—Much better; they would not get half that amount working as ordinary agriculturists.

13504. (Mr. Pease.) Would you give us the ordinary wages of an agriculturist?—They are paid generally in kind.

13505. Do you say that the payment in kind is not equal to one anna a day?—One anna a day is what a child would get.

13506. Their wages in agriculture would be less than one anna per day?—I should not think it would be more than that; paid in kind. These people live on very little.

13507. (Mr. Wilson.) Did I understand you to say that the average wages of agricultural labourers would be one anna a day?—Paid in kind, they would not be more than that. Very few zemindars pay in anything but in kind.

13508. Is it your opinion that if there was any prohibition of poppy cultivation, the rent of the opium land would fall to the level of land used for other crops?—It does not affect occupancy lands. There are plenty of lands in these provinces which are not occupancy lands; but are held by tenants-at-will. For these the zemindars have a right to increase their rents to any extent. I have known opium lands paying Rs. 20 or Rs. 25 per bigha, whereas an occupancy tenant next door is only paying perhaps Rs. 4 or Rs. 8. The rent of these lands would fall certainly.

13509. In certain cases and for certain reasons licenses to grow poppy are refused to cultivators?—Yes.

13510. In those cases do the zemindars reduce the rent of the land?—They do not come on our books. We do not know anything about them. If we find they are not good cultivators, we refuse them licenses. We do not enquire what happens afterwards.

13511. You have said that, in your opinion, the rent of opium lands would fall to the level of other lands; I wish to know whether that is founded on any knowledge: that, as a matter of fact, it has done so when the Opium Department has refused a license to cultivate?—We very rarely refuse good lands.

13512. I was simply asking you whether you know, as a fact, that the rent has been reduced under such circumstances?—I cannot give you instances of that.

13513. With reference to this factory at Ghazipur, I should like to know whether you suggest that the present system must go on always in order to afford sustenance to the people who are congregated round the factory?—If the system did not go on, they ought to be compensated in some way.

13514. Taking the case of any public Department that was shown to be useless, would you suggest that it should always go on for the sake of the occupants?—No; but there should be compensation to these men if the factory is stopped. The Government ought to do something to provide labour for these men or compensate them.

13515. Do you draw any great distinction between the habit of smoking and eating opium?—As far as my own personal views go, I prefer opium-eating to opium-smoking. From what I have seen of the people, I prefer eating to smoking. Although I have seen smoking in China, I have not seen any deleterious effects from it, but I have seen bad effects in India.

13516. You are aware that Mr. Cadell spoke of opium-smoking as a degrading vice: would you agree with that opinion?—No; from what I have seen of it in China, I should not say it was a degrading vice there.

13517. We are dealing more particularly with India?—I do not like the look of men that I have seen smoking in Calcutta, but I do not make a sweeping assertion including the Chinese.

13518. Leaving the Chinese quite out of the question, do you agree with Mr. Cadell that in this part it is a degrading vice?—I prefer opium-eating to opium-smoking a long way.

13519. Surely you can say Yes or No to my question?—Yes: I should say it is a degrading vice.

13520. I suppose you are aware that a few years ago there was some correspondence with the India Office in England, in which Mr. Rivett-Carnac took part, referring to the increasing difficulties in getting poppy grown: are you acquainted with that correspondence?—I cannot recall it to my mind just now.

13521. You have already mentioned in reply to our Chairman that you have some knowledge of the report of the Commission on the working of the Opium Department published in 1883?—Yes.

13522. Are you aware that that Commission recommended the repeal of the Act of 1857?—Yes.

13523. I believe that that Act has not been repealed, either as regards this province or Behar?—No; it is not.

13524. You are probably also aware that that Commission recommended that the payment of the Lumbardars should be increased from Rs. 1 per maund to Rs. 4?—Yes.

13525. Has that recommendation been acted on?—No.

13526. Are you aware that that Commission stated "the measures taken to repress unlicensed cultivation are unnecessary, and do more harm than good. We believe, it may be said with confidence, that unlicensed cultivation for the purpose of fraud is unknown in the poppy districts. The measurement of an Asami's land by officers of the Revenue Department is a vexatious proceeding, and we recommend that it be no longer permitted"?—Yes. But our lands are not measured, as far as I know, by the Revenue Department; they are measured by the Opium Department. We submit to the Collector a list of our measurements for any reference he may have to make to them; but the lands are not remeasured again by the Revenue Department.

13527. The object of the measurement there referred to has reference to the cultivation of poppy?—Yes.

13528. Are you aware that that Commission stated: "The two remaining objects are the most important of all—the protection of the ryot from illegal exactions, and the securing for Government the entire produce of the cultivation. Of these two objects, neither is attained under the present administration of the law"?—Yes, I know that paragraph.

13529. Can you tell us whether any action has been taken on that to secure any better system as regards the protection of the ryot from illegal exactions and securing to Government the entire produce of the cultivation?—Yes, the action of this Agency as regards securing to Government the entire produce of the fields is ample. Every precaution is taken here. The man's three years' return is always compared, and any suspicious averages are at once enquired into by the Department; we have special registers to show inferior cultivators who produce low averages.

13530. The same paragraph goes on to say: "Fees and perquisites are habitually taken by officials of the Opium Department. The practice is notorious and universal; though it has perhaps been reduced more completely to a system in Behar than in the Benares Agency?"—I have already stated that the difference of the two systems makes a difference in the exactions. In this Agency there is very little of it.

13531. This report recognises that Benares was in a better condition?—Yes.

Mr. G. M.
Gregory.

9 Jan. 1894.

Mr. G. M.
Gregory.
9 Jan. 1894.

13532. Can you tell me whether measurement by pole has been discontinued as recommended by them?—We measure by poles here, not by chain.

13533. Are you aware that the report said, "Measurement by pole should be discontinued, and a chain should be the instrument employed"?—We have tried the chain here, but we have reverted to the old system which is handier and more suited to the native than the chain system is.

13534. The paragraph goes on to say: "In the hands of native surveyors, a pole invariably gives results short of the true area. A native will always lay the pole on the ground and turn it over, a process which leaves, at each repetition of the operation, a part of the ground unmeasured. The error may be only a few inches each time, but it is always in one direction." The pole is still used, you say?—The pole is still used.

13535. Are you able to say whether there are any important changes recommended by the Commission of 1883 which have since been adopted?—Yes; several changes recommended by the Commission have been adopted, but I cannot state what they are now.

13536. Is it at all usual to sow poppy as late as the 19th of December?—No, very unusual.

13537. Should you expect it to do any good?—I should not think so. I should not advise anybody to sow poppy after the 10th of December. Even that is pretty late.

13538. You are acquainted with the "Opium Manuals"?—Yes.

13539. Am I right in believing that you had some hand in preparing the revised edition?—I drew up the Benares edition myself.

13540. In reference to the position of the Lumbardars, how does his appointment come about?—He is really a representative of the cultivators in a village. He is elected by them.

13541. Is he not appointed by the Department?—The Department recognises his appointment, but he is elected by the cultivators themselves; he is their choice. We always leave the choice of the lumbardar to the cultivators of a village.

13542. But he is responsible for seeing that they carry out their engagements?—We look to him to see that the lands are kept clean and properly weeded,—everything connected with cultivation.

13543. Look at page 32 of the Manual, paragraph 154. You will there find: "It should, however, be carefully explained to every lumbardar that he should engage strictly with reference to the capability of his village, and that should he or any of his cultivators sow less than the area engaged for, each defaulting ryot will be liable to punishment under section 10 of the same Act." What is the particular advantage which you claim for dealing with each ryot separately, if the lumbardar is also responsible for any of their shortcomings?—He cannot be held responsible for their shortcomings. He cannot be prosecuted under Act 13 of 1857 personally. It means that if he sows less than his engagement, he will be prosecuted under Act 13. If all his cultivators do not sow up to their engagements, they are liable to prosecution.

13544. Each individual?—Whichever of the cultivators in the village does not sow up to engagement, he lays himself open to prosecution under Act 13 of 1857. It is a legal contract.

13545. But it says that he engages "with reference to the capability" of his village, and that should he or any of his cultivators sow less than the area engaged for, each defaulting ryot will be liable to punishment?—When a settlement is made, the village lumbardar stands by the officers as each cultivator comes and engages. It is the duty of the lumbardar who receives so much commission to say whether a man has holdings or not, or whether he is engaging falsely or not. If the lumbardar fails to give information to the officers, he is liable to be punished on his own account by forfeiture of commission, but he can be held liable to prosecution under Act 13 for only his own holding if he does not sow up to his engagements, as he would then have committed a breach of contract.

13546. Do you hold in the case of a ryot making default that the lumbardar will not also be punished?—If the lumbardar has not committed a fault under Act 13 he cannot be punished. We can punish him ourselves by forfeiture of commission; we could do that.

13547. Any way we may take it that both parties are never punished?—No, they are not.

13548. Please look at page 39, paragraph 169: "All lumbardars should be made to understand their position as paid agents of Government, their remuneration being the commission on the yield of their licenses and 'khurchun' or scrapings from the cultivator's pots." What is the meaning of "khurchun"?—"Khurchun" means scrapings. When a man comes in for the weighment of his opium, as much opium as will come off the plate without scraping is taken by the Government and paid for. What is left on the pot and cannot be scraped off without the adhering earth of the pot, is the perquisite of the lumbardar. He gets this. That is held out as one of his perquisites, which is liable to confiscation unless he works up according to rule.

13549. (Chairman.) The origin of that was because the Department undertakes that there should be no admixture of earthen matter with the opium?—That is so.

13550. (Mr. Wilson.) I want to know the exact position of this man. You say he is elected by the ryots?—The Department recognises his appointment. He is a gang-master. The Government looks to him to keep everything straight in a village. If the Government had not a lumbardar in every village, they would have to have a zilladar; and the paid establishment would be very much larger than it was now. It is really, I suppose, an economical way of utilising the services of these men in the villages.

13551. The same paragraph says, "the appointment and dismissal of lumbardars will be invariably under the written authority of the officer in charge"?—Yes. The Sub-Deputy Opium Agent recognises the appointment formally. Without his authority the lumbardar cannot be appointed.

13552. It recognises the right of the Sub-Deputy Agent to punish them if they do not please him?—He has a hold over them. With the commission and "khurchun" he gets, he has a hold over them.

13553. I believe it is the practice to make advances under certain circumstances for wells?—Yes.

13554. Those advances are primarily for the purpose of growing poppy?—Primarily for that.

13555. Is it not the case that if there is only one well in the village and if the water is wanted for poppy, the poppy must have it first?—There is no such rule laid down.

13556. Is there not such an understanding?—I cannot say there is such an understanding. As far as I have seen, they water their crops in rotation.

13557. You have never heard that any preference is given for poppy?—They may do it in villages, but I have never been appealed to to insist on water going to a poppy field in preference to any other.

13558. If you have not been appealed to, have you ever heard of it?—I may have heard of it. I could not give you any definite answer to that question.

13559. Would you look at page 178 in the appendix of this book. There is there a form of agreement or contract in the vernacular?—Yes.

13560. Can you give us a translation of that?—Yes.

AGREEMENT. APPENDIX (B).

I, _____ Son of _____
of Mouza (village) _____ an Lumbardar or Assami, of
Mouza _____ of Pargana _____
of Zilla _____ I desire to construct a new well or
to repair a pucca well in Mouza _____ for the
increase and improvement of poppy cultivation. And having
received the sum of Rs. _____ as a loan from Govern-
ment for the purpose, I bind myself in the presence of the
Sub-Deputy Opium Agent of division _____ to repay the
said amount by instalments according to the undermentioned
conditions, and to fulfil, to the best of my power, the
conditions as laid down below—

(1) I shall construct (or repair) a pucca well in Mouza _____ measuring _____ and shall also complete the work as required by clause (a).

(2) After the construction of the well, I shall increase the area of my holding, covered by my *patta* (lease) to the extent of bighas by acquiring good land. And it is hoped that by this means "the productive power of the old land will be enhanced," thereby causing an increase in the production of opium.

N. B.—Where the condition does not involve an increase in the cultivation, the clause within the inverted commas only is to be substituted.

(3) I shall pay off Rs. _____ received as advance, within two years and six months from the date of payment of the first instalment.

(4) If I fail to construct the well for which I take the advance, or "if I cannot increase the cultivation of poppy according to my agreement," then I agree to refund the money I have received whenever it is demanded of me. And in default the Sub-Deputy Opium Agent will have the power to realise from me interest on the amount to the extent claimed by him for the period delayed, and the said Sub-Deputy Opium Agent will further have the power to impose on me any fine that he may think fit for the delay in question. And I shall have no valid objection to pay either the interest or the fine.

N.B.—Where the condition does not involve an increase in the cultivation, the clause within the inverted commas is to be omitted.

13561. Do you think that the powers to withhold any punishment that the Agent may think fit is a power that ought to be entrusted to any human being?—It certainly ought not to be there. It is not legal. It has crept in there. It is a power that is never exercised.

13562. But is it the prescribed form?—Yes. It does appear in the Manual.

13563. Any contract upon these well advances, which is not in this form, would be contrary to regulation?—Yes.

13564. The prescribed form is practically contrary to common law?—It is. It certainly ought not to be there.

13565. There is another form on page 119. Have you a translation of that?—No, I have not a translation of that.

13566. Can you tell me what steps would be necessary to have this obnoxious form altered?—It could be altered at once by the order of the Board of Revenue.

13567. Do you know whether that is the form which has always been there?—It has always been there. That is how it has crept in. It is the old form, and when the Manuals were revised, the forms that had received the sanction of the Board were considered as perfectly correct and accepted. That is the only explanation I can give for its having crept in.

13568. (Chairman) May I ask whether documents in the vernacular receive the consideration of the superior authority which is generally given to documents in English?—A form of that kind ought to; but I must say that the officers do not look so carefully into vernacular forms as they do into English forms.

13569. (Sir James Lyall.) The expressions in that form of agreement to make a well are, I suppose, merely a sort of *brutum fulmen*?—I have never known it put in force. I have been twenty-one years in the Department. I have given a great number of well advances, but I have never known the clause put into force.

13570. If you had to recover money under that form of agreement, would you do it by civil suit or how?—By civil suit.

13571. I suppose the Court would disregard the conditions as to interest and fine?—Yes. We have no power to exact anything.

13572. (Mr. Wilson.) Whether it is a *brutum fulmen* or not, it is there, and goes to the villagers, does it not?—That is the counterpart that we keep.

13573. Does not he know what he is signing?—He gives us that as his counterpart. He gets a paper in return.

13574. That form goes away to the villagers?—Yes.

13575. And he and his friends in the village see, if they fail, that they are liable to punishment at any time?—They see that.

13576. Will you explain a little more what you meant by "coolie-driving"? Is that a common expression in this country?—I made use of the term "gang-master" afterwards, which, perhaps, expresses it better. "Coolie-driving" does not express it really.

13577. Is "coolie driving" a common expression in this country?—It is not uncommon; but one does not attribute any violence to it, or anything of that kind.

13578. If these people are so extremely anxious to cultivate poppy, and come in in flocks to you, why is it necessary to have any driving at all?—There must be somebody to collect them at different periods of our season. You might call them selectors.

13579. The word driving, which came naturally to you, seems hardly consistent with the idea of people flocking round you for a privilege?—The man has to go to hut after hut in a village and inform these men. Not only that, he has to go two or three times before he can get them. They have not the faintest idea of time or distance. You

must simply collect them together, and take them with you to the centres where weighments and settlements are conducted. If you inform them a month or a fortnight previously and tell them that they must come on such and such a date, and at such and such an hour, you probably would not get half the men. It is not from any disinclination on their part to come, but because they have no idea of place or time.

13580. (Mr. Mowbray.) Do I understand that you have never had a case in which an advance for a well has not been repaid?—Yes. We have had cases where it has been remitted by Government entirely.

13581. You have never put this contract into force?—I really did not know of its existence even, until it was pointed out to me a few days ago, although I drew up the Manual. It escaped the notice of the compilers.

13582. You say it can be altered?—It can be altered at once.

13583. Before you were at the factory at Ghazipur, I understand you were Sub-Deputy Agent in one of the districts, or in more than one?—Yes. Both in Behar and in Benares.

13584. Did your duties as Sub-Deputy Agent involve constantly going into the districts and being brought into contact with the cultivators?—For five months in the year I am among the cultivators. From the first of November until about the beginning of March, I am moving about from village to village among the cultivators.

13585. Had they every opportunity of making complaints to you of any exactions or interference on the part of zilladars or other subordinate officials?—They have every opportunity, and they do come to me. Complaints are not common, but they are sometimes made.

13586. Had you in your position as Sub-Deputy Agent the power of dealing with these complaints, or had you to forward them on to a higher authority?—I have the power of dealing with them, unless they are serious complaints. In that case they have to be sent up to the Opium Agent.

13587. Then I may take it from you that the cultivators had the opportunity of appealing to the Sub-Deputy Agent in person, and if the complaints were well founded, you did your best to investigate them and deal with them?—Yes.

13588. I should like to know how a man ceases to be a cultivator when he has once been cultivating. I understand that in Behar the Khatadar comes with a list of the people?—Yes; in Behar he does.

13589. That list I suppose originally includes all the cultivators of the previous year?—Yes; and any new cultivators that he may have to bring on.

13590. Supposing the Khatadar inserts in that list the name of a man who has cultivated in the previous year, but who does not wish to go on cultivating, what ought the cultivator to do?—He need not take the advance when the Khatadar takes it to the village. He is not bound to take it. It is entirely optional for him to take it or not.

13591. But his name is on the list, and the advance is supposed to have been sent to him?—Yes; but he actually does not come on our books until his land is measured and his miniature license is written out. A license is given to each man afterwards.

13592. At what time of the year?—During the measurements. The measurements begin soon after the sowings begin. The sowings begin about the end of October, and they go on until the end of November or the beginning of December, so that a man need not bring himself on our books until the land is actually measured, and he has accepted the miniature license.

13593. We had purwanahs brought before our notice the other day in which a man was threatened with prosecution, because it was said that his name was on the books, and that an advance had been sent. It did not say that it had ever reached his hands. I want to know whether there was any possibility of a man's name being on the list furnished by the Khatadar and then the Government paying to the Khatadar an advance in respect of that land, while at the same time the man himself might know nothing about it until he got a purwanah threatening him with prosecution. Is that possible?—These are the objections to the Khatadar system. The man is not bound by it at all until he has actually accepted the miniature license. He could have rebutted that if he had chosen.

13594. What steps would he take?—He would refuse to take the advance.

Mr G. M.
Gregory.
9 Jan. 1894.

Mr. G. M.
Gregory.

9 Jan. 1894.

13595. I am assuming that the advance has not reached him, although the advances have been paid to the Khatadar P—The mere fact of his name being on the Khatadar's list does not bind him at all.

13596. Do you mean that the purwanah would never have been sent out to him threatening him with prosecution unless his name was on the list?—Unless he had actually brought himself within the law, that is, by having accepted the contract; it is open to him to refuse it; he need not sow the land and he need not take the advance.

13597. When is the time that he enters into the contract; is it when he executes the miniature license?—That is the time when he actually brings himself under the law.

13598. And therefore no purwanah would be issued threatening him with prosecution until he had definitely taken upon himself the contract by executing the miniature license?—No; it would be illegal.

13599. Then with regard to the Benares Agency, where you deal directly with the cultivators, how does a man cease to cultivate?—He need not come in at all. He may come and say that he does not want to cultivate any more, or he may not come.

13600. If he does not appear, that is taken to mean that he does not wish to cultivate?—Yes; and he is not settled with as he is not present.

13601. Can he authorise anybody else?—Yes; by power-of-attorney. If he sends a power-of-attorney for some one else to receive the advance for him, we give the advance. That is a legal document under the Manual.

13602. In default of his either appearing himself or appearing through somebody else under a power-of-attorney he goes off the list as a matter of course?—Yes.

13603. (Mr. Wilson.) I think that the Manual prescribes that if a cultivator desires to cease cultivation, the gomastha is to enquire his reason for doing so, and to report it to the superior officers?—That is so. It is a departmental action, we like to know the reason, that is all.

13604. What is the reason for that?—It is simply for our own satisfaction. If cultivation is falling in a district, we like to know the reason why. We have to submit reports as to the falling off of cultivation, and we have to report also if people are desirous of increasing their sowings. All these are departmental points requiring attention. It is simply for our own information.

13605. Do not you think that if a person in the position of gomastha presses this enquiry upon a cultivator as to his precise reason, it is a little in the direction of forcible persuasion?—Not in these parts. I think they know their interests pretty well.

13606. Do you think that the ryots perfectly understand that they really are absolutely free to cultivate poppy or not as they please?—Perfectly.

13607. Can you in any way account for several witnesses saying that they hold a contrary impression?—I really could not account for it at all. The people you mention could not have moved about the district as I have done.

13608. If you think they are perfectly aware of that, and that there can be no question about it, do you think there would be any harm in making sure of it by some public notification to that effect?—None whatever.

13609. As there appears to be some doubt about it, could any harm arise from a public recommendation being posted, say, at post offices and other public places, to the effect that they are absolutely free to do as they like?—Not the slightest.

13610. (Mr. Mowbray.) With regard to indigo, you say that some times it is grown with opium but I rather understood that that was not very common?—It is not common.

13611. What are the more common crops?—The more common crops are the rain crops—Indian corn.

13612. Those are the crops more commonly grown with opium?—After the opium is taken off.

13613. What I meant to ask you is: what are the crops which are more commonly grown with indigo?—That I do not know.

13614. You have referred to China. How long were you in China?—I was about a fortnight in China.

13615. (Mr. Haridas Veharidas.) Do you make yourself sure that a Manual license has reached the cultivator before you issue the purwanah?—I can only speak of this Agency; I cannot speak of the other Agency. In this Agency we give the advance into the man's own hands; when he gets

an advance he gets a miniature license with it. In the other Agency they do not.

13616. Do you keep a record of it?—Yes. Every man who gets a miniature license has a counterpart. That brings him directly under the law.

13617. Can you give us any idea of the extent of the cultivation of the poppy by tenants-at-will in proportion to the permanent tenants?—I could not give you the proportion.

13618. How long has the present system been in existence here?—I should say it has been in existence for fifteen years or so. The Assamiwar system of dealing directly with individual cultivators is developing daily, and I expect in a few years' time it will be in force throughout the agency. Now I should think nine-tenths of the people are engaged with individually.

13619. Then the old system was like the Behar system?—Yes.

13620. You have gradually uprooted that system?—Yes.

13621. (Mr. Fanshawe.) We have been told that a crop of maize or Indian corn generally precedes poppy, and that sometimes a crop of millet would follow it; would that be correct in your experience?—In this Agency crops are rather later than Behar crops. Millet does not follow poppy often in this agency; it may as a rare instance, but not as a rule.

13622. The crop ordinarily preceding it would be Indian corn or maize?—Yes.

13623. With regard to the measurement by pole, am I correct in understanding that the chain system was tried—and was this subsequent to the report of the Commission of 1883?—Yes; I think it was done before that.

13624. Was the chain system tried subsequently or before the Report of 1883?—Before.

13625. And it was given up?—Yes, every office has a chain, but it is never used.

13626. You have expressed an opinion against opium-smoking: may I ask you whether it is considered disreputable on account of its associations, or have you reason to think it is injurious in itself?—I can only speak from what I have heard. I should say it is injurious to the constitution of the people of India. My idea is that it does not suit the people of India in the same way that opium-eating does.

13627. The disreputable associations are not what you relied upon?—From what I have seen of opium-smokers in Calcutta and up-country they have not been of the respectable classes.

13628. Is the lumbaradar generally a poppy cultivator himself?—Always.

13629. If he failed to carry out his own poppy cultivation, he would be liable to prosecution, but not otherwise?—Not otherwise.

13630. With regard to his position, I understand that he is elected by the cultivators subject to confirmation by the Sub-Deputy Agent?—That is his position. He has to get them together to come in. The zilladar is the Government paid servant, who goes round to each village and tells the lumbaradar that such and such a date is fixed for weighments. The lumbaradar has to bring in his men on that particular date. He has to see that each individual cultivator keeps his fields clean and so on.

13631. We were told in Calcutta that he is the recognized go-between between the Government officials and the cultivator?—Yes.

13632. The advantage which you claim for the Assamiwar, or direct system of dealing with the cultivators, is that they come up themselves to receive the advance: is that the main advantage?—Yes. We are able actually to enter into contract with each individual person.

13633. When are the accounts with each cultivator or with the lumbaradar finally settled—at what time of the year?—At the same time as the settlements; after the returns are received from the factory. After the weighments in April and May the accounts are made up at the factory. Whatever balance there may be due to the cultivator is settled at the time of this settlement in August or September.

13634. Is the account left open until new settlements are made?—Yes. But the bulk of their money is paid to them immediately they weigh their opium in.

13635. We were told that a few cases were known in which the final adjustment of the account for one year had been refused unless the cultivator agreed to make a settlement for the ensuing year: has there ever been such a case in your experience?—No.

13636. With regard to the opinion you have already expressed with reference to a public notification, do you not think that in this country to issue a notification to the effect that the cultivators are generally free to cultivate poppy or not, might be liable to some misunderstanding?—Yes. Certainly it might be liable to misunderstanding.

13637. You did not seem to take that view before?—No. But as a legal step there is no objection to it.

13638. But you now think that it might be liable to some misunderstanding?—Certainly. They might take it to mean that the Government did not want them to cultivate at all. It might just have the opposite effect to what was intended.

13639. (Sir James Lyall.) With regard to the form of bond for repayment of loans for the making of wells, it is only in case he does not make a well and does not repay the money that the Deputy Opium Agent fixes some rate of interest and some rate of fine?—Yes.

13640. Of course that gives the officer the power of fixing an extortionate fine or extortionate interest?—Yes.

13641. At the same time it is a very liberal agreement up to that point; is it not?—Yes.

13642. If he does not carry out the agreement, he is still free to repay the money without interest, and it is only if he does not do all this that the officer can impose interest or fine?—Yes. That is so.

13643. (Chairman.) Does the department receive numerous applications for advances for the purpose of making wells?—Yes. Numerous requests are made to me while I am going round in the cold weather. Within the last month or two I have had about forty or fifty applications; but

The witness withdrew.

Mr. KAILAS NATH SUKUL called in and examined.

Mr. Kailas
Nath
Sukul.

13648. (Mr. Haridas Veharidas.) Were you the private Secretary to the Maharaja of Bulrampore?—Yes.

13649. Were you in the employment of the Foreign Office?—I was for some time after leaving the Maharaja.

13650. Were you employed by Sir Edward Bradford, who is now the Commissioner of Police in London?—Yes.

13651. Are you a Vaid?—I prosecuted my studies at the Medical College, Calcutta, and have read works on Hindu medicine also.

13652. Do you take opium?—I do.

13653. How much?—About ten grains per day—5 grains twice a day. I used to take more.

13654. When?—Some ten years ago.

13655. How long have you been in the habit of taking opium?—Thirty-two years.

13656. How much were you taking before?—About 20 grains.

13657. And you reduced it to ten grains?—Yes.

13658. What was the cause?—Old age and weakness. I could not bear the re-action it produced.

13659. What is your age?—Sixty-five.

13660. Have you tried to reduce your present amount of ten grains?—I tried to reduce it, but I do not keep my health. It weakens me.

13661. Have you anything to say about opium generally?—I can say that had I not taken opium, I would not have lived so long. I have been unwell since my birth. I have always been very sickly. My sickness was diarrhoea and dysentery, which always troubled me.

13662. Are you still sick?—I am not so sick now, but still I am weak. I never got dysentery, and diarrhoea after I commenced opium.

13663. (Sir William Roberts.) Have you taken opium for fifteen years?—No, for about thirty-two years. I com-

it does not follow that every application is accepted. We send these applications to the Collector for enquiry as to whether the man is able to give security or not, whether his holdings are secure, and whether we can trust him to repay the money. It is on the Collector's report whether a man can be trusted that we pay these advances.

13644. So that it would appear from your statement that the hesitation in the matter is not on the part of those who wish to borrow, but on the part of the department which is asked to lend?—Quite so.

13645. Therefore we may infer that this agreement, which on the face of it is of an extremely arbitrary nature, in practice is never enforced and does not deter the agricultural class from making frequent applications to the department for the purpose of obtaining loans to construct wells upon the terms which the Government enforce?—It does not deter them at all. Last year there were twenty-four applications from one small pargana in this district. Out of those twenty four applications which were sent up to the Collector for enquiry, in only two cases were we able to give the advances. The department refused to give in the other cases, because there was not sufficient title to their holdings, or there was not sufficient security forthcoming.

13646. You have explained that the practical working of these loans, instead of being arbitrary, is really considerate to the cultivator?—It is very considerate indeed.

13647. You would also wish to say that it would be very much more in harmony with that practice if this form of agreement were withdrawn and one were introduced more consonant with established practice?—Yes. I certainly think it ought to be modified.

menced taking it when I was thirty-three years of age, and I am sixty-five now.

13664. What is your weight?—I do not know what it is now; three or four years ago I weighed myself at the railway station.

13665. I suppose you would weigh somewhere about 15 or 16 stone?—I think I weighed about 2 maunds and three seers—about 166 pounds.

13666. Are you thinner than you used to be?—No, I am much stouter. I was very thin before I took opium. I had dysentery and diarrhoea. I was always sickly and very thin. I never have been quite well excepting the first twenty years after I commenced taking opium. I was quite well for twenty years, but after that I began to feel weak again. I could not bear the re-action of the opium, and I therefore diminished it. Since then I am better.

13667. You lessened the dose of opium?—Yes.

13668. You are still taking it?—Yes. I take ten grains every day—five grains twice a day.

13669. Do you feel pretty comfortable?—I do; but I can do nothing if the time goes by when I ought to take my dose. I become sick immediately.

13670. At what time do you take your second dose in the evening?—I take my first dose at 8 in the morning, and take my second dose at half-past 7 or 8 in the evening.

13671. When does this feeling of weakness and being ill at ease begin?—Just after the time when I ought to take my dose.

13672. Until 8 o'clock in the evening you feel pretty well?—Yes.

13673. But if you go beyond 8 o'clock in the evening without taking your dose you feel poorly?—Yes.

13674. (Mr. Wilson.) For persons who are not ill and who are not weak and who are not sixty-five years of age, do you think it is a good habit to take opium?—I would never advise. It is only beneficial to weak and sickly people.

The witness withdrew.

Mr. THAKUR MAHABIR PRASAD NARAYAN SINGH called in and examined (through an interpreter).

Mr. Thakur
Mahabir
Prasad
Narayan
Singh.

13675. (Mr. Fanhance.) What is your position in life?—I am a zemindar of hundreds of villages covering a large area. Poppy is cultivated on my estate, and I have gained much personal experience on account of being interested in agri-

cultural matters, and being Secretary and Founder of the Porter Agricultural Association, Baraon.

13676. In what pargana is your zemindari situated?—In the area of Baraon, in the Allahabad and Banda districts.

Thakur
Mahabir
Prasad
Narayan
Singh.

9 Jan. 1894.

The pargana comprises Arail, Sorson, Khairgah, Handia, Murzapur Chourhara.

13677. What is the result of your experience as to the use of opium by the people of your part of the country?—Opium is not used by all classes, nor is there any tribe or caste that is especially addicted to its use. The use of opium is considered useful in cases of cold, and it is said that in such cases injury is caused when it is not procurable. But as the use of the drug is limited, it cannot be said to be injurious in general. Those who do not use opium think that its use is productive of bad effects on the moral and physical conditions of the people, but the people who hold these views are in the minority. From an examination of the general condition of the consumers, it is proved that the effect of opium on the morality or the physique of the people is not very bad. Natives of India in general do not like the prohibition of the cultivation of poppy, but on the contrary consider the suppression of its cultivation as injurious. There is no doubt that a limited class of people who favour a new order of things are desirous of making themselves famous by stopping the cultivation of the poppy. Very few persons, and especially very few cultivators, will be found in this neighbourhood who use opium for mere pleasure. They use it only for medicinal purposes as is shown by the fact that the area under poppy cultivation is decreasing.

13678. Will you tell us what the views of the people whom you know would be as regards the imposition of taxation in connection with the prohibition of poppy cultivation?—The people of India can on no account pay any cost incurred by the prohibition of poppy cultivation, because their income hardly suffices to meet even their necessary expenses. The burden of expenses is increasing every year, and poverty is on the increase. It would be an act of great cruelty to impose any tax consequent on the suppression of the poppy

cultivation. Moreover what necessity is there for the prohibition of the cultivation of opium when it causes no harm?

13679. Have you any personal experience to give us as to the cultivation of poppy?—The area of poppy cultivation in pargana Arail is decreasing every year on account of the excessive labour of the cultivation and diminished production. From inquiries as well as from my own experience, I learn that the cultivation of opium involves great labour in comparison with the profits that it yields. The expenditure on cultivation of opium on my estate, inclusive of rents paid to zemindars, comes to Rs. 30-8 per bigha, while the income per bigha of the first class produce amounts from Rs. 40 to 50, and of average produce from Rs. 32 to 40. The net profits are therefore from Rs. 9-8 to 19-8 in the former case, and from Re. 1-8 to Rs. 9-8 in the latter. Besides this it is generally supposed that the cultivation of opium improves the productive power of the soil. The cultivation of opium is chiefly accounted for by the following advantages:—(1) The advance is paid to cultivators at a time when it is much needed, and thus obviates the necessity of borrowing: moreover, it bears no interest. (2) The price of the opium is paid to them in a lump sum, which enables them to pay up the whole of their rents at once and to save their grain produce for their requirements.

13680. How would the cultivators and landowners be affected if the cultivation of the poppy were prohibited?—If the cultivation of opium is prohibited, the cultivators will be subjected to much loss, and the zemindars will find it difficult to collect their rents. The quantity of corn produced by the cultivators, which suffices for their necessary expenses, will have to be sold for payment of their rent, and much suffering will be caused. The zemindars and cultivators in general of my neighbourhood see no harm in the cultivation of poppy, and are in favour of it.

The witness withdrew.

(Mr. Dane.) With your Lordship's permission, I should like to make a statement in regard to the question asked of Babu Ishan Chandra Roy in cross-examination by Mr. Wilson. A list of witnesses proposed by the Government of the North-West Provinces for examination by the Royal Commission was submitted by that Government to the Government of India on the 22nd of December 1893. The list contained the names of about 125 witnesses, among them being several Commissioned Medical Officers and Assistant Surgeons and a few independent medical practitioners, including Hakims and Vaidas. The time allotted by the Commission for the enquiry in the North-West Provinces necessitated reduction of this list, and it was accordingly revised and considerably reduced and, among others, the name of Babu Ishan Chandra Roy was omitted. Two Assistant

Surgeons attached to Benares and one to Allahabad and two Hakims and one Vaid were also omitted from the Benares portion of the Provincial List. It was thought that the medical evidence of Drs. Hall, McConaghey and Cameron, and of the two independent practitioners, Drs. Lazarus and Banerji, was enough for one place and that, considering the limited number of witnesses tendered for examination, the list as thus framed was sufficiently representative of the best medical opinion obtainable in this part of India. Many of the witnesses omitted from the Provincial List originally submitted to the Government of India hold, what I may describe as, *pro opium* views. A number of Bengali medical practitioners were, I may add, examined by the Commission in Calcutta.

Adjourned to to-morrow at Lucknow.

At Lucknow.

FORTY-SECOND DAY.

Wednesday, 10th January 1894.

PRESENT:

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (IN THE CHAIR).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
THE HON'BLE SIR LACHMESWAR SINGH BAHADUR,
MAHARAJA OF DARBHANGA, K.C.I.E.
SIR WILLIAM ROBERTS, M.D.
MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VEHAIDAS DESAI.
" H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary*.

Mr. F. B. MULOCK called in and examined.

Mr. F. B.
Mulock.

10 Jan. 1894.

13681. (Chairman.) Will you state your position in the Civil Service of the Indian Government?—I am Deputy Commissioner of Lucknow, District Officer.

13682. Have you any particulars to give us with reference to the consumption of opium at Lucknow?—

Opium is consumed by all classes in Lucknow to a greater extent than elsewhere in the United Provinces. In 1891-92 the consumption amounted to 7.1 seers per 1,000 of population, as compared with six seers per 1,000 in Benares and 4.5 in Cawnpore.

13683. Have you any statistics which will show whether the consumption in this district is increasing or diminishing?—No. I have not the figures by me. The district consumption in 1891-92 was 130 maunds 35 seers; in 1892-93 it was 143 maunds 24 seers. Those are the only figures I have by me.

1364. What is the result of your observation as to the effects of opium?—I have never noticed any evil effects on the moral or physical condition of the people from the consumption of this drug. When it is taken in the small quantities usual amongst the vast majority of consumers, it seems to act as a mild stimulant, and those who use it work all the better, and are reported to enjoy a marked immunity from malarial fever and bowel complaints, such as dysentery, etc. In my own office the head clerk of the most important branch is a confirmed opium-eater and smoker, yet he has the clearest head, and is the most energetic and indefatigable worker in it.

1365. What have you to say as to the effects of opium upon conduct?—Those who eat opium are amongst the quietest and best behaved members of the community, and I may add that during an experience of 23 years as a Magistrate in the Meerut, Allahabad, Benares and Lucknow Divisions, I cannot recall a single case in which the consumption of opium was either directly or indirectly the cause of crime. Natives of India, with very few exceptions, do not habitually take alcoholic stimulants at their meals; they drink water, but many of them take a small pill of opium after their food, which, as a stimulant, is about equivalent to a strong cup of coffee. To this extent, and no more, do the majority of opium-eaters consume the drug.

13686. Are you aware that exception has been taken to the condition imposed upon licensed retailers that they shall guarantee the sale of a minimum quantity of opium?—Down to the close of the excise year, ending 30th September last, it was usual to enter a minimum of Government opium in each retail license, which the license-holder was bound to purchase. This was done to ensure the public being supplied with good opium, and also to guard against the sale of illicit opium by licensed retail vendors. Since the 1st October last, the condition above referred to has been omitted from all licenses, with the result that there has been a falling off of 2 maunds 27 seers in the sale of Government opium during October and November of this year, as compared with the corresponding months of last year; but whilst this falling off has taken place in the aggregate amount sold in the district, the retail sale of Government opium at the treasury has increased from 2 maunds 20 seers, disposed of in October and November 1892, to 5 maunds 20 seers in the corresponding months of this year, the reason being that there alone can the public secure good opium, whilst illicit opium is now largely dealt in by the retail dealers. I would strongly recommend that the old system be reverted to, so as to protect both the public and Government.

13687. Do you find it impossible to suggest any means by which the sale of illicit opium by retail dealers could be prevented other than the imposition of a condition that a minimum quantity should be sold. Have you no other suggestion to offer?—No, it is so easily smuggled. I have no other suggestion to offer.

13688. What has been the result of your observation as to the mode in which the opium shops have been conducted, and the behaviour of the people who frequent those places?—Down to the year 1890-91, three opium-smoking shops were licensed by Government in the city of Lucknow. I repeatedly visited them, and was struck by the order and quiet prevailing, even before the greater number of those present had begun to smoke. On one occasion I counted 186 opium-smokers on the premises of one shop. It was early in the night, and smoking had just begun. I noticed no noise louder than the hum of voices of intending smokers round the lamps. There was no enforced silence owing to my presence, as I had given no notice of my intended visit, and many of the customers, who sat in different rooms, were unaware of my being there. The contrast between what I saw on that occasion and the scene that would have been presented by a fraction of this number of customers in a public house in England was most striking and instructive.

13689. You say "smokers;" they were smokers of what?—Smokers of *chandu*.

13690. (Sir William Roberts.) Not *madak*?—*Madak* to a very small extent. *Madak* is very little used: it is not a favourite form.

13691. (Chairman.) Has the withdrawal of the license to smoke opium in the retail shops led to smoking at other places less under the control of the Government?—Last year these three licensed opium-smoking shops were closed,

and the result has been that there are at present 62 known smoking dens in the city alone, where opium is illicitly dealt in. The police, under the law, are powerless to interfere, as it is necessary to prove the sale of the drug, and those who frequent these dens allege, when the police arrive, that they meet as friends to smoke opium. There are, moreover, strong reasons for believing that illicit opium is freely dealt with in these dens: whereas, under the old system, the premises of the three licensed dealers were under effectual police supervision and control, and none but Government opium was sold. The license-holders contracted to take a minimum amount per mouth from the treasury, and were themselves unpaid detectives, deeply interested in the suppression of illicit opium-smoking in unlicensed houses. I am confident that the effect of withdrawing these licenses has been to greatly increase the habit of opium-smoking and also to facilitate enormously the consumption of illicit opium.

13692. It has been proposed that the use of opium should be prohibited in India for other than medical purposes: how do you think such a result would be regarded by the native population?—Native public opinion is not opposed to the use of opium for non-medical purposes, whilst it would resent in the strongest manner the imposition of fiscal burdens to meet the cost of prohibitive measures.

13693. Can you give us any information as to the extent of the poppy cultivation in the Lucknow District, and the degree in which the cultivators are dependent upon the cultivation of poppy as a source of income?—The area under poppy cultivation in the Lucknow District varies, but I would instance the year 1890-91 when it was 10,447 acres out of a total district cultivated area of 347,943 acres. In that year cultivators received Rs. 3,67,863 from Government as the price of their opium. The total revenue of the district is Rs. 7,15,686, and the total rental demand paid by all classes of tenants to their landlords is, in round figures, Rs. 18,50,000. It is thus clear that 51·39 per cent. of the income received by Government from the landlords of the district in the form of land revenue was paid back to the tenants as the price of their opium. The price of the said opium represented to the tenant class no less than 19·83 per cent. of the aggregate rental of the district, whilst to those engaged in the cultivation of the poppy it represented an average of at least 80 per cent. of their aggregate rent. Many a tenant cultivates a small patch of poppy, and pays the whole year's rent of his holding from the proceeds. The great value of the crop to cultivators is shown by the fact that though the area under poppy formed only 3 per cent. of the total cultivated area in the year in question, it yet paid 19·83 per cent. of the aggregate district rent-roll. Poppy cultivation is the most valuable and prized of all forms of agriculture. The advances paid to cultivators in August and September help to keep them out of the hands of the money-lenders, whilst the fixed price of the produce gives it the great advantage of being independent of the fluctuations of market rates. In a year when corn is plentiful and therefore cheap, the cultivator may get no more for his crop than when the harvest is bad and prices are high; but not so with opium: for the more he can produce the more he realizes, the price per seer remaining unaltered. Another great advantage possessed by poppy over other forms of cultivation lies in the fact that the whole labour strength of the cultivator's family, including women and young children, can find employment in tending the crop and harvesting the produce.

13694. You have dealt with the question as regards the cultivator, what have you to say with reference to the interests of the zemindar?—The demand of Government revenue was fixed at settlement on the supposition that the agricultural community would be at liberty to grow all classes of crops, including poppy, to which, in common with a few selected crops, such as tobacco, sugarcane and vegetables, the Settlement Officer attaches special importance in fixing the Government demand. It would, therefore, be impossible to prohibit the cultivation of poppy without at the same time giving compensation to the landlord class in the shape of a very considerable remission of revenue, which in the case of the Lucknow District alone would amount at a rough calculation to at least a lakh of rupees per annum. A proportionate reduction would also have to be made in rents. But both the agricultural classes, no less than the consumers, would in the strongest manner resent any interference with their liberties in this respect, and no one who has given the subject any thought can fail to realize the grave political consequences that would inevitably result from the prohibition of the use of opium.

13695. Has it at all come to your knowledge that it has been necessary to resort to some sort of pressure from time

Mr. F. E.

Mulock.

10 Jan. 1894.

Mr. F. B.
Mulock.
10 Jan. 1894.

to time in order to keep up the area under poppy cultivation?—None whatever.

13696. As far as you know the cultivation of the poppy is willingly undertaken by the cultivators?—Yes. They would cultivate more if advances were forthcoming.

13697. Do you think you have reason to be wholly satisfied with the conduct in all respects of the subordinate officials in the Opium Department: do you feel that there is ground for the belief that in your district these officials are open to the criticisms which were passed upon them in the report of the Opium Commission published in 1883?—I am in camp for four months every year; I go round the district visiting the villages; I am accessible to everybody, and in constant contact with the cultivators. I am at present Settlement Officer of the district, revising the settlement; and I have never heard of a complaint against them.

13698. You do not think they are open to the charge of taking small perquisites?—Every native government servant is open to the charge of taking small perquisites; but I have not heard complaints against them.

13699. It has not been carried so far as to induce the cultivators to make complaints to you of such mal-practices?—No.

13700. I suppose you are familiar with the points of difference in the administration of the Behar opium agency, as compared with the Benares opium agency?—No, I cannot say that I am.

13701. Your attention has not been called to the observations of the Opium Commission on that point?—No.

13702. (Mr. Pease.) You mention that the head clerk in the most important branch of your office is an opium-eater and smoker: can you tell us what the amount of his consumption is?—No, I cannot. He takes a small amount, I know, such as is usual amongst the majority of opium-eaters and smokers. He is my head treasury clerk.

13703. Does he smoke in his own house or does he go to a club or a den to smoke?—That I do not know.

13704. But you know he is an opium-smoker?—Yes.

13705. What is the character of the persons who frequent these opium dens; you say on one occasion you counted 186?—They are all sorts and conditions of people. A great many of them are servants.

13706. We have been informed at various places that they are of the very lowest class of the population?—I dare say there are some of the lowest people in these smoking dens.

13707. You mention that there are now 62 known smoking dens; were there any before the prohibition was put forth in connection with licensed premises?—None that we could find out.

13708. You believe that the whole of these 62 new places have been established since?—Such is my information.

13709. Have you succeeded in any prosecutions for the illicit dealing in opium: you said that there are 62 clubs where opium is illicitly dealt in. Do you state that as a fact?—I state that as a fact. They do not buy opium from me.

13710. You state that there has been a large increase from the treasury from 2 maunds 20 seers to 5 maunds 20 seers. Is not that purchased for these clubs?—They cannot buy, they are not licensed dealers.

13711. This is retail sale from the treasury?—Yes.

13712. The retail sale by the Government has largely increased: is not that caused by the smokers leaving the licensed dens and smoking in clubs?—I do not think so.

13713. What do you think this large increase in the retail purchase from the treasury has been for?—By those who consume. There are customers who actually eat opium.

13714. It is not for smoking?—No.

13715. How do you account for the increase of sale from the Government retail shop?—Because they get good opium there.

13716. Do you not think they got good opium before October and November?—Yes, they got the same opium.

13717. You say, "The retail sale of Government opium at the treasury has increased from 2 maunds 20 seers, disposed of in October and November 1892, to 5 maunds 20 seers in the corresponding months of this year:" how do you account for that very large increase of retail sale?—By the fact that since the 1st of October last the condition was omitted from all retail licenses. The licensed holder was bound to consume a minimum of Government opium. That

has been omitted, and the aggregate sale has fallen off by 2 maunds 20 seers, owing to the displacement *pro tanto* of Government opium that was formerly sold by these retail licensed holders. It is displacement by the illicit drug. On the other hand, the sale at the Government retail shop has increased. I infer from that that here alone they can get the good drug,—the best opium.

13718. The consumers have not the same confidence they used to have in the quality of the drug sold by the licensed vendors?—I am certain they have not.

13719. You are of course aware that the land which is occupied by opium is frequently the homestead, and that that is most richly manured?—Yes.

13720. Does not that account to a very large extent for the fact that it is paying so large a proportion of the district rental?—To some extent I suppose it does.

13721. Are the lands here under the land settlement arrangement, whereby the land is divided into three classes?—Yes.

13722. Can you tell me the number of rupees given for each class of land?—It varies for each village. I have not the totals for the district.

13723. I think we were told it varies from Rs. 4 to Rs. 8?—The settlement rates average for the inner circle of homestead lands about Rs. 8; for the next, the concentric circle, about Rs. 6, and for the outlying land Rs. 2 or Rs. 3.

13724. Therefore every acre of opium-growing land is equal to 2½ acres of the outer circle land?—It is also grown in the second class land to some extent; it is not all grown in the home lands.

13725. We have been told by various witnesses that tobacco, sugarcane and potatoes are as profitable crops as opium: if that were so there would be no justifiable claim for reduction on the part of the tenants as against the landlord?—I do not agree with that view. Opium, owing to the steadiness of the price, has a great advantage over every other crop. The cultivator is absolutely certain of his income. It is not so with sugarcane, or with any other crop that I know, subject to market rates.

13726. Do you think at the present time the prices paid by the Government for poppy enable the cultivator to make a considerably greater profit out of that cultivation than out of any other?—Possibly a shade better. I do not think it is that so much as the fixed certainty of income. That is the great advantage.

13727. (Chairman.) And cash at a convenient moment?—Yes; that is the great thing.

13728. (Mr. Wilson.) With reference to the question of the minimum amount of sale to which you have referred, what was the duration of the licenses that used to be issued?—One year only, beginning the 1st of October.

13729. Therefore the whole of the licenses which were renewed this year or which were granted this year came into force on the 1st of October?—Yes.

13730. And they all expire at the same time?—They all expire the last day of September.

13731. You say that there has been a falling off of 2 maunds and 27 seers in the sale of Government opium in two months: can you tell us what the total sale was,—2 maunds 27 seers may be a large or a small proportion of the total?—The district sale of opium for the year is about 135 maunds.

13732. Roughly speaking, it is 12 maunds a month?—Yes.

13733. You refer to the amount of increase at the treasury; that is just 3 maunds, is it not?—Yes.

13734. So that while there is a falling off of 2 maunds 27 seers on the whole district of what remains to be sold, there has been an increase of 3 maunds from the Government store?—Yes.

13735. Do I understand that as far as you are aware there were no unlicensed smoking dens as long as the free licensed ones existed in the city?—Practically none. They were not brought to my notice, although the police had instructions to report anything of the sort. Now the police have brought them to my notice frequently.

13736. In Calcutta even while the licensed smoking shops were permitted there were still a large number of unlicensed shops?—There were not a large number here. There may have been a few, but nothing approaching the extent to which they are carried on now.

13737. I do not understand why the refusal of permission to smoke upon the premises could bring into operation so

large a number as 62 shops as against 3?—Now they can smoke anywhere. Natives do not make their own *chandu*. They meet in numbers, and they can now smoke anywhere. As a matter of fact, a dealer sells *chandu* to them the same as before, using, I am satisfied, to a considerable extent illicit opium. A native will not make his own *chandu* merely because the Government licensed *chandu* shop is closed. Some underling from the shop or someone else opens a shop, where he deals in the same way; but when my police come (they are all interested in suppressing the fact) they say they meet to smoke as friends and have made their own *chandu*. Now they can do that anywhere. You cannot stop a man smoking *chandu* in his private house.

13738. What I still do not understand is, what was there previously to prevent any man who pleased from establishing an unlicensed smoking den?—We licensed them under the Act, and any unlicensed dealer was liable to prosecution. Now there are no licenses under the Act. As long as we license three shops only, those licensed were entitled to sell to the public.

13739. The same is the case still?—But we do not license the shops; we have closed them.

13740. I can understand that the smoking saloon is closed, but the preparation of *chandu* is not prohibited?—The sale of it is absolutely prohibited under the Act. None but a licensed person can sell *chandu* and *madak*.

(Mr. Wilson.) That is where I was wrong. We went very fully into this matter in Calcutta, and there it was perfectly clear that the sale of *chandu* was still permissible.

(Mr. Fanshawe.) The orders differ in different provinces.

13741. (Mr. Wilson.) In Calcutta we were all agreed that the sale of *chandu* was perfectly legal, but that smoking upon the licensed shop is not now permissible. Now you prohibit absolutely the sale of *chandu*?—The sale of *chandu* is prohibited because we give no licenses. None but a licensed retail vendor can sell *chandu*.

13742. (Sir James Lyall.) You say that it cannot be sold under the law except with a license, and that you have withdrawn all licenses, so that no one can sell *chandu* now; but there is nothing to prevent a man from buying opium at a shop and manufacturing it at his own house for himself and two or three friends, and then smoking it?—That is so.

13743. You have instituted a comparison between the number of the three shops formerly licensed for the smoking of *chandu* and the present number of unlicensed places which you put at 62: how do those places compare in point of size and accommodation. You say there are 62 smoking dens; I suppose some of them are very insignificant little places?—Yes.

13744. They are not places that would accommodate the same number of smokers as the three places formerly licensed?—That is so. Nobody would dare to open a place on a large scale.

13745. They are little hole and corner places?—Yes.

13746. (Mr. Wilson.) If I go and open a shop and sell opium in Lucknow without a license, I am liable to prosecution?—Yes.

13747. But if I go to a licensed vendor and purchase a certain quantity of opium and transform it into *chandu* and then sell it, what then?—You cannot sell it without a license. You can take it home and smoke it. You cannot sell without a license: it is the sale which constitutes the offence.

13748. There cannot be any such thing as the legal selling of *chandu* in Lucknow?—No, not at present.

13749. With regard to the amount of poppy cultivation, am I right in understanding that a certain portion of the Lucknow district of which you are Deputy Commissioner, is comprised within the Benares Opium Agency?—Yes.

13750. The Benares Opium Agency covers the whole of your district or portion of it?—Yes, the whole of it.

13751. You speak of a small patch of poppy paying the whole year's rent from the proceeds, of course by the proceeds you do not mean the profits?—The total income.

13752. Not the profit?—No.

13753. You have spoken of compensation: is it not the case that the Opium Department can and does refuse a license to the cultivator?—Sometimes, if the stocks of opium are very heavy. I have no accurate information upon that point.

13754. Supposing that to be so, is any compensation given or any allowance made?—Not that I know of; but it is to a very small extent that happens.

13755. We had it in evidence that in one year the reduction of area amounted to 10 per cent. I do not know whether that was in the Lucknow district or not. Do you know of any case in which compensation has been given?—I do not.

13756. Or any case in which an allowance has been made by the zemindar for the refusal of permission to cultivate opium?—I do not.

13757. Mr. Cadell was officer in this part of the country, what office did he fill?—He is at present in the Board of Revenue. He was Commissioner of Rohilkhand before he went into the Board of Revenue, and he was also Commissioner of Excise for some time over the province.

13758. Mr. Cadell referred to this smoking as distinguished from eating, as a degrading vice: would you agree with him in that expression of opinion?—Yes, comparatively it is. The reason we closed the smoking dens was because we did not approve of it. We thought it was a mistake that we should license them anyhow.

13759. What connection, if any, have you as Deputy Commissioner with the Opium Department?—None whatever, except seeing that the crop reports are made to me periodically for statistical purposes. I have absolutely no connection with it.

13760. Supposing that there were any abuses, such as the Chairman has referred to in connection with the Opium Department, and supposing that complaints were made to you, would you have power of any kind to deal with them?—Certainly; as a Magistrate it would be very much within my province. I am Chief Magistrate of the district.

13761. If you had complaints that the zilladars had used too much persuasion towards the poppy cultivators, what could you have done?—I would have enquired into the matter, and if they had committed an offence within the law, I should have dealt with it as a Magistrate.

13762. But you would have made enquiries not through the opium officers, whether of high or low degree, but through the police?—If it was a case in which I thought the police would be liable to give a biased opinion, I should use one of my own subordinate officials. I am actually on the spot myself in the cold weather going round everywhere, and I should have the opportunity of making personal enquiries: that would not render the police necessary as a rule.

13763. Would the ryots sufficiently understand the distinction between the Opium Department and your own functions, so that they would be likely to make much complaint to you?—They understand the distinction. They understand that I am not an opium officer. For that reason I should expect them to come and complain if anything was wrong, because I have no connection with the Department, and have no interest in suppressing anything.

13764. (Sir William Roberts.) In answer to Mr. Wilson you said that *chandu* smoking was a degrading vice: are we to understand by that that you think it is essentially a cause of degradation, or merely that it is a form of the opium habit, which is practised by low and degraded people?—I mean the latter inference.

13765. Then you do not mean that it is essentially degrading and pernicious?—*Per se*, no.

13766. (Mr. Mowbray.) With regard to the sales by the treasury, I fancy that system is peculiar to the North-Western Provinces?—That I am not in a position to say.

13767. Do you ever sell *chandu* and *madak* from the treasury?—No.

13768. How many treasuries are there in the North-Western Provinces and Oudh in which you retail opium?—There are as many treasuries as there are districts.

13769. At the head-quarters of each district?—Yes.

13770. Do you think that system works well, or do you think there is any risk of corrupting the Government officials by the sale of opium?—No.

13771. I suppose the sales are conducted by subordinate officials?—The treasurer does not actually retail opium himself. His other duties do not permit of his being always in the retail shop. It is done through assistants of his.

13772. May I take it from you generally that for the limited extent to which it is in force in the North-Western Provinces, the system of selling at Government treasuries has worked satisfactorily?—Yes, certainly.

13773. You have told us that there is no possibility of buying *chandu* or *madak* legally in the North-Western Provinces at present?—Not in my district. There are *madak* and *chandu* shops elsewhere, but none in Lucknow.

Mr. F. B.
Mulock.
10 Jan. 1894.

Mr F. B.
Mulock.

10 Jan. 1894.

13774. How does that difference arise, is it because some of the licenses are still running?—No, some of them are still running. But in Lucknow I did not care personally to have *madak* and *chandu* shops, and I recommended that they should be closed.

13775. That is a thing which you yourself have done in your own district?—Yes.

13776. That is not the general rule in force in the North-Western Provinces?—No. You will find in the last Excise Administration Report the names of the districts where they are opened, and the number of shops. There are only 17 or 18 shops, and there are forty-eight million people. The number is something very small, and the shops are gradually being closed. It is part of a general policy to close opium-smoking shops. We began here. I closed first one, and then I closed a second, and in the third year I closed a third shop. It was done in that way, so as not to do it suddenly and inconvenience the people.

13777. Taking your district I understand there are no shops open for the sale of *chandu* and *madak*, and that the sale of *chandu* and *madak* is illegal?—Yes.

13778. Is the manufacture illegal?—No.

13779. Are you aware that in Bengal the manufacture of *madak* or *chandu* for domestic use is not permitted without a special license?—No, I am not aware of it.

13780. Do you think that it would be possible to enforce prohibition of the manufacture of *chandu* and *madak* for domestic purposes?—I doubt its being practicable.

13781. I presume that these people who are found in these saloons justify themselves by saying that they are using *chandu* and *madak* which has been manufactured for domestic purposes?—For smoking. When they are raided by the police no dealer apparently is found. They say that they have met there and have brought some *chandu* with them to smoke.

13782. If the manufacture of *chandu* and *madak* were made illegal as well as its sale—if that were practicable—that would give you the opportunity of dealing with these dens because the people would be in possession of an article which could not be legally manufactured?—So far you would facilitate matters, but even then it is so easy.

13783. Have you ever actually brought these cases into Court,—I mean with regard to these saloons?—To the best of my recollection we were successful in two prosecutions only out of some hundred odd instances of raiding by the police.

13784. I suppose in those two instances you were able to prove actual sale?—To the best of my recollection in one instance money and pills prepared for sale were found. One or two of the men who were smoking at the time gave evidence of actual sale, and some sort of an account was found. The case was strong enough for conviction.

13785. You cannot suggest any way in which these unlicensed premises can be brought within the law?—No, except by licensing them: it is the only satisfactory way.

13786. (Chairman.) Or having a law prohibiting the smoking of *chandu* altogether?—Yes, smoking *chandu* even in private houses. You would simply probably diminish the size of the gatherings. That is about the way it would operate.

13787. (Mr. Haridas Voharidas.) What is the quantity of opium that a man can possess: I believe there is a restriction by law?—Three tolas to the best of my recollection is the amount that a person can legally possess.

13788. Are you aware that the preparation of *chandu* is rather difficult?—Yes.

13789. Would it not be very difficult for a man to prepare three tolas at a time?—I do not think so.

13790. Am I right in saying that the extent of the cultivation of poppy is regulated by the demand which is estimated by the Government?—I suppose so to some extent, and the willingness of the natives.

13791. I believe the revenue from opium is decreasing gradually?—I have heard so; but I am not in a position to give figures on the subject.

13792. It is not only for the benefit of the cultivators that opium is grown, but it depends upon the demand, the Government estimates?—Yes, so far it does.

13793. (Mr. Fanshawe.) Can you tell me whether smoking is more common among the Mahomedans than among other classes?—It is most common amongst low Mahomedans.

13794. I understand your objection to opium-smoking is that it is disreputable on account of its associations: is that what you intended to say?—That, is so.

13795. Could you tell us how it is regarded by the natives themselves as compared with eating opium?—I think they look upon it as more or less degrading.

13796. You spoke of illicit opium,—where does this opium come from?—From my own district. It is grown largely here.

13797. Do you mean what the cultivators would keep back, and afterwards pass out into general use by illicit sales?—Yes.

13798. The greater part of the illicit opium would reach the hands of the people in that way?—Yes, in that way through the cultivators.

13799. With regard to the cultivation of the poppy, I understand you to say that on first class land certain crops, such as you have mentioned, are the most suitable and the most profitable, and that if you eliminate one of these, that is to say the poppy, the matter would have to be taken into consideration with reference to the grant of compensation: is that your general view?—Yes.

13800. Whether tobacco, sugarcane or potatoes could be generally substituted for poppy would depend on various considerations,—on the manure supply, the caste of the cultivators, the market, and so on?—That would be the case.

13801. With regard to compensation, I understand you to mean that if a complete measure of prohibition were introduced at once, then the question of some equitable compensation would arise?—Yes, that question would assume importance, even if it were gradually introduced, in so far as you prohibit men from cultivating. I am at present Settlement Officer. A field of poppy is the first thing which catches my eye when I am going round the villages settling the revenue. A great deal of importance is attached to poppy. Whether you prohibit the cultivators from growing it all at once or gradually, it would either immediately in the one case, or ultimately, in the other, have the same effect on them.

13802. You are taking away a valuable crop, and therefore the point must receive consideration whether there should be a reduction of revenue and rent?—I consider it the most valuable crop. One reason is the fixity of rate.

13803. Whether prohibition were immediate or ultimate, you think some measure of compensation should be equitably paid?—I should say so, certainly. It is a question of law.

13804. (Sir James Lyall.) I think either you or Mr. Stoker must be wrong with regard to the fact of *chandu* shops being opened at present in some other districts. In the memorandum which he has put in he states:—“Consumption on the premises was stopped where it was possible to do so that year, and ceased entirely in 1892-93. The number of shops had then been brought down to 14 for the whole provinces, and it was decided to close the remainder on the expiration of the current licenses. This was done, and there are at present no shops where *chandu* can be legally manufactured or consumed.” That seems to mean that not only saloons, but all *chandu*-selling shops have been stopped this year?—I was unaware of that fact.

13805. In your district the shops were closed rather earlier?—Yes. I closed the first shop four years ago; I closed the second shop three years ago, and the third shop I closed about two years ago.

13806. It seems to me that keeping smokers together in large gangs, by lessening the number of saloons, may be advantageous for police control, but is not there, on the other hand, a great risk of contaminating young people by having large saloons licensed by Government opened in which we know the criminal classes have a tendency to collect?—Minors are not allowed on the premises.

13807. It seems to me if you have large saloons open in which a great number of people collect, and to which you have reason to know bad characters and criminal classes will probably resort, it will be likely to be more contaminating than a great number of small saloons, not perhaps so attractive, and in which the criminal classes would find their own place and other people find another place?—It may be so. I would sooner as a matter of public morality (from a magisterial point of view) have all my criminals together: I could deal with them more effectually.

13808. From a police point of view?—Yes.

13809. But from a general point of view of good morals it would perhaps have an action the other way?—Possibly

13810. You have said, "I have never noticed any evil effects on the moral or physical condition of the people from the consumption of the drug." That seems rather strong. I suppose you will allow that there are such things as opium sots as well as liquor sots?—Yes.

13811. They do not come before you?—They are so very few. Occasionally you come across a man that you can see is an opium-eater, just as you see a man sometimes at home who obviously, from his appearance, is a drunkard. From time to time you do see a man that you are pretty sure is either an opium-eater or a drug consumer.

13812. In the old times when you visited those saloons did you see people of that sort?—Yes, a few.

13813. What is the retail price at which opium generally sells to the public at the licensed retail vendor's shop?—It varies considerably. Shops are opened at fixed places, and they supply a certain area. The retail value of opium varies more or less, as the custom of a shop in one street differs from the custom of a similar shop in another street. You will find figures of the estimated profit in Mr. Stoker's report, which would be more accurate than anything I can give. We roughly estimate that the profit made is from Rs. 3 to 4 a seer over and above the price at which Government sells it.

13814. They have to pay heavy license fees?—Yes.

13815. Adding the license fees and the price at which Government sells together, over and above that they make a profit of about Rs. 3?—Yes, something of that sort.

13816. I suppose they adulterate considerably?—Yes, they do to some extent.

13817. I suppose the richer class of smokers (if there is a richer class) always smoke in their own houses?—I fancy so.

13818. I believe in Oudh poppy cultivation was free before Annexation?—I do not know.

13819. (Mr. Pease.) May I gather that notwithstanding the difficulties arising from the clubs, you personally are in favor of the closing of the opium dens in connection with licensed premises?—I am in favor of only having licensed premises.

13820. With no dens attached to them?—Yes; anything would be better than the present system.

13821. You closed three licensed dens or smoking saloons yourself, thinking that notwithstanding the difficulties of the clubs, it was desirable to have these smoking saloons in connection with licensed premises closed?—Yes. I also closed licensed premises: they sold *madak* and *chandru*, and smoked it in the same place.

The witness withdrew.

RAJA UDAI PRATAP SINGH, C.S.I., called in and examined.

13836. (Sir James Lyall.) I believe you are a talukdar of Bninga, Babraich district, Oudh, Fellow of the Allahabad University, and Chairman of the Municipal Board?—Yes.

13837. I think you are also a member of the Viceroy's Legislative Council?—I was. My term expired in February. I was also a member of the Public Service Commission.

13838. Where were you educated?—I was educated at the Lucknow Wards Institution.

13839. Have you ever travelled out of India?—No.

13840. When you were in the Council, I believe you brought forward a motion last year about the trouble amongst the country people by the "*rassad*" question, the question of supplies for official tours and the movements of troops?—Yes; I also wrote on the subject an article which appeared in the *Nineteenth Century*.

13841. Will you give us your opinion as to the number of people who take opium in India?—The number of people who take opium in excess is very small indeed; and even could a prohibitive measure be introduced for these immoderate people only, it would, in my opinion, be attended with the worst results possible. If their opium were stopped, they would, I am convinced, certainly have recourse to arsenic, nux vomica, alcohol or dhatura seeds. The tone of any society cannot, I submit, be raised in a day. Polygamy and concubinage must disappear from India before any attempt is made to put down even the immoderate use of opium by force.

13842. What is your opinion of the moderate use of opium?—My opinion is that it depends upon the constitu-

13822. Are you aware that at the present time throughout the whole of Bengal no one is permitted to manufacture *madak* or *chandru* even for private consumption without a special license?—I was not aware of that.

13823. (Mr. Mowbray.) I understand you to say that you do not see how you can close these unlicensed smoking saloons?—No.

13824. Supposing it is impossible to close the unlicensed smoking saloons, do you think that the licensed saloons which used to exist were better than the present unlicensed saloons?—I do, decidedly better. They were subject to supervision, whereas these unlicensed saloons are not subject to supervision.

13825. Is that the result of your experience since closing them?—Yes, only since closing them.

13826. In fact, have you modified your views since you have had practical experience of the closing of these licensed premises?—Yes, I would open them again tomorrow. I closed them with a hope of stopping opium-smoking, but I have failed.

13827. (Mr. Wilson.) You have said that opium is consumed by all classes in Lucknow to a greater extent than elsewhere in the United Provinces. That is very apparent from Mr. Stoker's table. Can you assign any reason for that greater consumption in Lucknow?—There is a very large Mahomedan population. I think that has something to do with it.

13828. It is not the largest proportion of Mahomedan population?—No, perhaps not, but it is a very big city; and in cities opium is used much more than in the country: there is no doubt about that.

13829. (Chairman.) Do you think there is less consumption of illicit opium than formerly?—Not now. There is much more consumption since the minimum of opium has not been entered in retail licenses.

13830. (Mr. Wilson.) The figures we have before us refer to the district with a population of 774,000?—Yes.

13831. The population of the city is one-third of that?—It is 279,000 including Cantonments, and 249,000 without.

13832. That is roughly one-third?—Yes.

13833. Therefore the proportion in Lucknow must be enormous when this very high consumption refers to the whole province?—Yes.

13834. It is not merely the city?—It is chiefly the city.

13835. (Sir William Roberts.) Do the reports which are brought to you indicate that *chandru*-smoking is tending to displace opium-eating?—No, I do not think so.

tion of a man. What one can take without any injury to himself is the moderate dose for him.

13843. Do you see any harm in it?—Having regard to those who take opium in moderation, I see no harm in it whatever. It is by no means injurious to the native constitution, and any endeavour to suppress the habit by legislation is sure to be a source of great political danger. In Rajputana it is not only invariably offered to visitors calling on their friends or acquaintances, but also no betrothal can take place without a ceremonial drinking of opium.

13844. Is there a popular opinion prevailing in some places that it is good for malaria?—In malarious districts the drug is of the greatest medicinal use, acting as a general tonic, if not as a preventive, in cases of fever and cold.

13845. What do you think of the policy of prohibiting the cultivation or the use of opium except for medicinal purposes?—I think it would be the cause of sowing seeds of discontent among the people. In any case it would be impolitic to interfere in any way with the use of the drug. In the present state of society, it would be as difficult a matter to compel Indians to be abstainers from opium as to turn the whole of the inhabitants of the British Isles into teetotallers.

13846. What do you think of the comparative effects in this country of opium and of alcohol—which do you think has the worst effects?—Certainly alcohol—has much worse effect.

13847. Is opium cultivated on your estates?—Very little; there is almost no cultivation.

Mr. F. B. Mulock.

10 Jan. 1894.

Raja Udaï Pratap Singh, C. S. I.

Raja Udai
Pratap
Singh.
C. S. I.

10 Jan. 1894.

13848. Have not the Opium Department extended their operations much into your part of the country?—In some places, but not in Bhinga. There is very little opium cultivation there.

13849. I suppose you were born after the Mutiny?—I was born before the Mutiny. I was very young at the time, but of course I have heard about it.

13850. Before the Annexation I believe opium cultivation was free in Oudh?—Yes, quite free.

13851. Do you think there was any difference when it was free; do you think it was more or less consumed than it is now?—I think it is much less consumed now; its use is much on the decrease.

13852. (Mr. Wilson.) Will you tell us why you select polygamy and concubinage, and say that they must disappear from India before anything can be done with opium?—Because the use of opium is the outcome of polygamy and concubinage, and the polygamous races are the chief consumers of the drug.

13853. I think you said before the Annexation the cultivation of opium was quite free.—Yes.

13854. Now it is prohibited in certain districts?—Yes. There was no restriction at all before, but now there is greater restriction.

13855. Do you know when it was prohibited in these districts?—It was before the Mutiny, I think. I was very young then.

13856. I thought you might know from history?—No, I do not know. I have only heard it from others.

13857. Is the part of the country with which you are best acquainted very malarious?—Not very malarious; but it is malarious in comparison with Lucknow or Fyzabad.

13858. Is Bhinga malarious?—Yes, Bhinga lies north of Bahraich, bordering on the Nepal territory.

13859. And that is much more malarious than this district?—Yes.

13860. Are you aware that, although that district is much more malarious, the consumption of opium for each one of the population is ten times as great in the district of Lucknow?—This district includes the town of Lucknow which is inhabited chiefly by Mahomedans who use opium more than Hindus.

13861. Do you think that is the only reason?—Yes. Besides it is used chiefly as a medicine in malarious villages, while in large towns like Lucknow it is taken habitually.

13862. Are you aware that in the district to which you particularly refer, and which you say is malarious, there is a smaller consumption of opium than in any of the other districts with the exception of, perhaps, eight or ten?—I do not know. I have only heard this from you.

13863. You say that the number of people who take opium to excess is very small. Do you think a large number take it in moderation?—I think among the martial races a very large number take it.

13864. Is there a martial race in Bahraich?—There are some Rajputs and Mahomedans.

13865. You have spoken of alcohol doing much more harm: would you be in favour of prohibition of alcohol?—We have very little to do with alcohol: we orthodox Hindus do not touch it.

13866. Would you be in favour of prohibiting it?—We require opium, but we do not require alcohol; so I think it would be better to prohibit alcohol than to prohibit opium.

13867. (Sir James Lyall.) Is it not the case that in the towns the consumption of opium, probably the whole, appears on the Government records, but in the country a great deal of it is illicitly kept back by the cultivators?—Exactly so.

13868. And so it does not appear on the papers?—No.

13869. Your district borders on the Nepal Terai?—Yes.

13870. Is there free cultivation of opium in Nepal?—I do not know.

13871. A great deal of opium is produced in Nepal, is there not?—Yes; but I have no personal experience: I have only heard it.

13872. Have you heard that it is smuggled into your district?—Yes, I have heard that it is smuggled.

13873. That also would not appear on the papers?—I think a greater quantity is smuggled than bought in our part of the country. Half of one of my villages is in the British territory and the other half in the Nepal territory; so they can easily not only get opium, but also alcohol from Nepal, where it is much cheaper.

13874. The whole border there is a country of forest?—Yes, all forest.

13875. And it would be very difficult to stop smuggling along there?—It would be quite impossible, unless they have more police and detectives.

13876. (Chairman.) I gather that you desire to say that opium is extensively used by what you call the martial races: I presume it is chiefly taken by the Mahomedans in moderation, and therefore in your opinion without doing them very much harm?—Yes, it is taken by Rajputs, Sikhs, Jats and Mahomedans.

13877. You also desire to say that just as advocates for abstinence in England recognize that prohibition of the liquor traffic can only be entertained where public opinion has declared itself to be in favour of such prohibition, so it must be in India, and you would say in India that it would be impolitic for Government to prohibit the use of opium universally unless we have an assurance that the public opinion of India is in favour of such a measure?—Exactly so. And I think it would be very impolitic if not dangerous to interfere with the use of opium, taking the political and social state of the country into consideration. When, for instance, Cow Protection and Anti-cow Protection Societies are fast multiplying in the land, and the mischievous are busy in sowing the seeds of discontent amongst Her Majesty's subjects, it would be highly impolitic, if not dangerous, to move in the matter in any way.

13878. Have you taken any interest in the proceedings of what is called the National Indian Congress?—No.

The witness withdrew.

BRIGADE-SURGEON-LIEUTENANT-COLONEL W. R. HOOPER called in and examined.

Brigade-Sur-
geon-Lieute-
nant-Colonel
W. R.
Hooper.

13879. (Sir William Roberts.) I believe you are Civil Surgeon in Lucknow and Superintendent of the Lucknow Lunatic Asylum?—Yes.

13880. What opportunities have you had of studying the opium question?—As Civil Surgeon at Azamgarh and Benares in the North-Western Provinces and at Lucknow, in Oudh, also as Superintendent of Jails at Azamgarh, Allahabad and Benares, for periods amounting in all to 29 years, I have had considerable experience of the habits of the people of the districts named.

13881. What is your impression as to the prevalence of the opium habit in the Lucknow district?—I believe that about 50 per cent. of the Mahomedan population of the Lucknow District, and about 20 per cent. in the other districts named habitually use opium, whilst about 10 per cent. of the Hindu population of the Lucknow District and probably 5 per cent. in the other districts are addicted to the habit. Where malarial diseases are unusually prevalent and also during the rainy season, the percentage of both Mahomedans and Hindus using opium is higher.

13882. What is your opinion as to the effects of the moderate consumption of opium?—The effects of a moderate consumption of opium are not in my opinion prejudicial to the moral and physical condition of the people.

13883. Would restrictive measures affecting the sale and use of opium be popular?—I believe that any restrictive measures affecting the sale and use of opium would be strongly resented by the people, and would create great discontent; and that the people would also strongly resent the infliction of the cost of prohibitive measures in whole or in part.

13884. What is your view of the habit from a medical point of view?—From a medical point of view I regard opium as a remedy which nothing could replace. It is a blessing and a necessity to vast numbers, and especially so for those located in malarious tracts. As a remedy it is held in the highest estimation by the people, and its use undoubtedly saves many lives when taken in the early stage of cholera, for bowel complaints, malarial fever, spasmodic affections, rheumatism, and other painful diseases, for which it is used both internally and externally.

13885. Is the tendency to excess strong?—The tendency to use opium in excess is slight, and certainly nothing in proportion to the tendency to excess in the case of alcohol. If deprived of opium or restricted in its use in consequence of restrictive measures, large numbers would resort to the use of alcohol.

13886. What has been your experience in the Lucknow Lunatic Asylum?—Of 393 lunatics admitted into the Lucknow Lunatic Asylum during the past five years, only eight were habitual opium-eaters. Opium cannot be regarded as a prominent cause of insanity. The moderate use of the drug has the effect of increasing the power of endurance under hardship and exertion, and of maintaining health under privation, cold and damp.

13887. What have you to say with regard to the use of opium in malarial districts?—In malarial tracts of country opium is largely used, and I believe acts as a prophylactic and febrifuge, acting as a moderate amount of alcohol does: its stimulating effects enabling the system to resist the action of malarial poison and of chill and wet.

13888. You do not quite express the opinion that opium acts in the same way as quinine as a protective against malarial fever?—One of its alkaloids certainly does.

13889. Which?—Narcotine. Twenty years ago I was one to whom experiments with narcotine were entrusted. I found it act not quite so well as quinine, but it was a very good substitute.

13890. Is it your impression that Bengal opium, which contains such a large proportion of narcotine, has in some degree the same power as narcotine itself?—I think so.

13891. Can you give us any specific evidence in regard to that point?—I mean in regard to the protective power of opium in malarious fevers?—I have observed it in the south of the Benares district, in the rice growing, damp portion of the district, where malarial diseases very much prevail. I was there given to understand by the Hospital Assistants in charge of the dispensary that opium had a decidedly protective influence.

13892. How long ago is it since you were in the Benares district?—I left in 1891.

13893. Had you heard any popular opinion with reference to the usefulness of opium in malarious districts much earlier in your career?—Yes, many years ago. I first went to Benares in 1864.

13894. You knew of that popular impression or opinion as early as 1864,—you are quite clear upon that point?—Yes, quite clear.

13895. I suppose you regard the opium habit as a risky habit,—the same as the alcohol habit?—Yes, certainly, to some extent.

13896. Therefore if anybody in good health asked you whether he should begin the opium habit, I presume you would not undertake to advise him to do so?—Certainly not.

13897. Is it for the reason I have expressed, namely, that it is a risky habit?—Yes.

13898. But supposing you were asked by a person going to a malarial district whether he might use opium in case he found quinine ineffective, or he had not a supply, or whether he might join it with quinine, what would be your answer?—I should advise it under those circumstances.

13899. (Mr. Wilson.) Which are the most malarial districts of which you have had experience?—Benares and Azamgarh.

13900. Would you call them decidedly malarious?—The south portion of the Benares district is decidedly so—the rice growing district; and a good deal of the Azamgarh district is decidedly malarious.

13901. Much more so than this district?—Much more.

13902. You are probably aware that the consumption of opium is much larger in this district than either of the two districts you have mentioned?—Yes. I think it is entirely on account of the large population of the city here. It has become the custom for a long time to use opium.

13903. Can you give us any reason why it is notably prevalent here?—I think the force of example has a great deal to do with it.

13904. Whose example?—The example of the Mahomedans who use it freely. It is practised here more as a vice than elsewhere. I think in malarious districts the people resort to it as a remedy and protective. Here it is more a vice, such as the consumption of alcohol in large cities in Europe.

13905. Speaking generally, do you approve of the present regulations of the Government with reference to the restrictions on the sale of opium?—I have never gone into the question of restrictions of sale.

13906. You are aware of course that there is not free trade in opium?—Yes.

13907. And that the price at which it is issued by Government in India differs very widely in different districts?—Yes.

13908. Are you aware that in some of the most malarious districts the price is the highest?—No, I was not aware of it.

13909. From your point of view with regard to its great value in malarious districts, you would be rather sorry to learn that perhaps?—I should, certainly.

13910. With reference to the dietetic use, I take it that under certain circumstances you would recommend your European patients probably to take a little alcohol in some of its various forms?—Certainly.

13911. Would you advise opium for daily dietetic use?—No.

13912. Why?—It would have different effects from alcohol; it would not act in the same way.

13913. I think I understood you to imply that the daily use of opium was frequently beneficial; do you personally advise it to your patients?—No, not without some distinct reason.

13914. Disease?—I said that the use of opium was beneficial to people resident in malarial tracts of country, but not generally.

13915. Did you, when you were resident in those malarious districts, advise the daily dietetic use of opium to your European patients?—No. Europeans are not under the same conditions as the natives who reside in the country: they would not require it.

13916. (Chairman.) They presumably took alcohol?—Yes, they took alcohol as a habit, certainly.

13917. (Mr. Wilson.) Do you advise it to your patients who are natives of India for daily dietetic use?—Not without some distinct reason.

13918. (Mr. Mowbray.) You have spoken very highly of the medical use of opium. I suppose there is also what I may call a quasi-medical use of opium as a domestic remedy commonly used by the people?—Yes.

13919. I should like to put it to you generally,—from your knowledge of the country and of the medical service in India, and the medical facilities, would it be possible to meet the demand for opium on the part of the people of the country for these medical and quasi-medical purposes by any system of Government dispensaries or of Government doctors?—I think it might.

13920. Could you form any idea of the cost of such a system?—No, I have not considered the question.

13921. Would the present staff be anything like adequate to the wants?—It might be distributed through the Tahsildars, where no dispensaries exist. I do not think the dispensaries are sufficient.

13922. That is exactly the point I put to you. You do not consider that the dispensaries are sufficient?—Not at present.

13923. They would have to be either very largely increased, or you would have to make use of the agency of people like Tahsildars?—Yes.

13924. I do not know whether you would like to express an opinion as to whether, in the case of a drug like opium, which is so much sought after by some classes, it would be safe to entrust the supply to Tahsildars for medical purposes?—Probably not.

13925. (Mr. Haridas Foharidas.) Perhaps you know that Magistrates issue licenses for selling poisonous drugs, such as arsenic, etc.?—Yes.

13926. Should they be entrusted with this work of selling opium?—They might be.

13927. (Sir James Lyall.) If you entrusted Tahsildars or dispensary officials, Hospital Assistants and that sort of people which you have at dispensaries, with the business of selling opium, you would supply them with the opium, tell them to sell it and account to you for all the money they took?—Yes.

13928. Would not there be the greatest danger that every one of them would take a larger price, and make a large profit?—Certainly there would be that danger.

Brigade-
Surgeon-
Lieutenant-
Colonel
W. R.
Hooper.

10 Jan. 1894.

13929. In the same way if you entrusted the business to native druggists and other people on the same terms, namely, that they were to take the opium and sell it at a certain price, and account to you for the proceeds, they might do the same thing, might they not?—Yes.

13930. If you said to your Assistant Surgeons and Hospital Assistants that they were only to give opium to those people who required it for medical purposes, do you think they could be entrusted to give it only to such persons, supposing they were making a profit out of the sale?—All of them could not be so trusted.

13931. Would it not be likely to demoralize the whole establishment?—It might.

13932. (*Chairman.*) When you expressed the belief that about 50 per cent. of the Mahomedan population of the Lucknow district habitually use opium, you meant, I presume, 50 per cent. of the adult male population?—Yes.

13933. (*Mr. Wilson.*) When I was asking you about malaria, I had not these figures before me. Are you aware

The witness withdrew.

The Hon.
Maharaja
Pratap
Narain Singh.

The Honourable MAHARAJA PRATAP NARAIN SINGH called in and examined (through an interpreter).

13936. (*Sir James Lyall.*) I believe you are Talukdar of Ajudhia, and one of the leading talukdars of Oudh?—Yes.

13937. To what extent is opium used in the part of the country with which you are acquainted?—The use of opium is not confined to any sect or community, but generally speaking the Mahomedans and Khatriyas of the United Provinces are more in the habit of taking opium than other people. As to the extent of the use of opium in different districts, I can say nothing with any degree of positiveness, but people living in cities and towns are generally more given to the use of opium than villagers. For instance, amongst the residents, and particularly Mahomedans, of Lucknow, Fyzabad and Ajudhia, this habit is more prevalent. Very few belonging to the lower classes are found in this habit.

13938. Has the use of opium any effect upon morals?—I cannot endorse the opinion that the use of opium, and opium alone, uncombined with other known causes of demoralization, can have any effect on the moral condition of the people.

13939. What is the physical effect of it?—The very excessive consumption produces a certain amount of lassitude. As to the effect produced by opium on the physical condition of the people using it, I would say that a young man with good food will not feel any injury, but it will bring on weakness when he is 50 years of age.

13940. Are there any signs of an increased tendency towards the use of opium for non-medical purposes?—Taking the cities of Lucknow and Fyzabad as exceptions, there does not, to my thinking, exist any growing tendency towards the use of opium for non-medical purposes.

13941. What is your opinion as to the policy of prohibiting the use of opium or imposing direct or indirect taxation to meet a loss of revenue consequent thereon?—Any imposition of direct or indirect taxation to meet the cost of introducing the prohibitive steps is sure to be a most unpopular measure.

13942. Are the people in a position to bear extra taxes?—They are unable to bear the cost of taxation.

13943. Are there any other general remarks you would like to express?—The interest bound up with opium as far as the landed classes are concerned are to my mind large. We cannot overlook the advantages which the present system secures to the needy cultivators by way of advances made in a time when they are most in need of money to pay off their rents due to the talukdars and zemindars. These advances secure to the zemindars the realisation of rents without much difficulty, and as a matter of consequence, the Government revenue is as well safeguarded. The money thus advanced by the Government for the cultivation of opium after benefiting the cultivators and zemindars and at the same time securing the stated revenue returns to the State treasury. It is noteworthy that this advantage is not afforded by any other crop. Besides this, the present system secures a ready sale of their entire produce at a fixed price. If the advance system is abolished, then the only means that will be left to the cultivators to raise money will be to borrow from banias at an exorbitant rate of interest. These transactions in most cases terminate in the utter ruin of the cultivators, ending finally in their absconding from the villages. It is to be remembered that if the present system

that in the Azamgarh district, which you said was malarious, the consumption of opium (that is Government opium) is only 26 tolas per thousand of the population, whereas here it is 594, which is nearly 23 times as great: or to put it in another way, the malarious district of Azamgarh is one of the lowest in the whole of the N.-W. Provinces and Oudh, are you aware of that?—Probably the drainage has been very considerably improved since I was Civil Surgeon there. I was there in 1861 and 1862,—30 years ago.

13934. Do you think they would then leave off taking it?—They might not feel the same necessity for it.

13935. (*Sir James Lyall.*) Is it not a fact that in the Azamgarh district the poppy is extensively cultivated, and that it is notorious in those districts where the poppy is extensively cultivated, it is impossible to prevent the opium consumers drawing their supply from the cultivators?—That is so.

is done away with, for which I would say there are no justifiable grounds at all, the alternative left will be to open free the cultivation of poppy and the manufacture of opium to private individuals, and in that case it is evident that the remedy will prove worse than the disease, and the result would be the increase of cultivation, production and consumption. It may find an easy access into places where it would otherwise have obtained no access at all. The restriction, coupled with the high rates of retail prices, serves without the least shadow of doubt to restrict consumption within reasonable bounds. If the absurd theory of total abolition of poppy cultivation be accepted for a moment, it is plain enough that the opium-eaters in no way will give up their life-long habits of using opium without adopting the use of alcohol or other intoxicating liquors, a state of things far worse than the present one. The financial considerations are not the least important factors in the solution of the problem.

13944. Further taxation of any kind being out of question, how is the loss sustained in consequence of the abolition of the opium monopoly to be made up?—In short the present system must be continued, as it checks consumption by restricting cultivation, and at the same time it secures to Government a steady revenue. A careful consideration of the matter will convince any man supporting the abolition theory of the utility, efficacy and advantage of the monopoly system. I wish to add that, according to law, no cultivator can be prohibited from cultivating any crop that he thinks proper, and the highest degree of assessment on the land has been mostly on poppy cultivation. If the cultivation were stopped, there is no article which can be substituted for it to replace the deficiency.

13945. (*Chairman.*) And bear the same rate of assessment?—There is no cereal crop that could bear the same rate of assessment. Two necessities will arise; the first will be an alteration of the law, and the second will be a reason of assessment and a reduction of the revenue.

13946. (*Sir James Lyall.*) Is poppy much cultivated on your estate?—Yes, a considerable amount.

13947. The people get licenses, do they not, from the opium agent?—Yes.

13948. Do you remember the time before the Annexation?—I do not remember it: I was only two years old.

13949. You would not require any new law I think, because the present opium law prohibits cultivation without a license?—That is correct, but if the whole arrangements are to be altered, it will perhaps be necessary to make some changes in the law.

13950. Have you heard what was the state of poppy cultivation in the olden time?—As far as I have heard, the cultivation was general. There was no issuing of licenses.

13951. Do you think that the moderate use of opium is at all general among the country people now?—In my opinion the use of opium by cultivators in villages is very small. It is generally understood that cultivators keep back some of the opium.

13952. If they do so, do you know what they do with it?—If they keep it back, they must keep it back for the purpose of eating; but in my opinion it is not a common practice.

13953. What are the class of people who cultivate opium in your part of the country?—Cultivation is generally

confined to men of the lower castes, such as Koeris, Kaharis, Ahirs, and a few people of higher castes. I have seen Kshatriyas and Brahmins cultivate also.

13954. Is that because women of the lower castes work in the fields?—The cultivation is generally confined to those classes who are in the habit of working with their own hands.

13955. Do you mean also women and children?—Among the lower classes women and children also assist.

13956. Would a man of the higher class think it anything disgraceful to cultivate opium?—They do not consider it in any way beneath their dignity to cultivate opium, as shown by the fact that some of them do it. But the cultivation of the crop is laborious, and as men of the higher castes cannot usually work with their own hands and have to pay for labour, they do not derive the same profit from their crop as men of lower castes do.

13957. (*Mr. Wilson.*) Do you know that those who have suggested the prohibition of the growth of the poppy and the sale of opium for non-medical use have proposed it on the condition that such suppression shall not be allowed to cost increased taxation to the people of India, and that, if it be found necessary, the people of England must make good the loss?—I have heard that.

13958. (*Mr. Mowbray.*) Are you aware that when the proposal was made to the representative of the Government in London, he said that he had not the slightest reason to suppose that there would be any disposition on the part of the Government to place a heavy burden on the tax-payer of England for the purpose indicated?—I am aware of that.

13959. May I take it that you state affirmatively that unless the Parliament of England is prepared to make compensation to the landowners and cultivators of the poppy, you consider it would be unjust that the cultivation should be prohibited?—My meaning is this: even if the loss, which would result to the Government of India, were made good by Government at home, how could it be made good to the Government of India?

13960. Do you say that unless the British Parliament is prepared to grant full compensation for the loss to owners and cultivators, it would be unjust that they should be prohibited from the cultivation?—Even if such arrangements were made, that the loss to Government would be compensated for, and that the zemindar and ryots were also compensated, still, even then, in my opinion, great difficulties would be experienced.

13961. (*Mr. Wilson.*) Do you understand that if Lord Kimberley was right in the opinion he expressed, as put by Mr. Mowbray, there never will be any prohibition?—It would be exceedingly difficult to say, because one cannot really anticipate whether any fresh taxation would be imposed or not.

13962. Are you aware that the cultivation of the poppy has been prohibited either in whole or in part in a consider-

able portion of the North-West Provinces and Oudh?—I have not heard of that.

13963. Do you think that licenses are granted throughout the whole North-West Provinces and Oudh?—In my opinion throughout almost the whole of the Provinces; that is the case.

13964. Is Ajudhia a town in the district of Fyzabad?—Yes.

13965. You say that "taking the cities of Lucknow and Fyzabad as exceptions, there does not, to my thinking, exist any growing tendency towards the use of opium for non-medical purposes;" are you aware that in Oudh the consumption of Government opium has increased between twice and three times in the last 20 years?—I have noticed that.

13966. Do you think that the whole of that increase is in the cities of Lucknow and Fyzabad?—Probably the whole of the increase was not in those two cities; there may have been a small increase in other parts.

13967. Are you aware that the cultivation of the poppy in Oudh in the year 1890-91 was 25 per cent. greater than it was last year?—I have not seen those figures. I have had no opportunity.

13968. (*Mr. Fanshawe.*) Are you also aware that one of the reasons for the increase in the sale of Government opium, as shown by the figures, is believed to be that the illicit opium has largely been stopped?—That certainly is so.

13969. (*Chairman.*) You have told us that there are a large number of cultivators of the poppy on your estates; have you heard any complaints on their part of acts of oppression or speculation by minor officials of the Indian Opium Department?—I have heard of complaints that the character of the produce has not been correctly determined; that they have classified opium of the first class as being of the second, so that they had an inferior price for it.

13970. Was that by an error?—The classification is made with severity.

13971. I assume that you are exceedingly interested in seeing that all the cultivators on your property receive justice under a public department: will you tell us whether, on the whole, looking at the fact that any large department must contain a great number of officials, you consider that the treatment of the cultivators by the Opium Department is equitable and fair?—I have never heard of any other oppression than that which I have already stated, that they classify the produce with severity.

13972. You have alluded to the advantage to the cultivators growing poppy having advances in cash at periods when they would not otherwise be in possession of ready-money. May we assume that when the cultivator obtains the advantage of an advance from Government on his poppy, he generally escapes the necessity of borrowing from the *banias* at an exorbitant rate?—That is the case.

The witness withdrew.

MUNSHI NEWAL KISHORE, C.I.E., called in and examined (through an interpreter).

13973. (*Sir James Lyall.*) I think you are an Honorary Magistrate?—Yes.

13974. And a Zemindar?—Yes.

13975. You are a member of the Municipal Board, Lucknow?—Yes.

13976. You are Fellow of the Allahabad University, and proprietor of the Newal Kishore Press?—Yes.

13977. Will you give us a statement of the circumstances which have led to your being able to form an opinion upon this opium question?—The evidence which I am able to lay before the Opium Commission is based on about 37 years' experience acquired in the several capacities mentioned. In 1855 I was the Editor of a journal at Lahore, and since 1858 I have been connected as proprietor and Editor with the *Oudh Akhbār* in these provinces. My father was a hereditary landlord of some villages in the Aligarh District, where opium cultivation was, and is, regarded as one of the chief sources of land revenue; and I hold zemindari estates in the districts of Unao, Gonda and Nawabganj at the present day, where also poppy cultivation is not uncommon. I have a large press at Lucknow called the Newal Kishore Press, among the operatives of which there are many of the people of Lucknow who use opium. I have had opportunities of conversing with them.

13978. What information have you to give us as to the prevalence of the opium habit in parts of India with which

you are acquainted?—The use of opium is more or less to be found in almost all parts of India. Among the Native States Rajputana has the largest population of opium consumers. In the North-Western Provinces and Oudh, Lucknow heads the list of the places where there is a great consumption of opium. As far as I have seen, the use of opium is common chiefly among the Mahomedans and Rajputs. Among the Mahomedans the women and even children are in the habit of using opium. I have not come across an instance in which the use of opium has made a bad effect upon the moral condition of the people. As regards their physical condition, I can only say that they have generally been found to be safe from other diseases, though of course such of them as use opium in large doses have been seen to be lazy and giddy, and this effect is chiefly due to the dryness and weakness of the brain, if the people are in distress and cannot afford to pay for nourishing things, such as milk, ghee, etc. Among the labouring classes these evils are seldom to be found. They are seen to be busy with their occupations like those of their class, who do not use opium at all.

13979. Will you tell us how the habit generally arises?—As far as my experience goes opium is originally used as a general rule for medical relief against other diseases, but gradually its use becomes a habit, though without giving rise to any dangerous effect. The greater consumption of opium among the Mahomedans, especially among the

*The Hon.

Kishore,
C.I.E.*

Munshi
Neval
Kishore,
C.I.E.

10 Jan. 1894.

well-to-do, is attributable chiefly to their luxurious propensities. The people of the damp tracts of the country, where diseases like fever and the like are common, consider and use opium as a safe remedy for the preservation of their health, and they have been seen to be successful in their experiment, if they use it in small doses. At the lowest computation, twenty-five per cent. of the operatives of my Press, about 700 in number, are opium-eaters, but as they eat in moderate doses, they are not in any way giddy or indolent, but work more actively when they use it. Their moral character is also satisfactory.

13980. What is your idea as to the disposition of the people towards the policy of prohibiting the use of opium and the cultivation of the poppy and towards bearing the cost of such a measure?—The inquiries I have had occasion to make on this point at Lucknow and other places allow me to say that there is no willingness on the part of the people to the adoption of prohibitive measures against the use of opium, and when they have no inclination to it they cannot be expected to bear the cost of the measures, whether in whole or in part. They already make loud complaints against the levy of income and municipal taxes, which have raised the cost of their daily requirements. They cannot then be expected to bear the cost of such measures, much less to make up the loss that is likely to be caused to Government in the revenue.

13981. What are the interests involved in the cultivation of opium?—They are to my mind the following: (1) the payment of rent by tenants; (2) payment of revenue to the Government by the zemindar; (3) cultivators' gains; (4) necessity for alteration or revision of the settlement between the Government and the zemindars and between the zemindars and the tenants. The advantage which the cultivators derive from opium cultivation may be briefly described as follows:—The cultivation of poppy from which opium is derived is commenced in October, and the crop ends in April. The rent for the *kharif* crop becomes due in October. This they are able to pay from the advances made to them by Government for the cultivation of opium at the rate of Rs. 4 or Rs. 5 per bigha, and are thereby saved from the exorbitant interest which they would have to pay in case of borrowing money from the bankers: the grain produce is left to them quite free from all charges on account of rent, etc., to enable them to live on during the winter. The crop ends in April, when they are paid for their opium produce after deducting two annas in the rupee. This enables them to pay off the rent for the *rabi* crop in respect of other produce, and they are again saved from the risk of paying interest to their bankers. Besides these advantages, they have another source of income from the opium cultivation. The produce of poppy seed, which is not less than twenty seers per one seer, and is sold at least at the rate of Rs. 3 per maund, brings to them again a net profit equal to $\frac{1}{4}$ th of the value of opium. If the cultivation of opium be absolutely abolished, an increase in the cultivation of grain crop is sure to result, and this is likely to lower the price of grain. During the last few years the

revenue was enhanced, it will be observed, by the settlement authorities on a calculation of the total income of the land at the prices then current. There were large exports of grain from India in those days to other countries, in consequence of which the prices had highly risen, and the value given to the produce by the settlement officers was based on these rates. In 1892-93 there have been little or no exports of grain, and consequently the agricultural and commercial class have both suffered alike by the fall in prices. If the areas on which opium is now cultivated be added to those used for grain cultivation, an increase in the produce of grain followed by a fall in price is certain. The average area under opium cultivation in the North-Western Provinces and Oudh is about three lakhs of acres. This circumstance will involve the landlords in great difficulty to pay the existing Government demands, which are based on the high prices of grain of the previous years, and the Government will, in the eyes of justice, be compelled to adopt measures for the reduction of its revenue demand in addition to the loss that is likely to be caused to it by the abolition of opium cultivation under the head of land revenue. Apart from this, the poverty of the agricultural classes will certainly rise to its summit when they, at the present moment, are quite fatigued to bear the burden of taxation which has its ultimate effect upon them. These evils will finally give rise to other difficulties of a political nature, when distress will force the people to adopt criminal measures to support themselves.

13982. Have you been concerned in various social movements?—Yes, I have.

13983. Of what kind?—I am Vice-President of the Bhargava Sabha of Agra—the objects of the society are to improve the social and educational conditions of the people.

13984. (Mr. Wilson.) Of what race or religion are most of the workmen connected with your printing works?—A great proportion of them are Mahomedans, say three-fourths.

13985. Is there any difference with regard to the consumption of opium between the Mahomedans and the non-Mahomedans?—Amongst the operatives of all kinds, the proportion of consumers is larger among Mahomedans than among other religions.

13986. Have you any figures as to the export of grain, so as to compare 1892-93 with other years?—I have not the figures with me, but I am in the habit of talking to persons acquainted with the subject, and I can say confidently that there has been a decrease in the export, and that grain is about one-third cheaper than it was before.

13987. Do you do much work in paper-making, or printing, or book-binding, or work of any kind for the Government of India?—I do; but the work I do for Government is not more than one-sixteenth of the total work turned out at my place, which goes as far as Bokhara and Persia. The work of the Educational Department, which is an important one, is not given to me, or very little of it. The bulk of it goes to the American Mission.

The witness withdrew.

The Reverend T. J. Scott, D.D. called in and examined.

The
Rev. T. J.
Scott, D.D.

13988. (Mr. Wilson.) Are you Principal of the Bareilly Theological Seminary?—I am.

13989. With what body are you connected?—The American Methodist Episcopal Church.

13990. Will you tell us what classes, races, or castes you have had experience amongst?—The Hindus and Mahomedans of Rohilkhand and Oudh. The castes would, of course, include the common castes of the Hindu, from the Brahmin down to the sweepers and lower castes. All these come under one's observation.

13991. During how many years have you had those opportunities?—Over thirty-one years.

13992. Have you had any special or general opportunities?—The general opportunities of a missionary moving constantly among the people, and familiar with their habits.

13993. Will you tell us if you have any knowledge as to the age at which the habit of taking opium is generally acquired?—It is given very commonly to children for a certain number of years. How much that would affect their acquiring the habit I am not prepared to say, but the giving it to children, for certain reasons is very common up to the age of three or four perhaps. Then my observation would lead me to say that the habit is acquired in the vigour of manhood, when it is perhaps taken for certain reasons. Then in old age it is taken I believe with the idea that it sup-

ports declining strength. These are the three periods. It is often taken in connection with sickness at any time of life. It is commenced in the medical use, and then perhaps it is not broken off afterwards.

13994. What is the principal motive inducing people to take opium?—It may be given to children to quiet them while the labourers are attending to their duties. In early manhood the object is to increase and strengthen virility—the sexual impulse. That has been told me by medical men in the country years ago. I could give the names of some who have called attention to it. Then, as I have said, it is taken as a medicine, and the habit formed has not been broken off; and in old age it is sometimes recommended to support strength in declining years.

13995. Is there a general tendency to increase the dose?—I have no doubt of it—not invariably.

13996. Can you give us your view of the results of the habit, physically, mentally, and morally?—My observation is that physically, many become wrecks, and mentally those who have come under my observation as students or catechists have become dull in their faculties, rendered less vigorous and active, and they have acquired a habit of prevarication; they attempt to conceal the habit, and it leads to falsehood and mendacity. It is in that direction that I should chiefly see it as a moral evil. It does not

seem to make people fight like drink, but it certainly leads to habits of trickery and mendacity.

13997. Is opium generally believed by the people of this part of the country to be protective against fever?—I never heard of it until I heard of this Commission. For other diseases I have heard of it, for instance, in the case of catarrhal and bowel troubles.

13998. You have not studied medicine specially?—Not specially.

13999. That is your general impression?—Yes, and as a matter of fact, I have known opium administered for those complaints, but never for malaria. I have known the profession give it for bowel complaints.

14000. Have you heard whether or not it is specially useful in malarious districts?—I have never heard of it.

14001. Or believed by the people to be useful?—I have not heard of it spoken of in this way, though for other diseases I have.

14002. Is it necessary, or believed to be necessary, to enable working people to go through their daily toil?—I never heard of it.

14003. Is it looked upon as disgraceful?—As I have heard of drinking, so opium is looked upon as disreputable. Of course not universally so, but that is the common opinion amongst the natives.

14004. Have you any opinion as to whether the existing system of granting licenses for selling opium tends to the spread of the habit or its restriction?—Of course the license holder will try to press the sale, that is human nature. I have no statistical evidence. I have never studied the matter in a technical way.

14005. Is it in your opinion desirable to prohibit the sale of opium in this country except for medical purposes?—Ultimately.

14006. Will you explain that?—The immediate attempt to do it would, I think, be accompanied with very grave difficulties, rendering it almost impossible, but I think it could be done in time.

14007. Would you indicate in any way how it would be easier in time than now?—It is a very broad question and a perplexing matter, but I think some restrictive measures may be used. My impression is that the Government connection with it rather stimulates and spreads the acreage under cultivation. If the Government severs its connection with it, it will gradually narrow the area of cultivation. I think that other restrictive measures might be used.

14008. Do you think that the public opinion of this part of the country would favour the adoption of any more restrictive or even prohibitive measures?—I think it would favour restrictive measures, perhaps not prohibitive measures.

14009. Supposing any prohibitive measure was adopted, would it be desirable to make special provision by establishing a Register of opium consumers for the wants of those who are already habituated to the use of the drug?—I think it would; I think that would lessen the difficulty.

14010. Can you suggest any way in which the sale of opium for medical use might be provided for, while there was a more general restriction or prohibition?—That would also require some thought. I would confine it to authorised medical shops and centres, where it could be within the reach of those who must have it, hospitals, perhaps recognised Drug Stores and medicine shops, which are numerous enough.

14011. I believe you have no personal knowledge in reference to the cultivation of the poppy, but that you have heard the conversation of the district on many occasions?—Yes, often, moving about the country and mingling with the people.

14012. Will you tell us if you consider poppy cultivation generally popular?—Popular in the sense of a thing that people desire, I do not think it is. That is not my observation.

14013. Do you think it is more profitable to the people than other crops?—It is more profitable than some other crops, because it is sown on good lands, but there are other things that would be quite as profitable.

14014. Have you any knowledge whether pressure is ever brought to bear by the officials to induce cultivators to grow poppy when they do not want to do so?—That also is a question which it is difficult to state very definitely, but I hear that there is a measure of pressure brought to bear. In fact, I think that the whole matter of giving advances of money, taking it under Government observation in a

special way, guarantees to the opium cultivator something that he does not get in any other cultivation.* That of itself I would not call a pressure, but it is a form of inducement, a form of loaning money to the cultivators. With regard to individual persons, I am not prepared to give names—I do not know that I am at liberty to do it; but I have heard that where the cultivation is abandoned in some localities, the Revenue Agents hunt up new localities, and of course make the advances so as to put it within the reach of people to cultivate the poppy. That I think is done. I think that people abandon it in some places, and then in order to keep the area up, perhaps they seek new lands. I have heard and known instances of that kind.

14015. The point is whether, when cultivators desire to abandon the cultivation, any undue persuasion, any pressure approaching to compulsion, is used, especially by the lower officials?—I do not know it as a fact.

14016. Can you tell us how poppy compares with other crops in regard to labour and irrigation?—It is one of the most laborious crops, requiring abundant manuring, watering, and weeding. Tobacco is somewhat the same. Sugarcane would perhaps rank in profit with it. They must be cultivated on the best lands; so must the poppy.

14017. Have you any knowledge as to part of the crop being illicitly retained by the cultivator?—I often hear of this.

14018. Have you any observations to make with regard to your native catechists and preachers?—If any of our native workers, catechists and preachers, become demoralized in any way, we know of it. I have noticed several instances, which I can recall, in which some of our men have become wrecks from the use of opium, and I have observed the same thing amongst non-Christians. Dealing with our preachers and catechists, of course, a case of that kind would be very prominent in my mind. I have known of several cases of wreck from the use of opium.

14019. (*Mr. Pease.*) Do you retain as members of your church, or in official positions, those who are known to be opium consumers?—No; we would not. We would seek to break off the habit, and if they were irrecoverable, we would cut them off.

14020. (*Sir William Roberts.*) Do you regard the habitual use of opium as an immoral practice?—From my standpoint I do regard it as an immoral practice. Native opinion I think regards it generally in the same way as drink, anything that intoxicates is in their moral code wrong, both among the Mahomedans and Hindus.

14021. Is that your attitude in regard to all intoxicants?—All intoxicants.

14022. You would not include tobacco, of course?—Personally I do. The medicinal use of opium and spirits we admit.

14023. Even from your own personal point of view, you would not regard the use of tobacco as a vice?—Personally I do; I rank it amongst intoxicants. I regard it as a useless and unnecessary indulgence, though I would take it as a medicine.

14024. Is that the attitude generally taken by the body to which you belong?—It is.

14025. With regard to alcohol, opium, and tobacco?—It is.

14026. That they are vices?—Yes, of course if you put the question as to the test of membership, it is not held in regard to tobacco, while it would be in regard to opium.

14027. (*Sir James Lyall.*) Opium and alcohol?—It would be.

14028. You spoke of its being a very common practice in many parts of the country to give children up to three years old small doses of opium?—That is particularly among the labouring classes, where they have not servants to take care of the children. It is to put them away quietly, to hush them up.

14029. It is mentioned in a history of the reign of Akbar, written about the middle of the 16th century, that the practice of giving opium to children of three years' old then prevailed in certain parts of India: do you think if it was a very injurious practice it would have existed all this time?—That is a matter of opinion. If injurious practices corrected themselves invariably, I suppose humanity would have reached the millennium long ago.

14030. You say that the Government connection with opium cultivation in your opinion rather stimulates it?—That is my fear.

14031. Do you know that opium cultivation was free in the times of native rule in India?—I suppose it was free.

*The
Rev. T. J.
Scott, D. D.
10 Jan. 1894.*

The
Read, T. J.
Scott, D. D.
10 Jan. 1894.

14032. Do you suppose that if it was now made free and the Government connection withdrawn, the cultivation would fall off or increase?—My opinion is that it would fall off. I do not think that it would cease by any means. It would fall off in time I think.

14033. With such a profit upon it as is now obtainable in Calcutta or Bombay, you think it would fall off?—I have given my opinion that it would. I have no statistics on which to found it. I have not studied the matter in any technical sense in that way.

14034. If Government only gives Rs. 5 a seer for it, and at that rate the opium officers say they could largely increase their cultivation to-morrow if they wanted to do so, and in Calcutta or Bombay that same opium will sell for three times as much, what would you say?—I base my opinion upon an impression that I have received all over the country that the Government connection with it, and the making of advances render it popular, giving a sort of guarantee, a kind of certainty that it would not have if it were left to the cultivators themselves. Without that I do not think it would be so popular as it now is. It would not have the same advantages, Government being in a sense a money-lender. Without that advantage, I think it would fall off—that is my point.

14035. (*Mr. Fanshawe.*) Your experience has been in the North-West Provinces and Oudh?—Yes, chiefly in Rohilkhand.

14036. You have spoken of students taking opium, is that common amongst them?—I do not know that it is common, but in my experience I have detected it.

14037. In occasional cases?—In two cases that I know the students became wrecks. I could not be positive that they began it in the school. They came to me as adults to study theology.

14038. You would not say that the practice is at all common amongst students of that class?—I think not among Christian students.

14039. You have also referred to what may be called the aphrodisiac use of opium: is that common?—I hear it. My attention was first directed to it by a member of the medical service. I then heard it afterwards, and occasionally asked about it, and I find it does seem to be a common use.

14040. Would that be amongst cultivators or amongst the higher classes?—Perhaps amongst city people more than in villages—amongst the higher class people.

14041. I understood you to say that your experience has been that the medical use often merges into the non-medical use?—I think that is so. I have known cases where they began it as a remedy, and then the habit was formed, and they were not able to shake it off.

14042. Do you think that the cultivators as you know them—there are 550,000 who cultivate the poppy in the Benares agency—are not perfectly aware that they are free to grow such crops as they like?—I think they are aware that they are free to grow crops as they like.

14043. The advances you think are a distinct encouragement to them to cultivate poppy, but you have no knowledge of compulsion?—I think they know they are free.

14044. (*Mr. Haridas Voharidas.*) Is opium expressly prohibited by the Hindu and Mahomedan religions as alcohol is?—I could not answer that distinctly, but the general idea of intoxicants being forbidden, I do know. Mahomedans, if they include it as an intoxicant, would think it forbidden.

14045. You know that alcohol is expressly prohibited?—Yes.

14046. While opium is not expressly prohibited?—That is why Mahomedans use it so much more readily.

14047. (*Chairman.*) I believe you go a great deal amongst the people?—That has been my life in India.

14048. In the opium growing districts?—Formerly the city, where I was, was the head-quarters of the division of the Opium Department, so that I suppose the district was a good opium growing district. I cannot say whether Rohilkhand is considered so or not.

14049. You remarked that the action of the Government in connection with the manufacture and sale of opium, the advances which they made, and the other incidents of the Government monopoly, tended to make the crops popular?—For the reason that the getting the money in hand is always with the native a great consideration. Government takes the place, so to speak, of a money-lender, and the assured hard cash in hand gives the people a sort of guarantee, and they are more likely to be successful.

14050. You use the word popular: does that represent your view of the way in which it is regarded by the cultivators?—Yes.

14051. Looking at the question of opium from the moral point of view, would you favour a policy tending ultimately and gradually towards the prohibition of the use of opium for other than medical purposes?—Certainly.

14052. Would you desire to see a similar policy pursued for the same moral purposes with regard to alcohol?—I would.

14053. Is there anything further you desire to add?—Of course, I see very grave difficulties connected with the revenue question, difficulties which must be faced. If asked how the want could be met, I have thought of one thing, which would be a great economical advantage in the country. I refer to the rich money-lender. If there be an increased stamp on the lending of money over a certain amount, there would be an increase of revenue, and a repression of the excessive taxation which is ruining the people of India. The money-lender is the bane of India.

14054. (*Sir James Lyall.*) Does not the money-lender always pass on the cost of the stamp to the borrower in this country?—That I do not know, but as a simple fact there is a growing tendency in recent years for certain money-lending classes to get the common people in their clutch, and then they pile up interest upon interest until the people are oppressed. I would check that by putting a higher and a heavier stamp upon money-lending beyond a certain amount.

The witness withdrew.

Adjourned to to-morrow at 11.

At the Darus Shafa, Lucknow.

FORTY-THIRD DAY.

Thursday, the 11th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
 THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
 MAHARAJA OF DARBHANGA, K.C.I.E.
 SIR WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
 „ ARTHUR PHASE.
 „ HARIDAS VEHBIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

SIR JOHN TYLER, C.I.E., called in and examined.

*Sir John
 Tyler,
 C. I. E.*

11 Jan. 1894.

14055. (*Chairman.*) I believe you hold the office of Inspector General of Prisons for the North-Western Provinces and Oudh?—Yes.

14056. You have had an experience of thirty-one years in public appointments in India?—In this province.

14057. Has your service been largely connected with prison administration?—As Civil Surgeon for ten years; then I have been in the jails for the last twenty-one years.

14058. We shall be glad to have the impressions you have formed as to the effects of the use of opium upon the population of these provinces?—I am of opinion that the consumption of opium by the different races in these provinces is moderate, and that during the past thirty-one years there has been no increase of crime which can be traced directly to indulgence in opium. In fact, the percentage of prisoners who are addicted to the use of opium is only 3·59 to the total criminal population. This as I consider, may reasonably be accepted as satisfactory evidence of the fact that opium does not occasion acts of violence or offences against order and good behaviour; nor does it, judging from the offences for which the prisoners are admitted into the jail, show any tendency towards heinous offences against either person or property. Indeed, the statistics of persons addicted to the use of opium and those addicted to other drugs and intoxicants are most favourable to the former class. As regards the physical condition of regular opium consumers, I desire to point out that I have always been surprised when told by them that they had habitually taken opium, as their appearance in no ways indicated a state of deterioration or emaciation. They invariably added that they had been accustomed to the use of opium from childhood, or had taken it for the amelioration of some severe ailment for which it had been recommended, and as far as I could observe, they had experienced no ill-effects in consequence. When I have been consulted in such cases I have advised them to continue it, as there was no doubt that, under such circumstances, the habit of opium-eating was beneficial.

14059. What is your impression as to the view which would be taken by the people of India of an edict coming from the Government of India absolutely prohibiting the use of opium except under medical prescription?—The people of this part of India take opium under advice or from habit, and there is no feeling against its consumption. It is, I may point out, the only drug that has been sanctioned by the priesthood, and it is indulged in by high caste Brahmans. The very fact of the appointment of this Royal Commission has tended to unsettle the minds of those interested in the welfare of the Government. The imposition of any prohibitive measure would, I apprehend, be calculated to produce discontent, which, in the present state of the country, would speedily ferment: for opium is accepted by almost all right-minded people in the light of "God's gift to man," and it is always of service to all classes of the people, regardless of age, sex or creed. If any prohibitive measure that may be in contemplation involves any addition, however trivial, to the existing taxation, it will certainly create discontent, and produce a feeling of disloyalty and possibly lawlessness.

14060. As a medical man, have you made considerable use of opium as a remedy?—As a medical man I have prescribed opium for over thirty-two years with the most satisfactory

results in comparison with other narcotics. I have used it among those entrusted to my care whenever I have considered it necessary, so that I am of opinion that it is no way deleterious in its effects, nor does it, as a rule, enervate or demoralize those who are in the habit of taking it medicinally. Opium as a febrifuge is well known in malarious districts, and from my experience I am convinced that the death-rate is greatly controlled by the fact that it is obtainable. If it were now prohibited it would be highly injudicious, and the mortality would certainly rise, and then nothing, not even the most liberal distribution of quinine free of cost, would in any way reduce it.

14061. Have you any evidence from prison statistics showing the effect of the opium habit on prisoners?—According to the statistics obtained from Register No. 38, which is maintained by the medical officers in charge of the jails, out of a criminal population of 26,270 there were only 945 prisoners who professed to be opium-eaters. Their health at admission was as under:—457 were in good health, 653 in fair condition, 207 were in indifferent health, and only 128 were actually in bad health. On the 30th October 1893 the health statistics of these prisoners was as follows:—577 were in good health, 178 in fair health, 140 were indifferent, and only 50 were in bad health. The fact that out of a population of 26,270 prisoners only 945 were opium-eaters it may I think, be accepted as a satisfactory proof that opium is not an incentive to crime. I may add that, from a close examination of the health register of the jails of these provinces, I am convinced that the health of these prisoners, who at times had been accustomed to the use of opium, does not contrast unfavourably with the health of those who have not acquired the habit.

14062. As regards the effect of taking opium upon those whose lot it is to labour, what is your experience?—In regard to the relation of opium to labour, I do not feel the least hesitation in asserting that it does not interfere in any way with a man's capacity for work, so long as it is not abused, and this sometimes happens.

14063. Summing up the results of your long experience, does it not come to this, that while opium taken to excess may be productive of great evils, and in that respect compares with alcohol or any other stimulant, yet when the consumption is moderate in amount and judiciously regulated, it is practically innocuous?—Yes, perfectly harmless.

14064. (*Mr. Wilson.*) Do prisoners under your supervision get any opium, in gaol?—They are not allowed to have opium, but if their health is so far influenced that it becomes necessary, opium is given to them.

14065. When a man, who is in the habit of taking moderate doses of opium becomes a prisoner, is the opium stopped?—Unless it is found subsequently that his health is suffering, all opium is stopped, but if it is found afterwards that he needs it, it is given to him.

14066. You have referred to the fact that there is some unsettlement of the minds of persons in connection with the appointment of this Commission?—Yes.

14067. I presume you see such newspapers as the *Pioneer* and the *Englishman*?—I do not refer to the newspapers, but to my own personal knowledge. I mix with the natives perhaps more freely than most officials.

Sir John
Tyler.
C.I.E.
11 Jan. 1894.

14068. I ask whether you are in the habit of seeing these papers?—Yes, I see the newspapers, but what I have stated is not dependent upon them.

14069. Is it, or is it not, a fact that these Anglo-Indian newspapers have, since the appointment of this Commission, been drawing constant attention to the probable increase of expenses, as they suppose, and the danger of the unsettlement of peace?—That is not a fact. I have not depended upon that: I have been stating what I know from my experience, travelling about and mixing with the natives.

14070. I am not impugning your evidence, but I am asking whether it is not extremely likely that the effect of this persistent writing in these newspapers has been this unsettlement of the minds of these persons?—I should think not, but I seldom see a paper.

14071. (*Mr. Mowbray*.) With your experience of the country, may I ask whether you think it would be practically possible to prohibit the use of opium for all but medical purposes, and to make an adequate provision for medical use?—Certainly not.

14072. If it were decided to allow opium only for medical use, do you think that native practitioners could be safely trusted with the power of recommending or refusing the use of opium for medical purposes?—Most certainly not.

14073. Are you of opinion that the existing number of practitioners practising medicine according to the European methods in this country would be adequate to provide for every person who might require opium medically, obtaining a medical prescription authorising him to use it?—It is not sufficient.

14074. If the present number of Government medical men were largely increased in order to give such opportunities, would that in itself cause a considerable increase in the expenditure of this country?—Certainly.

14075. You have told us that any prohibitive measures involving an addition, however trivial, to existing taxation, would create discontent. I should like to ask whether prohibitive measures, even if they did not involve an increase in taxation, would create discontent?—Most certainly. The people would object to having their habits and customs interfered with. To them opium is like alcohol or smoking to us. If it were interfered with, it would be productive of a great deal of dissatisfaction.

14076. It is a matter of custom, apart from the question of taxation?—Quite.

14077. (*Mr. Haridas Feharidas*.) You know that Magistrates give licenses to persons to sell poisonous drugs, such as arsenic and verdigris?—No.

14078. Do you think they should be allowed to sell opium also?—Certainly not; opium is not a poison if it is not taken in excess.

14079. Certain persons are allowed to sell poisonous things, and if they are allowed to sell opium, it will be safer, because it is not a poison?—It is not considered a poison by the natives, and the same restrictions should not be used towards it.

14080. (*Mr. Fanshawe*.) Are the class of natives with whom you are in the habit of mixing, and to whose opinions you have referred, likely to be readers of the English newspapers or not?—I mix mostly amongst the poor. When I was at Agra I used to mix with the best in the land, and I was Consulting Physician to the late Maharaja Seindia, and to the Maharajas of Dholpur, Patiala, and Bhartpur; but in the last five or six years my work has been amongst poor people.

14081. Would they be likely to be readers of the English newspapers, or not?—No.

14082. (*Sir James Lyall*.) Is it necessary for a native druggist who sells arsenic to have a license?—I think the sale of all preparations like arsenic should be under a license.

14083. I am not sure whether they are?—No; you can buy arsenic in the bazar.

14084. I suppose the difficulty of entrusting a native druggist with the right to sell opium for medical purposes as compared with arsenic would be that for arsenic there is no demand, whereas for opium there is a very large demand?—There is a large consumption of opium; there is no consumption of arsenic, except for special purposes.

14085. If you give a native druggist the right to sell opium for medical purposes, you will have no security that he will not sell it for any other purpose?—That is so.

14086. (*Sir William Roberts*.) With regard to opium as a febrifuge in malarious districts: you have been in India for thirty-one years, and you said that it is well-known as a remedy in the malarious districts. Do you mean a popular remedy?—Yes.

14087. How long have you been aware of that belief?—I have been practising in this province over thirty-one years.

14088. And you found this belief existing when you came?—Yes. It still exists.

14089. You are speaking from your own actual knowledge and experience?—Yes.

14090. You are speaking of what the natives have told you?—What they have told me and what I have prescribed myself.

14091. Have you much belief in opium as a prophylactic against malarious conditions?—In certain cases I think it is the only thing.

14092. It is not equal to quinine, I presume?—I should say in certain cases of malarial fever it is superior to quinine.

14093. You distinguish between malarial conditions, some being of one kind and some of another?—Quite so.

14094. You think that some are best met by opium and some by quinine?—Yes.

14095. Do you recognise that opium has a double action, namely, as a therapeutic agent, an anodyne, and hypnotic, and an action as a restorer and comforter?—Yes.

14096. I suppose you found those two effects overlapping and interpenetrating each other in India?—Very frequently.

14097. Have you observed in your experience that the reaction of the natives in this country, or many of them, in regard to the restorative and comforting effect of opium, is different from the effect in our own country among English people?—It is quite different, because here those addicted to it, taking it as a restorative and comforting agent, are men not accustomed to alcohol.

14098. At any rate you recognise the fact as a permanent fact in your mind that there is a difference either of constitution or of climate?—The climate and the constitution of the natives of India are different from those of Europeans.

14099. So that, speaking broadly, the reaction towards opium as a restorative and comforter is different?—It is more favourable.

14100. (*Mr. Pease*.) I think you stated that you did not consider opium a poison. Of course we consider it in England a poison. Do you wish to qualify your statement?—It is a poisonous drug, but in the way in which it is used it is not a poison. It is like alcohol as used by us. You might classify alcohol amongst the list of poisons.

14101. A few grains would prove fatal to a person unhabituated to the drug?—Yes, but I know a man who takes 48 grains at a dose.

14102. When we were in Burma we had evidence in regard to jails. Surgeon-Major Dantra said (and I wish to ask whether it agrees with your experience): "In jails for years I have invariably stopped giving opium to all prisoners immediately they are admitted into the prison, and no doubt they have left off food for two or three days, have got diarrhoea, and complaints of pains and aches all over the body, &c. But these symptoms soon pass off, and they do not feel any the worse for leaving it off." Then the question was asked whether he was referring to those who were moderate consumers, and he said, "perceptible diarrhoea is apparent in even moderate consumers, but they do not leave off their food. I have to keep them on very light work." I should like to know how far his experience agrees with yours?—When a person is admitted we do not give opium to him; we treat him as if he is ill in the hospital; if we find that his health does not improve and that opium is absolutely necessary, we do not withhold it.

14103. You say that it has been frequently found that those who have been habituated to the taking of opium have their health breaking down for the want of it in jail, and you have had to send them to the hospital?—Yes, several cases. My experience in charge of large jails has extended over twenty-one years, and I have had cases of prisoners addicted to opium from Rajputana prisons—Rajputana prisoners are sent to us, and they go into hospital. If I get a man cured well and good, but if nothing short of giving him opium is necessary, we give him opium rather than see him die.

14104. Is it frequently the case that those habituated to opium have to go into the hospital as the result of stopping the drug?—On first admission a good number go into hospital.

14105. (*Mr. Wilson*.) Will you tell us the districts of these provinces that you consider the most malarious?—Aligarh, Bulandshahr and Meerut.

The witness withdrew.

MAJOR-GENERAL SIR ROBERT LOW, K.C.B., called in and examined.

Major-General Sir Robert Low, K.C.B.

11 Jan. 1854.

14106. (*Chairman.*) You are a Major-General, and hold the important military command of the Oudh district?—Yes.

14107. Can you inform us as to the races from among whom the native troops under your command are recruited?—They are Hindustani, both Hindus and Mahomedans, living in the North-West Provinces.

14108. As a rule are these men opium-eaters?—No.

14109. I presume there are exceptions in almost every regiment?—Yes.

14110. What is the highest number of opium-eaters reported in any one regiment under your command?—Twenty.

14111. And the lowest?—Two, that is in the Goorkha Regiment.

14112. Is there any regiment in which none are reported?—There is one.

14113. Among those reported to you as being opium-eaters, how many are reported to be consumers in excess?—In one regiment two men are reported as consuming in excess.

14114. In other cases?—The men use it in moderation.

14115. Have you any men under your command who have been consumers of opium for an extended term of years?—In one regiment the Officer Commanding reports that there is one man who has used opium for thirty years.

14116. In your personal service in the army have you had considerable experience with Sikh troops?—Yes.

14117. Would you give us the result?—During my service I was twenty-four years in the 13th Bengal Lancers, which at first was composed wholly of Sikhs and which up to 1852—the year I left—had always a large proportion of Sikhs in it; these men all took opium habitually in small quantities; the exact amount I do not remember. It had no perceptible effect on them, and its use was not considered wrong or disgraceful by any of the other classes which came into the regiment when its constitution was changed from one of exclusively Sikhs.

14118. Speaking from your long experience as a soldier in India, how do you think the native troops would regard an edict from the Government, which would prohibit the use of opium entirely except under medical prescription?—They would get it surreptitiously.

14119. They would object to such a rule being imposed?—Certainly.

14120. Have you had occasion to recognize that there was any connection between opium and crime?—There is no connection between opium and crime to my knowledge.

14121. Looking at the habits of the native soldier, how do you suppose he regards opium in comparison with the use of tobacco amongst ourselves?—Speaking generally, opium appears to affect the native soldier no more or less than tobacco does me, and this may be summed up by saying, I like it, but can do without it, if I cannot get it.

14122. You have had long experience in India, and we shall be glad to know if you have any general observations to make with reference to the question before the Commission in its political aspect?—It is I think important that the questions raised in India by the appointment and working of the Royal Commission should be settled speedily. There is talk throughout the country, and when this is the case regarding any measure bearing a semblance of Government sanction which affects the habits and customs of the people, it means doubts on the part of many, which is the opportunity for leaders of disaffection, and to delay is playing into their hands. The masses in India care nothing for the financial aspect of the question or whether a Government monopoly exists or not, but their fears are easily raised on any question of ancient custom and usage, and “prohibition of opium” could be, and probably has already been, made use of as a cry to rouse their fears. If the customs of the people are not to be interfered with, it is desirable that they should know it as soon as possible; if they are to be interfered with, it is still more desirable that the decision should be announced before time is given to excite them to turn ploughs into sword blades.

14123. (*Mr. Pease.*) You say that Sikh troops take small quantities: can you give us any idea of what the quantity is?—I cannot remember the exact quantity.

The witness withdrew.

COLONEL A. W. JAMIESON, 7th Bengal Infantry, called in and examined.

Colonel A. W. Jamieson.

14146. (*Chairman.*) I believe you have had a long Indian service?—I have been twenty-eight years in India.

14124. Do they take it as poppy water?—In the form of small pills.

14125. Were they, at any time when you were with them, without any supply of opium?—It was my duty to see that they always had supplies.

14126. Opium was supplied by the Commissariat?—From the regimental bazar.

14127. Therefore they were never without it, and you had no opportunity of seeing the effect on the troops of being without it?—I have known occasions when they have been two or three days without it—not prolonged periods.

14128. What was the effect?—None that I could see.

14129. Had you a servant who had taken opium for a considerable period, and became stupid and useless for the want of it?—Yes.

14130. Would you apprehend that some effect would be produced upon the troops if they are left without it?—As to using it in excess, the only case that came to my knowledge was that of this servant. I did not know that he used it to excess, until up in the hills we found ourselves without it, then he became perfectly useless, and we had to send many miles to get some.

14131. (*Mr. Wilson.*) You have told Mr. Pease that these soldiers obtained opium from the bazar?—Yes.

14132. That would be in times of peace?—And in time of war.

14133. In active service is it not supplied?—Not to my knowledge. In the Bengal Cavalry the regimental bazar takes a supply for the soldiers.

14134. (*Chairman.*) Like a canteen?—Yes. Government gives forage for the horses and rations for the men, but that does not include opium. All delicacies and luxuries are carried in the bazar.

14135. And the men buy them?—Yes.

14136. (*Mr. Wilson.*) We have had some information from the military authorities that there is a Commissariat Regulation in regard to it and in regard to the maximum quantity that may be issued. Can you tell us the extent to which that has been availed of?—I have never heard of it.

14137. (*Mr. Mowbray.*) Have you been on active service with Sikh regiments?—Yes.

14138. And you never found them fail for want of opium?—No.

14139. I presume that of all things which can be carried, opium is almost the most portable?—Certainly.

14140. Do Sikhs take tobacco?—Never.

14141. (*Mr. Fanshawe.*) You have mentioned one case of the excessive use of opium; am I right in concluding that the fact that in your long service you have only known one such case would justify the belief that such cases are very uncommon?—That is the only case I have seen.

14142. (*Sir James Lyall.*) I believe that the natives of India are aware that many, if not most Europeans, look upon the opium habit as something strange and rather objectionable; under those circumstances do you think that the men in the regiment will all answer correctly when asked whether they take opium or not?—I think it is very doubtful. Some of the officers commanding regiments in my district have reported that they have had some difficulty in arriving at the numbers.

14143. Several of the missionary gentlemen who have come forward as witnesses in Burma and in India have stated that the opium habit had a very demoralizing effect upon their converts, and that they practically put their converts under discipline in the matter of opium and liquor, but that a certain number of their converts and of their native pastors in spite of that take opium, and are then demoralized by the necessity of evasion and falsehood in their dealings with the missionaries. Supposing the use of opium to be prohibited, would not the same result be likely to happen in the regiments, Sikhs for instance?—It could not be prohibited; it would be obtained surreptitiously.

14144. That would be taking it with concealment; whereas they now take it openly?—Yes.

14145. That would be likely to have a demoralizing effect?—So far that they would be telling, so to speak, a daily lie.

Colonel
A. W.
Jamieson.
11 Jan. 1894.

14148. Have you any case of excessive use?—One case.

14149. Have you known the use of opium to be productive of injurious results, physically or morally, among the soldiers under your command?—No.

14150. Can you give us any instance in your experience on active service in which the use of opium has been beneficial to the troops?—I have not been on active service, but I have been in conditions which are very similar in Burma and during famine operations in Tirhut in other regiments—not in my present regiment. So far as I know there have been no injurious effects.

14151. Have you ever known any unhealthy districts where you have served when the use of opium has been directly beneficial?—Yes; two years ago in Burma my regiment was employed in the Chin Hills, in the Tarai district, very unhealthy and malarious tracts, and my Jat Company found the use of opium beneficial. The men broke up; they found they could not do their work without taking opium in small quantities.

14152. Was opium taken by other Companies in the regiment under your command under those circumstances?—At a small outpost in the Chin Hills there was one man who could not get along with his work at all unless he continued taking opium, and it had to be procured for him with beneficial results.

14153. You have referred to the Jat Company; were many other Companies users of opium?—No.

14154. How did they stand the unhealthy conditions of the district?—Jats are in the habit of taking opium; the other men are not. There is very little taken by Rajputs.

14155. Is yours a Rajput regiment?—Yes.

14156. Though recruited from the Rajputs, the number of men who take opium is exceedingly small?—Yes; the Jats when serving in the 7th benefited largely by it.

14157. It has been proposed that the use of opium should be forbidden except for medical purposes. How do you think that such a proposal would be regarded by the native troops?—Not well; I think any interference of that kind would cause discontent amongst the men. They would not understand what it was, they are suspicious, they never know what we are up to when any change is brought about in India, and I think it would act injuriously.

14158. You think it would be inadvisable to take such a step?—Yes.

14159. Unless called for by Indian public opinion?—Yes, if you can get at Indian public opinion.

14160. (Mr. Pease.) I understood that your experience among the Jats in the Chin Hills was that these men were accustomed to take opium and could not do their work without it?—Yes.

14161. Do you know whether there were exceptions amongst them, those who did not take opium?—No, I cannot get at that. My Jats have left me, there has been a re-organization, and they have been transferred to other regiments. I cannot get sufficient evidence on the Jat question.

SUBADAR-MAJOR GURDATT SINGH BAHADUR, 7th Bengal Infantry, called in and examined.

14177. (Sir James Lyall.) How long have you been a Native Officer, and with what troops have you served?—I have been a native officer for the last nineteen years. I have had experience of Erahmins, Rajputs, Sikhs, Jats and Hindustani Mahomedans. My regiment is now composed of Rajputs, but all the previously-named classes have at various times been represented in the regiment, and I am therefore able to give evidence as to their customs and habits from personal observations.

14178. Outside the native army, what experience have you had?—Apart from my knowledge of the native army, I am able to give evidence regarding opium and its use from the point of view of a zemindar, as my brother and I, between us, hold a large zemindari in Oudh and pay Government a land tax of nearly Rs. 4,000 per annum. I am thus able to speak regarding the effect of opium on my tenantry which consists of over 300 men.

14179. You are a Rajput yourself?—Yes.

14180. What district do you come from?—Unao.

14181. What doses of opium do soldiers in the native army generally take?—Small doses, in moderation; as regards the native army, all Sikhs, most Jats and most Rajputs of Rajputana Proper, are in the habit of daily consuming opium in quantities varying from 1 ratti to 12 rattis.

14182. Is there any difference in the matter of opium consumption between Rajputs of Oudh and the North-Western Provinces and those of Rajputana?—Rajputana Rajputs

14162. It was not the case of men who had not been accustomed to opium, but required it under special circumstances?—No.

14163. Do you say that the Rajputs do not take opium?—As a rule they do not.

14164. (Mr. Wilson.) Can you give me any idea of the average consumption per man daily of those under your command who do take opium?—Yes, the average consumption is about 8 grains.

14165. What is the number of men under your command?—The total number is 912.

14166. Did I understand that the great majority of the men in your regiment are Rajputs?—They are.

14167. We have had some evidence that that class of men are specially addicted to opium; that is not your experience?—It is not.

14168. (Sir James Lyall.) Are they Rajputana Rajputs?—No; Rajputs of Oudh, and they are all young men.

14169. (Mr. Mowbray.) Do you think that, in the case of men like Jats who are accustomed to taking opium, there is serious risk of their being incapacitated on active service if they fail to get their opium?—Yes.

14170. Then I will ask you as a practical man would you rather run the risk of having your troops incapacitated from failure to get opium, or run the risk of having the troops disaffected from having their opium prohibited?—I should certainly object to their being disaffected.

14171. Do you think there would be serious risk of their being disaffected if opium were prohibited?—I think it would become a national question.

14172. Do you think that a greater risk than the risk of their becoming incapacitated owing to a failure of supply on any particular occasion?—Much greater.

14173. (Mr. Haridas Voharidas.) Supposing there is a vacancy in recruiting the ranks, and two candidates appear equal in every other respect, but one taking opium and the other not, whom would you select for the vacancy?—Such a thing does not occur. It is a question I never put to the men. I know from experience that a young soldier when he comes for enlistment is not in the habit of taking opium. Natives do not take opium at that age, except when it is given to them as very young children, medicinally. They are not likely to be confirmed opium-eaters.

14174. But in case you came to know that one took opium and the other not, and you had to employ one of them, whom would you choose?—I cannot imagine a case of the kind. I should not hear of it in any case. I take a recruit as I see him, if he is physically fit for the ranks and looks likely to turn out a good soldier, that is all I want.

14175. You would not like to engage a confirmed opium-eater?—I cannot imagine the case.

14176. (Mr. Fanshawe.) Do you think that the recruitment amongst the Jats or Sikhs would be affected if it were known that the use of opium was prohibited?—Most decidedly. I have served in a Sikh regiment.

take it most; those of the North-Western Provinces do take it, but not in such large numbers, or in such quantities as the former.

14183. In your regiment what number of men take opium regularly?—In my regiment I find, from careful enquiries, that the number of men who take opium regularly does not exceed twelve out of a total strength of 850 men; of these, only one man can be said to take it in excess; the rest take it in moderation. By a moderate consumer I mean to say a man who consumes from 1 to 4 rattis per diem (96 rattis = 1 tola); but after some years' practice a man can take as much as 12 rattis, and even more, without apparent harm. I have never known a case in my service of a man's military efficiency or discipline being affected by excessive use of opium.

14184. What has been your observation as to the effect of taking opium on men when on service?—In Burma it was observed that the men who took opium were remarkably free of disease; the marching powers of the men were greatly improved by a moderate dose of opium, and in a fever-stricken country, such as Upper Burma, the moderate use of opium seemed to keep the men in health, and several men, who were in no way regular opium-eaters, took it occasionally for the sake of their health.

14185. How many men do you mean?—I would say about 8 or 10 per cent. who are not regular opium-eaters. They took it as a rule when they found they were getting a

Subadar-
Major
Gurdatt
Singh
Bahadur.

little tired. If they saw any of those who were regular opium-eaters taking it, they would ask them to let them have a little to make them a little fresh for some time, so as to be able to do their work.

14186. Was there any difference in the price of opium in Burma as compared with the price in Oudh?—Yes, in Burma the price was Re. 1 per tola, and in Lucknow it is Re. 1 for 5 tolas.

14187. What do the natives of Oudh think of the medical properties of opium?—We, Hindustanis, like the Sikhs, consider that opium has great medical properties; we use it a great deal in our homes, especially in treatment of children. We give it to young infants, mixed with their mothers' milk, in the cold and rainy seasons, to prevent chills, diarrhoea and coughs.

11188. I have heard it said that poor people give their children up to about three years old opium to keep them quiet, to prevent their crying?—That I cannot say.

14189. It is not the custom in Oudh?—No, the thing being dear, the poor people will not get it to give their child on to make them quiet.

14190. As you have said, opium is a great deal used as a domestic medicine?—Yes.

14191. If the order were given that opium was only to be sold at the dispensaries as a medicine, what would be the effect?—Our villages are often 5 or 60 miles distant from any dispensary, and if the sale of opium was restricted to dispensaries, and issued only as a medicine, we would consider it a very great hardship, for it could not be obtained when most wanted.

14192. Have you any reason to give why Sikhs particularly take opium?—Rajputs all smoke tobacco; Sikhs by their religion are forbidden to; they take opium instead: Jats and Western Rajputs smoke tobacco and also take opium; the latter very largely; it is with them a custom which has existed from hundreds of years. I am quite sure that if orders were issued by Government restricting or forbidding the sale of opium, it would cause very great discontent in the Bengal Army, especially in Sikh and Jat Regiments; this might not be shown at first openly, but it would cause murmurings and discontent on the part of the sepoys.

14193. You are a zemindar in Oudh?—Yes.

14194. I suppose you have seen a good deal of the cultivation of the poppy in Oudh?—I have. The cultivation of the poppy is purely voluntary, but Government assists those willing to cultivate with small advances, which are a great boon to small cultivators who may have got into difficulties through bad crops. Some of my cultivators have been benefited in this way.

14195. Do you think that if the consumption of opium were stopped in any way people who now use opium would take to other intoxicants?—Yes. Most men want some sort of stimulant sometimes. If they were prevented from getting opium, many would begin to smoke *ganja*, and to drink country liquor, which does men much harm.

14196. You think country liquor worse than opium?—I think so.

14197. I suppose the Rajputs of Oudh do not drink country liquors?—No, they do not drink any.

14198. If a Rajput of Oudh were to drink, would he lose caste with his regiment?—Of course if he were to take it openly he would lose caste, but if given as medical treatment he would not.

14199. Are the Rajputs of Oudh both Hindu and Mahomedan?—Most of them are Hindus.

The witness withdrew.

SURGEON-MAJOR J. ANDERSON, M.B., called in and examined.

14223. (*Chairman.*) I believe you are Civil Surgeon of Bareilly and Superintendent of the District Jail and of the Lunatic Asylum at Bareilly?—Yes.

14224. What has been the length of your service in India?—Over fifteen years.

14225. What has been your experience as to the habits of the population of these provinces with reference to the use of opium?—In the parts of these provinces over which my experience extends, the Mahomedans form the bulk of the opium-eaters. They use it mostly in the crude form, but sometimes smoke it as *chanda* or *modak*. Saiyids and Pathans are more addicted to it than other castes. Among Hindus the habit of eating crude opium is confined to Brahmans, Khattris, and other high castes, whose rules do not permit them to use liquor of any kind. Some of the

14200. Is there any difference between the Hindus and Mahomedans in the matter of taking opium?—None whatever.

14201. Both take it to a small extent?—To a small extent.

14202. You are speaking of country people?—Yes.

14203. In towns I suppose the Mahomedans take it a good deal: do they not?—They do take it a good deal in the towns. 11 Jan. 1894

14204. (*Mr. Haridas Feharidas.*) When you fill up a vacancy you select your candidate and produce him before the Colonel for final sanction. Do you make yourself certain before you take the candidate to the Colonel that he takes opium or not?—I have never done this.

14205. You take him as he is?—Yes, as long as I see that he is well made and strong enough, not too old, and medically fit. He then goes before the commanding officer. I never put the question whether he takes opium or will take it.

14206. If you come to know by chance that he was in the habit of taking opium, would you select him in preference to one who did not take opium?—I generally go by the strength and by the make. I never mind anything about opium.

14207. If you knew that he took opium, would you not mind it?—I would not mind it at all.

14208. (*Mr. Wilson.*) What part of the country do the Jats come from?—The neighbourhood of Delhi.

14209. Colonel Jamieson told us something about a Jat soldier who rather failed in his duty, and he said that opium was got for him: can you tell us any more about that?—I cannot. The regiment was scattered in several places. I was in a separate post altogether.

14210. You say that most men want some sort of stimulant?—Yes.

14211. Are there not a great many people in India of some races or religions who do not take any stimulants?—Very few.

14212. Some?—A few only.

14213. Which races?—A few in every race.

14214. Alcohol is forbidden by the religion of most of them?—Yes, it is.

14215. Then what do they take instead?—They take *ganja* and *bhang*.

14216. (*Mr. Pease.*) Can you give any explanation why the Rajputs of Oudh take less opium than the Rajputs in the Western districts?—I cannot.

14217. Do you take any stimulant yourself?—No; I simply smoke tobacco.

14218. (*Sir William Roberts.*) You mention that opium is given to infants: do you know if it is mixed sometimes with their mothers' milk?—Yes.

14219. Have you heard or known of accidental poisoning in consequence of that practice?—I have neither known nor heard of it.

14220. Do they give opium in such cases in the liquid or solid form?—I think in the liquid form.

14221. (*Chairman.*) I understand from your evidence that while the troops recruit from the Rajputs of Oudh are precluded by their religion from the use of alcohol, there is no similar restrictions as regards opium?—None.

14222. I take it to be your evidence that if the use of opium were prohibited it would be a probable cause of discontent in the army?—Undoubtedly.

lower castes, such as Kahars and Chamars, acquire the habit, especially in large cities. I have never known a Parsi opium eater. Bengalis and Marathas use it to a small extent. It is very common among the Sikhs; but as a rule they take it in moderation. I should say that about 4 per cent. of the poor and 10 per cent. of the well-to-do classes take the drug.

14226. What is the effect of opium-eating as regards the conduct of those who revert to the practice?—I have always found opium-eaters a particularly well-behaved and law-abiding class. When taken in moderation, it produces no appreciable injury either to the body or the mind. I have treated thousands of natives who habitually take opium, and cannot recollect more than one or two who were ruined by the drug. In my experience, it does not in any way

Subadar-
Major.
Gurdatt
Singh
Bahadur.

Surgeon-Maj.
J. Anderson,
M.B.

Surgn.-Maj. J. Anderson, M.B.
11 Jan. 1894.
lower the moral tone, nor does it develop a propensity to gambling or sensuality. When taken to excess, it causes both moral and physical deterioration. It produces emaciation, gastric disorder, loss of appetite, gives premature senile expression, and no doubt shortens life. Morally over-indulgence makes the victim idle and timid, and engenders a habit of exaggeration. The habit of opium-smoking is often acquired in bad company. We all know what a fine race the Sikhs are, notwithstanding the fact that moderate opium-eating is so common among them. That opium-eating seldom causes insanity is abundantly proved by the statistics of our asylums. I have been in charge of the largest lunatic asylum in these provinces for the past four years, and during that time only three men have been admitted in which the cause was traced to opium-eating. One of these was due to opium and alcohol combined, so that strictly speaking only two have been attributable to opium.

14227. You distinguish, do you not, somewhat widely, between the effects of opium-eating and the effects of opium-smoking?—Yes.

14228. Opium-smoking being more pernicious?—Yes.

14229. With regard to opium-eating, the effects are distinctly proportionate to the quantities consumed?—Precisely.

14230. The moderate use may be innocuous and the excessive use, as you have shown, may be disastrous in its consequences?—Yes; I should like to add to the statement I have made that, so far from opium being a factor in the production of insanity, it is, in my opinion, a great preventive of insanity in this country.

14231. What have you to say as to the disposition of the people on the subject?—I have lately made a point of discussing the question of the disposition of the people in regard to the use of opium for non-medical purposes with almost every intelligent native with whom I have come in contact. They commonly regard it as a good thing which may be, and sometimes is, abused. The moderate opium-eater derives a great deal of pleasure from the drug without any appreciable harm to his constitution. In my opinion he would resent any legislative interference tending to deprive him of one of the greatest comforts in life, as much as I should resent an attempt to deprive me of my glass of beer or wine at dinner. As for bearing the cost of prohibitive measures, I have never met a man who would agree to such a thing.

14232. (*Sir William Roberts.*) Will you tell us what your experience is in regard to the use of opium as a popular remedy?—Opium is probably the commonest remedy used by natives in the treatment of their ordinary ailments. It is chiefly resorted to in cases of chronic rheumatism, diarrhoea, dysentery, fever, colic, diabetes, chest affections, and the early stages of cholera. In my capacity of Civil Surgeon I use it largely in the treatment of nearly all these diseases among both Europeans and natives, and I prescribe it daily in the jail and asylum, of which I have charge. It is used largely and with benefit by men who have fatiguing work to do, often on short diet; and for those who have not sufficient food to eat, I can imagine nothing more soothing and satisfying than a small opium pill. I should certainly take it and recommend others to do so under such circumstances. It should be remembered that in India there are millions of people beyond the reach of skilled medical aid, and to deprive them of opium, a remedy which all know and believe in, would cause inconceivable misery.

14233. What about the use of opium as a febrifuge?—Opium is largely used as a febrifuge in jungle tracts. I do not consider it comparable to quinine as a prophylactic against malaria. It, however, lessens liability to chills, and thus diminishes the risks of attacks of ague. Narcotine, one of the alkaloids of opium, is sometimes used in fever cases, but I have no experience as to its efficacy or otherwise.

14234. (*Chairman.*) Would you give us the particulars of your service?—The above evidence is based on an experience of fifteen years in this country, during which I have held civil medical charge of nine districts in these provinces, with eleven jails and two lunatic asylums. I also served through the Second Afghan Campaign. I have a large practice among the native community, and come in contact with all castes and classes daily.

14235. (*Sir William Roberts.*) Have you ever seen opium habit, even in excess, produce any organic disease?—There is no morbid condition that I know of that I could associate with the excessive use of opium.

14236. Any special organic change?—No.

14237. Nevertheless the opium habit carried to excess practically does shorten life?—It does in my opinion.

14238. In what way would you express it?—In the first place, it disorders the man's stomach; it shuts up the secretions of the liver to a certain extent; and starting with that I think it produces various deteriorating effects throughout his constitution generally.

14239. Have you yourself had medical charge of a case or cases of persons who had used opium in excess, and in that way brought themselves within a measurable distance of death?—I have.

14240. What did you notice in what you may call the final stages?—The symptoms I have described.

14241. Do you mean gastric symptoms, vomiting, or want of appetite?—Want of appetite and loss of digestive power.

14242. Did you record the cases as cases of death by starvation?—I have never seen a man die from the effects of opium. I have seen men brought to a very bad stage such as I have described, but I could never say, although it might be the original cause of his constitution breaking up, that it was the immediate cause of death.

14243. He would die of some intercurrent disorder?—Yes.

14244. What were those intercurrent disorders generally?—Indigestion would be one.

14245. Would diarrhoea be one?—I do not think I have seen diarrhoea in such a case, but it might occur.

14246. Are you aware that statistics in regard to the opium habit in connection with longevity do not show that the habit on the whole shortens life?—I am.

14247. You say the opium habit in excess no doubt shortens life; then to balance the account you also say that the opium habit in moderation sometimes saves life?—Most certainly.

14248. So that taking the entire account, there is a profit to those who use opium?—Undoubtedly.

14249. What is the number of persons in the lunatic asylum?—About 300 on the average.

14250. (*Mr. Pease.*) You have been referring to persons out of health, I suppose?—Out of health and in health too.

14251. Would you advise persons in health to commence the opium habit?—I am sure it often does a great deal of good.

14252. Will you answer my question?—Not an ordinary person: it would depend entirely on the person.

14253. Have you ever advised any one in health to commence the opium habit?—I do not think I have.

14254. (*Mr. Wilson.*) You say that the habit of eating crude opium is confined to Brahmins, Khatris, and other high castes: would you agree with the Subadar-Major, who was here before you, that those Hindus who do not take alcohol or opium commonly take *bhang* or *ganja*?—I do not know, he is probably a better authority on the subject than I am.

14255. You have referred to the statistics of asylums: can you explain in what way in those statistics the causes of insanity would be stated; what evidence is given as to why he has been brought into that condition?—There is a regular statement of his case filled up by the authorities of the district from which he comes.

14256. What is the authority?—It is signed by the Magistrate, and filled in either by him or his subordinates.

14257. The complete schedule?—Yes.

14258. Describing the whole thing?—Yes; the family history and everything.

14259. It is obvious that the Magistrate could not know himself, and often the subordinates of the Magistrate could not: would they get information from the relatives or from the police?—From the relatives, as a rule; sometimes from the relatives through the police.

14260. You said you thought the use of opium was a great preventive of insanity?—I say so.

14261. In what way?—I think there is a great deal of suffering and misery in this country which is allayed by opium, and which, if unallayed, would most likely lead to insanity or suicide.

14262. When you say that for persons who have not sufficient food, you can imagine nothing more soothing or satisfying than a small opium pill, I suppose you are alluding to a special case of emergency, or some special circumstances?—I am alluding, for instance, to a man who has not enough dinner to eat going to bed and taking a small opium pill.

14263. Do you mean a man who day by day has not enough dinner to eat?—Yes.

14264. A very poor man who cannot get sufficient, being very short of money and in great difficulty, you say that it is better for him to spend part of his money in opium and part in food than to spend the whole in food?—He can get a much larger proportion of opium for a very small amount than he could get food.

14265. And is that your view as to his habitual condition of existence?—I can fairly express my view by saying that if I had not enough dinner to eat myself, I would take a small opium pill on going to bed.

14266. Because you would hope to have a good dinner the next day?—Sufficient into the day is the evil thereof.

14267. I am speaking of the case of a man who is regularly day by day and year by year miserably poor and ill-fed: would he do well to spend a portion of his scanty pittance on opium?—I think it would be about the best investment he could make, if he had not enough food to eat, to buy a piece worth of opium and eat it.

14268. You said you were aware of the statistics as to longevity?—I know it does not vitiate a man's policy in a Life Assurance Company to take opium: his premium is not increased in any way.

14269. Can you refer me to the statistics which you had in your mind in reply to the question of Sir William Roberts?—That is my general impression.

14270. That there are such statistics?—I know that there are such statistics. Assurance Companies will insure a man although he takes opium as readily as if he did not take it if his life is otherwise a good one.

14271. Can you tell me where I can find those statistics?—I cannot.

14272. (*Mr. Moubray.*) With regard to opium and food, do you mean that if a man takes a piece worth of opium on the top of a small dinner, it would do him more good than if he spent the additional piece in increasing his amount of rice?—I did not fix myself to a piece. He can get a small opium pill for a fractional part of a piece.

14273. And that would do him more good than the amount of rice he could purchase with that fractional sum of money?—I should make it up in that way myself.

14274. Do you think there is greater risk of people who take opium going to excess than there is of people who take alcohol going to excess?—I do not think the risk is great.

14275. (*Mr. Haridas Velaridas.*) You know perhaps that the Commission has been informed by many witnesses that opium does no harm if the person who takes it has good nourishing food?—Yes.

14276. In the cases you mention perhaps harm would be done, because the man has not good food to eat, and not eaten sufficient food to satisfy his appetite; would it not do him any harm otherwise?—The want of food will do him harm.

14277. But not the opium?—I do not think it would do him as much harm as going hungry to bed.

14278. Eventually it would be an injurious thing?—I do not think it is a good thing if taken in excess.

14279. In this point it would be injurious because he does not get nourishing food?—Yes; if he took too much.

The witness withdrew.

14280. (*Mr. Fanshawe.*) You stated that opium is used largely with benefit by men who have fatiguing work to do?—Yes.

14281. I understand you to refer to men who are not habitual users, and to be speaking of an occasional use for special cases of fatigue?—Yes.

14282. Are those cases within your own experience?—I know that Kahars and people of that kind often take it.

14283. Perhaps you will kindly state what class you mean by Kahars?—Dhuli bearers and palki bearers.

14284. Have you any experience of the use of opium amongst the cultivating class?—Not much.

14285. (*Sir William Roberts.*) In answer to Mr. Pease you said that you never recommended any body in health to commence the opium habit, although you believed that on the whole in India it does more good than harm?—Yes.

14286. But I presume you never have been asked that question?—I never have.

14287. It is scarcely a question that would be submitted to a medical man?—I do not think so.

14288. Any more than a young man would be likely to ask a medical man whether he should begin to smoke tobacco?—Just so.

14289. That is the sense in which you answered the question?—Yes.

14290. You regard it rather as a social than as a medical question?—Yes.

14291. The opium habit by your own showing and by the evidence before us is a risky habit, that is to say, it involves the danger of a man entering on the habit and using the drug to excess?—Undoubtedly.

14292. In the same way that the alcohol habit does?—Yes.

14293. Therefore you would scarcely as a medical man feel justified in recommending a man who had never tried the opium habit to begin a habit which you knew was a risky habit, and might lead to disastrous excess?—I should not.

14294. Does that present your view?—That exactly presents my view.

14295. (*Mr. Wilson.*) We have had it over and over again in evidence that injurious effects do result from the habitual use of opium in the case of persons who are insufficiently fed; but that where there is abundance of nourishing food those results do not show themselves. That has not been your experience. I take it, that injurious results occur from opium where a man has insufficient food?—I did not mean to convey that. In the first place the man would be injured by insufficient food. I do not know that I understand your point. My position is that opium in moderation does not do harm.

14296. Does that apply equally to those who are well fed and those who are insufficiently fed?—A man insufficiently fed would be more in a position to be done harm to than a man who is well fed. I refer here to persons who take the drug in excess.

14297. But you do think that the man who is trying to exist on a very few annas a week would do wisely to spend a portion of that in opium?—I should do it myself.

SURGEON-MAJOR D. F. BARRY, M.D., called in and examined.

14298. (*Chairman.*) You are a Civil Surgeon of Sitapur and Superintendent of the Sitapur District Jail?—Yes.

14299. What has been the extent of your service in India?—I have had over 14 years' service in India.

14300. In what parts have you served?—For about 10 years I served with Native troops of all arms and of all the castes that go to form the Native Army of Bengal. I have served in the Punjab, North-Western Provinces, Oudh, Bengal and Assam.

14301. What has been your experience of the effects of the consumption of opium amongst Native troops?—During the 10 years I served with Native troops the question of the consumption of opium never once forced itself on my notice, although I have served with the castes which are universally believed to be confirmed consumers of the drug, such as

Sikhs, Rajputs, etc. I have endeavoured, as far as possible, to recollect a single case in which I was obliged to treat a soldier for the excessive consumption of opium, or for the evils resulting therefrom, and so far unsuccessfully. I have some dim recollection of one or two individuals having been described as excessive opium-eaters, but I have never to my recollection been called on to treat them for symptoms arising from the abuse of opium. So much for my Military experience.

14302. Will you name the regiments with which you have served?—The 38th Native Infantry, 18th Native Infantry, 2nd Gurkhas, 3rd Gurkhas, 4th Gurkhas, 17th Native Infantry, 42nd Gurkhas, 15th Bengal Cavalry, 45th Sikhs, 20th Native Infantry, Mountain Batteries, the Viceroy's Bodyguard, and detachments of the following:—6th Bengal Cavalry, 39th Native Infantry, 3rd Native Infantry, 4th Native Infantry 43rd Gurkhas, and Sappers and Miners.

Barry, M.D.

Surgn.-Maj.
D. F.
arry, M. D.
11 Jan. 1894.

14303. More recently you have had experience in the Civil Department? During the last four years I have been employed altogether in the Civil Department, and as Civil Surgeon have been brought into close contact with the lower classes, more particularly the destitute and the criminal. During that period I can recollect something like three cases in which opium was obliged to be exhibited in hospital in larger doses than usual to bring about a certain result owing to the previous opium habit being marked. A dozen cases would probably total my experience in the matter of those who consume opium in excess coming to hospital for treatment for symptoms arising from its abuse.

14304. What has been your experience as regards the use of opium as a domestic medicine in this country?—My own experience, and the inquiries I have made to confirm my observations, tend to prove that the use of opium as a common domestic medicine is practically universal, and that it is also used non-medicinally for its primarily stimulant properties, much more generally than is believed. With regard to the former, I may mention that I once made inquiries from the staff of my principal hospital, and each and every member of the staff without hesitation declared that opium was in common use in their families as a domestic medicine. There was an exception—a Brahman—who said that his wife was with her people so that he could not answer. Castes were pretty well represented, as Sikhs, Christians, Brahmans, Mahomedans, Kayasths, Ahirs, Kahars and sweepers had at least one representative. I may add that the hospital water-carrier, a Mahomedan, is a confirmed opium-eater, and is my smartest and best servant. I made the same inquiry from my jail staff, and with practically the same result.

14305. Do you consider that the moderate use of opium is extending?—I am of opinion that the moderate use of opium is widespread; that Sikhs, Rajputs, and next to them Mahomedans, are those amongst whom the habit most prevails, and that it is in more common use as a medicine amongst cultivators and as a stimulant amongst the inhabitants of towns. I think that its use is not confined to any one caste or to a number of castes only.

14306. What is the effect of opium so far as your experience enables you to judge on the moral and physical health of the people?—With regard to the effect on the moral and physical health of the people I am firmly of opinion that its moderate use can be safely disregarded. I certainly have not observed any moral or physical deterioration from the use of the drug in moderation. I have only to instance the case of the Sikhs, the most stalwart race in India, and certainly one of the most, if not the most, manly and upright.

14307. What is your opinion as to the connection of opium with crime?—As far as regards its connection with crime I may state that under the directions of the Inspector-General of Prisons I caused to be examined the records of my jail (a first class one) for the last five years; and the number of declared opium-eaters was so small when compared with the total admissions, something like 5,500, as really not to be worthy of notice. From my jail experience I am also convinced that as a rule the habit can be suddenly stopped without any real danger to health, and that the moderate habit can be checked suddenly without much more inconvenience to the individual than stopping his pipe would be to a tobacco-smoker. In my jail I simply take no notice of opium-eaters, and I may add that I have never yet discovered a case of opium smuggling in the jail, although of course other contraband articles are frequently found.

14308. What would you say as to the disposition of the people to accept the prohibition of opium?—As regards the disposition of the people with reference to the use of opium for non-medicinal purposes I can only say that, owing to what may be termed the extravagant attitude assumed often by us towards the consumption of opium, it is a matter of difficulty to find out the real disposition of the people. I believe that really it is not only tolerant, but even friendly. I mean of course to opium used in moderation.

14309. What do you say as to the willingness of the people to bear the cost of prohibitive measures?—With regard to their willingness to bear the cost wholly or partially of prohibitive measures I am of opinion, and I doubt if there are many officials that will disagree with me, that the people of India have not the least desire to pay a piece of the cost of prohibitive measures, and that any attempt to impose such cost on them would be a dangerous and useless experiment. In fact decided interference with the consumption might be resented a good deal more actively than people at home seem to dream of.

14310. How would you compare the moderate use of opium with tobacco or alcohol?—I believe that the moderate

use of opium is not harmful to the economy, and that it can be compared with the moderate use of tobacco or of alcohol. In my mind the question arises as to whether opium may not be the better behaved drug. It is quite possible that its stimulant properties are as valuable to the native of India as the moderate use of alcohol is to the European in India, and that a certain amount of stimulant is necessary to the dweller in the plains few medical officers will deny; and I am of opinion that the moderate use of opium may just give that filip necessary to the constitution broken down by the heat, monotony and hard work of Indian life, be it of native or of European.

14311. (Sir William Roberts.) What has been your experience with regard to the medical question?—With regard to the special medical reasons calling for remark in connection with the consumption of opium, no one practising in India can fail to be struck with the predominance of diseases in which active pain is a prevailing symptom, such diseases as vesical calculi, renal calculi, abdominal colic, painful diarrhoea, dysentery, muscular pains accompanying malarial fevers, cholera, painful diseases of the eye, and a host of others. Now, taking the statistics of my own district I find that last year about 50 per cent. of the inhabitants within a circle with a five miles radius from the sadar were treated in the dispensary, and that about 10 per cent. of the whole population of the district were treated in the different dispensaries. Taking for granted that 50 per cent. represented all the sick of the circle above alluded to (and this is far from being the case), it follows that 40 per cent. of the sick of the whole district received no European treatment at all, something like 44,000 cases of disease. It is very probable, if not certain, that the great majority of diseases from which these 44,000 cases suffered were diseases in which the exhibition of opium would, at all events, give relief to pain and suffering; it therefore seems a very serious step, and not one to be treated lightly, to propose to restrict the use of opium, to place out of reach of the enormous mass of sufferers in India the one drug on which they can rely; the one drug which is their solace; the one drug which enables them to bear the terrible burthen of Indian life, at all events with patience; the drug which the French have long ago named the *Dieu donné*.

14312. Have you any confidence in opium as a pure febrifuge?—I do not put much confidence in opium as a pure febrifuge. Of course in my experience as a medical officer in charge of troops I was supplied with a large quantity of quinine, as much as I wanted. As Civil Surgeons, we are more or less restricted by our funds with regard to the purchase of English drugs. We cannot always distribute drugs in the large quantity that we wish. My experience is not as large as that of the last witness as a Civil Surgeon. In the many complications of malarial fevers—and one or more complications most frequently occur—it is a most valuable drug. I have long been of opinion that in malarial districts and tracts the number of deaths which occur in the months of November, December or January returned to us under the generic title of "fevers" are really due to pneumonia occurring in constitutions broken down by the malarial poison. Civil Surgeons are also mortuary registrars of their districts. Now in this class of cases opium would be most valuable. In the often excruciating pains accompanying malarial fever, in the bowel disorders of malarial poisoning, opium would not only very often be necessary, but might be essential. Where quinine is not known, and it is to be remembered that only a very small percentage of cases resort to European treatment, opium must be regarded as of value, of such value as to call for particular notice in the inquiry.

14313. I see that you distinguish the use of opium as a therapeutic agent as an anodyne and hypnotic, and its use as a restorative and comforter?—Yes.

14314. The distinction is very clear in your mind, I presume?—Yes.

14315. So far as the second action of opium is concerned, that is, as comforter and restorative, the use of it in the case of a healthy man is scarcely a medical concern any more than the use of tobacco?—Exactly. I place it in the same class.

14316. So that it would be useless to ask you, as a medical man, if a native of India should begin the opium habit. You have never been asked such a question, I suppose?—Never.

14317. Any more, probably, than you have been asked shall I begin to smoke? or shall I begin to drink?—No.

14318. It is more a social than a medical question?—Exactly.

14319. If you happened to be asked, what would you probably say?—I should say, no; just as if a man asked me whether he should commence drinking—to a man who had been previously an abstainer—I should say, don't.

14320. With regard to the use of opium in the second sense as a restorative and comforter. I think you distinguish between the natives of India and Europeans?—Certainly.

14321. How would you express yourself on that point?—I think the people are not fully aware of the terrible hardness of life in India amongst the natives. A great number do not get sufficient food. They labour under terrible conditions.

14322. Your view is that the differences are differences of circumstances rather than of constitutional susceptibility?—(Circumstances have modified the individual nature, changed the economy.

14323. They have induced constitutional changes?—Yes.

14324. So that, as a matter of fact, you recognise constitutional differences in the susceptibility to the restorative effects of opium in India and in England?—Certainly.

14325. (*Mr. Wilson.*) Do you agree with Dr. Anderson as to the use of opium as an economical diet for the poor?—I do, certainly.

14326. In regard to the question you have just been asked by Sir William Roberts: suppose I was coming to India to reside, or to make a practical stay, and consulted you as to my general course of life and diet, asking for your hints, and running over a variety of habits of life and articles of food, and you told me what to eat, drink, and avoid, and then came to opium; what would you say?—I should say, don't do anything of the kind.

14327. Not even in a malarious district?—Not even in a malarious district. Perhaps I may modify my answer. You ask me the question as a European; I am distinguishing clearly between the European and the native constitution.

14328. For a European you would not recommend it?—No; I would not recommend him to take it. The conditions are changed.

14329. Suppose a native of India were to come to you for general advice as a doctor?—That is quite a different thing.

14330. I do not mean suffering from disease, but coming for advice as to good and bad habits of diet and so on: would you advise him to take opium?—It would depend upon his position in life.

14331. Will you explain?—If a man is incapable of filling his stomach, possibly for a couple of months in the year, not getting one full meal, I should say that a small proportion of opium, which is very cheap, would do him good. It would tide him over the bad time. In the case of a man in prosperous circumstances, I should say, don't.

14332. By a man who does not get a good meal for a couple of months, you mean an extremely poor man?—Yes, and there are many.

14333. A fairly well-to-do native of India who consulted you in that way you would not advise to begin the habit?—No, because he can change his life and his climate. The other cannot: he is bound by a chain.

14334. In reference to the matter of jails; we have had it in evidence two or three times that on account of the small bulk that opium occupies it is most easily smuggled into the jail: is that contrary to your experience?—Yes; my own experience has extended only 4 years; but I have had a number of prisoners searched before me, and I have asked my jailor the same question. He is a man who is opposed to the use of opium, or professes to be so, and he says he

has never found it. He cannot recollect a case in which he has found muggling. I have found hemp, but never opium. I suppose it does take place.

14335. You say that the people of India have not the least desire to pay a price for the cost of prohibitive measures: for what tax or purpose do they desire to pay money?—I was asked a question and I have given a plain answer.

14336. Do you know anything for which people are willing to pay any more than they can help paying?—(Of course, we are always anxious to pay no taxes. We are burdened heavily enough.

14337. (*Mr. Mowbray.*) We have been told that opium is a risky habit, and some say that there is a great distinction in that respect between opium and alcohol. I should like to know whether in your opinion there is more risk of a person who takes opium going to excess than a person who takes alcohol?—That is a large question.

14338. So far as statistics go, and so far as your experience goes, would you say that there are a larger number of people who consume opium in excess, and thereby ruin themselves than there are among people who take alcohol?—Certainly not: the number of people who take alcohol in excess is very much larger, I am firmly convinced, than those who take opium in excess.

14339. (*Mr. Fanshawe.*) I understand the general tenor of your evidence to be that the common use of opium is a moderate use?—Yes.

14340. (*Sir James Lyall.*) You said that last year about 50 per cent. of the inhabitants within a radius of 5 miles from the sadar were treated in the dispensary. I suppose you work out that 50 per cent. by applying the number of attendances to the total population of the circle?—That is what we look upon as the dispensary population, a 5-mile radius from the dispensary itself.

14341. Would not that a good deal exaggerate the percentage of attendance, because if a man, as must often be the case, attends a great many times in the year, he will come in each time?—No; those are fresh cases.

14342. Care is taken to count a man only once?—Certainly: I should be sorry to think it was otherwise. The dispensary practice is under my own eye.

14343. Would it not cause a great deal of trouble?—A Native attends at the door of the dispensary, and he is entered by the Assistant Surgeon or the Hospital Assistant. But the name may be Mehala, and there may be several hundred Mehallas, or several thousand, in that circle.

14344. Would it not be likely that the man may appear again in another two months, and be entered again?—That might be, but he would not be entered if his case were continued, if he appeared every day. If he discontinued his visits, and then came as a patient a month or two afterwards his name would rightly be entered again as a fresh case.

14345. That would to a certain extent explain the high percentage?—I do not think it is high.

14346. Fifty per cent. of the population is much larger than I should have expected to see attending a dispensary?—Take the case of regiments, of which I have had a good deal of experience. You may have 1,400 or 1,500 to 2,000 admissions in a regiment 800 strong. Of course the men return again and again, but that is still the fact.

14347. You mention the fact that the French have given to opium the name of *Dieu donné*?—Yes.

14348. Have you ever heard that the Indians have also attributed a Divine origin to the drug?—I have heard it only lately, since the enquiry.

The witness withdrew.

Mr. F. W. BROWNRISS called in and examined.

14349. (*Sir James Lyall.*) You are the Settlement Officer for the district of Sultanpur in Oudh?—Yes.

14350. Will you give us any facts as to the consumption of licit opium?—Roughly speaking the consumption of licit opium is highest in the Meerut division, and in the following districts:—Agra, Muttra, Moradabad, Aunpore, Allahabad, Hamirpur, Jhansi, Jalaun, Bonares and Lucknow: that is to say, in those districts where its cultivation is prohibited, or where there is a large urban population, or where the Mahomedan population is proportionately large. It is noteworthy that Aunpore, the most active centre of industry in the united provinces, the Manchester of Northern India, shows the highest average consumption of all. The use of opium is also common in malarial tracts, such as the

Dén, or where canal irrigation is extensive, and intermittent fever unusually prevalent, such as Saharanpur and Bulandshahr etc. In the eastern districts, where fever is comparatively less and the climate drier and more healthy, the amount consumed is not so great. The Mahomedan population of the eastern tracts also is thinner than away west, and this too is a factor which affects the amount consumed.

14351. What can you tell us as to the effects of eating and drinking opium?—So far as my experience goes the eating and drinking of opium are not ordinarily attended with any detrimental effects, moral or physical. The Mahomedan is, speaking generally, in many ways an abler man than the Hindu. Nationally and individually this differentiation holds good.

Surgn. Maj.
D.
Barry, M. D.

11 Jan. 1894.

Mr. F. W.
Brownrigg.

Mr. P. W.
Brownrigg.

11 Jan. 1894.

14352. What do you say as to opium-smoking?—Opium-smoking, which I understand is of comparatively modern growth in this part of India, is popularly esteemed vicious. Its effect on the Hindustani is probably somewhat different to its effect on the Chinamen. The latter has had much longer experience. To the Hindustani opium-smoking is usually harmful, but it is at present confined to a very small portion of the population, and has never been a serious evil in these provinces.

14353. We have been told that *chandu* and *madak*-smoking shops have recently been closed. What is your opinion of the policy of that step?—I was much averse to the closing of the *chandu* and *madak*-smoking shops, and officially deprecated such a step at the time; and I still think it was a mistake to drive this vice into private houses. I cannot see where the particular offensiveness of the opium-smoking shop in India came in. While acting as Commissioner of Excise in 1889, in company with a leading member of the Government Secretariat, I paid a surprise visit one night to the so-called "opium den" which Mr. Caine had shortly before denounced in no measured terms, and we could discover nothing objectionable in connection with it. It was a quiet, orderly, well-managed establishment.

14354. What is your experience of the effects of using opium in the rural districts?—Since I joined the service, twelve years ago, I have been stationed in every division in the North-Western Provinces and Oudh, and have been in charge of excise administration in different districts for several years. Since 1888 I have been employed chiefly in settlement work, which has taken me from village to village day after day amongst the people. Nowhere have I come across any such indications of moral or physical deterioration as would justify me in considering that the use of opium in these provinces is productive of evil results. Instances of excess are rarely met with, and under no circumstances can it be honestly asserted that there is any prominent or patent abuse of this drug.

14355. Would you compare the use of opium with the use of beer or alcoholic beverages in England?—Speaking for the part of India with which I am acquainted, the ordinary use of opium is viewed much in the same light as the drinking of beer is in England. Relatively speaking its effects are individually and collectively much less serious and apparent.

14356. It has been proposed, as you are aware, to put a very close restriction on the use of opium by the people of India: what do you say as to the policy of what may be described as prohibitive measures?—I cannot help regarding it as a most dangerous policy to think of tampering with long established custom in a country like India. If I remember aright the hardship caused by increasing the price of opium has been considered one of the predisposing factors in the ill-feeling which led up to the disturbances of 1857-58 in Oudh. Such action is known to have led to bloodshed elsewhere. Only quite recently symptoms of serious disaffection have shown themselves in the eastern districts of these provinces, and I considered it absolutely essential to the maintenance of peace and good government to avoid all semblance of innovation or interference with the liberty of the subject, which in the minds of an unthinking and ignorant proletariat might so easily lend itself to unintentional or malevolent misconstruction.

14357. In your district of Sultanpur can you tell us whether the cultivation of the poppy has of late increased or diminished?—There has been a decided tendency to decrease in the area under cultivation which has gradually fallen from 8,597 acres in 1885-86 to 5,851 in 1892-93, the lowest figure yet touched in recent years. The outturn for some time past has been poor and profits have accordingly fallen off. This along with other causes has served to discourage cultivation.

14358. May I take it from you that when the cultivator finds that the cultivation of the poppy is less advantageous than the cultivation of other crops, there is less disposition to cultivate, and that in point of fact the area rapidly diminishes?—Never rapidly.

14359. Gradually?—It has a tendency to diminish.

14360. May we infer that the people do not consider themselves to be under an obligation to cultivate unless they think it will be for their advantage to do so?—They are certainly under no obligation.

14361. They do not continue the cultivation from the belief that the Government has a power to compel them to do so?—Certainly not.

14362. Can you give us any figures showing to what extent cultivators are assisted by advances received from the Govern-

ment in the payment of their rents?—The following data are compiled from the figures for the past five years:—

- (1) Average amount of opium brought in by cultivators, 1,119 maunds.
- (2) Average area under cultivation, 7,284 acres.
- (3) Average payment made by advances, Rs. 43,760.
- (4) Average payment made at weighments, Rs. 1,42,410.
- (5) Average payment made when accounts are being finally settled, Rs. 32,132.
- (6) Total average payment to cultivators, Rs. 2,18,302.

The average poppy-growing area with each cultivator, in the united provinces is stated to be 13 biswas, or $\frac{1}{3}$ ths of an acre. In this district the average holding of the poppy cultivator is even less. The average number of cultivators during the past five years is 20,033. This would indicate payments of a little more than Rs. 10 per head. The cultivated area of the district is in round figures, according to the returns of 1299 Faslî, 609,300 acres.

14363. Why do you not take the English year?—Because the Faslî year extends through two English years, from the 1st July to the 30th June. All our revenue figures are compiled from settlements the Faslî year. The area under poppy, therefore, is only about 1 $\frac{1}{2}$ per cent. of the total cultivation, and the payment actually made by Government for opium handed in at the weighments (which, it should be noted, is only a portion of the profits realised by the cultivator) represents in money value nearly one-sixth of the total revenue demand, cesses included, of the whole district. The relation which the poppy crop bears to the revenue demand may be still further illustrated from the figures of two 'Courts of Wards' estates situated in this district. I have had them collated for the past five years. The *Kurwar* estate on an average has 170 acres under poppy cultivation. Its revenue demand is roughly speaking Rs. 40,000 (exclusive of cesses). The poppy crop, therefore, valued at Rs. 50 per acre, is worth about one-fifth of the amount paid to Government by the estate. Similarly in the *Rampur* estate I would calculate the value of the crop as one-sixth of the revenue demand. To go down to a lower unit still. Only a few days ago in course of inspection I came across a village with a large colony, of Muraos, the chief poppy cultivators in this district, in which about 50 acres were devoted to a poppy crop, worth, I should say—for the land was exceptionally good—almost as much as the whole revenue demand at present fixed on this property. There is no doubt that with the exception of tobacco the poppy crop is the most valuable grown. Were its cultivation prohibited the consequences to landlords and tenants would certainly be serious. The land now let for poppy-growing as a rule fetches higher rents than much of the similarly situated land in the district. This, however, is fortuitous. The bulk of the poppy cultivation here is in the hands of Muraos, and by virtue of their caste and industry they usually pay higher rent than other cultivators do. Whether they would still be able to do so if poppy-growing were stopped is another question. Personally I am inclined to think they would find it difficult. The ground now devoted to poppy would for the most part have to grow wheat, a crop in many respects not nearly so valuable. In the two estates above mentioned three-fifths of the poppy cultivation is in the hands of Muraos. Ahirs and Brahmans are the only other castes who cultivate to any appreciable extent. Cane would rarely take the place of poppy in this district. Indeed, in Pargana Jagdispur, now a large poppy-growing tract, the growth of cane is interdicted. Moreover, profits from cane cultivation in this district compare unfavourably with those derived from poppy-growing. The existence of the present system of poppy cultivation enormously facilitates the payment of rent, and *ergo* of revenue too. In some village, most of the tenants keep a little of "such land as a rent-paying crop. If a cereal were to be grown instead, the landlord would of course reap the benefit of straw in manorial dues, of which he is now deprived; but this would not go far towards compensating him for the security he now possesses that his rent will be paid up punctually, and the inevitable tahsili dunn duty met.

14364. (*Chairman*.) Why do Muraos pay higher rent than other cultivators?—They are more industrious. They are like the Koeris and Kaohis; they are mostly garden cultivators.

14365. Is the higher rent a rent paid for a better description of land?—The land is generally the best in the whole village.

14366. (*Mr. Pease*.) You said there had been a considerable decrease in your district; was that voluntary, or because the ryot found it more profitable to grow other crops?—Perfectly voluntary as far as I am aware.

14367. It was not because the licenses were withheld?—Certainly not.

14368. (*Mr. Wilson.*) We do not all quite understand these arrangements. You are Settlement Officer; are you in any way connected with the Opium Department?—No; not in the least.

14369. You have given us a number of details about the Opium Department?—I got them from the Opium Department generally.

14370. They have not come to your special notice except for the purposes of this enquiry?—Not in their present form, but as a Settlement Officer any details affecting cultivation to such an extent as opium does would necessarily come under my immediate notice; but it certainly is not my department.

14371. Can you tell us whether, in the case of this large reduction to which you have referred, the zemindars or talukdars reduced the rents when the people ceased to cultivate opium?—Not that I am aware of.

14372. With regard to the last phrase you used, may I ask the meaning of "talsili dun;" is dun the same as the English word?—Yes; the talsili dun is the Chuprassi sent from the sub-divisional head-quarters of the district to collect the revenue.

14373. Then it really means the inevitable revenue demand?—Yes, the tax-gatherer.

14374. I do not quite understand how you get at Cawnpore as showing the highest average consumption; we have before us a table furnished by Mr. Stoker from which it would appear that Lucknow is considerably the highest and that Cawnpore is the third on the list?—I had other figures before me for the whole provinces.

14375. Can you give them?—I have not got them here.

14376. Have you known of any action in connection with an increase in the price of opium leading to bloodshed?—I said that on the strength of Mr. Driberg's evidence which I read as reported in the *Pioneer*.

14377. You are aware that that has since been refuted?—I am not aware of it.

14378. You have said that this considerable falling off during the last eight years is connected partly with profits and also with other causes: what other cause?—Another cause would be that the tenants thought they had not received as much money for their opium as they ought to have received, and in some instances, having been paid too much, when the accounts came to be settled they had been called on to refund the excess paid to them.

14379. Was there a feeling that they had not been paid enough; do you mean that the price professedly paid by the Government was inadequate, or that there had been some deductions which they thought improper?—I must explain the system on which they are paid. They are paid for a certain consistency of the opium which cannot be gauged until it goes to the factory, and if it has been gauged higher than it actually turns out to be afterwards, instead of getting an additional amount of payment when the accounts are settled they are called upon to refund what has already been paid if they have been paid too much. That is what I referred to; but of course cases like that would be rare.

14380. Am I right in believing that the consistence of the individual cultivator's opium is not so ascertained, but the consistence of the opium from a particular village or district?—That is a question which concerns the Opium Department only on which I have not such information as to enable me to give an answer.

14381. It is impossible to compare the cultivated area in a particular year which you specify with the average cultivation for the past five years?—I will give figures* showing the number of cultivators for each year and the area under cultivation for each year.

14382. You have said that the Ahirs and Brahmins are the only other class who cultivate to any extent: have I rightly

* Note.—The following figures were subsequently furnished by the witness:—

	IN THE SULTANPUR DISTRICT FOR				
	1898-99.	1899-00.	1900-01.	1901-02.	1902-03.
Number of poppy cultivators	20,055	22,808	21,689	19,772	16,044
Cultivated area of the district in acres	612,634	616,035	608,228	609,291	611,498
Average number of poppy cultivators during the past five years	20,044				
Average area of the district under cultivation (in acres) during the past five years	611,537				

understood that the Brahmins do not do the more laborious work, and that the women of their families do not do any work?—No.

14383. They employ hired labor?—Yes.

14384. (*Mr. Mowbray.*) With regard to the figures at Cawnpore, are they the figures of the town or district?—The whole district.

14385. *Mr. Haridas Veharidas.* Have you had to deal with districts where the poppy was not grown?—Yes.

14386. Have you compared the condition of the cultivators of those districts with the conditions of those where poppy is grown?—That is a difficult thing to do. The district I have in my mind where poppy is not grown would be Saharanpur for example, and, I think, Bulandshahr also; there canal irrigation is extensive, whereas in other districts like Sultanpur, Azimgarh and such districts where poppy is grown there is no canal irrigation; so that it is difficult to make any contrast.

14387. Have they another advantage?—They have another compensating advantage.

14388. In the same tract of the country where poppy is grown, some cultivators do not grow it at all, and have no other compensating advantage. Have you been able to make a comparison in their case?—Not of the kind you suggest.

14389. (*Mr. Fanshawe.*) You state that wheat would have to be substituted for poppy in the Sultanpur district; that would be a crop of a much less valuable character, would it not?—Yes, less valuable pecuniarily.

14390. We have been told that cereals as a rule would not be substituted for poppy because the class of land on which poppy is grown is very valuable, and therefore it would not pay as a rule to put cereals upon it. Is there any special reason for saying that wheat would be sown in the Sultanpur district?—Because I think it is the next most valuable crop which people would ordinarily cultivate after giving up poppy.

14391. Circumstances of course differ in different districts, but in this district you would put wheat before potatoes or sugarcane or tobacco as a substitute for poppy?—As a substitute owing to the circumstances of the case. The growth of sugarcane, tobacco, potatoes and crops of that kind is regulated by the wants of the people. You cannot overgrow those things; they would be of no value if you grew more than is absolutely wanted.

14392. The question would depend largely on the local market?—Yes.

14393. Therefore in this district, wheat would be the next valuable crop, in the local circumstances, to take the place of poppy?—In my opinion.

14394. Would that wheat be for export?—Not in the Sultanpur district. We are not on the line of railway. We are so far untouched by railway communication.

14395. Is it the case that in fixing the amount of Government revenue you look directly to the rents paid as distinguished from the class of soil?—The orders of the Government now are that the assessment should be made solely on the declared rents.

14396. The rents no doubt are fixed with reference to the soil to some extent?—Certainly.

14397. The fact that poppy is grown is indirectly taken into account in fixing the Government revenue?—It is taken indirectly into account along with other considerations; it is a factor which assists one in coming to a conclusion as to what the assessment would be.

14398. If the cultivation of poppy were prohibited the consequences to landlords and tenants would be serious and I should like to know whether you think, that, as an equitable measure, compensation should be paid to them?—Compensation ought to be paid, because there would be a certain amount of reduction in the income both of tenants and landlords.

14399. Am I right in understanding that the prohibition of poppy would affect injuriously an industrious and poor class of tenants: is that your view?—Certainly it would.

14400. Is it the case that you regard these advances for poppy cultivation as being something of the nature of an agricultural loan?—It serves that purpose undoubtedly. It comes just at the time when money is most wanted, and no doubt immensely facilitates the payment of the rent due.

14401. You say that in "pargana Jagdispur, now a large poppy-growing tract, the growth of cane is interdicted: " is that for sanitary reasons?—No; it is because the pargana is populated for the most part by Bhāle Sultans: a caste of people amongst whom the cultivation of cane is

Mr. F. W. Brownrigg.

11 Jan. 1894.

Mr. F. W. Brownrigg. strictly prohibited. It is a mere caste prejudice. They will not live in tiled houses, and they will not make masonry-wells.

11 Jan. 1894.

14402. You say that the Mahomedan is, generally speaking, an abler man than a Hindu : do you mean a Mahomedan Rajput is abler than a Hindu Rajput?—I was thinking solely of pure Mahomedans,—Mahomedans of true extraction.

14403. But even such Mahomedans are not better cultivators, are they?—I was not thinking of cultivation at all. I was merely giving an opinion of the two, as Mahomedans are such large consumers of opium.

14404 (*Mr. Wilson.*) I do not quite understand the question of settlement. Is the settlement finished, or is it revised from time to time?—A temporary settlement in these provinces and Oudh lasts usually for 30 years, and it is revised at the end of 30 years if necessary.

14405 Is the 30 years constantly running out in different places?—Constantly : it is running out from district to district, from year to year.

14406. And as it runs out in the various districts it is your duty to readjust it?—To revise it if ordered.

14407. Where you find that poppy has gone out of cultivation, do you make a reduction?—So far as I have yet

done settlement work I have made no reduction in a case of that kind.

14408. You have given us figures showing a falling off during the last eight years, amounting to about one-third?—Yes.

14409. You have said that the money comes in at a convenient time of the year for the payment of the land revenue : is that another way of saying that the land revenue has been fixed at such a time as would be convenient for poppy payments?—For the payment of rent, not for the payment of land revenue. That is an entirely different thing.

14410. Is it another way of saying that the time for the payment of rent is fixed at the time when money will be coming in?—It is right to say that they happen to come about the same time. I would not on any account be prepared to say that one was fixed merely to accommodate the other.

14411. Is it a pure coincidence?—So far as I am aware, it is merely an accidental coincidence.

14412. It seems natural that the landlord should try to get his rent at a time when he knows the tenant will be in possession of ready money?—Most natural.

The Honourable SRI RAM RAI Babadur, M.A., B.L., called in and examined.

The Hon. Sir Ram Rai Babadur M.A., B.L.

14413. (*Chairman.*) I believe you are a member of the Lieutenant-Governor's Council, Honorary Magistrate, Government Pleader of Oudh, and Public Prosecutor in the Court of the Judicial Commissioner of Oudh?—Yes, and I may also add that I am a member of the Talukdars' Association, called the British Indian Association of Oudh, of which the Maharaja of Ajudhia who gave evidence yesterday is President.

14414. Can you give us your impression of the effects of taking opium upon those who use it?—A moderate use of opium does in no way affect the moral and physical condition of the consumers. On the contrary it acts as a check to several diseases originating from bowel complaints and rheumatism. But when it is used in excessive quantities—and what is there under the sun the excess of which does not lead to pernicious results—it does affect the *physical and intellectual* condition of the consumers; but in no way, so far as my experience goes, does it lead to moral degradation. From my experience as the Public Prosecutor in the High Court of the Province of Oudh extending over ten years I can assert that not a single case came under my notice in which the consumption of opium has directly or indirectly led to the commission of crime.

14415. What is the rule with Mahomedans as to the consumption of opium?—Among the Mahomedans the consumption of opium is not religiously prohibited. Any prohibitive measure would be inflicting a great hardship on them and would open the door to a very large consumption of alcohol—which is by no means desirable.

14416. What do you say as to opium-smoking?—Opium-smoking is a thing which, in my opinion, should be prohibited. Not only should licensed opium-smoking shops be closed, but prohibitive measures should be introduced to stop opium-smoking in private places as well.

14417. Turning to the ancient literature of the subject, how is opium regarded by the old writers?—It is regarded as a thing which is considered as a panacea for all evils; there is a verse from a celebrated writer, Amir Khuro of Delhi, which says that "opium is the mother of recovery; though it is an ailment it is a panacea for all evils".

14418. As regards the disposition of the people to bear additional taxation, we have heard from many witnesses, and I suppose you would confirm it, that they would not like to bear such additional taxation in order to provide for the loss of revenue from the cessation of the sale of opium?—No.

14419. With regard to the arrangements under what is called the Bengal monopoly system, would you confirm what has been told us by others that the advances are a help to the cultivators to pay their rents?—They are. These advances are made at the very best time, *i.e.* in September and October and in April and May, periods when the tenants have to pay their rents, so that there is not the trouble of borrowing money from the village money-lenders, which would cost them 50 or even 100 per cent. interest.

14420. You have a large body of tenants; what is their opinion as to the policy of prohibition of the cultivation of

poppy?—I have examined these tenants as a landlord—altogether about 200—and I had the opportunity of putting the question to about 100, and all of them expressed the opinion that it should not be prohibited; that it was advantageous to them.

14421. (*Mr. Pease.*) Have any of your tenants voluntarily given up the produce of the poppy?—When the produce was not good they gave it up only on that ground—and not that other crops would prove more profitable. Two years ago there was a hailstorm and the result was that the fields on which poppy was grown were destroyed and the next year many of them gave it up.

14422. (*Mr. Wilson.*) Is the city of Lucknow notorious for its opium-eating and smoking population?—Yes, especially the Mahomedans.

14423. How do you account for that?—This has been going on from the time of the Mahomedan Kings, since the place was under native rule, and the cultivation of opium was as free as it could be. Sometimes it happens, especially among the richer portion of the Mahomedans, that they commence taking opium for other purposes than as a medicine.

14424. What other purposes?—For prolonging sexual pleasure.

14425. You say that it is not religiously prohibited?—No, it is not, because it is not considered as a stimulant, as *nasha*.

14426. You have referred to English sentimentalists. I suppose you know that the persons whom you so call are really anxious that India should not have to bear more taxation?—The question is whether that is practicable.

14427. (*Mr. Moubray.*) Have any of your ryots who have given up poppy cultivation in a bad season taken to it again?—Yes, next year.

14428. You say that in your opinion prohibitive measures should be introduced to stop opium-smoking in private places, would you extend that to private houses?—I would, because, in my opinion, opium-smoking is very injurious to health and to the moral condition. That is not only my opinion but it is the opinion of all friends whom I have consulted.

14429. Do you think it would be possible to pass a law that nobody should be allowed to smoke opium in his own house?—It would be possible to pass the law, but the question is how the law would be put into force. I have not thought out what prohibitive measures should be adopted, or in what way they should be enforced.

14430. You recognize that it would be a very delicate matter?—Of course.

14431. Without having exactly considered the difficulties, you are of opinion that if it could be done it should be done?—Yes.

14432. Can you compare the condition of those cultivators who have grown poppy and those who grow poppy?—Those who grow poppy are very punctual in the payment of their rents—at least we have greater facility in realizing our

rent from them than from those who do not cultivate poppy.

14433. Have you recourse to the law to recover your rents from the other cultivators?—Sometimes I have.

14434. But not with poppy cultivators?—No; they promise that they will pay their rent as soon as they receive their money from the Government. I generally send my agent with them; he goes to the factory, and he realizes from them as soon as the money is paid to them.

14435. From that you conclude that the poppy cultivators are in a better condition than those who do not grow poppy?—Because they have not to pay any interest for their money.

14436. Is there any difference between the conditions of the two?—Yes, generally the tenants who grow poppy appear to be more comfortable in their circumstances than those who do not.

14437. (*Mr. Fanshawe.*) I understand that the use of opium, as far as your experience goes, is generally a moderate use?—Yes. I may add that the total population of some of my villages in which I have been is about 3,000 of the cultivating class, and I found that only about five or six persons were in the habit of taking opium.

14438. You also say that the habitual use of opium frequently begins with disease; is not that the case?—That is what they say. I have not personal experience, but that is what I have been told by the cultivators and those with whom I have conversed on the subject.

14439. From that we may take it that the medical and the non-medical use of opium are very closely allied?—So it appears.

14440. As regards Mahomedans, it is understood that, as a practical rule of life, they are not forbidden to use opium?—Yes.

14441. (*The Maharaja of Darbhanga.*) In case the cultivation of opium is prohibited altogether, do you think that the landlords ought, according to strict equity, to get some sort of compensation?—I think they should, because the settlement is made on the understanding that there shall be no restriction whatever with regard to the crops to be grown on these fields, and it will in some way affect the rent rolls of those villages in which poppy is grown.

14442. Are the rents settled by the Settlement Officer according to the crops grown, or what?—In a certain measure.

The witness withdrew.

Babu GOKUL CHAND called in and examined.

14453. (*Sir James Lyall.*) I believe you are a Pleader and Chairman of the Municipal Board, Fyzabad, and Honorary Magistrate?—Yes.

14454. Will you state what professions you have followed leading to the positions you now occupy?—After serving the Government for about 12 years in the capacities of Settlement Head Clerk, Translator, Deputy Munsarim and Tahsildar, I commenced practising as a Pleader in Oudh from the year 1875. At present in addition to my ordinary avocation as a Pleader I also perform the duties of an Honorary Magistrate and Chairman of the Fyzabad Municipality. I also possess some landed property in the Fyzabad District. All that I have to state on the opium question is based on my personal experience.

14455. Have you had any personal experience of opium-eating?—I do not eat, drink, or smoke opium, nor does any member of my family do it.

14456. What is your experience as to the opium habit among other people?—The consumption of opium is not common among the people residing in the mofussil of Fyzabad. In the towns of Fyzabad and Ajudhia the drug is consumed more by the Mahomedans than by the Hindus. Opium-consumers who cannot afford to get good diet generally become very lean and pale; and lose their energy and spirit and gradually become very idle. In my opinion the moderate use of opium is not harmful, and I know a good many persons enjoying good health, good appetite and perfect energy by the moderate use of the drug. I am also of opinion that its use does not produce harmful effects either physically or morally. Opium-eaters are generally sober and quiet, and, as such, are less capable of committing crime than those who use liquor.

14457. You say that people enjoy good health, good appetite, and energy by the moderate use of opium: do you mean in spite of the moderate use of the drug?—I have

14443. The Bengal and the Behar system of settling the lands according to the quality of the land is not in vogue in this province?—Here three things are considered, first the vicinity of the land to the village site, another is the nature of the crops grown on it, and the next is the facility with which it can be watered. These are the three conditions taken into consideration in making the settlement.

14444. Do you think that the prohibition of the cultivation of the poppy will be a hardship?—Yes.

14445. On the landlords' as well as the tenants?—Yes.

14446. What is the price per seer now paid to the ryot?—In my district it averages from Rs. 3½ to 6.

14447. When were these prices last fixed?—I put the question only for the last three years, and for that period this has been the average price. I cannot give the exact date when it was fixed.

14448. If it is proved that for the last 7 or 10 years prices have not been changed, do you think that the time has now come to increase the price, considering that there has been a rise in wages and in the price of food throughout all India?—I think the price should be increased.

14449. (*Mr. Pease.*) Do you think the ryots prefer growing poppy at the present prices to any other crop?—Yes, because in the case of poppy they can be sure of a quick return as the Government is the purchaser. In other cases they cannot be sure of a sale in the market, and the prices may fall. They cannot expect a sure return in case of other crops as they can in the case of the poppy.

14450. Taking all considerations into account they prefer poppy to other crops at present prices?—Yes.

14451. When your agent takes the ryots to the factory for them to receive their allowances, is the money paid by the Government Agent direct to the ryot, or is it handed to your agent?—Of course it is paid directly to the ryots. The agent cannot get it from Government agent. It is a private understanding between the agent and the ryots that they will pay the money to him as soon as they get it from the Government.

14452. You say the agent takes them to the factory and receives the money from them there?—When they go to the factory at stated periods to realize the money from the Government, the agent accompanies them, and he realizes the money from them there.

seen persons who take a very small quantity every day, and I see them enjoying good health and a good appetite.

14458. Do you mean that it does not interfere, or that it actually gives them good health: which is your opinion?—I think it does give them good health.

14459. It improves their health?—Yes.

14460. You say that opium-consumers who cannot afford to get good diet generally become very lean and pale: do you mean that of excessive opium-consumers or of any particular class of people, such as underfed people?—Of course excessive consumers.

14461. What, in your opinion, would the people in India think of prohibitive measures?—I am strongly of opinion that the people of India will never be willing to bear any farthing of the costs of prohibitive measure. In fact, they will not like such measures being taken at all. Such measures in my opinion will be taken in the light of a great calamity, especially by the poor opium-eaters.

14462. What is your opinion about the prohibition of opium cultivation?—India being an agricultural country, the cultivators, whose chief source of income is from the poppy cultivation, will suffer if its cultivation is prohibited or restricted. Its cultivation costs less labour and money, and the outturn from the sale of opium, juiceless poppies, seeds and leaves and flowers is much more than any other similar crop. It is in my experience that poppy cultivators pay their rents more regularly than a good many other tenants, and consequently the landholders will also as a class not like the total or partial prohibition of this crop.

14463. What is your opinion of the habit of opium-smoking?—I am against the licensed shops of *chandu* and *madak*. If these shops be not completely closed on account of some financial difficulty, their number should on no account be increased. I would not allow any new shop for the sale of *chandu* or *madak* in any town, village or locality where no

*The Hon. Sri
Ram Bai
Bahadur,
M.A., B. L.
11 Jan. 1894.*

*Babu
Gokul Chand.*

Babu Gokul Chand. such shop has ever existed. Any prohibitive measure in this respect will, I am sure, be hailed by every well-wisher of India.

11 Jan. 1894.

14464. At present in this part of the country all the shops for the sale of *chandu* and *madak* have been closed I think?—Yes, I have heard that.

14465. It is said that since the closing of the shops for the sale of *madak* and *chandu* and the saloons in which the people used to smoke, a great number of small private saloons have been opened in which people eat and smoke together?—That is the case.

14466. Do you think on the whole that if that cannot be stopped, it is better than keeping open the public shops?—I think it is better.

14467. At any rate I suppose Government is not responsible for them?—Government of course is not responsible any more than it is responsible for those who indulge in liquors in their private houses.

14468. (*Maharaja of Darbhanga.*) You say you have been in the Settlement Department for some time; you will therefore naturally be able to help us a great deal with regard to the question of rents. One witness told us that the rents are fixed to a certain extent according to the crops on the land on which poppy is grown, that they are assessed at a slightly higher rate than the lands on which crops that yield less are grown: is that the case?—Yes.

14469. Supposing a ryot refuses to pay this enhanced rent, what procedure is taken by the Government?—The landlord of course will give the land to somebody else. The poppy crop is generally grown on first class land.

14470. A witness told us that rent is to a certain extent fixed according to the crops on the land?—In my opinion it is fixed according to the condition of the land, whether it is good, or major or pailo.

14471. It is not fixed according to the crops?—First class poppy crops are generally grown on first class land. It comes to the same thing whether it is taken according to the crops or according to the conditions of the land; both are considered,—the crop and the quality of the land.

14472. Do you think it a fair system for the land to be assessed higher because poppy is cultivated in it?—No.

14473. As regards the rates at which the ryots are paid, may I ask what were the rates ten years ago?—I do not know; I have ascertained that they are now from Rs. 4 to Rs. 6.

14474. You do not know when they were last fixed?—No.

14475. What is the staple food-crop of these parts?—Wheat and rice.

14476. Has there been any rise in the price of those staple crops in the last ten years?—Yes.

The witness withdrew.

14477. Can you give us an approximate idea of the rise?—About 15 per cent.

14478. Has there been a similar rise in wages?—Yes.

14479. Do you not think that there ought to be a similar rise in the price of opium paid by the Government?—Yes.

14480. You are clear on that point?—Yes.

14481. (*Mr. Pease.*) You say that cultivation requires less labour than any other similar crop?—Yes.

14482. What crops are you comparing it with?—Gram and wheat.

14483. Do you mean to say that it takes less labour than wheat?—That is what I have ascertained from my tenants.

14484. (*Mr. Wilson.*) I think you said that you considered the moderate use of opium to be positively beneficial?—I cannot say that exactly; but I have seen persons using small quantities of opium, and they enjoy good health and appetite; they do not lose their energy, and they are not idle like those who indulge in the excessive use.

14485. Did you not state that you thought it was actually beneficial?—It is said that those who take a little quantity after forty years of age are helped in their health—it is said by those who are more experienced than I am.

14486. (*Mr. Mowbray.*) Have you seen people reduced to poverty by taking opium?—No, I don't think the opium traffic has anything to do with the poverty of India. There may be very few of the whole lot of opium-consumers who spend almost all their earnings in purchase of opium. There are scores of Mahomedan families in Lucknow and Fyzabad, every member of which, including infants, use opium, and yet I have not seen any such family demoralized or become poor simply because of its eating opium.

14487. (*Mr. Fanshawe.*) You have spoken of the moderate use and also of the excessive use of opium: in your experience is the excessive use exceptional or not?—It is.

14488. (*Sir James Lyall.*) You were appealed to by the Maharaja as a Settlement expert witness. There has certainly been some difference in the evidence given to us as to whether the crop was taken into account in assessing the land value, or whether it was only the class of land: I wish to know whether this is not the case, that revenue is mainly assessed on the class of land, but, inasmuch as we are not quite certain whether the classification of land is correct, the Settlement Officer, in considering the classification and assessment, also looks to the return of the crops, and if he sees that a village has a great deal of poppy in it, though the area returned as first class land may be rather small, he would probably conclude that the area is really larger, and would assess something higher on that village?—Yes.

CHAUDHRI MUHAMMAD AZIM called in and examined (through an interpreter).

*Chaudhri
Muhammad
Azim.*

14489. (*Sir James Lyall.*) I believe you are a Talukdar of the Hardoi District and Honorary Magistrate?—Yes.

14490. How far does the use of opium extend in your country?—It is not confined to any particular race or district. It is used by men of different races in all districts. It is consumed more extensively in cities and towns than in villages. The use of opium affects the moral condition of the people, but only when used in large quantities; but it is not so injurious if good diet is taken.

14491. What do people in India think of the habit of using opium?—The use of opium in large quantities is deprecated by the people of India, but its use in small quantities is looked upon as beneficial.

14492. What is the disposition of the people of India in respect to bearing any part of the cost in case of a loss of revenue?—The people of India will not, in my opinion, be willing to bear, in whole or in part, the cost of prohibitive measures.

14493. What is your opinion about poppy cultivation and the degree to which it is a source of profit?—Poppy is largely cultivated. The present system of its cultivation is a source of great profit to the cultivators, and the zamindars can easily recover their rents from the cultivators.

14495. What is the size of your estate?—I pay Rs. 80,000 revenue.

14496. How many villages have you?—77.

The witness withdrew.

Adjourned till to-morrow at 10-30.

14496. To what race do you belong?—I am a Syad.

14497. Is poppy cultivated on your estate?—Yes.

14498. Do the cultivators like it?—It is beneficial to the cultivators.

14499. We have heard of pressure being used by Government officials to prevent the cultivators giving up the cultivation?—There is no pressure.

14500. It is not wanted perhaps?—No.

14501. They do it of their own free will?—Of their own free will.

14502. Will you tell us how much poppy is grown on your estates?—I cannot give the exact amount, but it is cultivated in most of my villages.

14503. Is there as much grown now as there was ten years ago?—It fluctuates from year to year.

14504. Is there as much grown now as there was ten years ago?—It is not less—if anything greater. It has somewhat increased.

14505. With which province of India are you acquainted?—Oudh.

14506. Any others?—I have heard of other provinces, but I only know Oudh.

14507. Then when you speak of the people of India you mean Oudh?—Oudh and other British Provinces.

At the Darns Shafa, Lucknow.

FORTY-FOURTH DAY.

Friday, the 12th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
 THE HON'BLE SIR LACHHMESWAR SINGH BAHADUR,
 MAHARAJA OF DARBHANGA, K.C.I.E.
 SIR WILLIAM ROBERTS, M.D.
 MR. R. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
 „ ARTHUR PEASE.
 „ HARIDAS VEHARIDAS DESAI.
 „ H. J. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

MR. GANGA PRASAD VARMA called in and examined.

14508. (*Mr. Pease.*) Will you tell us what your position is in Lucknow?—I am a journalist, proprietor of two weekly newspapers, and Editor; also a member of the Municipal Board.

14509. What opportunities have you of knowing the views of the people of Lucknow?—As a journalist and a member of the Municipal Board I have to mix with all sorts of people.

14510. What is your view as to the proportion of the Mahomedan population who consume opium?—In my opinion 50 per cent. of the Mahomedan population of the city consume opium.

14511. And of these what proportion are smokers?—25 per cent.

14512. Have you observed what have been the effect of the habit upon them?—In my opinion it has physically deteriorated them, and it has resulted in moral depravity.

14513. Have any of the wealthier members of the community suffered much through the habit?—They have lost much of their property, and have become lazy.

14514. Do you know several cases of that character?—Yes, I have given five cases in my statement, and I can give more.

14515. What is your view as to the effects of the opium habit upon morality?—Opium-eaters are known to be the worst sort of men; they are regarded as a lot of immoral men.

14516. Is the fact that a man is an opium-smoker in moderation a reproach?—Yes, when he is called “*aphim*” he is regarded as a low person.

14517. Is it applied to persons who take opium in moderation, in small quantities?—I know personally very few cases of moderate consumers.

14518. You mean that persons who take in small quantities gradually increase the dose?—Yes, after five or six years they generally become confirmed smokers and eaters of opium.

14519. Do you find anything in books showing how the habit is regarded?—Books in the vernacular like *Chundo Namah*, *Aphim Namah*, *Madak Namah* and others, which sell every year by thousands, show the public feeling about these men, depicting the opium-eater as immoral, physical cowards and morally depraved.

14520. Are these modern books?—They are old books, but they are printed in large numbers every year.

14521. What was the view of Dr. Cleghorn about the effect of opium on infant mortality?—In the Municipal Report of 1891 he said, “Another cause of mortality among children is the almost universal practice of giving infants opium. The habit is a most pernicious and dangerous one, and it is utterly useless. It is given through mistaken kindness and to save trouble.”

14522. Will you give us your view as to the effect of closing *chandu* shops?—As to *chandu*-smoking I wish to point out that the closing of shops has done us no good. The Government has closed the dens, but *chandu* is still sold. I

am told women of ill-fame have opened shops in their private houses from which they supply *chandu* to their friends, and their houses have become a resort of persons of bad character. It is difficult for high officers to get clue of these houses, as it is a well-known fact that like grog-sellers the opium-smokers know how to purchase the goodwill of the police. Unless the Government puts a stop to the sale of *chandu* no good result can come out of the closing of dens.

14523. What is your view as to the course that the Government ought to pursue?—In my opinion it would be a blessing to my city if the Government stops the sale of opium and strictly orders that none but those who require opium for medical purposes shall have it.

14524. What do you say as to the effect of closing the trade upon the population?—The assertion that the abolition of the opium traffic will result in a general discontent and disaffection amongst the opium-eating population is absurd.

14525. (*Mr. Wilson.*) In the opinion you have expressed, particularly in regard to the disgrace connected with opium-eating, and also with regard to the entire abolition of the traffic except for medicinal purposes, are you expressing the general opinion of your friends and neighbours or only a small section of the people of Lucknow who share your views?—I think the majority of the opium-smokers themselves will agree with me. I had occasion to visit more than hundreds of opium-eaters only the day before yesterday, and not less than 50 of them agreed with me in expression of opinion.

14526. What is your religion?—I am a Hindoo.

14527. Are you connected with the Missionaries in any way?—In no way at all.

14528. Do you know any of the Missionaries?—I know in my trade concerns the Rev. Mr. Craven, who is now in America.

14529. Do you know Mr. Evans?—Yes; personally as a temperance man.

14530. Do you agree with his temperance views?—Yes. And I promote those views as far as lies in my power.

14531. You do not agree with his religious opinion?—No, and I also differ from some of his political opinions.

14532. So that you are not under his influence?—In no way.

14533. (*Mr. Mowbray.*) You have told us that in your opinion 50 per cent. of the Mahomedan population of the city consume opium?—Yes.

14534. I see in your printed paper that you say in regard to the pecuniary status of opium-eaters that the highest of them are insolvent?—Yes.

14535. You definitely state that 50 per cent. of the Mahomedan population of Lucknow are insolvent?—I believe so; 45 per cent. of them must be insolvent. At least if not declared so by the Court, in our private society we know that they are.

*Mr. Ganga
Prasad
Varma.*

12 Jan. 1894.

Mr. Ganga
Prasad
Varma.

12 Jan. 1894.

14536. I think you told us that you do not know of such a case as a moderate use of opium : you say it is impossible to use opium moderately ?—Yes.

14537. It always proceeds to excess ?—Yes.

14538. Do you consider that in all cases it leads to excess ?—Almost in all cases.

14539. You are in favour of prohibiting the sale of opium except for medicinal purposes ?—Yes.

14540. You say in your printed statement that many guardians under the advice of foolish quacks give opium to their children : what do you mean by foolish quacks ?—Those who are not licensed doctors. Hakims who have not read much of medicine books.

14541. What do you mean by licensed doctors ?—Doctors who have passed a medical examination.

14542. Is there any register of what I may call medical practitioners amongst the Hakims and Kabirajes ?—I do not think so.

14543. Then it would be open to anybody who did not agree with any particular Hakim or Kabiraj to call him a foolish quack ?—It is only a matter of opinion.

14544. In your judgment would it be safe to entrust the powers of recommending the use of opium for medicinal purposes to a class of persons of whom anybody might say that any number of them were foolish quacks ?—I do not think it would be right to entrust to such men. The Government will have to prepare a register of good men. It will have to get local opinion or the opinion of the city to ascertain who are physicians of good reputation in order that they may be entrusted with the work.

14545. You have told us of some places where you are told *chandu* is sold : can you of your own knowledge tell us of any places where *chandu* is sold in Lucknow now ?—I have heard of five or six places, and one was in my own neighbourhood just below my wall. I heard five or six *chandu*-smokers used to come there every night and smoke with some women of ill-fame.

14546. Did you test it by going to the place ?—I heard it. I did not go personally, but *chandu* was smoked there.

14547. I am asking is *chandu* sold ?—I cannot give my own personal experience.

14548. You have made a very general statement that “the assertion that abolition of opium traffic will result in a general discontent and disaffection amongst the opium-eating population is absurd,” and you have told us that opium is consumed by 50 per cent. of the Mahomedan population of Lucknow. The population of Lucknow City is something over 2½ lakhs ?—Nearly 3 lakhs.

14549. I suppose the Mahomedan population is about half the city ?—Nearly half.

14550. And that will be something like a lakh and-a-half ?—Over a lakh.

14551. At any rate there will be something over half a lakh of opium-consumers ?—Yes.

14552. And I think when you went into detail as to the opinion which you represented, you told us that you had seen lately some hundreds of opium-smokers ?—Yes ; in this last week. I could not see women.

14553. I wanted to know whether you thought that some hundreds of people that you have spoken to personally were a fair representative of the bulk of the Mahomedan consumers of opium in this city ?—Yes, I do, since many of them were confirmed opium-eaters who move and mix with opium-eaters. They have expressed the opinion that they would regard the abolition of the opium traffic as a blessing, and they express not only their own personal opinion, but the opinion of those among whom they mix.

14554. (Mr. Haridas Voharidas.) Perhaps you know that there are persons who at the age of 30 or 40 years first commence taking opium ?—I do not personally know of such cases in Lucknow ; I believe they commence here at the age of 18 or 20, mostly for very bad purposes.

14555. Therefore you are in a position to say that they increase the dose which they commence at the beginning, and they never stick to that which they commence with ?—They do not if their financial status allows them.

14556. Do you apply this to Hindus also ?—No ; not to the Hindus. I know very few Hindus who are habitual consumers of opium, and their number will not be very large in this city.

14557. Am I right that at 30 or 40 years of age they do not increase the dose ?—I have no personal knowledge of Hindus who take to opium-eating in after-life.

14558. As you are a Hindu you will tell us whether opium is prohibited by the Hindu religion ?—I am not well versed in the Shastras, but I was talking to a Vaid who was versed in the Shastras, and he said the habitual use of opium is prohibited in the Shastras. That is only information that I have heard from a Vaid.

14559. That it is prohibited by the religious Shastras ?—Yes.

14560. Is opium prohibited by our religion ?—I have been told by another Pundit that in our religious Shastras there is no mention of such a thing as opium.

14561. Is mention made of alcohol ?—Yes.

14562. Is it prohibited ?—It is.

14563. You would not like a Hindu then to drink ?—No.

14564. Perhaps you would not object so much to a Hindu taking to opium as you would to drink ?—I would rather like the Hindu not to take any intoxicant, and if he requires stimulant, he should rather take to drink than to opium, and I have my own special reasons for this.

14565. Although alcohol is against our religion and is expressly mentioned, you would prefer it to opium ?—If he must take any stimulant, I should prefer he took alcohol of the two.

14566. He must obey the Shastras ?—Yes.

14567. Although opium is not expressly prohibited by our religion, you would prefer that a Hindu should take alcohol to opium ?—I am told there is no mention of opium in the Shastras. If Hindus are to take any stimulant and go against the Shastras, I should prefer that they take alcohol to opium, but I would prefer most that they should take nothing.

14568. (Mr. Mowbray.) You said you had a personal reason ?—Yes.

14569. (Mr. Haridas Voharidas.) It is your personal opinion, not the opinion of the Hindus generally ?—I have not consulted my friends on the point.

14570. Would you like to give your personal opinion ?—I think it reduces a man and makes him morally weak and a physical coward, and liquor does not bring about that result.

14571. Have you personal experience of this ?—Yes, of some Hindus.

14572. Then you know of Hindus who take alcohol ?—Yes.

14573. And they are not worse than those who take opium ?—No.

14574. Are they better ?—They are better than Mahomedan opium-eaters.

14575. (Mr. Fanshawe.) Would you kindly tell me whether you think that you are competent to express an opinion on behalf of the Mahomedan community generally ?—I do, since I mix with them, and I have a large number of Mahomedan friends.

14576. Do you think that this enables you to express an opinion on behalf of the whole Mahomedan community of Lucknow ?—In my own idea.

14577. With reference to these private places in which the smoking of *chandu* now goes on, do I understand you to say that these private places have entirely sprung up since the Government licensed smoking-houses were stopped ?—Yes.

14578. Am I right in understanding that you wish to attribute the ruin, of which you have spoken, among the Mahomedan section of the inhabitants of this town largely to the opium habit ?—Yes.

14579. Is it not the case that a number of the Mahomedan inhabitants who formerly found employment in connection with the Court and under the Oudh Kings, have lost that occupation and have not adapted themselves to the new conditions of life ?—A very large number of Mahomedans left Lucknow after the mutiny and found work at Calcutta and other places.

14580. Is it not the case that there is still a large number of Mahomedans connected with those who were employed in the service of the Oudh Kings, who have never adapted themselves to the new conditions of life ?—I think only in a very few cases.

14581. Do you not think that there is some large section of what you may call idle and thriftless people in this town ?—Yes, and many of them have become idle on account of opium-eating.

14582. You attribute it directly to opium-eating ?—Yes.

14583. And to nothing else ?—To nothing else.

14584. With reference to these books, such as *Chandu Namah* and so on, can you kindly tell me the approximate date at which they were published?—I cannot tell exactly the date, but I know they are being printed every year.

14585. When were they originally published: you said they were old books?—I cannot give the exact date.

14586. 10, 20 or 30 years ago?—Since the introduction of the press there has been a large circulation of these books. I do not know when they were first printed.

14587. You said they were old books: will you kindly tell us what you mean by old books?—I think they were published as long as 25 or 30 years ago.

14588. When you said they were old books, you had no accurate information on the subject?—No, I had no information as to the date of their publication.

14589. Are you aware that for some time the sale of *madak* was prohibited in this province?—I am not aware of that.

14590. Will you kindly tell me the number of subscribers to the two papers with which you are connected, the *Advocate* and the *Hindustani*?—The *Advocate* has 500 and the *Hindustani* about 400, and I may tell you at the same time that this is the largest circulation of any Indian political paper in the province, excepting those which are supported by the Government.

14591. Do you declare the number of subscribers for the Post Office privileged newspaper system?—Yes.

14592. Will you tell us the number you declared last quarter?—Through the Post Office I sent about 300 of the *Advocate* and about 35 in exchange, and we sell about 150 in the city.

14593. That makes about 500?—Yes. The numbers declared for the *Hindustani* is about 275 outside and 35 or 40 in exchange, which makes about 300. For Lucknow we publish about 100 copies.

14594. Which are not distributed through the post?—Not through the post.

14595. (*Sir James Lyall*.) You said you are Editor of the *Advocate*?—Yes.

14596. In October last a friend of mine in England handed me a copy of the *Advocate* for September the 8th, in which was published a letter sent to Mr. Hamid Ali Khan by Mr. Caine, M.P. May I ask you whether that letter was sent to you for publication by Mr. Hamid Ali Khan?—We all belong to a Temperance Association, and that was a letter addressed to Mr. Hamid Ali Khan in his capacity as a temperance advocate. Whether he sent it to me for publication or not, I do not remember. I cannot tell how it happened. I do not remember whether he handed me the letter for publication, or whether it was handed over to me for publication by the Temperance Society.

14597. Is Mr. Hamid Ali Khan here to-day to give evidence?—Yes, he is here.

14598. (*Chairman*.) You have just told us that you are a member, and, I have no doubt, an able and influential member of a Temperance Association?—Yes, I belong to that association.

14599. It is one of the objects of that Association, as you have explained to us, to stop the sale of opium for other than medical purposes?—Yes.

14600. You say that such a step as that would be a blessing to your city?—I think it would be a blessing.

14601. Would you not make the same recommendation in respect of alcohol?—Yes, I would.

14602. You pointed out to us that the closing of shops where *chandu* was formerly smoked has done you no good?—Yes.

14603. The reason being that the regulation has been practically evaded by the smoking of *chandu* at unlicensed places?—Yes.

14604. As a remedy for the evil of *chandu*-smoking, you recommend that the Government should put a stop to the sale of *chandu*?—Yes.

14605. I understand the Government is not a seller actually of *chandu* but a seller of opium, from which *chandu* may be prepared, is that so?—When I wrote this I was under the impression that Government—

14606. I do not want information from other sources. Supposing the Government were to prohibit the sale of *chandu*, or that it went even further and prohibited not only the sale but the smoking of *chandu*, does not it occur to you that there would be quite as great a risk of a regulation of that kind being evaded?—I think that the Government under proper regulations can put a stop to the sale of *chandu* or to the illicit sale of *chandu*.

14607. Your experience in the case of the closing of the shops which sold *chandu* shows you, does it not, how difficult it is for Government by public action, by laws and regulations, to control absolutely the conduct and actions of private individuals?—I am not aware whether the Government sells *chandu* or not.

14608. Do you not recognize generally how difficult it is for a Government by laws and regulations to control the private acts of individuals?—I think that the sale of *chandu* is in the knowledge of Government; it is within the notice of Government officials that *chandu* is sold illicitly here, and if they can put a stop to the sale of *chandu* which is manufactured in the city—it must be manufactured by somebody in the city—if they can put a stop to that, they can keep the smoking of *chandu* under control.

14609. You admit my general proposition, do you not, that it is extremely difficult for the Government to follow a private individual into his own domicile, and there control his actions?—It is very difficult with regard to smoking, but not with regard to selling. I can give you more information on that to-morrow if you like.

14610. Is it not the case that the reform you wish to bring about is one which must come rather from working upon public opinion and bringing about an improvement in the moral condition of the people by preaching and by influences of that kind?—Yes, but the Government can take away the temptations which are placed before the people.

14611. (*Sir James Lyall*.) *Chandu* is not a very difficult thing to make, is it?—I have no personal knowledge, but I can enquire. I know it is sold by some men and smoked by others. There is some preparation of the opium to go through; it takes some time to prepare opium into *chandu*.

14612. Your idea is that the making should be prohibited?—Yes.

14613. And that a man may not even take opium into his own house and boil it and make *chandu*?—I think it would be difficult, and only some men would be able to do it. Men who can get *chandu* for one pie would not be able to obtain it then.

14614. If they wanted to smoke, would not they club together as long as the sale was not stopped and get a little opium? They could boil it and make it in their own house?—That is the reason I ask the Government to put a stop to its manufacture: Government can stop that. Two hundred or more men could combine together.

14615. We have been told that Government has stopped the manufacture by unlicensed vendors?—But the Abkari Department of Lucknow knows where *chandu* is sold and manufactured in the city.

14616. Do you mean illicitly inside people's houses?—As I have told you I have no clear conception how this *chandu* is sold in the city. I do not know whether Government sells it or whether it is obtained from private houses, but there must be a manufactory somewhere.

14617. (*Mr. Wilson*.) I want to know whether you have any knowledge as to the practice in this city in reference to the sale of poisons?—There are only two or three licensed shops in the city from which poisons can be had. One is at Chouk, and there is another in Amenabad.

14618. By whom are they licensed?—By the Deputy Commissioner of the place under a certain Regulation or Act.

14619. Do you know at all what the object of the license is: I mean are purchasers obliged to give explanations or anything of that kind?—My information is that nobody can get yellow arsenic without giving his name, his father's name, and the object for which he makes the purchase. I am further told that the Register is presented to the Collector once a month.

The witness withdrew.

Mr. Ganga
Prasad
Varma.

12 Jan. 1894.

*Pandit
Lakshmo
Pershad.*

18 Jan. 1894.

PANDIT LAKSHMO PERSHAD called in and examined.

14620. (*Mr. Wilson.*) Are you a Brahmo missionary?—I am. Brahmo missionary means missionary of the Brahmo Samaj—missionary of the Brahmo church.

14621. Have you heard the evidence which has just been given by Ganga Prasad Varma?—Yes.

14622. Do you agree with what he has said as to the moral degradation caused by eating and smoking opium?—Yes, I do.

14623. Do you also agree as to what he has said about the physical injury caused by smoking opium?—Yes. I have a dispensary in my charge, and I have to visit poor patients generally in the country and in the town, and I have seen many diseases caused by opium, and I have treated them generally.

14624. Treated them medically?—Yes.

14625. And it is your duty as a preacher to see these persons?—Yes, the poor people who cannot get help otherwise.

14626. Have you had any personal experience in your own family?—Yes.

14627. What was it?—Of a child dying by opium.

14628. By whom was that administered?—By my mother. He was my own brother, and my mother gave him a little opium to send him to sleep, and he died of it.

14629. She gave him too much I suppose?—Not too much, I think. I do not know the exact quantity. My mother is living; she told me all about it.

14630. Do you think that the use of opium as it is now distributed and sold by the Government is an advantage or disadvantage to this country?—It is a disadvantage altogether.

14631. Would you be in favour of the prohibition of the sale of opium except for medical purposes?—Yes, I am, although I do not think opium is even good for medical purposes.

14632. You do not think it is any good as a medicine?—It may be in some cases, but not always. It is not a curative agent. It only stupifies a man and makes him unconscious of the disease, but the disease goes on increasing. I have seen cases of that.

14633. You would not object to its being sold for medical purposes to such persons as it was necessary?—No.

14634. Would you think if there were some such prohibitory measure it would be desirable to make some exception and have some kind of register to permit the sale to those persons who have become so used to it that they may suffer seriously if suddenly deprived of its use?—If medical men certify to that fact I would have no objection to it, but I hear that in jails here the criminals do not get opium, and they do not die; they generally improve.

14635. You think it is a serious responsibility for the Government to sell opium in the way that is now the case?—I do.

14636. (*Mr. Mosbray.*) Can you tell me the number of the Brahmo Samaj community in Lucknow?—It may be about 20.

14637. I suppose you preach with a view to making converts among the other Hindus?—Yes, Hindus, Mahomedans and Christians.

14638. How long have you been a missionary in Lucknow?—This time I have been here for more than two years, and before that I was also here.

14639. As a missionary of the Brahmo Samaj?—Yes; I have been a missionary for ten years.

14640. In your absence I suppose there was another missionary of the Brahmo Samaj here after you went away and before you came back again?—No; some lay members of the Brahmo Samaj worked here.

14641. (*Mr. Haridas Voharidas.*) You are a Brahmo missionary, is it the same Samaj which exists in Calcutta?—Yes; I am a missionary of the Brahmo Samaj.

14642. Is it a fact that they do not believe in caste?—Yes.

14643. They eat and drink freely?—Yes, but there may be some restrictions physically and morally.

14644. As far as caste goes there is no restriction at all?—No.

14645. By religion they do not take objection to the use of alcohol?—No.

14646. You do not believe in the Hindu religion so far as the prohibition of alcohol is concerned. Do you make any distinction between the use of alcohol and opium?—No; I am against both.

14647. Equally?—I think opium more dangerous than alcohol, because it reduces the physical powers more than alcohol does.

14648. (*Mr. Fanshawe.*) I understand that you are a resident of the Hardoi district in Oudh?—Yes.

14649. (*Sir James Lyall.*) Are you aware that at present opium can only be sold by the few licensed shops?—Yes.

14650. And at a price which is very much above cost price?—Yes.

14651. And that it is very highly taxed?—I do not know that; I have not a personal knowledge of it.

14652. The vendors have to pay a very high sum for their license?—They may, but there are no restrictions; any man can go and buy it.

14653. But it is very highly taxed, is it not?—It may be, but I have no knowledge of it.

14654. Do not you know that licensed vendors pay a very high sum for their licenses?—I have no personal knowledge.

14655. You are aware that before the British Government annexed Oudh the cultivation of opium was free?—I do not know that; I have so many missions to attend to.

14656. (*Chairman.*) You are equally opposed to opium and to alcohol?—I am against both.

14657. You recommend that the sale of opium should be restricted, and that it should only be permitted for medical purposes?—Yes.

14658. Would you recommend a similar restriction with regard to alcohol?—Yes; but it may be used as a medicine.

14659. (*Sir William Roberts.*) You have practised medicine?—Yes.

14660. Are you qualified, have you any diploma?—No.

14661. Then you are a physician of your own appointment?—Yes.

14662. I think you said you had seen the use of opium produce diseases?—Yes. I have cases before me, and if the Commission likes I will bring them in.

14663. Could you mention the diseases produced by opium?—I have seen paralysis with my own eyes. I have seen violent colic, constipation and congestion of the brain. Besides that it vitiates the blood, and general derangement of the system is caused by it.

14664. You have seen a case of paralysis produced by opium?—Yes; there is a case here in Lucknow.

14665. That is a new discovery, I think?—It may be; I cannot say.

14666. Have you known opium-smokers?—Yes, many but among the poor classes only. I have only a little time to go to the rich people.

14667. Had they any disease?—Yes; not everyone of them, but their blood is vitiated all round.

14668. How do you know?—You can tell them by their appearance; their faces show it.

14669. You can tell them by their appearance?—Yes.

14670. (*Mr. Pease.*) Are you a doctor?—I am not a passed doctor, but I am a doctor by birth, and I have also studied homoeopathy, not allopathy.

14671. The members of your community are strongly opposed to alcohol, are they not, although it is not a matter of religion?—Yes, they are.

14672. You gave us your own feeling in the matter: can you tell us what is the general feeling with regard to opium?—They do not like it, they hate the opium-eaters generally. Only yesterday an opium-eater came to me and asked me for something that would put an end to his life—he was so tired of life. That was only yesterday morning.

14673. Is a person who is an opium-eater regarded in the same light as a person who is not?—Not.

14674. In what respect do they differ?—He is considered a very mean man.

14675. (*Mr. Wilson.*) I want to understand exactly the view that is held in regard to alcohol by the Brahmo Samaj community: do they permit the use of alcohol?—Not at all. there is no permission or prohibition, but generally the

Brahmos hate all intoxicating drugs. Even tobacco is not taken by Brahmos generally, they hate it.

14676. They object to all intoxicating drugs?—Yes.

14677. And to alcohol?—Yes.

14678. And a few of them use tobacco?—A very few of them.

14679. Tobacco is not prohibited?—Nothing is prohibited openly, but generally when a man takes alcohol he is not allowed in the church.

14680. (*Sir James Lyall*.) You say that generally if a man takes alcohol he is not allowed in the church, would it be the same thing if a man took opium?—I have never seen a man who was an opium-eater in the Brahmo Samaj.

14681. There are a great many high class Brahmos in Calcutta who take opium, and many of them belong to the Brahmo Samaj, do they not?—I speak of Brahmos. If they took alcohol they would not be allowed into the church.

14682. You also think that if they took opium they would not be allowed into the church?—Yes; I do.

The witness withdrew.

Mr. HAMID ALI KHAN called in and examined.

14683. (*Mr. Wilson*.) Are you a practising barrister?—Yes.

14684. In this city?—Yes; and Advocate of the Judicial Commissioner's Court, Oudh, and Advocate of the North-Western Provinces High Court.

14685. Speaking generally, in the first instance, do you approve or disapprove of the use of opium?—I most emphatically disapprove of the use of opium.

14686. When did you first begin to hear of persons advocating or justifying the use of opium?—When this Royal Commission arrived in India. I never heard of any person before advocating the use of opium.

14687. Is it your opinion that in the majority of cases opium is used for the purpose of lust?—Yes; I have called it longevity of the enjoyment of sexual intercourse: staying power is what I meant to convey by the expression.

14688. Is it the case that people begin at first with small quantities and gradually increase it?—Yes; those who take it for its staying power.

14689. Speaking of the general use, do they take it in small quantities and gradually increase it until they become victims of opium?—There are three kinds of people, you must clearly understand, who take opium—children, those who take it for its staying power, and those who take it for cold. Those people who take it for cold take it between the ages of 35 and 50.

14690. Have you any suggestion to make as to the best way in which this Commission can get evidence?—Yes; by material evidence. There is indirect evidence in which you are now engaged, and material evidence as the law calls it. I think there is an abundance of material evidence in Lucknow—that is, looking at the people who take opium: that is what I call material evidence.

14691. And if the Commission desired to do that, you would give them some help?—Yes; there are thousands of people. I can give up my cases to-morrow and the day after, any amount of time, and shall be very pleased to do so. If there is any doubt about this, you can imprison me and put me in custody.

14692. Do you think it is very creditable to the British Government to be carrying on this business?—Most shameful.

14693. You think it is a cause of vice and misery to the people?—Decidedly.

14694. Is that your individual opinion, or do you think it is shared by a large number of the inhabitants of this city?—By almost every opium-eater in the city from Prince and Nawab down to the peasants. Everybody shares that opinion, even the opium-eaters themselves.

14695. Do you draw much distinction between smoking and eating?—Smoking perhaps is more injurious than eating, because the injury is of slow growth in the case of opium-eating.

14696. Your evidence, however, mainly refers to opium-eating?—Yes, so far as I have stated.

14697. (*Mr. Mowbray*.) What is your age?—I believe it is 34; it appeared in the Akbari number.

14698. I suppose you have known people who consume opium all your life?—No; the best part of my life was spent in your country. I have seen them for the last nine years, since I returned to this place. I am a native of Amroha, in the district of Moradabad, and originally a resident of Delhi.

14699. You do not mean to suggest to us that the habit of opium-eating or of opium-smoking is a thing that has been introduced by the British Government?—Not introduced exactly. I do not think so.

14700. You are aware as a matter of fact that opium was grown here before the annexation of Oudh by the British?—Grown by the King?

14701. In the country?—Yes, it is grown like anything else.

14702. You told us that until this Commission landed you never heard anybody defend the use of opium?—Never; and perhaps I shall never again as soon as it is gone.

14703. Can you tell me whether you have heard people find fault with the use of opium?—Yes, everybody, even those who take opium.

14704. How long does that go on, finding fault with the use of opium?—Ever since they took it. My personal experience is only confined to nine or ten years.

14705. And you recollect that there were as great faults found with the use of opium nine or ten years ago as there are now?—That is so, so far as the evils of opium-taking are concerned; they were as much denounced then as they are now, with this difference, that following the evidence of many witnesses I have come across many who defend the use of opium.

14706. And that you never heard of till this Commission arrived?—Never.

14707. Have you given a careful study to the opium question?—In this manner: I am surrounded always by opium-eaters, if you call that a study; I call it a very careful study.

14708. You never came across any papers which had been read before Societies in England by Mr. Batten and Sir William Moore and others defending the use of opium?—There may be those in England who defend the use of alcohol as well.

14709. I did not ask about alcohol. I asked you whether you were aware of those papers?—No.

14710. Then I may take it you have not made a very careful study of the opium question?—You may draw any conclusion you like. In my opinion, from coming into contact with the people and talking with them and from reading the evidence—

14711. You at any rate have studied one side of the question?—That may be your opinion.

14712. (*Mr. Haridas Voharidas*.) Perhaps you will admit that the tendency of human nature is to take some stimulant?—Yes; I quite agree.

14713. What is your religion?—I am a Mussalman.

14714. You will admit also that all persons are not like you; you will not take alcohol, that is a different thing, but there are many people who like to take some stimulant?—I suppose so.

14715. Then which would be more objectionable to take, opium or alcohol?—I do not know at all. I do not know what those people would say. I cannot anticipate whether they would choose opium or alcohol.

14716. If two men come to you, one who takes alcohol and the other who takes opium, whom would you trust most?—As regards what?

14717. In any transaction, if you had to deal with one of these persons, whom would you prefer?—If he was not in a tipsy state I would trust the man who takes alcohol.

14718. And with regard to the man who took opium?—I do not think I could manage to get anything into his head if he were an opium-eater. There are millions and millions here. You may say that I am one-sided, but it is very easy for you to see whether my statements are correct or one-sided.

14719. I do not mean to say that, but between the two, alcohol and opium, as a Mahomedan, would you take objection to alcohol more than opium?—As a Mahomedan we are forbidden entirely to take alcohol, but now they say that opium does not come under the head of alcohol, so it is taken by Mahomedans, because it is put down under the

*Pandit
Lakshmo
Pershad.*

*Mr. Hamid
Ali Khan.*

Mr.
Hamid Ali
Khan.

12 Jan. 1894.

head of poison, and that is the only justification, but whether it comes under the head of alcohol or not it is for the learned to say. I am not learned in theology.

14720. Opium is not expressly prohibited by the Mahomedan religion?—No; but if it falls under the head of alcohol, it is decidedly prohibited by our religion as much as alcohol.

14721. But you will admit as a lawyer that it is not expressly prohibited?—If it falls under the head of alcohol it is decidedly forbidden, but if, as the majority think, it does not fall under alcohol, it is for the theologians to decide, not for lawyers.

14722. But a Mahomedan would not have so much objection to taking opium, if he liked it, as he would to taking alcohol?—Quite so, if he is of opinion that it is not alcohol.

14723. (Mr. Fanshawe.) Do I understand you to mean that there is no such thing as a moderate use of opium among the Mahomedan community?—With those who take it for what I call staying power there is no such thing, but with children and those who take it for cold I believe there is such a thing as a moderate use, but their number is very limited, confining myself all this time to Lucknow City only.

14724. Is it not the case that the consumption of opium is excessive, especially among certain classes of your own community in Lucknow?—Yes; Mahomedans perhaps take it as a rule because they are fond of women.

14725. I understand that in Lucknow you have a class of idle and thriftless men who were connected with the old Court?—Yes; they live upon the Wasika, the interest of money lent by the Kings of Oudh.

14726. To the East India Company?—Yes; in the old days.

14727. Is it not the case that a class of that kind, disposed to vicious habits, would be likely to run to excess in some form of indulgence or other?—It would depend upon the class.

14728. I said a class of that kind: is it not probable that such a class would go to excess in some form of indulgence or other?—Yes; if he takes it not for cold but for those distinctions I have drawn.

14729. We have an idle and thriftless class disposed to vicious habits, and I ask whether it is not likely they would go to excess in some form of indulgence or other?—Yes. Decidedly.

14730. Then you do not attribute their present condition directly or entirely to the use of opium?—It would be so.

14731. They take to opium as they would to anything else, to any kind of intoxicant or luxury, in excess?—Yes. I believe so.

14732. You are aware that in Calcutta Mahomedans gave evidence of a very different character to much of yours?—I have not been following. I have been out a great deal lately.

14733. (Sir James Lyall.) What do you mean by "for cold:" you mean to avert chills?—"Naslah" is what I mean.

14734. Would it translate, "to avert chills"?—Not exactly "chills."

14735. To keep the system up?—People are affected here by disease called "Naslah," and it is translated, not strictly speaking, to very freely by "a cold." People generally suffer from it at the age of 40 upwards.

14736. It is taken as a sort of stimulant in fact?—No; as a medicine.

14737. But even alcohol can be taken as a medicine and stimulant when people are declining in strength?—So far as "Naslah" is concerned it is taken as a medicine, and not as a stimulant.

14738. You say it is shameful for the British Government to carry on this business. Do you think it would be right to revert to the old Oudh system of leaving the cultivation free?—No. Total prohibition: make it penal.

14739. You think the present system is better than the old system?—I have said that Government never dealt with it under the old system.

14740. Opium was much cheaper under the old system?—Yes, like everything else. Every article has gone up.

14741. But not like everything else, because other things are not taxed, opium is very heavily taxed?—That is no remedy; you might tax anything as much as you like.

14742. But it is a fact that opium is very heavily taxed, and has therefore gone up in price and is very much higher under the present system than it was under the old system—is not that an improvement to a certain extent?—No. There is no prohibition.

14743. Is it not an improvement?—No; I do not consider it an improvement, because so long as it is freely used it is no improvement whether you tax it heavily for your benefit or not.

14744. But opium shops are now few and far between, whereas formerly opium could be sold in any Baniya shops?—Yes; but from these remarks I gather you refer to the days of Wajid Ali Shah, the last King of Oudh, because you cannot be referring to the reign of Mahomed Ali Shah, you must be referring to the last King and during his reign this stimulant was taken and other things also, but people have been reduced to poverty, and this indulgence cannot have any reference now.

14745. I am referring to a long time ago?—Then I beg to differ, the trade did not exist then.

14746. What did exist?—There was no opium or anything like opium at the time. Opium was not taken until the reign of Amjad Ali Shah.

14747. (Sir William Roberts.) How long was that?—Twelve years. It would bring us to 1836, 50 years ago.

14748. (Sir James Lyall.) Are you aware that in the time of the Emperor Akbar it is mentioned, that in the Province of Oudh, Allahabad and some other provinces opium was a staple crop?—Yes, I am aware of that.

14749. Are you aware that at least 50 years ago the Bengal Government tried to extend its monopoly of purchasing opium to the Province of Oudh and tried to do it by treaty with the Nawab of Oudh, and that the end of the attempt was that it was reported that the people of Oudh were so attached to their old custom of free cultivation and free trade in opium that it was impossible to get their consent to come under the Bengal monopoly?—I am not aware of the treaty.

14750. That was not a treaty: there was only an attempt to get a treaty?—I am not aware of it, not even of the attempt.

14751. You are a native of Delhi?—My forefathers lived there, but we moved from there at the beginning of this century to Amroha.

14752. You are not a native of Oudh?—One branch of my family lives here.

14753. Are you competent to state so positively as you have done what was the state of things 50 years ago in Oudh?—I know that the Government never dealt in it.

14754. You said there was no cultivation, no use of opium in those days, in Oudh?—I never said completely no use—that was never the case. I meant, comparatively speaking, there was no use of it, barring that reign to which I have already referred, because towards the end or middle of that reign there was a good deal of opium, and other stimulants also.

14755. Have you obtained that information from books, or how?—With regard to the denouncing of opium the book "Afyoon Naman" by Khalil denounces it in the most unmeasured terms and in verses which I think could not be equalled.

14756. When did Khalil live?—About 20 years ago; he died after the mutiny.

14757. Do you derive it from his poetry?—No; it has been denounced. I cannot remember the books.

14758. What authority have you for saying that 50 years ago, in the reign of the previous Nawabs of Oudh, there was little or no use of opium?—I cannot recollect the names of the books, but I can tell from the general state of the reigns of those Kings.

14759. I asked your friend Mr. Ganga Prasad Varma a question about a letter from Mr. Caine, M.P., to you, which appeared in the *Advocate* of September 8th last. I should like to read the last sentence of the letter and ask you a question about it?—Perhaps you are aware that both I and Mr. Caine were taken to task in the *Pall Mall Gazette* by an Anglo-Indian writer, or rather by a writer who called himself Anglo-Indian. That letter in the *Pall Mall* was sent to me by a friend in England where I resided for six years.

14760. The last paragraph says: "I should like you to get us up some really good evidence on the whole scope of this enquiry. We ought out of this Commission to get some really important reforms in the administrative department

at all events. We ought to kill and bury the entire trade in the opium-smoking compounds. Of course the financial question is our great difficulty, and we in England thoroughly understand that if there is to be anything in the shape of absolute prohibition we shall have to bear the main portion of the burden. Excuse a long letter, for, as you may well understand, I am much occupied. I have to write on this subject to about 130 of our correspondents in India"—is that correct?—Yes.

14761. What do you understand by the phrase "we in England"? did you understand the English people generally or Mr. Caine and his friends?—I would not be so uncharitable as not to include men of all shades of party and religion. I have known the English character well during my six years' stay there.

14762. You think it meant all the English people?—I believe so. I would not be so uncharitable as to put a narrow construction upon it. I am always putting liberal construction upon words. It may be the drawback of my profession.

14763. There are two ways of looking at it. You would like to put a liberal construction on it, but some people in England perhaps would put a narrower construction on it?—They are quite welcome.

14764. Your impression is that England would be ready to bear the main burden of the loss of revenue which would result from the prohibition of the opium traffic?—Yes; I do.

14765. That would be a permanent burden, would it not?—It is not for any human being to say whether it would be permanent or not. I do not know what may occur in 20 or 50 years hence—it may be only temporary.

14766. If we had to pay two or three millions for 50 years, it would be a very serious thing, would it not?—Yes; it would. I rely too much upon the justice, equity and good conscience of England.

14767. I am sure we feel very much the high opinion you have expressed with regard to the liberality of the English people?—I have expressed it over and over again in my books and articles. It is not the first time I have expressed it.

14768. I suppose this letter of Mr. Caine's was a circular letter?—I do not know.

14769. (*Chairman.*) You are in favour of the prohibition of the sale of opium for other than medical purposes?—Quite so.

14770. What is your recommendation with reference to alcohol?—Total prohibition as an orthodox Mahomedan. Although I appear more like a Christian, I suppose on the present occasion I am a very orthodox Mahomedan.

14771. The harm done by the use of opium is a harm done, is it not, by the individual consumer to himself?—To himself and to society by setting a bad example.

14772. He does not do harm to society by acts of violence?—No. The poor fellow is deprived of all vitality to do acts of violence or harm to society.

14773. It is a harm done to the individual himself?—Yes. I may here cite that there is a friend of mine living in the city, and a beggar, who is addicted to the use of opium, comes to him. He comes in the evening and he is told that he will be given "whatever the master may order," in a short time; and sometimes it happens that the beggar is sitting there from evening to morning without knowing or having any idea of time or place or anything. I was told that by my friend.

14774. You have said in the course of your evidence that these people, who were consumers of opium in some form or

other, must be reckoned by millions and millions?—I said, confining myself to Lucknow, "by thousands".

14775. You used the word "millions"?—I only used it as meaning an enormous number. I confine myself, as I have always said, to Lucknow, because my experience is limited to Lucknow only.

14776. Looking at the nature of the harm that opium does, and looking to the fact that consumers, whether in small or large quantities, are to be reckoned as enormous in number; do you not think that the evil which you are contemplating and which you desire to remedy is one in which it is eminently desirable that the action taken by the Government should be supported by public opinion?—By independent public opinion.

14777. Would you not say that in dealing with a matter of personal habit and social custom it is particularly desirable that such a Government as the Government of India should be assured of the support of public opinion before it takes strong prohibitory measures?—Quite so, if the Indian Government can succeed in any way in getting at independent public opinion.

14778. How would you suggest that public opinion should be ascertained on such a subject as this?—If official pressure is not brought to bear upon the individual people, then I think the Indian Government will get what, I am inclined to think, is independent public opinion.

14779. May I ask if you have taken an interest in the proceedings of what I believe is called the National Indian Congress?—I am considered a prominent member of it, but I consider myself a very humble member.

14780. You take an active part in its proceedings?—Yes, perhaps I am the only Mahomedan who first joined.

14781. You are competent to tell us what the Congress has done with regard to this matter of alcohol?—Yes, it has passed resolutions.

14782. Recommending a prohibitory policy?—Yes.

14783. Has it done the same with regard to opium?—No; I do not think so.

14784. If it has not done so, why do you suppose it has hesitated to take the same strong action with regard to opium as it has taken with regard to alcohol?—There are a great many things which the Congress has left undone in my individual opinion, and opium is one of these things.

14785. Is it not the case that the action of the Congress in common with the action of all other democratic bodies is an action entirely dependent upon assumed public opinion?—Yes.

14786. And it was confidently believed by the Congress that public opinion would support them in the resolutions they passed with regard to alcohol?—Yes.

14787. And there was a doubt I presume as to the public mind with regard to opium, and that is the reason why the Congress has not dealt with it?—I do not draw that conclusion.

14788. We may do so?—You are quite welcome.

14789. (*Sir James Lyall.*) With regard to the letter I read, I see it says in another part: "I shall be very grateful if you will call your Committee at as early a date as possible, and get an expression of opinion on the various points of enquiry." What Committee was that?—I am not quite sure what Committee he was referring to; it may be the Congress Committee, or it may be the Rafa-i-Am Association Committee.

14790. You are President of many Associations?—I am connected with 13 different bodies, not only political—social, moral, educational and so forth.

Witness withdrew.

His Honor **SIR CHARLES CROSTHWAITE**, K.C.S.I., called in and examined.

14791. (*Chairman.*) You are Lieutenant-Governor of the North-Western Provinces and Oudh?—Yes.

14792. You have had a long and varied service under the Government of India?—Yes; I have been 36 years in the service. I served in three Provinces.

14793. Has your service extended widely over parts of India?—Over three Provinces; North-Western, Central Provinces and Burma.

14794. I understand that you have been kind enough to come before us, not to enter into matters of detail, which can be more properly dealt with by Departmental officers,

but to give us your general view on the question which is before us. I should like to ask you whether in your belief the use of opium has been a cause of extensive moral and physical degradation among the people of India?—In my belief it is not. I have not made the matter a subject of particular enquiry. I merely speak as a man who has lived for 36 years among the people, and of my general observation, both in private life, and as an official, I say distinctly that it has not been a cause of general demoralization; I might even say of noticeable demoralization.

14795. I am sure I shall not be making too high an assumption if I take it that your life is passed in efforts for

Mr.
Hamid Ali.
Khas.

H. H.,
Sir Charles
Crosthwaite,
K.C.S.I.

H. H.
Sir Charles
Crosthwaite,
K.C.S.I.
12 Jan. 1894.

the improvement of the moral and material condition of the people who are placed under your Government. I will ask you in the work which occupies your life, whether the evils done by opium are a principal or a subordinate subject in your contemplation, whether there are not a number of other evils, and a number of other matters which come before the Opium Reform in your contemplation?—I would say that I do not take it into consideration at all in looking at the country generally and in thinking what I could do to benefit it; I would not take the matter of opium into consideration as an appreciable evil which it was necessary to remedy.

14796. Can you at all compare in your mind the evils done by opium in India with the evils which we have to acknowledge are done by alcohol in England? Which of the two do you think the greater evil in the country in which the custom obtains?—I should say alcohol was incomparably the greater evil.

14797. In England than opium in India?—Yes; certainly.

14798. The Commission of which we are members has been appointed to advise Parliament on the opium question, and the proposal which is more particularly before us is a proposal to the effect that the use of opium shall be prohibited except for medicinal purposes. I will ask you whether you consider such a proposal as that is practicable?—I think it is not. In judging of a proposal of that kind I think we must look to the agency that we must employ in the first place, and to the possibility of making that agency efficient without making it oppressive and tyrannical; and considering the ease with which opium can be smuggled, my opinion is that we could not actually prohibit the use of opium except for medicinal purposes without a very large and oppressive force, and without an inquisition into the habits of the people, which would be very unpleasant to them and would make the Government, I think, exceedingly unpopular. Even as it is, I suppose every Magistrate has known many cases in which opium is used by people as a means of getting their enemies into trouble. It is so easy to put a small quantity of opium into a man's house and then go and lay information against him that he is in possession of opium. It is often used in that way, and if we were to extend the prohibition in the manner proposed, I conceive that there would be a great number of false cases of that kind, to say nothing of the oppression that the police would infallibly exercise.

14799. Then as to the possibility of having a reliable body of duly qualified medical men upon whose prescriptions the use of opium would depend, do you believe that such a body of competent medical people exists in this country, and is so widely distributed as to secure that everybody who really needs opium for his medical use would have the facility, which it would be desirable he should have of getting a certificate to that effect; do you believe that there is a risk of people setting themselves up to be doctors for the purpose of giving this certificate who would really have no qualification whatever. How do you regard that point?—I do not think there is a qualified body of men at present existing, and I think it will be very many years before the medical profession in India is so large as to furnish the country with a body of that kind. At present, in the large towns, like Allahabad, Cawnpore and Lucknow, there are a few qualified medical practitioners who are not in the Government service, but for the great mass of the people the only medical aid is that provided at Government hospitals and dispensaries, and those are scattered, three or four, or four or five in a district over very large areas, and not at all within reach of the mass of the population. I do not see how it is possible to lay down a rule that a person wanting opium should get his certificate from a qualified medical practitioner. Then, again, it is very difficult to say where you should draw the line. We have not attempted in India to prevent men practising without licences, or from selling drugs, because we cannot interfere with the native system of practising medicine. Any native can set himself up as a doctor, either after the Mahomedan system, or after the Hindu system, and there can be no interference with him.

14800. It comes to this in short, does it not, that if such a rule as has been proposed were established under Government, it would be very difficult to enforce it adequately, and very difficult to prevent evasions?—Yes, I do not see how it could be done.

14801. I suppose, in a general way, you are cognisant of the administration of the Opium Department?—Yes, in a general way.

14802. It has been urged for our consideration that pressure is unduly exercised on the ryots to induce them to maintain or to extend the cultivation of the poppy, can you give us an opinion upon that?—Yes, I think I can.

I have been greatly engaged in settlement work, which has taken me amongst the villages, and I think that if any such influence had been exercised, I must have heard of it. I never heard any one complain, but as an illustration of how such an idea may have got abroad, I may mention that any person who is employed on Government work considers it more or less a sort of work which he must do. If you ask a man who is paid to carry a load for a Government officer, he would say that it was "begar," that is to say, it was compulsory work. If you ask one of these people in the villages why they sow opium they will often say they sow opium by order, they have told me so themselves quite lately. I say to them: "Why do you sow opium, is it your voluntary wish?" They say "*Hukm se*," by order. But if you enquire into the matter you will find it is merely an expression which they use, because it is work which they are doing for the Government. If you go on to ask them whether they would like the cultivation prohibited, or whether they would like to be stopped from growing poppy, they would tell quite a different story; in fact they would tell you that they want nothing of the sort, because they depend a great deal on the advances they get from the Opium Department and on the price they get for the opium, but they will tell you that they must sow the opium after they get the advances—if a man takes an advance, he must sow the opium. Therefore, he says, "I sow opium by order of the Government," but the taking of the advance is perfectly voluntary.

14803. And the pressure, if any there be, rather comes upon him at a later stage. "You have taken the money you ought to sow the poppy?"—He finds himself forced to fulfil his contract.

14804. At any rate he is called upon to do so?—Yes; I believe it is nothing but that. In fact, I would go further and say I do not see how it is possible to force a man to sow anything by mere influence. There is no law to force them to do it. If I was to go and tell them that they must sow this or that, they would not do it. I could not force them to do it.

14805. (Sir James Lyall.) Practically they would not obey you?—No; not unless it was to their advantage.

14806. (Chairman.) You have told us, speaking generally, you are not aware of any instances in which pressure has been exercised on the ryots to make them cultivate poppy. Looking at the thing from the opposite point of view, do you know any instances of complaints on the part of the ryots that they have ceased to be licensed to grow poppy?—Personally I have no knowledge, but I have heard that they complain. I have no knowledge personally of it.

14807. We have had some witnesses before us who have made a complaint to us of misconduct on the part of certain minor officials of the Opium Department, and we have had before us the Report of the Opium Commission of 1883 in which reference is made, not altogether in the most complimentary terms, of the minor officials of the Opium Department. Has any thing come before you in your official capacity on that subject?—Nothing; I have no official connection with the Opium Department beyond being Lieutenant-Governor of the Provinces. It is not directly under me; it is under the Bengal Government. Nothing has come to my notice of the sort.

14808. Supposing the cultivation of the poppy were prohibited, would you say that in your belief such a prohibition would entail serious loss on the cultivators and the landed interests?—My impression is that it would entail considerable loss to the cultivators, but how far it would extend to the landlords I am not prepared to say. It would certainly cause great loss to the cultivator. I explain it in this way: the cultivator has two advantages from the opium cultivation, he gets an advance of money free of interest, and he gets a good price, ready cash, for his crop, when it is ready that saves him from going to the money-lender. Then, he certainly gets a considerably better profit on opium, as far as my knowledge goes, than he would from other crops. To suddenly change his system, stop his advances and prevent him getting the profit that he gets from opium would certainly cause him a great loss. I think in these provinces about 100 lakhs of rupees is about the average value of the opium crops, that is to say, that is the money paid to cultivators for opium on the average. In financial language it is Rs. 1,000,000. I think between five or six hundred thousand families are more or less engaged in the cultivation. Each cultivator, as a rule, grows half an acre or a quarter of an acre of opium. He does not put his whole holding under opium, but grows from a quarter of an acre to an acre of opium. And so the cultivation although, is not, relatively to

the whole area under cultivation, in the province, large, it is scattered over a great number of families. I should think very nearly 600,000 families, and that a million of pounds really goes to those families.

14809. It is a little help to a great many?—Yes; and a very timely help.

14810. We have had some evidence before us with regard to the closing of licensed places for smoking opium. A witness, who has appeared, criticised it and stated that many undesirable results had followed from the closing of these licensed places. Have you at all considered the policy of putting restrictions of that kind upon the use of opium in licensed places—would you recommend a policy of further restriction, or would you recommend a return to the former system under which you had licensed places, few in number, and under the eye of the police. Do you consider that was a better state of things than to have, as we have now, no places licensed but a certain amount of illicit smoking?—I have no personal knowledge of that at all. My opinion is that there is no doubt that opium-smoking is a bad thing, and I would prefer not to re-open the licensed places until we have evidence as to the effects of the present system of closing them.

14811. You think the Government by giving a license to such place would be giving sanction to a bad practice?—Yes; unless we find that closing them is worse. It is a choice of two evils. If we find that closing them is worse, we should open them again.

14812. Before you give a decision on that point you would like to have further evidence?—Yes; it is only two years since they were closed.

14813. With regard to the practicability of carrying out the proposals which have been put before us that the use of opium should be prohibited except for medical purposes, what would you say as to the popularity of such a step? How would such a step as has been suggested be received by public opinion in this country?—It is difficult to say what is public opinion, but taking it as the opinion of the majority, I think it would be very badly received. There is no doubt that the people use opium very largely, not in great quantities, but very widely. I think nearly all of them give it to their children and believe that it is necessary. It stops colds and diarrhoea and childish complaints of that sort; and, as I have said before, we must remember that there are no medical practitioners all over the country. The great majority of the people have no aid whatever. They cannot go to a doctor or to a chemist, and they depend on their own little remedies. There is no doubt that opium, as far as I know from talking to the people and hearing what they say, is really a household remedy. They get a little opium and they give a very small quantity to a child if he has a cold or a howel complaint; and the adults themselves also use it in the same way. More than that, I think it is very extensively used by the people as they grow older, just as you find old men in England taking a glass of port after dinner,—perhaps two or three as they get older. The people of this country who have no wine, and who as a rule never touch stimulants, take little doses of opium, and they say it acts as a stimulant and enables them to do work with the brain or body which they would otherwise not be able to do.

14814. You were saying that it was difficult to tell what is public opinion in this country, but is it not the case that when there is a strong feeling upon any question, somehow or other it does make itself felt?—It makes itself felt, but it does not always make itself heard.

14815. It often makes itself heard, does it not?—I should say, real public opinion in this country is much more felt than heard; it shows itself.

14816. Supposing there was a strong and widely spread feeling of dissatisfaction with the Government in relation to opium, whether in regard to permitting its sale or in regard to the working of the Bengal monopoly, do you not think it would have made itself felt before this Commission by some decided expression of popular opinion?—Yes; if it was a widely and deeply felt opinion, certainly it would.

14817. (*Mr. Pease.*) I believe it is not the wish of the Government to extend the sale of opium?—No; it is not.

14818. The policy is rather to suppress the sale so far as is supported by public opinion?—I think so.

14819. Your practice is to sell the right of sale by auction, is it not?—Yes.

14820. I see by the North-West Provinces Return you received about Rs. 1,50,000 for the right to sell opium?—Yes.

14821. And in the Province of Oudh about Rs.24,000?—Yes.

14822. What is the interest of those persons who purchase these licenses?—Their interest of course is to make a profit, otherwise they would not take them.

14823. Do you think therefore the agents of the Government, the licensees, would carry out the policy of the Government?—They certainly will not carry out the policy of the Government so far as restricting the sales go; but we carry out the policy of restriction by putting the shops up to auction and making the price of opium as dear as possible. We charge them a heavy price on the opium; we also charge them the highest possible price for the right of selling it, and therefore the effect of those two measures is to raise the price of opium to the maximum.

14824. Therefore the fact remains that your system of sale is open to the objection that there are persons who have a very strong interest in increasing the supply of the drug to the people?—I do not think it is open to that—not more than any other system of sale would be. They would make much more profit out of it if we did not charge them so much, and the more profit they made I suppose the more wish they would have to increase the sales.

14825. They have in Bengal a system for the sale of quinine, for instance, where those who sell it have no direct interest in increasing the sales?—Quite so; we sell it at its lowest possible price.

14826. Is it not the fact that in this (Bengal) Province there is a retail sale by the Government, and those who retail it have no interest in selling it or in increasing the sales?—Yes, at the Treasury.

14827. Do you not think, therefore, that the present system is open to the great objection of interfering with the acknowledged policy of the Government?—No, I do not see what better system you could have, given that you could not prohibit it altogether, and also that you ought not to prohibit it. Of course from the point of view that you ought to prohibit it altogether it is a different matter.

14828. You have had a large experience in Burma. We had an instance given to us when we were there lately of one licensed house in Akyab where one man paid a lakh of rupees for that one house. As we are told, it was impossible the sales over the counter could compensate for one half that amount paid for the license. Therefore there must be a considerable amount of what we call hawking opium through the country. Have not the licensed owners of this country a considerable temptation of this kind like the case of the licensed house at Akyab?—I do not think so from the habits of the people here. I do not think there would be that temptation.

14829. In opium-growing districts of course there is not the same temptation?—There is a great deal of illicit consumption from the opium no doubt that is kept back by the cultivators. There must be. But I do not think, and I have never heard of any case of hawking opium in these provinces, and I doubt whether it would pay men to do it at all.

14830. Did your experience in Burma coincide with your experience here, that the practice of taking opium was comparatively harmless?—I think the practice of taking opium in Burma is much more harmful, because the Burmese are much more given to excess, both in drinks and drugs.

14831. Then you wish your evidence to be confined to the influences in this province?—Yes, as far as regards the influences.

14832. But in Burma you do recognize that a considerable injury has been done to the population by the practice of taking opium?—More injury has been done than in these provinces. In fact, as far as my observation goes, I consider the injury done in these provinces has been infinitesimal. I do not think you could reduce it without driving people to much worse evils. In Burma, owing to the character of the people, I believe they take much more, but I do not think the excess is anything like what some people have represented. I am only speaking from my own observation.

14833. (*Mr. Wilson.*) You said in reply to question from the Chairman in reference to your experience in connection with settlement—I was not sure whether you were referring to a period a long time ago when you were personally engaged in that kind of work, or whether you were referring to something more recent?—I was referring to a period when I was engaged in the work.

14834. I think I may take it that it is a long time ago?—About 20 years ago. I ceased to do settlement work in 1876.

H. H.
Sir Charles
Crosthwaite,
K.C.I.E.

12 Jan. 1894.

H. H. Sir Charles Crosthwaite, K.C.S.I.
12 Jan. 1894.

14835. Have you within the last ten years made any special personal enquiries as to the popularity of the crop amongst the cultivators?—Only within the last week or two I was going through Rai Bareli, which is a district where a great deal of opium is cultivated—that is the first opportunity I have had for the last 16 years.

14836. We have been told that during the last few years the prices of many kinds of agricultural produce have risen considerably?—That is so, with the fall in the rupee.

14837. And that the price of labour has risen considerably?—That is so.

14838. But the Opium Department has not raised the price of opium?—I think not. I cannot say positively about that. I do not think they have raised it lately.

14839. So that it might be quite possible that what was popular some years ago may not, owing to these causes, that is to say the rise in the price of those other commodities and the rise in the price of labour, be so profitable and therefore not so popular?—It may be so; I do not know it.

14840. It is not an improbable result?—You asked whether I had made enquiries lately. From enquiries which I have made lately I should say it was not the case. In several villages which I rode through lately, opium villages, they were very much against having it stopped, and they told me it was more profitable.

14841. May I take it as your opinion that the cultivators, the ryots, are and know themselves to be perfectly and absolutely free to grow opium or not to grow it as they like?—I believe that is the case.

14842. Then, as there seems to be reason to believe that in certain districts and amongst certain ryots to be a doubt on that point, would you see any objection to some more public notification being made, say, at the Opium Offices, Police Stations, and so forth, to the effect that they are perfectly free to grow opium or not as they desire?—I should have no objection whatever. If they are not forced to do it, and if they think they are, they ought to be told the truth.

14843. I suppose it may be taken that the city of Lucknow does not stand very high from a moral point of view?—I think not, it was the seat of a very corrupt court for a long time.

14844. Some witnesses have represented to us that the exceedingly large consumption of opium in this city is the principal, if not the one, cause of the somewhat low condition of moral sentiment. Do you entertain that view at all?—No; I should be inclined to put it the other way, and think the excessive consumption of opium was due to the collection of a number of disreputable people in the place. I should be inclined to put it that way.

14845. We also have heard from a number of witnesses in this city that there is very large amount of misery and wretchedness produced by opium—persons reduced to beggary and physical and moral ruin has been described. There has been large numbers. Is your view contrary to that?—I could not say. I have made no enquiries which would justify me in saying that was the case or not. I can only judge from what I have seen from the people in jail.

14846. (Mr. Mowbray.) May I ask you generally if in your judgment the prohibition of opium, such as has been proposed, would be an interference with the habits of the natives which could only be justified on the strongest moral grounds?—Yes; that is my opinion.

14847. I suppose you would admit that the British Government have in certain cases interfered with native customs?—Yes; our principle is not to interfere with native customs, but where there has been a great question of morality or humanity we have interfered, and we have braved the danger in several cases.

14848. The case of female infanticide in the Agra and Muttra divisions has been referred to before this Commission, and I suppose I may take the case of *Suttee* as another case?—Yes; and the age of consent as another case.

14849. But looking at the question with your experience and in your responsible position, you are of opinion that the opium question does not stand upon that moral footing which requires the British Government to run that risk?—No; I do not think there is anything to justify us in doing it.

14850. And except for a good moral reason, I presume to interfere with the native customs would be to involve us in considerable political danger?—Yes; I think so. Our great rule is not to interfere with their customs.

14851. If the prohibition of the growth and consumption of opium as proposed were carried out, I suppose to make it effective it would have to be carried out by fine and ultimately by imprisonment?—Yes; there would be no other means of doing it.

14852. What in your judgment would be the effect on the population of this country if a very considerable number of people were fined and ultimately sent to prison for what they did not regard as a crime but for what was made an offence by the law prohibiting the consumption of opium?—I think it would cause great discontent.

14853. (Mr. Haridas Vekaridas.) I believe you said that cultivators are benefited by this in two ways—one by advances, and another by the good price they receive from Government for their opium?—Yes.

14854. Under the circumstances stated by Mr. Wilson, would you like to see the present prices paid by Government to the cultivators raised?—No; I would not. I think we get as much opium cultivated as we want. There is no object in raising the price unless you want to increase the cultivation.

14855. You do not think the cultivators get less than they are entitled to receive?—No; they make a large profit.

14856. (Mr. Fanshawe.) As regards the policy of the Government in dealing with the sale of opium, I understand it to be your view that if you raise the price, limit the number of shops, lay down rules as to the hours within which opium should be sold and so on, this is a practical measure of restriction?—I think so very much.

14857. I should like to ask you a question with regard to the suggestion that a public notification should be made that cultivators are free to cultivate poppy. It has been pointed out that such a notice, especially at police stations, would be liable to misunderstanding?—It might be, especially at police stations. I see no objection to telling them. I would not mind riding over the whole place and telling them they need not cultivate opium unless they liked.

14858. My point was rather about the formal notification. Do you see any objection to that?—I see no objection to that if it was properly worded.

14859. I understood you to say that you would not regard native practitioners, such as the Vaidas and Hakims as competent medical officers to grant certificates for the use of opium for medical purposes?—I do not think that they are competent. If we let any medical practitioners do it, we must let them do it.

14860. You described what I might call the domestic use of opium as being very common among the people?—Yes.

14861. And if you limited the sale of opium to a medical certificate, you would not regard the certificate of these native practitioners as being one that could be relied upon?—No; certainly not.

14862. Do you not think that if you put this power in their hands you would be creating a very lucrative profession for men of that kind who could give opium to everybody who wanted it?—Yes, they could be vendors of opium without being doctors at all.

14863. (Sir James Lyall.) It has been suggested in your examination that the right of leasing by auction, the right of retail sale was objectionable, and I imagine, that the alternative will be to issue the license for retail sale at fixed moderate fees. Would not this make opium cheaper?—It would.

14864. That is, if Government issued opium at the same price as now?—Yes, it would.

14865. But if Government raised the price of the opium to the vendors so as to keep opium at the same price, would not the vendors be under a very strong temptation to procure their opium illicitly, and not from Government?—Yes; I think they would to the extent that the price was raised.

14866. The system of hawking opium from the shop at Akyab in Burma, throughout that district and other districts, has been referred to in your examination, is not that simply caused by the policy of refusing licenses for any shops in some districts and only allowing a single shop in other districts, and the distance being prohibitory for these who want to get opium, illicit hawking arises as a consequence?—Yes, I think so, the restriction of opium in Akyab division to one shop has been an experiment, but in my opinion has not been a good thing, the experiment has not succeeded. The one shop sold as much as the other shops did before, and besides that there are numbers of districts where the sale and possession of opium becomes illicit numbers of people are put into prison for selling or possess-

ing opium, and, as far as we know, the consumption of opium has not decreased.

14867. Where you have, as in the rest of India, a certain number of shops scattered about the country, within reach of all parts of it, and held by monopolists, retail vendors, the same temptation with regard to the hawking system necessarily does not arise?—It does not, and each vendor is on his watch to prevent smuggling into his circle.

14868. Is not the self-interest of these monopolist vendors of great assistance to us in India in preventing smuggling?—It is of very great assistance; I do not think we should be able to prevent it without them.

14869. Is there any other class of people who would be likely to come forward and assist Government?—None.

14870. You were Chief Commissioner of Burma, will you kindly tell us when and how long?—I was first Chief Commissioner in Burma for a year in 1883, and I went back there in 1887, and stayed there until the end of 1890.

14871. I believe you were a member of the Supreme Council of Her Majesty's Government in India at the end of 1890?—Yes, at the end of 1890 I went to the Supreme Council.

14872. I should like to ask you whether the Notes recorded by Sir Alexander Mackenzie, Chief Commissioner of Burma, and Mr. Sneaton, Financial Commissioner of Burma, on the question of prohibiting the use of opium by Burmans in Burma, came before you when you were in the Viceregal Council?—Yes; I saw them.

14873. Do you think that the statistics, to use the terms of those Notes, of persons physically and morally wrecked by the use of opium are reliable as statistics of Indian official publications generally are?—No; I do not. I examined them and also enquired into the way in which they were collected, and I do not trust them.

14874. You think they are unreliable?—Yes; that they are unreliable. They were collected by Burman officials, who are about the most careless persons that I have had to deal with, and they were not tested in any way by our officers, therefore I should doubt them. We do not know how the villages were selected or anything about it.

14875. I suppose you would admit with regard to the attitude the Kings of Burma took against the use of opium by Burmans and the general condemnation of the opium habit by all respectable classes of Burmans, that the question of prohibition stands on different grounds in Burma to what it does in India?—I think so, my objection to it in Burma is that we may run into worse evils. The King prohibited it, but there was an end to the matter; he had no police to enforce it. When we took over Upper Burma, I do not suppose there were 20 people in jail, but now we have put in, I am afraid to say how many—about ten or twelve thousand.

14876. Not all for opium?—I mean under the criminal law generally. There were orders in the King's time, but they were very lightly and inefficiently enforced. There was really no Government. But there was that feeling against opium, and no doubt it still exists: all respectable Burmans will condemn those who use it in the way we would condemn drunkards.

14877. I suppose the Government of Burma was a sort of Church and State Government, and in the edicts which the King gave out, he did not distinguish very much between what we should consider religious matters and criminal matters?—To some extent it would be so, but as far as I know, the rule prohibiting opium was not really enforced except by the opinion of the people. Opium was

imported into Mandalay, I have been told, by Burmans in large quantities from the Shan States, and believe the Irrawaddy Flotilla Company had quoted a fixed rate for carrying opium, I believe it was in the King's time, from Bhamo to Mandalay.

14878. (Mr. Pease.) That was for bringing it from the Shan States to Lower Burma. It was not for Upper Burma, was it?—I do not know; I could not tell that, but as far as I know they brought it from Bhamo. We would not have allowed it into Lower Burma.

14879. Was Chinese opium brought down to Lower Burma?—It could only be smuggled into Lower Burma; it could not be consumed in Lower Burma; it was forbidden.

14880. (Mr. Mowbray.) Did I understand that the importation of Chinese opium was at that time prohibited in Lower Burma?—I believe the importation of Chinese opium was prohibited in Lower Burma as it is now.

14881. (Mr. Wilson.) I should like to ask you another question, arising out of some questions put to you by Mr. Mowbray. He asked you certain questions in reference to *Suttee* and so forth: was it not the case that these practices, or some of them which were put down, were actually connected with the religious observances of the people?—It was, that is to say in popular estimation. I do not believe that it was the real religion of the people.

14882. Popularly it was regarded as so?—Popularly so.

14883. Was it not regarded at first when the question affecting those practices was first agitated with opposition? Was there not a considerable amount of opposition from the official party?—I suppose it was the Old Company?—You mean from the officers of the Government.

14884. Yes, apprehension and opposition?—I believe you are right about there having been a great deal of apprehension.

14885. In the case of opium there is not even that religious objection?—No; there is not.

14886. So that any apprehension in those cases would be much weaker as far as the religious point of view was concerned?—Except that in this case you are going to deal with the habits of a very large portion of the community. In the other case you merely interfered with what occasionally happened. I do not suppose *Suttees* were at all common. You did not find *Suttees* going on every day or in every family.

14887. So far as any religious sanction or popular belief is concerned, we have not that point to face just now?—No. It is a question of interfering with the domestic habits of the people.

14888. It was put to you by Lord Brassey, whether, if there had been very strong feeling upon the question of opium in this part of the country, the Commission would not have had some decided expression of that popular opinion. May I ask in what way an expression of popular opinion would be likely to occur in this country?—I understand the President to mean an expression against opium, that if there had been a strong feeling against the use of opium there would have been a popular expression of that feeling. I think it would have come to light much in the same way as the agitation against cow-killing and so on comes to light. There would have been movements of the people. As I said before, I think the popular feeling of this country is much more felt than heard. The public opinion or popular feeling that you see in the newspapers may or may not be public opinion, but the real public opinion of the mass of the people, who have no means of making themselves heard, is always felt.

The witness withdrew.

RANA SIB SHANKAR BAKSHI, K.C.I.E., called in and examined (through an interpreter).

14889. (Sir James Lyall.) You are an Honorary Magistrate and an Honorary Assistant Commissioner?—Yes; I am a Talukdar of Khajurgaon.

14890. You are also Vice-President of the British Indian Association of Oudh?—Yes.

14891. To what extent does the use of opium prevail amongst the agricultural population of Oudh?—A moderate use.

14892. Rather inclined to small?—Yes.

14893. Can you say among 100 adult men in the villages how many would take opium?—25 per cent. in the villages, and more than that in towns.

14895. Is the opium cultivation of importance in your

part of the country?—Of the highest importance, both to landlords and to cultivators. It is of the highest importance to the landlord because rent is collected with facility; to the cultivator, because he sows 10 biswas. Out of that he pays land rent. He grows his grain free for his consumption.

14896. What would be the feeling if Government prohibited the cultivation of opium—what would be the feeling of the country?—Government will lose, and it will also cause much distress to the cultivators and also to Government of India. The autumn crops have failed, and the cultivators are in good heart because they will recoup the loss by the product of the poppy which they have sown since.

H. H.
Sir Charles
Crosthwaite,
K.C.S.I.

Rama Sir
Shankar
Rukhsar,
K.C.I.E.

12 Jan. 1894.

14896. How many villages are there in your talukdari?—About 130 villages.

14897. Is poppy cultivated in your villages?—A great deal in some villages. The rental obtained from poppy cultivation amounts to three-quarters.

14898. You said the use of opium was small among the villages, do they drink liquor—arrak?—Yes; the poorer classes.

14899. Do the same people take opium who drink liquor, or different people?—No; they are different. Perhaps one

The witness withdrew.

Mr. D. C.
Baillie.

Mr. D. C. BAILLIE, Deputy Commissioner, Oudh, called in and examined.

14902. (Sir James Lyall.) You are a member of the Indian Civil Service?—I am.

14903. You are also Settlement Officer, and Deputy Commissioner of the Rai Bareli district?—I am.

14904. How many years have you served?—This is my fifteenth year of service.

14905. Will you give us your impression as to how far the use of opium extends among the agricultural and rural classes?—I believe the use of opium amongst the agricultural and rural classes in these provinces is very restricted except for medicinal purposes. It is, however, as a medicine one of those most generally used, and there are few houses in which a small quantity is not kept for use when necessary.

14906. Have you any reason to think that the habit is often pursued to a deleterious extent?—I have during my experience in these provinces come across very few instances in which opium was consumed to an excess likely to cause physical or mental deterioration; and I believe that in all, or nearly all, such instances it is the practice of smoking the drug which has caused the bad effects.

14907. Do you think that the use of opium has increased in late years in Oudh?—I believe that the use of opium has in Oudh at least become greatly restricted since annexation, owing to a great extent to the fact that opium was sold before annexation in Oudh bazaars at Rs. 3 to 5 a seer, and that it now costs, except at head-quarters, from Rs. 20 to 30, or even more.

14908. Where have you got that information as to the price of opium in Oudh before annexation?—I am unable to find out. I thought it was in "Sleeman," but I have been unable to find it there. I noted it at the time I read it for use in connection with this evidence, but on lately looking for it I could not find it.

14909. You noticed it in some book?—Yes; in a contemporary book.

14910. At that time the cultivation of opium was just as free as the cultivation of any other crops I believe?—So I believe.

14911. Did you ever enquire whether the opium in those days was ever smuggled out of Oudh?—I have no information on the subject.

14912. What is your opinion on the proposal to restrict the use of opium to medicinal purposes?—I am unable to imagine how the restriction of the use of opium to medicinal purposes is to be enforced, as there is no agency by which opium could be sold for medicinal purposes only. I believe that any effectual attempt to prohibit the use of opium, and the measures necessary to enforce such a prohibition, would give rise to discontent so great as to amount to a political danger.

14913. It has been anticipated that if the cultivation of the poppy and the opium traffic were abolished, it might be necessary to impose some additional taxation to meet in part or in whole the loss of revenue. What do you think would be the result of such a measure?—I am strongly of opinion that the imposition of any additional taxation to compensate for the loss of the opium income would give rise to still greater discontent. The measure would be regarded by all tax-payers as both useless and oppressive. The terms on which the Government revenue is derived from these provinces are already as high in all respects as they can fairly be, and if any rise in revenue is possible, it must be derived from Bengal, and not the North-Western Provinces.

14914. There has been a good deal of argument as to what extent it would be an injury to the country if the opium cultivation in these provinces was prohibited:

in a hundred takes both.

14900. You said the use of liquor is confined to low class people: to what class of people in your country is the use of opium confined?—To Rajputs and Mahomedans. The lower classes of people do not use opium.

14901. (Mr. Wilson.) I did not understand what you said about three-quarters of the rental being obtained from poppy?—Poppy is cultivated to a very large extent. When I said that three-quarters of the rental is obtained from poppy, I meant that three-quarters of it was obtained from the poppy cultivation.

can you give an opinion on that subject?—I believe it to be of great importance. I can give evidence of the great importance of the opium cultivation to the dense agricultural population of the eastern districts of these provinces. I have in a memorandum I now lay before the Commission given figures and facts to prove that in not a small proportion of the villages of the Rai Bareli district the present rent could not be paid if opium cultivation were prohibited, and that a considerable decrease in the amount of the Government revenue taken from these provinces would be necessary. Besides affecting the Government revenue and the income of the zamindars, the prohibition would imply that a considerable class of the most deserving and industrious cultivators in districts would be plunged into distress. Many of them would be reduced to the status of day labourers, and the standard of comfort for all of this class, now better than in former years, and still gradually improving, would be inevitably lowered to a most injurious extent. I believe that for Rai Bareli at least there is no crop which could be grown to take the place of opium.

14915. You say you are prepared "to lay before the Commission figures and facts": have you got any note on the subject?—I have recorded a note on the subject which has been printed.

(Chairman.) That note will be considered by the Commission, and if thought necessary, printed in the appendix.

14916. (Mr. Fanshawe.) Have you had special opportunities of forming an opinion on the subject of the note you have handed in?—I have during fourteen years of executive service served in all parts of these provinces. I have been employed on settlement duty, implying constant and close inquiry into the circumstances of agriculture and agriculturists in three districts, in one of which, Bulandshahr, opium is not grown, and two of which, Basti and Rai Bareli, are amongst the most important opium districts in the provinces.

14917. There has been a great deal of argument on the point whether the cultivators who grow opium under license from the Opium Department understand that they are completely free to take advances and grow poppy or not. What is your opinion on this subject?—I believe they thoroughly understand that they are free to take them or leave them. I believe the influence of the Government officers would be quite insufficient to induce them to grow poppy if they did not find it profitable. In Rai Bareli district we have a special instance. Cane was considered by many of the officers in charge of the district as a profitable crop, and an effort was made to get the cultivation extended, but it has not been successful. In half the district cane is not grown. The people regard it as unlucky and will not grow it.

14918. Your experience is that a cultivator, as regards his own fields, is very independent as to what he will do in a matter of this kind?—Cultivators would not from year to year grow it. They might grow it for one year as a favor, but if it was unsuccessful they would not continue it. They would say they would not do it.

14919. You think they are not so ignorant as not to understand that they are at full liberty to do as they like?—By no means. They thoroughly understand they are quite at liberty to grow it or not as they like.

14920. Do you think it possible that though they might not obey a Government officer they might obey a request or order of their talukdar?—I am speaking of Oudh now?—Yes; if the talukdar were determined to enforce it.

14921. Have you ever heard of such an order being given?—No; I never heard of it. The talukdar would object to giving such an order, because it would lead to interference between him and his tenants.

14922. The talukdar would have more power in Oudh than the zamindar in Bengal, would he not?—The talukdar has more power than a zamindar here.

14923. I was speaking of zamindars in Bengal. The talukdar has more power here, I think, than a zamindar in Bengal, because the tenancy of the tenant depends so much on his pleasure?—Absolutely on his pleasure.

14924. (*Mr. Mowbray.*) I do not quite understand whether the figures in this note which you have put in were prepared specially for the Commission or taken from some General Report which you have to make as Settlement Officer?—They are extracted from the figures that have been prepared in connection with Government returns.

14925. They are all to be found in some larger report I suppose?—Yes; the totals have been printed in connection with the district and other annual reports. These are taken from some of the details.

14926. They all refer to the district immediately under your supervision?—Yes; the district in which I am now working.

14927. How long have you been working in that particular district?—A year.

14928. (*Mr. Wilson.*) Is this Rai Bareli district in Oudh?—Rai Bareli is in Oudh 50 miles from Lucknow.

14929. Then in the first sentence of your note you say that that district is most important as regards poppy cultivation—did you refer to Oudh and the North-West Provinces?—I included them both.

14930. We have it from some figures that were given to us by Mr. Stoker that the area under poppy last year was 25 per cent., or rather two years ago it was greater by 25 per cent. than it was last year. Can you tell us in what districts that falling off has been?—There has been a falling off to some extent in the Rai Bareli district. The acreage four years ago was 26,000; it is now 21,000.

14931. What is that due to?—To some extent it was due to intentional restriction. An area round Rai Bareli town was thrown out of cultivation.

14932. Why was that done?—To prevent opium smuggling.

14933. How did the prohibition in that part of your district prevent smuggling?—It ensured that there should be no cultivation near the town. Opium cultivation was prohibited within two miles of the town, because opium was smuggled into the town.

14934. What quantity of land was prohibited?—I cannot say.

14935. A considerable proportion?—I cannot say. I may say that there are two varieties of opium cultivation carried on by two classes of tenants; cultivation by the high caste tenants, which is occasional and accidental, not of great importance, and cultivation by low caste tenants, which is of the greatest importance. The variations in cultivation are almost entirely in the cultivation of high caste tenants, because it does not pay so well.

14936. I do not see how the proximity of the town made prohibition necessary, because an article so portable as opium can be as easily brought ten miles as one, can it not?

Mrs. JENNETTE G. HAUSER called in and examined.

14952. (*Mr. Wilson.*) I think you are an American by birth?—I am.

14953. You have been in India some years?—Yes.

14954. How many years?—I came here 33 years ago and remained 7 years, then I returned here, and this time have been eight years in India.

14955. Are you connected with any missionary society?—No.

14956. You are now resident in Lucknow?—Yes.

14957. Are you connected with the World's Women's Christian Temperance Union?—Yes. Since last April I have been President of it for India.

14958. Can you speak any of the languages of India?—I read and speak Urdu, and read and understand Hindi, but I do not speak it much.

14959. I believe you have paid a visit lately to some opium shops?—Yes.

14960. Did you do so with a view of giving evidence before this Commission?—No; I should not have had the courage.

—No; it is portable, but it is strong smelling, and its smell cannot be concealed. It is easier to bring it in from a field close to the house than from a field ten miles away.

14937. Was there a great outcry by the people at that time against the prohibition?—I was not in the district at the time, but I believe there was a considerable outcry.

14938. Do you know whether any of these ryots received compensation?—No; the circumstances near towns are different from those of villages at a distance. Cultivators near towns can grow produce for the town; there is a large market for vegetables which are as profitable as opium.

14939. You are aware that we have had a great deal of evidence before this Commission, that some ryots do object to grow poppy?—I have heard it spoken of but have no evidence of the fact.

14940. Can you in any way account for the statements, or can you suggest any reason why they or all witnesses who profess to be interested in them should make such statements if there were not some foundation for it?—They are apt to make facts out of nothing in some cases.

14941. To make statements without any foundation whatever?—They may have, but no one can vouch for the underlings of the Opium Department as to what they do in special cases.

14942. You think in some cases there may be a little squeezing?—No; I cannot imagine squeezing to cultivate. They are more likely to interfere with a man by threatening to prevent his cultivation.

14943. You have said that there would be a great difficulty in restricting the use of opium to medicinal purposes, because there is no agency by which it can be sold for that purpose?—No agency.

14944. Is there not an agency existing for the sale of poisons?—No; there is no agency for the sale of poisons.

14945. Is the sale of poison perfectly free?—Perfectly free.

14946. We have been told licenses are required?—I have never come across them—I never heard of any necessity for a license for selling poison.

14947. You think arsenic and strychnine can be freely sold in the bazaar?—I am not certain about it. I never heard of a license being given for the sale of poisons.

14948. Is there not a license granted for the sale of sulphur?—Sulphur is an explosive, it comes under the Explosives Act.

14949. With the manufacture of gunpowder?—It is used for making gunpowder and is sold under the Explosives Act.

14950. (*Chairman.*) Was it one of the main objects of your note which we have before us in another form to show that poppy is essentially a poor man's crop?—That was one of the objects of my note, to show that it was essentially a poor man's crop.

14951. Therefore if the cultivation of poppy be prohibited, the loss would fall mainly on the poorest class of people?—Mainly on the poorer class of cultivators.

Mr. D. C. Baillie.

12 Jan. 1894.

Mrs. J. Hauser.

Mrs.
Hauser.
12 Jan. 1894.

commended the use of it. This was without any hint from us as to what we wanted to know. They said it was no good at all, and one of them said it was *shaitani*, from the devil. They all assented to this, even the opium-seller themselves. They said it was no good to any one, neither for money nor for health, nor mentally nor any way.

14966. Did any conversation take place in reference to the possibility of stopping the sale of opium in the country?—It was said that perhaps the sale might be stopped, as the smoking shops have been stopped, and one shopkeeper himself said that it would be to all people a great benefit if the shops were shut. Some of the old opium-users said they would be ill and die if the shops were shut. I asked one man if it would not be better that he should die than that a number of children standing by should be brought into trouble and temptation, and he said "certainly." In speaking later to some intelligent Mahomedans about opium and telling them something of what I had seen in the shops, and saying that some of our English friends very much desired that these shops should be shut, one of these men exclaimed, "Yes, we know that there are a great many who are our friends, and who want the shops shut, but Government cares only for the revenue and not for the people". This he put particularly.

14967. I daresay you would hardly be prepared to make such a sweeping statement in reference to the Government?—No; because I think Government does care for the people, but in some things it would seem that such a thing might be, as we often hear the remark. I may say that persons who are not in any Government employ, not even connected with missions, and Americans also, will learn more of these people than a person in Government employ or a missionary, or even an English person, because they feel that we are not liable to bring them in contact with Government in any way. If it had been known that I was to appear here to-day, I should not have heard many of the things that were said to me.

14968. Have you anything to tell us as to your experience of domestic servants in connection with this matter?—As soon as they begin to be troublesome from taking opium it is our custom to dismiss them, and not only to dismiss them from service, but to dismiss them from our thoughts—to forget them. I have had more than one, but there is one that I may particularly mention. He was a man who was doing some decorative work for me on wood and brass, an aged man and a skilful workman, but he could not work unless he had his opium, and sometimes when he had forgotten his opium, I was obliged to let a young man go a long distance to his home to get it for him. He was a most untrustworthy man, and, except for his peculiar skill in this decorative work, which had come through long years of practise, I could not have kept him in my employ. He was so very troublesome that I could never tell when he would come or not come; he would take advantage of me in money matters; he seemed to have no conscience in this or in any other way.

14969. (Mr. Mowbray.) The shops that you visited were not smoking shops?—Not smoking shops.

14970. I understand that you saw the people coming in?—Yes.

14971. Did you gather whether they intended to eat the opium which they were buying or to smoke it?—They were buying it to mix with water to drink. I saw them in some of the shops putting it in little bowls and mixing it with water; others took it away. In one of the houses that I visited I asked a woman how her husband took it, and she said that he mixed it in water and drank it immediately before his meal.

14972. I do not know whether you told us about how many people you saw in these seven shops?—I did not estimate the number.

14973. I suppose some of those whom you saw were in the streets outside?—Yes. I should think the people we saw in the shops or who came to buy and passed away immediately could not be less than 50; I think that is a low estimate.

14974. I rather gather from you that the object of these people was simply to produce intoxication?—Yes.

14975. That there was no idea on their part of taking it in moderation, but they were people who came to buy it for the purposes of intoxication?—That is what I understood, or because it had become an absolute necessity to them.

14976. With regard to the comparative price of opium now and what it was before the annexation of Oudh, I believe one of the people whom you saw spoke to you on that point?—Yes. He said that in the time of Wajid Ali Shah the price was Rs. 4 a seer, and that the present time

they were paying at the rate of Rs. 20. We enquired at several of the shops, and they told us that Government sold it for Rs. 17 per seer, and that they themselves sold it at an advance of Rs. 1 or Rs. 2.

14977. Did you make any enquiries about the price at which it was sold or the amount of consumption in the time of the old Kings?—No. We asked this one man if the people took it in the time of the Kings, and he said that they did, but very many more now. I have spoken to others about it, and they have said that it was taken in the time of the Kings, but not to the same degree as at present.

14978. (Mr. Haridas Voharidas.) Have you had occasion to employ artisans of equal cleverness with the man you mentioned who have not taken opium?—Yes.

14979. Did you find any difference?—I have employed a number of these men for decorating wood and brass, and those who were opium-eaters I could never trust. I could never know whether they were coming the second day to work. If anything happens by which they can earn two or three annas more anywhere else they will go. They will take advances and not come until they are sent for. I cannot trust them if I am absent when I am getting any of this work done. Those who are not opium-eaters will work faithfully.

14980. (Sir James Lyall.) You told Mr. Mowbray that the man who spoke to you in the shop was greatly grieved at the increased cost of opium?—Yes.

14981. He said that in Wajid Ali Shah's time it was sold at Rs. 4 and now at Rs. 20?—Yes.

14982. He went on to say that many more people use it now: did you ask him to explain why?—I did not.

14983. Did it not strike you as odd that when it was so cheap it was less used than now when it is so dear and can only be had at a few places?—I made no particular enquiries on that day, but what I have generally understood from my acquaintance in India is that there are more opium shops at present than there were then, and that opium is much more largely cultivated in this part than it was. I know for myself that it is more largely cultivated now than it was 33 years ago when I first came to India.

14984. Where did you go then?—I was in the Bijnor district. I may mention an incident that occurred to my husband in 1862-63. Opium had not then been grown to any extent. Perhaps a few poppies would be growing about some of the houses, but not in the fields. The Opium Agent at the station was calling men together to give them advances of money for planting their fields with poppy, and there was a great deal of dissatisfaction among the people about it. One of the men came to my husband and threw himself at his feet with Rs. 5 in one hand and his paper in the other. He clasped him by the feet and said "Sahib, intercede for me; it is against my caste and against my religion to plant this opium, but I am required to do it."

14985. My question was about Oudh. It is the fact that before the annexation poppy cultivation was free in Oudh and opium was sold at Rs. 4 or Rs. 5 a seer, and it would be sold by any bania who chose to sell it; but now the number of shops is strictly limited and the opium is very much dearer, is it not very extraordinary if the consumption has increased?—It certainly would seem so except that it has become their habit. As one of the shopkeepers said, the thing can never be stopped until the shops are closed.

14986. Is it not extraordinary that reducing the number of shops very greatly and making opium five times as dear as it was should cause the habit to spread?—It is very extraordinary, but when we consider (I may be excused for giving an opinion) how greatly the habit has grown during the last few years and that it is an imperative necessity as so many have said, it appears that they must have it,

14987. How do you know that the habit has grown? Merely because these people have said so?—Not simply these people, but from my acquaintances in India.

14988. I am talking of Oudh which was only annexed in 1856. The circumstances were peculiar; there was free cultivation and free sale and opium was exceedingly cheap: how do you know that the consumption has increased since that time?—I do not feel that I am an authority on the point. I am only saying what I have heard and seen among the people.

14989. You were not in Oudh in those days?—No.

14990. I understand that your information about Oudh depends upon what these people told you in the shops?—Not altogether; I have travelled several times in Oudh years ago. I was here in 1864, and once again in 1867, and saw

nothing of it. This was often a topic of conversation ; but still I do not feel that I am altogether an authority.

14991. Are you aware that in the history of the times of Akbar, who lived about 1550, it was recorded that opium was a staple crop in Oudh ?—Yes.

14992. That does not look as if the use of opium was a new thing ?—No, certainly. I know it is not.

14993. (*Chairman.*) The Association with which you are connected and of which you have been President in India during the past year is an Association organised for the purpose of promoting the moral improvement of the people ?—Yes.

14994. And in pursuance of that object, it desires that the use of opium should be prohibited except for medical purposes ?—Yes.

14995. Does the Association recommend a like policy with reference to alcohol ?—Yes.

14996. (*Sir William Roberts.*) May I ask what your purpose was in paying your visits to these shops ?—Was it with a view for studying the effect of the opium habit on the natives of India ?—It was.

14997. Does it appear to you that in that way you would get anything like a complete investigation of the subject ?—Certainly not complete, but I knew that in that way I should find out as much as would be possible. By visiting the shops and taking them unawares I could see what was really going on.

14998. If you were engaged on an enquiry into the effect of the alcohol habit in England, would you consider that your enquiry had any completeness if you confined it to the gin shops and slums of our large towns ?—No.

14999. In the same way would you not regard the fact that you got your information by going to these low places as probably very misleading as bearing upon the totality of the question of the use of opium habitually amongst the natives of India high and low ?—I am studying this subject from more than one standpoint ; I am reading about it, and I converse with other people, and for one thing I visited the shops.

15000. You probably agree that it is a very small corner of the matter ?—Certainly, but it is the accumulation of small corners that completes the great square.

The witness withdrew.

NAWAB ALI MOHAMED KHAN, SYED HYDER MIRZA ADAB, NAWAB SYED JAFFER HUSSEIN, NAWAB MOHAMED MIRZA KHAN, and SYED ASHIQ HUSSEIN called in and examined (through an interpreter).

15001. (*Mr. Wilson.*) Are you Nawab Ali Mahomed Khan, President of Anjuman-i-Mohamedis ?—Yes.

15002. What is the meaning of that ?—The Mahomedan Association.

15003. Are these other gentlemen who have come forward members ?—Yes.

15004. What is the object of the Association ?—The public good.

15005. What do you think of the opium habit ?—Opium-smoking is worse than opium-eating, but opium-eating is bad.

15006. What has been the effect of opium-eating and smoking on many of the families of Lucknow ?—The habit has ruined thousands of families in Lucknow and has degraded them physically and morally. I know of the families of Khwaja Mohamed Kazim, Wakil, Syed Dost Ali Khan, and Feteu-ud-daula Mirza Mahomed Raza, who have been reduced to the condition of beggars.

15007. What has the habit done to their physical condition ?—They can do no work except taking opium and sitting idle.

15008. What is the effect on their minds and their habits ? They become dull-headed.

15009. Would you be in favour of some great restriction or entire prohibition of the sale of opium for medicine ?—Certainly.

15010. Do you think that the people of Lucknow generally would be in favour of it, or is it only your particular Society ?—The whole city would be in favour of it except those who take opium.

15011. (*Maharaja of Darbhanga.*) Some who consider that they would be killed ?—Yes.

15012. (*Mr. Wilson.*) I should like to ask Syed Hyder Mirza Adab if he is a poet ?—

(*Syed Hyder Mirza Adab.*) Yes.

15013. You know something of the books and literature of the country ?—Yes.

15014. Can you tell us generally and briefly what is said about opium in those books ?—Several poets have spoken of the abuses of opium-eating, and there is a verse which says that the man who takes opium becomes like a mad man and is thin and lean.

15015. Do all the gentlemen agree with what the first witness has said ?—

(*The Interpreter.*) They say they all agree.

15016. (*Mr. Mowbray to Ali Mohamed Khan.*) How many members are there in your Association ?—About 175.

15017. Are there any branches of the Association in other places besides Lucknow ?—There are no branches in other places, but there are members outside.

15018. Are those members included in the 175 ?—Yes.

15019. I suppose there are no opium-eaters or smokers in the Association ?—Three or four take opium, but there are no opium-smokers.

15020. Do they agree in recommending prohibition ?—Yes. I took opium for 26 years. I took six annas worth a day. I then reduced it to two annas and recovered my health.

15021. How old are you now ?—About 59 or 60.

15022. Do you still consume opium ?—Yes ; two annas a month.

15023. Do you wish to be stopped taking that ?—Yes. If I could be reduced from six annas a day to two annas a month, I can do without it.

15024. Do you wish that Government should forbid you to have any ?—Certainly ; future generations will be saved.

15025. As you have reduced the consumption so much, why do you not give it up altogether ?—The doctors have advised me not to give it up altogether. I can leave it off from to-day, if I like.

15026. What sort of doctor recommended you not to give it up, a European doctor, or a Hakim ?—Dr. Wahid-ud-din, Hospital Assistant.

15027. (*Mr. Haridas Voharidas.*) I should like to ask another witness, Nawab Mohamed Mirza Khan, how many years he has used opium ?—

(*Nawab Mohamed Mirza Khan.*) From the time of the native Kings.

15028. What is your age ?—About 60.

15029. Do you take the same quantity now as you commenced with ?—Sometimes increased and sometimes decreased.

15030. Do you now take the minimum or the maximum ?—I have reduced it, because people are in favour of giving up the habit.

15031. What is the greatest quantity you have taken ?—One anna a day.

15032. And now ?—Half an anna.

15033. Do you keep the same health now as you did when you were taking the highest quantity ?—I was in very good health when I was taking one anna worth of opium, but I am not keeping the same good health now : I cannot say whether it is on account of the reduction of the dose or from some other cause.

15034. Does Syed Hyder Mirza Adab take opium ?—No.

15035. And you never have done ?—No.

15036. (*Mr. Fanshawe.*) Is it not the case that the ruin of Mahomedan families in Lucknow is due to other causes than opium ? Is it not the case that there is an idle class of Mahomedans who were formerly connected with the Court in Lucknow and who are likely to go to excess in any indulgence ?—

(*Nawab Ali Mohamed Khan.*) Except a class of men of an older generation who held high offices before the Mutiny, there is no class who have become idle. Idleness is only produced by opium-eating.

15037. (*Mr. Pease.*) Has Nawab Mohamed Mirza Khan

Mr. J.
Hauser.

12 Jan. 1894.

Nawab Ali
Mohamed,
Khan,
Syed
Hyder Mirza
Adab,
Nawab Syed
Jaffer
Hussain,
Nawab
Mohamed
Mirza Khan,
and Syed
Ashiq
Hussein.

Nawab Ali Mohamed Khan, Syed Hyder Mirza Adab, Nawab Syed Jaffer Hussain, Nawab Mirza Khan, nad Syed Ashiq Hussein.
 12 Jan. 1894.

reduced his quantity lately?—
 (Nawab Mohamed Mirza Khan.) Only four or five months ago.

15038. (Sir James Lyall.) Do you, Ali Mohamed Khan, remember the time of the old Kings?—
 (Ali Mohamed Khan.) Yes.

15039. Was opium as largely consumed amongst the Mahomedans then as it is now, or is there any difference?—In those days Lucknow was much bigger than it is now, and perhaps in proportion to the extent to which it was bigger, there was a larger consumption.

15040. In those days I believe opium was very cheap, because cultivation was free?—Yes; much cheaper.

15041. Has not the great increase in price tended to reduce the consumption?—Those who are accustomed to it will get it even if they have to get it by theft.

15042. A great number of people have died and others have grown up since those days; has not the great increase of price and the restriction of the numbers of shops tended to check consumption among people not accustomed to it—young people?—It may have had some effect, but the custom is very old: mothers give it to their children to eat, and therefore in spite of the rise of price the custom has continued.

15043. You say that the opium-eater is dirty and dull-headed and unable to work: surely you must have seen many opium-eaters who are very clever and do their work well?—In the beginning they are able to work, but when the habit becomes old they are not fit for any work.

15044. Do you mean when the habit comes to excess or merely when it becomes old?—Both when the quantity is increased and when the habit becomes confirmed.

The witness withdrew.

Syed Kalk Hussein.

(SYED KALK HUSEIN called in and examined (through an interpreter).

15053. (Mr. Wilson.) Are you a zemindar?—Yes.

15054. Are you a Mahomedan?—Yes.

15055. How many tenants have you in your zemindari?—Twenty or twenty-five.

15056. Do you think that the poppy is a very profitable crop to the cultivators?—I think it is a great loss to the cultivators.

15057. Do your ryots grow poppy?—Yes.

15058. Why do they grow it if it is a loss?—For two reasons: first, because Government advances the money, and secondly, because of pressure from some officials.

15059. How do they use pressure?—The zemindars are asked by the officials, and they sometimes injure the interests of them and compel them to cultivate.

15060. You do not press the ryots on your estate to grow opium?—Yes; since I have the fear of the District officials, I have to press them.

15061. Who are the officials?—The opium officials.

15062. Of what rank?—Zilladars or daroghas.

15063. Why is the poppy not profitable?—In the first place it can only be cultivated on first-class land where there is a well or a tank. In the second place, after what they spend on manuring, preparing the fields and weeding, they do not get a sufficient price for it from Government.

15064. What do you estimate the cost of cultivating a bigha of poppy?—At the lowest Rs. 25 or Rs. 30.

15065. How much does the cultivator get when he sells his crop?—Rs. 15 or Rs. 20.

15066. Do you include in that the poppy seed and leaf?—I exclude it.

15067. That would make something more?—Two or three rupees.

15068. What about the lumbardar?—The lumbardar is an official on behalf of the Government, who induces the Government to advance money to the cultivators, and if the cultivators do not give him something, he does not recommend the advance to be given.

15069. He does not recommend advances?—It is in the hands of the lumbardar, whether an advance goes to any cultivator or not.

15070. Then if the cultivator does not want to grow poppy, there is no hardship if the lumbardar does not let him have

15045. We have been told by a number of witnesses that there is a large class of people who take opium when forty years of age and upwards, and take it in moderation, and that it does them no harm, but perhaps does them some good: is there any class like that?—If it is taken in small quantities as medicine, it does no harm. The great defect is that when a man first takes it after two months, it becomes a habit and he is then compelled to increase the quantity.

15046. There is a temptation to increase, but I suppose a great many people,—sensible people—know how much is good for them and how much is bad, do they not?—In company with others the quantity is increased. When people are young they take it for purposes of lust, but very few take it for medicine.

15047. Do you mean when men take it over 40 years of age, or do you mean young people?—Young people begin it, and when they reach 40 they continue it. Those who take it after 40 take it as a medicine; they do not increase it, and it does them good, but young people who take it for pleasure increase the dose and they suffer.

15048. I suppose the Society which you represent is very much opposed to alcoholic liquor?—With all Mahomedans it is prohibited.

15049. You say you are decidedly in favour of prohibition; how do you suppose that will be carried out?—Government should enforce rules as it thinks best.

15050. Do the others agree?—
 (The Interpreter.) Yes.

15051. (Mr. Wilson to Ali Mahomed Khan.) You say you can bring a number of other people who have suffered from the opium habit?—If I am allowed two days I can bring 400 or 500 persons for inspection of their condition.

15052. Opium-eaters in poor condition?—Yes.

an advance?—That is the time for the rent, so the cultivators accept the money instead of paying interest; they are glad to get the money.

15071. You say that some of the officials of the Opium Department press these men to make them grow poppy; now you say the lumbardar ill-treats a man because he strikes him off the list and will not let him grow poppy. How do you reconcile that contradiction?—The cultivators cultivate poppy only for the sake of the advance, and on those who do not want the advance pressure is used by zemindars and lumbardars.

15072. After the opium is ready has he some other grievances as to the way in which it is treated?—After preparing the opium the cultivators take it and then it is classified in the second or third quality, and priced accordingly at Rs. 5, Rs. 4, or Rs. 3. After that there is a system of what is called *grum* by which the officials keep the opium and then pay for it after it is dried up.

15073. Is the grievance with them that the opium is not put in the right class; that it is said to have too much water when it is really good?—Yes, it rests with the daroghas and others to classify it.

15074. Of course the Opium Department pays for proper dry opium of a certain quality; and if the ryot takes opium that is not of such good quality, he does not get paid so much;—what, then, is the grievance?—It is called *grum*, the Government paying after six months the opium is dried up.

15075. What do you say about the opium officials visiting the cultivators and getting something from them?—When opium officials visit them they receive fuel, dried grass, straw and pots from the cultivators.

15076. What kind of officials are these?—Daroghas, zemindars and lumbardars.

15077. How would you like it if the opium cultivation were stopped—entirely prohibited?—It would result in good.

15078. Good for you as a zemindar?—Certainly; if the cultivation of the poppy is prohibited sugarcane, wheat and other things will be cultivated.

15079. Would it be good or bad for the ryots?—Yes; it will be profitable to the cultivators also.

15080. (Mr. Mowbray.) Where is your zemindari?—In Barabanki district.

15081. How many cultivators have you altogether?—100 or 150 in all; 25 grow poppy.

15082. What revenue do you pay the Government?—Rs. 700.

15083. Do you know any instance in which any one of your cultivators has been compelled by an opium official to grow poppy?—I cannot name one just now.

15084. You have told us that you have yourself pressed your ryots to grow poppy, because the opium officials have put pressure upon you; will you tell me what class of official has ever put pressure upon you to make you put pressure upon your ryots?—I have said that the darogha man pressed me.

15085. (Mr. Haridas Voharidas.) You say that some of the poppy cultivators were in need of advances to pay their rent. But if they cultivated at a loss, their not having an advance would be a gain to them?—In that case they cultivate sugarcane, and after selling the produce they would be able to pay their rent.

PANDIT SHIAM NARAIN MASTADAW called in and examined.

15091. (Mr. Wilson.) Are you a member of the Municipal Board at Lucknow?—Yes.

15092. You are also a zemindar?—Yes.

15093. How old are you?—Sixty-five.

15094. Have you lived in Lucknow all your life?—I was born and bred in Lucknow. I was in the King's employ in former times. My father was Dewan.

15095. Before the annexation?—Yes.

15096. Have you heard the evidence of Ganga Prasad Varma?—Yes.

15097. Do you agree with what he said?—I agree with it.

15098. If we desired it, could you give us a great many illustrations of opium-eating?—I could give many instances, and many of them would be from my own family and friends and caste.

15099. Are the results good or bad?—Many children have died on account of the carelessness of their nurses in administering opium; and many young men of sixteen or twenty have become consumptive on account of opium-eating.

15100. What is the effect on the property of the people who take it?—It is a custom in Lucknow among opium-eaters not to take opium alone, they take it with a number of friends, and that soon exhausts their wealth.

15101. How many ryots have you in your zemindari?—About 200.

15102. (Sir James Lyall.) How many villages have you?—Six villages.

15103. (Mr. Wilson.) How many of your cultivators grow opium?—Only 3 cultivators out of 200.

15104. Why do they not grow it?—I do not bring any sort of pressure or influence on my cultivators. I am not a man to be afraid of anybody, so I do not bring any pressure upon them for cultivation.

15105. Do you mean that you look after them and protect them?—As I know that opium is not profitable, I have not brought any pressure upon the cultivators. Had I brought pressure upon them they would have cultivated more.

15106. Are you a Congress man?—I am a Congress man. I join every movement which is for the good of the country and of the Government. I believe the Congress is likely to do good both to the Government and the people.

15107. Do you know what the Congress has done about opium?—The Congress has done nothing about the opium matter as the subject is before this Commission. Congress has not exhausted the list of good things to be done.

15108. Would you be in favour of the prohibition of the sale of opium except for medicine?—Opium should be classed with other poisonous drugs, and should not be specially treated.

15109. Do you know what the regulations are with regard to poisonous drugs?—In Lucknow Municipality we have a bye-law. Chapter 2, section 9, which says that the sale of poisonous drugs is prohibited unless the seller takes a license from the Deputy Commissioner. The name of the purchaser is to be taken down or there is to be a doctor's certificate. In general practice it is not given on a doctor's prescription.

15110. Do you mean that these poisonous drugs must not be sold unless the vendor knows something about the person who wants to buy?—Yes.

15086. Then they grow other things at their own will?—They cultivate crops by which they support their children and their animals.

15087. It comes to this, that good cultivators who do not need an advance are pressed to cultivate against their will?—Yes.

15088. (Mr. Fanshawe.) Do you seriously wish us to believe that you, as a zamindar, are afraid of zilladars and daroghas, and on that account put pressure on your tenants?—Yes, I am afraid.

15089. (Sir James Lyall.) In what way do you press the cultivators?—Do you threaten to evict them, or what?—I have to induce the cultivators. I also threaten that if they will not cultivate I will evict them.

15090. (Maharaja of Darbhanga.) Do you mean that in case a ryot refuses to cultivate you can evict him according to law?—I say that only to bring pressure upon them. I have got power to evict my cultivators.

15111. Do you know how many shops there are in Lucknow that are licensed for the sale of poisonous drugs?—I cannot say accurately, but I have heard that there are only seven shops in the city; and out of these seven I can get arsenic at only two shops.

15112. Do you think that regulations might be made of the same kind for the sale of opium for medicinal purposes?—Since opium is also a poison, it should be included in the list of other poisonous drugs.

15113. (Mr. Mowbray.) In what district is your zemindari?—In the Sitapur district.

15114. What do your tenants grow who do not cultivate the poppy?—First, they cultivate sugarcane, wheat, vegetables of different sorts, and cereals.

15115. We are sometimes told that sugarcane pays very well; why does not every body who now grows poppy cultivate sugarcane?—In this province cultivators are too poor; they are generally in want of money, and they take loans at Rs. 3-2 per month and Rs. 6-4. As many of them are ready to take money at this high rate of interest, if they can get it without interest from the Government, they are tempted to take it.

15116. Sugarcane requires a certain amount of capital, does it not?—Yes; and other crops require some capital.

15117. (Mr. Haridas Voharidas.) You have only two or three cultivators who cultivate poppy?—Yes.

15118. Do the others grow sugarcane?—Every cultivator grows sugarcane a bigha or half a bigha.

15119. Even borrowing money at such a high rate, they find the sugarcane profitable?—I think so.

15120. Am I to conclude that opium-growing, although they receive advances without interest, is not so paying as sugarcane with loans at a high rate of interest?—Yes. There are the seeds. Cultivators have only to contract for loans once; in future seasons they can get seeds themselves from their own fields, so that they need not borrow money.

15121. (Sir James Lyall.) What are the names of your villages?—Gouraicha, Dhuria, Khusrua, Torakpur.

15122. Does all your property lie in one mouza?—No; there are three mahals.

15123. How much land revenue do you pay to the Government?—Rs. 1,300.

15124. You say that people have to take out a license to sell poisons—are you speaking of Lucknow?—I am speaking only of Lucknow.

15125. Do you think that is acted upon, that no one sells arsenic, for instance, without a license?—No one can get white arsenic without a Magistrate's order, and other poisonous drugs no one can sell except the seven shopkeepers in the city.

15126. Outside the town, in the villages, any shopkeepers can sell, I suppose?—I have no accurate information about that. No arsenic can be found in my village.

15127. (Maharaja of Darbhanga.) If I remember rightly, one witness has deposed that at the time of the father of the late King and his predecessor the sale of opium was prohibited in Lucknow; as you are an old servant of the late King, you can give us some information on that point?—That is wrong. Everybody could get opium, and the rate was Rs. 7 or Rs. 8. Every shopkeeper could sell opium without a license.

15128. What is your opinion with regard to the consumption of opium; has it increased or decreased the last 30 years?—It is declining among the educated classes; among

Syed Kalk Husein

12 Jan. 1894.

Pandit Shiam Narain Mastadaw.

Syed Kalk Husein. the uneducated the number is the same, especially among the Mahomedans.

12 Jan. 1894. 15129. As regards the system of selling poisons in Lucknow, do you think that in case the sale of opium being prohibited, except for medical purposes, the system now in vogue in Lucknow could be adopted in the mofussil without there being a chance of indiscriminate smuggling?—Justice and fairness require that the system of selling opium and of selling poisons should be the same.

15130. Do you think that the system will lead to any extensive smuggling?—Instead of increasing smuggling,

on account of the spread of education smuggling will decrease.

15131. (*Mr. Haridas Veharidas.*) Do you get your rent from your other cultivators as regularly as you do from the three poppy cultivators?—I have had no suits to recover rent in the Court. All pay.

15132. (*Sir James Lyall.*) You propose that the rules for the consumption of opium should be the same as the rules in Lucknow City for the sale of poison: would you have the same rules apply to alcoholic liquor?—It would be advisable.

The witness withdrew.

Adjourned to to-morrow, 10-30.

At the Darus Shafa, Lucknow.

FORTY-FIFTH DAY.

Saturday, the 13th January 1894.

PRESENT :

THE RIGHT HONOURABLE LORD BRASSEY, K.C.B. (CHAIRMAN, PRESIDING).

SIR JAMES B. LYALL, G.C.I.E., K.C.S.I.
SIR WILLIAM ROBERTS, M.D.
MR. E. G. C. MOWBRAY, M.P.

MR. A. U. FANSHAWE.
" ARTHUR PEASE.
" HARIDAS VEHARIDAS DESAI.
" J. H. WILSON, M.P.

MR. J. PRESCOTT HEWETT, C.I.E., *Secretary.*

Dr. Manohar Prasad Tewari, L.M.S.

Dr. MANOHAR PRASAD TEWARI, L.M.S., called in and examined.

15133. (*Sir William Roberts.*) I believe you are a licentiate of medicine and surgery?—Yes, of the Punjab University College.

15134. You have got your diploma, and you are practising as a private practitioner in Cawnpore?—Yes.

15135. How long have you been practising there?—For the last seven years.

15136. What opportunities have you had of studying the opium question?—I have been practising and moving in different districts in the North-Western Provinces as Assistant Surgeon as well as in private practice.

15137. How long is it since you ceased to be an Assistant Surgeon?—For the last seven years.

15138. Altogether you have had fourteen years' experience?—Yes.

15139. Will you tell us from your personal experience in what way opium is used to those districts?—It is swallowed or eaten in the form of solution or pill, and is smoked in the form of *chandu* and *madak* respectively. It is cultivated in India, and to a great extent in Rajputana and Marwar States. It is also cultivated in these provinces—North-Western Provinces and Oudh—but in a limited extent, because it costs them much labour and money in preparing and securing these crops, and it exhausts the soil rendering it barren or incapable of producing crops of other vegetables or corn but poppy itself.

15140. How many use opium in Cawnpore?—In Cawnpore, out of a population of 160,000, 3 per cent. swallow opium, 4 per cent. smoke it as *chandu*, and 1 per cent. smoke it in the form of *madak*.

15141. That makes about 8, per cent does it not?—Yes.

15142. Do you mean these to be percentages of the male adults or of the total population?—All opium consumers in any form as above stated.

15143. When you speak of 3 per cent. do you mean 3 per cent. of the entire population, or 3 per cent. of the adult males?—For the most part it is used by the males. These averages, specially of *chandu* and *madak* smokers, far exceed at Lucknow. Of the opium consumers 90 per cent. are Mahomedans, 9 per cent. Hindus, and 1 per cent. other classes. Males 97 per cent. and prostitutes 3 per cent. Habitual moderate consumers in fractional doses of a grain form 35 per cent.;

habitual excessive consumers 60 per cent. Occasional moderate consumers 3 per cent., and occasional excessive consumers with criminal intents 2 per cent.

15144. What is the average cost of doses of opium?—Average allowances and cost of opium in its three forms vary from fractional doses of a grain to several tolas a day, and from $\frac{1}{16}$ of an anna to more than a rupee per diem respectively. The consumption of *chandu* and *madak* is practised in company, and that of opium in company or solitude.

15145. Is the habit easily formed?—The habit of either of them is easily formed, and is difficult to be broken off, and there is a tendency in the use of opium in its three forms for the moderate habit to develop into the excessive.

15146. What is the view of the population generally in regard to the use of opium?—Its consumption is generally regarded by the people at large with contempt, and in the case of *chandu* and *madak* with horror, and it is in general disrepute among the public, because its use, in any of its forms, deadens the intellect, impairs the physical and moral sense, induces laziness, immorality, or debauchery. He is not relied on by others, or entrusted with responsible duties. *Chandu* and *madak* being inhaled in the form of smoking, act powerfully, instantaneously, and spontaneously, and do more mischief than opium when eaten, and these people are more liable to attack of diseases and changes of weather and climate than opium-eaters.

15147. What are the objects of people who consume opium?—The objects of opium-consuming are manifold.—(a) Young people use it with an impression that it acts as an aphrodisiac, but their theory is wrong, as it produces contrary effects, and causes partial or total impotency in the end. (b) Old people, especially poor classes, use it in solution or pill form, because they think it will protect them from evil influences of climate and changes of weather, chiefly cold one. It certainly does them good, provided they can afford to take rich food with it, without which, of course, they suffer, as their case goes from bad to worse. (c) It is given to infants by their mothers during the period of suckling, with a view to keep them calm and quiet, their bowels in good order, and safe from injurious effects likely to be brought on their milk by their injudicious diet and mode of living; and in these cases it has come to my experience that it does them an immense

amount of good. (d) As medicine it is out of question that it acts beneficially in most diseases in one way or the other, and can be substituted for many medicines.

15148. You mean that it is a medicine of very wide application?—Yes.

15149. Is opium taken habitually by the respectable classes, or by the low classes of people?—It is taken for the most part by uneducated low classes of people, at the instigation of others, as aphrodisiac or as medicine, and being thus used indiscriminately, does them great harm instead of good.

15150. What ill-effects have you seen arise from the habitual use of opium?—Ill-effects of opium are that it produces—(a) Severe constipation, lowers circulation, impairs functions of important organs, deteriorates the general health, and produces noxious effects, physical, mental, and moral. (b) It renders the system of an opium-consumer in such a state as to resist the action and effects of other drugs, and their influence inert partially or totally, and this is the reason that when opium-consumers suffer from diarrhoea, dysentery, bronchitis, asthma and brain disorders, opium does little or no good to its consumers. (c) There is always a longing for subsequent gratification in increasing doses in common with other intoxicants. (d) It breaks down the constitution of a man, and makes him liable to get other diseases, and to be affected with weather and climate changes.

15151. What is your opinion as to the general effects?—In moderate doses it is unquestionably beneficial to infants, but noxious to young men, and harmless or beneficial to old people in fractional doses of a grain, provided rich food is taken after its use; otherwise it proves injurious.

15152. What do you mean by fractional doses of a grain?— $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, or $\frac{1}{16}$ th of a grain.

15153. Do you mean of an English grain?—Yes. $\frac{1}{16}$ th of a grain or $\frac{1}{4}$ th of a grain.

15154. Habitual opium-consumers take more than that, do they not?—I was speaking of a moderate dose.

15155. But even a moderate opium-consumer takes more than that?—There is no definition for moderation. We call moderate doses medically those which have been put down medically, and below those doses we call moderate doses.

15156. Would it be a privation to opium-consumers if the cultivation were stopped in India?—It would be certainly a serious privation to any class of consumers of opium, especially *chandu* and *madak*, to forego consumption of the drug all of a sudden, because they shall suffer by feeling inevitably too much for it with a longing or inflamed desire, and there would be thus a great straining on their system. But it would be feasible to prohibit the sale of *chandu* and *madak* by public sale, and immoderate use of opium in solution or pill form, by indirect means, as raising heavy tax on it, but gradually.

15157. Do you think any discontent would arise if the authorities would proceed in that way?—No serious discontent can occur by their prohibition in this way as above stated among the consumers. Nor would it amount to a political danger. It would not be followed by recourse to alcoholic stimulants. There would be certainly loss to Government in revenue, but it can be remedied—

- (1) by curtailing and cutting down all such expenses which the Government may deem superfluous, unnecessary or improper;
- (2) by introducing such measures which may be calculated to recoup the loss and give the full effect to cause sufficient economy in the Indian Budget.

15158. Do you yourself believe that opium is a real aphrodisiac?—For a few days it does act as an aphrodisiac. In the beginning it acts as a stimulant.

15159. As a general stimulant?—For a few days only.

15160. Much as alcohol would?—Not so much like alcohol, but to some extent it acts as a stimulant.

15161. As I understand you it does not act as special aphrodisiac agent except just in the beginning, as a stimulant?—Yes.

15162. And that effect passes away in a few days?—Yes.

15163. Do you believe that that action is especial, or that it is only a part of the general stimulative effect of opium?—I is transitory, lasting for a few days.

15164. That is not quite what I meant. Do you think that the aphrodisiac effect of opium is a special effect?—It is not a special effect.

15165. We have been told repeatedly that aphrodisiac remedies of various sorts are very much used in India and throughout the East: that opium is by no means singular in that matter?—Opium is also regarded as one of them.

15166. It is regarded as one of a number of aphrodisiacs?—Yes. 13 Jan. 1894.

15167. (Mr. Pease.) You have given us a great number of percentages; are they your own computations from general knowledge, or have any special means been taken to ascertain the number?—I have ascertained them from the sales in the shops at Cawnpore.

15168. It is the result of enquiry at the shops?—Yes.

15169. Shops in Cawnpore?—Yes.

15170. (Mr. Mowbray.) You said that it would be feasible to prohibit the sale of *chandu* and *madak* by public sale. Are you aware that we have been informed in papers which have been put in before us that the public sale of *chandu* and *madak* is already prohibited in the North-Western Provinces?—If it is prohibited and effect is given to it so much the better; but its use is generally going on.

15171. I asked you whether you are aware as a matter of fact that according to the law in the North-Western Provinces the public sale of *chandu* and *madak* is already prohibited?—I beg to say that full effect has not been given to it, as desired.

15172. I ask you whether you are aware of the present state of the law?—I am not aware, it may be so, but I cannot say. I beg to say that I am not fully aware whether there have been passed any rules or orders with regard to the prohibition of *chandu* and *madak*; but I say that no beneficial results have been obtained by prohibition because the habit is as yet going on. It appears that full effect has not been given to the subject.

15173. That would go to prove that the mere prohibition of the public sale of *chandu* and *madak* which you recommend has been tried and has not proved effective?—Because the habits have not been broken off as yet. It takes a long time to break off habits.

15174. Are you aware or not that at the present time opium is very heavily taxed?—I should say that it requires still more taxation.

15175. Are you aware that it is heavily taxed at present?—I cannot say that it is heavily taxed.

15176. Do you recognise the fact that the difference between the price at which it is produced and the price at which it is sold being due to a Government monopoly, is, in fact, a very heavy tax on the sale of opium?—In that view it may be a heavy tax, but in the view of the mischief it is doing I do not regard it as a heavy tax.

15177. (Chairman.) You hardly mean that it is not heavily taxed, but you mean to say that it is not sufficiently heavily taxed?—Yes, that is what I mean.

15178. (Mr. Mowbray.) Can you tell me what is the amount of taxation which opium now bears?—It is sold, I believe, at Rs. 16 per seer.

15179. Do you know how much of that is taxation?—From the fact that it is being sold dearer it cannot be said that it is heavily taxed. I cannot say any other word for that.

15180. Then you cannot answer my question, and you do not know?—I do not understand what your object is. I say that it is not sufficiently taxed. Its price is not raised so much as to prohibit persons from buying and making use of it freely.

15181. I ask you whether you can tell me how much taxation it bears at present. If you cannot tell me I do not wish to pursue the subject?—It is purchased at Rs. 4 or 5 a seer, and sold at Rs. 16 or 17 a seer.

15182. Do you regard that difference as taxation?—Yes.

15183. (Mr. Fanshawe.) Am I correct in understanding that you recognise no one as a moderate consumer who takes more than a fractional grain of opium?—That is what my meaning is.

15184. Have you had any experience of agriculture: you have expressed a rather strong opinion as to the cultivation of the poppy?—I have very little experience of agriculture.

15185. (Sir James Lyall.) You seem to have some difficulty in understanding Mr. Mowbray's question about the taxation of opium. Are you aware we had evidence yesterday to the effect that opium before the annexation of Oudh was quite untaxed and used to be sold at Rs. 4 or 5 a seer?—Yes.

Dr. Manohar Prasad Jewari, L.M.S. 15186. Is it not a fact that it is now sold at Rs. 20 a seer in Oudh. Does not that show that it is heavily taxed?—Yes. In comparison with that it is heavily taxed.

15187. (*Chairman.*) You have given us your views with regard to opium; are you opposed to the use of stimulants generally except for medical purposes?—Yes.

The witness withdrew.

Babu Kshetra Nath Mukerjee.

Babu KSHETRA NATH MUKERJEE called in and examined.

15189. (*Mr. Pease.*) What is your occupation?—I am an agriculturist.

15190. Are you a cultivator of land yourself?—Yes, I am a farmer.

15191. Where do you live?—I live at Benares and sometimes in Bengal. I have my farms at Oudh.

15192. Will you tell us what attention you have given to the subject of agriculture?—I have devoted much of my time to agriculture for the purpose of writing a book on the subject. I have had occasion to make enquiries in different parts of the country. I have accumulated facts with regard to the present state of agriculture, and those facts I have put down in my book and published them.

15193. What is your view with regard to the interests of the country with reference to the growth of the poppy?—Poppy cultivation is one of the important subjects dealt with in my book. It is a poisonous thing. Its growth is in no way beneficial to the country. It produces an effect which demoralizes the people. Physical growth is deteriorated and children are affected also.

15194. Is the cultivation of the poppy popular among the cultivators?—Temptation held out to the cultivators has led to its popularity.

15195. Do you think it is to the advantage of the cultivator to grow poppy as compared with other crops?—No, certainly not. The cultivators always undergo a loss in comparison with other crops. Tobacco or sugarcane crops are better paying crops than poppy.

15196. Can you speak of any instance in which cultivators have given up the growth of poppy to their advantage?—Yes. Once I had occasion to direct some cultivators to grow tobacco instead of poppy in those lands where they intended to grow poppy. They made a profit out of tobacco of nearly Rs. 40 a bigha. In cultivating poppy if the tenants do not consider or do not include the wages of their own labour there is no loss to them, but if their own labour be calculated they suffer a loss to the extent of Rs. 36 per bigha. The average produce per bigha is 4 seers.

15197. Do not you think that you are rather overstating the loss?—The tenant has to devote 8 months of his time to the cultivation of his poppy.

15198. You have stated that you have very strong feelings against the use of opium. Have you anything to say with regard to smoking?—Yes. It is most injurious to the persons who use it and has its evil effects upon the children also.

15199. Have you any views as to the course Government ought to take with regard to the opium trade?—It ought to be stopped altogether, but attention should be drawn to the fact that it must be lessened gradually. It must be sold to the Medical Department so that each man might be registered, and then each habitual consumer might get opium from the Medical Department.

15200. The general effect of your evidence is that you believe the consumption of opium is injurious and that it is not profitable to the cultivator?—Yes. That is my opinion.

15201. (*Mr. Mowbray.*) When you say that people ought only to be allowed to obtain opium through the Medical Department, I should like to know a little more precisely what you mean?—It ought to come through the Medical Department. There are Assistant Surgeons and there are also native doctors. I think such medicines as opium should be sold through the Medical Department. The medical men should keep a register of each person, and certificates should be given as to the circumstances why they may take opium.

15202. I quite understand your answer with regard to Civil Surgeons and Government officials and doctors practising according to the European methods. I should like to know how you would regard any body who chose to set up as a native doctor?—Now-a-days these are scattering over the country. I would not allow them to set up as doctors.

15188. (*Mr. Pease.*) You are aware that there is a difficulty in raising the tax here in consequence of the liability to smuggling or purchasing from the cultivators: would you be in favour of a plan whereby those who are habitual consumers should have their names placed upon a register so as to avoid suffering on the part of those who are at present consumers?—Yes.

15203. I suppose you are aware that the number of Government servants and trustworthy medical men in the country at present is very limited?—These people have free scope to get these things from the Treasury.

15204. How many medical men are there in the outlying districts?—There is one Assistant Surgeon in each head-quarter of the district, and there are at least four or five native doctors in each sub-division. Men will not have to travel to get opium from the district treasury. If there be centres they will not have to travel into distant lands for the purpose of getting opium. There will be less smuggling also.

15205. You recognise that for medical purposes there would have to be a considerable number of centres from which opium should be distributed?—There are centres of course. The existing centres will do.

15206. Do you think that under such a scheme as you suggest there would be a larger number of places where opium could be obtained than there are at present with the opium shops?—There are a great many opium shops now, from which people easily get and consume. Of course it would be very difficult to get opium in the present form, but then there will be a check over excessive consumption.

15207. You think it is difficult?—Now-a-days they can get it easily in shops and everywhere.

15208. (*Mr. Haridas Veharidas.*) When did you begin your career in society?—In 1862.

15209. What was your age at the time?—I was about 18 or 19.

15210. Then you are about 50 now?—Yes.

15211. I did not quite follow you when you stated that the cultivators lost Rs. 36 per bigha from growing poppy: will you clear that point up?—To manure and irrigate and plough a bigha cost nearly Rs. 15. Then there is the cost for the extraction of the opium. The highest crop yields 12 seers per bigha; but the average crop is generally 4 seers. Then there are often losses to the tenants owing to the untoward circumstances of the seasons. The tenants get at the utmost Rs. 5 per seer; that makes Rs. 20. It costs every tenant not less than Rs. 25 per bigha. That calculation does not include labour. The cultivator devotes 8 months of his time to the cultivation. Then, calculating Rs. 3 for wages, it comes to Rs. 28.

15212. Would you not reconsider your answer and modify the amount of losses which you have estimated at Rs. 36 per bigha? It seems very much to me?—I am a cultivator myself. I have studied the matter thoroughly and I think I am right. The total amount of cost is Rs. 53 per bigha and income is Rs. 20, thus the loss is Rs. 33 besides other small expenses.

15213. (*Mr. Fanshawe.*) What amount of land do you hold yourself, and where is it situated?—I have 300 bighas of land in Bengal.

15214. Have you any land in this province?—Yes. I have land in the Bahraich district.

15215. How much?—1,000 acres.

15216. Is it on lease?—Yes.

15217. Is there any poppy cultivation on that land?—No.

15218. Do you cultivate the land yourself?—Yes. I cultivate it. It is a regular farm.

15219. You hold this land on lease and manage the cultivation by means of paid servants; but you do not yourself live on the place?—That is so.

15220. When did you publish your book on agriculture?—In 1882.

15221. Are you aware that there are 550,000 cultivators cultivating poppy in these provinces?—I am not.

15222. Do you wish us to understand that that large body of cultivators are cultivating poppy at the average loss of Rs. 36 per bigha?—Yes, I do.

15223. (*Sir James Lyall.*) Have you got any tenants under you in those 1,000 acres?—Yes, I have some.

15224. How many have you?—Altogether I have some 50 tenants in those 1,000 acres.

15225. How much do you cultivate with your own ploughs?—I have my own herds of cattle.

15226. You say you have 50 tenants on those 1,000 acres. What is the area which you cultivate with your own ploughs by paid labour?—About 700 acres.

15227. Then you have 50 tenants on 300 acres?—Yes. Some of the land is lying waste for the grazing of cattle.

15228. How much is lying waste?—I have some 50 or 60 acres of land for grazing.

15229. That leaves 950 acres cultivated?—Yes.

15230. Of which you say 700 acres are cultivated by yourself with your own ploughs?—Yes.

15231. That leaves 250 acres on which you have 50 tenants?—Yes.

15232. They are very small holdings?—These tenants are cultivating in different villages also. They are *pahi kash* tenants.

15233. What crops do you cultivate?—I cultivate Indian corn, paddy, cereals, linseed, indigo, sugarcane, and all these things.

15234. Do you lease this land from a Talukdar?—Yes.

15235. (*Chairman.*) Are you opposed to the use of intoxicating drugs generally?—Yes.

15236. Would you like to see close restriction placed upon their use?—Yes. But especially upon the use of opium, which is most fatal for those who consume it, and the evil effect descend to hereditary laws also.

15237. Excepting for medical purpose?—Yes.

15238. You would include alcohol?—Of course alcohol. But alcohol does not effect the law of hereditary. It has an evil effect upon the persons who use it immoderately.

The witness withdrew.

SHEIKH RAZA HUSAIN KHAN called in and examined (through an interpreter).

*Sheikh Raza
Husain
Khan.*

15239. (*Mr. Wilson.*) Are you zemindar of Saleh Nagar?—Yes.

15240. And Life President of the Rafa-i-Am Association, Lucknow?—Yes.

15241. What is the translation for the Rafa-i-Am Association?—Public good Association.

15242. Do you think that opium-eating often proves detrimental to the morality and health of the consumers?—Yes, certainly.

15243. And also to their property?—Yes.

15244. Do you consider that the cultivator gets much advantage from the cultivation of poppy in comparison with other crops?—I do not think that much benefit accrues from poppy cultivation.

15245. Does the zemindar derive much benefit from it?—No.

15246. Do you think that Government might encourage some other cultivation instead of poppy?—I am of that opinion.

15247. How do you think that Government could encourage sugarcane?—By giving advances, just as in the case of opium.

15248. Are you in favour of the immediate abolition of the sale of opium in this part of the country?—I am not in favour of immediate prohibition.

15249. Do you think if it were suddenly prohibited it would be injurious to a great many people who have contracted the habit of taking it regularly?—I think as they are habituated to the use of the drug it would be injurious to them.

15250. Do you advocate some plan by which the sale of opium should be very much restricted, provided it was not done in such a way as to cause injury to the health of those persons who have already become thoroughly accustomed to opium?—I do not advocate the immediate abolition of the traffic or total prohibition of the cultivation of the poppy, as many opium-eaters will find it difficult to live without it. The cultivation should be gradually abolished and opium be sold only for medical purposes. By that I mean that Government should stop giving advances. Government should encourage the cultivation of other crops and make advances for sugarcane.

15251. (*Mr. Mowbray.*) How many members are there in the Association of which you are life president?—About 150.

15252. Are many of them agriculturists and cultivators connected with the land?—Very few. I am a zemindar myself.

15253. Where is your zemindari?—In the District of Barabanki.

15254. How many cultivators have you in your zemindari?—Upwards of six or seven hundred.

15255. How many villages have you?—Sixteen or seventeen.

15256. What revenue do you pay to Government?—Over Rs. 10,000.

15257. (*Mr. Haridas Vekaridas.*) Do you take opium yourself?—No.

15258. Is poppy cultivated in your zemindari?—Yes.

15259. What proportion?—At this moment I cannot tell you.

15260. Are those cultivators who grow poppy willing to grow it?—I have not enquired from them whether they are willing or not.

15261. You do not know whether poppy cultivation is a losing concern or a paying one?—I have not heard.

15262. With regard to poppy cultivation being discontinued and an impetus given to sugarcane, that is your own suggestion?—Yes.

15263. (*Mr. Fanshawe.*) I understand you to say that you would recommend Government advances for other crops but not for poppy?—Yes.

15264. (*Sir James Lyall.*) How could Government give advances for other crops unless it intended to buy the crop?—It is not necessary that Government should purchase the produce.

15265. You mean that Government should lend money to the cultivators to encourage the cultivation?—Yes.

15266. Establish a sort of bank?—Yes.

15267. When you say you think opium advances should be stopped, do you mean that Government should also cease to buy poppy, and that poppy cultivation and sale of opium should be free as it was in the Nawab's time?—I am of that opinion.

15268. You think that you would not thereby make opium cheap and available to everybody?—Cultivation would decrease.

15269. I suppose you remember the time before annexation?—I do not well remember it.

15270. (*Chairman.*) Does your Association of which you are the life president condemn the use of stimulants generally except for medical purposes?—Yes.

15271. I suppose it is a Temperance Association?—It is not a Temperance Association, but its object is to promote morality. It condemns the use of stimulants.

15272. (*Chairman.*) You include alcohol?—Yes.

The witness withdrew.

Syed Nazir
Hossein.

SYED NAZIR HOSEIN called in and examined.

13 Jan. 1894.

15273. (*Chairman.*) I believe you are a pleader of Sitapur?—Yes.

15274. Do you consider opium as injurious to the health?—No, if taken moderately.

15275. Do you consider that the excessive use of opium is bad?—Yes.

15276. The opium produced in India is not chiefly consumed in this country, is it?—The greater part is consumed in China.

15277. What is the general character in your view of Chinamen as a labouring population?—They are laborious, hearty, strong and hale. They are not weak and indolent.

15278. If we prohibited the export of opium to China what would the Chinamen do?—They would grow it for themselves, and every country would export it to China.

15279. In the case of sickness and disease, is opium used with good effect?—It is very useful in several diseases.

15280. Supposing the cultivation and sale of opium were prohibited, what do you believe would be the political results?—My eight years' experience, and that of those who have been consuming opium for more than half a century, shows that the abolition of the use of opium would lead to the bloodshed of more than half of the number of its consumers; and moreover there would be a clear loss of six millions tens of rupees, without which the administration of the State would not be carried out.

15281. Do you mean that half of them would die when you speak of the "bloodshed" of the consumers?—Yes. Some of them would die and some of them would suffer from diseases.

15282. You wish to say generally if the use of opium were prohibited that many people who now make use of it as a remedy would suffer, and that many would die?—Yes.

15283. With regard to taxation, do you think the imposition of other taxes in lieu of the opium revenue would inflict a great burden upon the people of India?—Yes. Taxation in India has reached its climax, and any further taxation would be particularly an impolitic measure which no Government with any sense of justice and wisdom would press.

15284. (*Mr. Pease.*) When have you obtained your experience with regard to the Chinese?—I have gathered it from newspapers and seen myself.

15285. (*Mr. Wilson.*) Do you know the opinions of the anti-opiumists?—Yes, they are against the use of opium.

15286. How have you learned their opinions?—I have learned it from various quarters, and here before this Commission.

15287. Do you know the opinions of Native and English doctors?—Yes, I have consulted some of them and they have given me their opinions, and I have seen the opinions of others in the newspapers.

15288. What did you consult them for?—About the use of opium.

15289. What advice did they give you?—They told me that the use of opium is not at all injurious to a man if taken moderately.

15290. Will you tell me what doctor told you that?—Dr. Barry of Sitapur, who was examined here the day before yesterday. Also I have heard it from the Assistant Surgeons of Sitapur at the Government Hospital. I have heard it too from the native physicians.

15291. Can you give me the name of one?—Mahdi Hossein and Syed Kazim Hossein.

15292. (*Sir James Lyall.*) Where have you seen a Chinese?—At Benares and at Golamundi.

15293. How many of them are there?—There were about 10 or 12 at the former place and some 200 at the latter.

15294. (*Mr. Wilson.*) You are a pleader at Sitapur?—Yes.

15295. Are you the head of the Bar there?—No.

15296. Are you one of the principal pleaders?—I am one of them.

15297. Have you ever been invited to appear in a similar position to this before?—No.

15298. Do you think that the use of opium ought to be encouraged?—I do not think it ought to be encouraged, nor should it be totally suppressed. The present system is quite right.

15299. You think the present system is quite right?—Yes.

15300. Would you have the cultivation of poppy increased?—No.

15301. Would you have it decreased?—Neither increased nor decreased. The present area is sufficient for the cultivation of opium.

15302. And the arrangements are all quite right?—Yes.

15303. (*Mr. Mowbray.*) Have you ever taken opium yourself?—Yes, I have been taking it for the last 8 years.

15304. Is that what you mean by your 8 years' experience?—Yes.

15305. How much opium have you taken?—I take four grains a day: two grains in the morning and two grains in the evening.

15306. Have you gone on taking the same doses for the last 8 years?—Yes.

15307. You do not take more now than when you began?—No.

15308. Do you find that it has had any effect upon you either for good or ill?—Yes, I was very short-sighted before I used opium. It has improved my eyesight.

15309. Anything else?—Nothing.

15310. When you began to take it how old were you?—It was 8 years ago, and now I am 33.

15311. Did any doctor advise you to begin it?—My native physicians advised me to take it.

15312. Are you a Mussalman?—Yes.

15313. Was it a Hakim who advised you to take it?—Yes.

15314. Have you consulted him since, or have you simply gone on taking it?—I have not consulted him since. It did me good at the time. It improved my sight.

15315. (*Mr. Haridas Voharidas.*) Has it benefited you in other ways besides your sight?—I had no other complaint.

15316. You only used it because you were short-sighted, the Hakims advised you to take it?—Yes, only for that.

15317. (*Mr. Wilson.*) What is your opinion with regard to alcohol?—Being a Mahomedan of the *Shia* sect, I am against it.

15318. You object to the use of alcohol?—Yes, I emphatically object to the use of alcohol.

15319. Do any of your friends take it?—No, none of them.

15320. You never took any?—I never took it.

The witness withdrew.

Mr. G. P.
Gartlan.

MR. G. P. GARTLAN called in and examined.

15321. (*Sir James Lyall.*) I believe you are Manager of the Palmer Estate, Rai Bareli District?—Yes, it was jungle when we first got it. We got it free simple. We broke it up and brought it under cultivation. It is just settled as the other villages in the neighbourhood.

15322. What is its area?—Its area is about 10,000 bighas.

15323. How long have you been in charge of the estate?—Since June 1866—nearly 28 years.

15324. Can you say what your experience is as to the consumption of opium by the rural population?—There is very little consumption amongst the rural population. Where

it is consumed it is amongst the better class. There is very little of it amongst the lower classes. You meet it in the middle and zemindar class, and amongst the talukdar class. It is not, however, taken to excess. If it is taken to excess it is amongst those people who go in for other drugs, such as *ganja* and *bang*.

15325. Do you mean that the rural population very seldom consume it, even in moderation?—They very seldom consume it at all; but where they do consume it, it is in moderation.

15326. Is poppy cultivated in your estate?—Yes, very extensively. It is cultivated all through the Rai Bareli District.

15327. Do you suggest to your cultivators that they should cultivate poppy?—They take to it willingly. I wanted to stop it at first. I was against it; but they asked me to allow them to cultivate it.

15328. Why were you against it at that time?—It was owing to the Opium Department. I was not against the cultivation itself. It was because there were interferences brought about between the cultivators owing to the old system of poppy cultivation which is no longer in existence.

15329. Was that feeling a dislike for the Opium Department officials coming in between landlord and tenant; does that to your knowledge prevail elsewhere in Oudh?—It may with petty zemindars, but not with large talukdars.

15330. You say your cultivators cultivate poppy extensively; perhaps you would give us your opinion as to the result to the cultivator?—It is most beneficial; it is the best paying crop we have.

15331. It is a crop that takes a great deal of labour, is it not?—No, not necessarily. The only labour it takes is when it is being collected.

15332. Is it in the hands of Muraos, the garden cultivating people?—It used to be, but it is no longer in their hands. It is now cultivated by every class in the district.

15333. Is it cultivated by the Chuttris?—Yes, the Chuttris, Mahomedans, Brahmans, Ahirs, Gadarias, Kumbis, Chamars, Fasis, and Muraos. In fact I may say there is every caste in the cultivation.

15334. Do you mean to say that all these castes cultivate the poppy on your estate, or is it more prevalent amongst one caste than another?—It prevails more among some castes than others; but there is no distinction with regard to cultivation. Every class settled on our estate indifferently cultivate the poppy, without reference to any particular caste.

15335. But is it not the case that in the poppy cultivation there is a great deal of work which can be done by the women and children?—It is mainly done by the women and children.

15336. Do high caste women and children work?—In that case paid labour is employed.

15337. Still, even employing paid labour you think they find it profitable?—Yes, but of course not so profitable as in the other case.

15338. It has been said by some witnesses that poppy cultivation attracts the cultivators not because it is profitable to them, but because they get an advance of money at a time when it is convenient to them for payment of instalments of rent; do you think that is the case?—No, not quite, because the advances made for poppy are not given when the rent is on. The advances do come in useful, however, to pay up balances for rent.

15339. You are convinced that over and above the advantage of getting advances in ready cash it is a profitable crop in itself?—It is.

15340. How much of that profit, do you think, comes from illicitly keeping back a certain amount of opium?—I should say little or nothing.

15341. Would an order of Government prohibiting cultivation—that is withdrawing the licenses—in your part of the country cause discontent?—Not only would it cause discontent, but it would cause great hardship to the comfort and welfare of the people. The advantages which the Assamis have already acquired from the cultivation would all disappear, and they would be as they were formerly.

15342. Their condition is improved?—Yes, their comfort generally and their prosperity is increased entirely owing to the poppy cultivation in the Rai Bareli District and in neighbouring District of Fatehpur.

15343. Has poppy cultivation always prevailed in the Rai Bareli District?—Yes, but not to the extent that it prevails now.

15344. (*Mr. Pease.*) Have you prepared any statistics to show the profit of poppy cultivation?—No, but I did prepare some statistics for some years. I took down the poppy cultivation of the different villages. I found that the amount paid for the produce of poppy grown in the few acres cultivated paid for the whole rent of the different Assamis.

15345. Very few of your tenants, I suppose, grow poppy without growing other crops?—They all grow other crops: it is merely a small proportion of land that is under poppy.

15346. We have had it stated by several witnesses that in the Behar Agency poppy was grown at a loss, but that other crops were making a good livelihood. You do not think that is the case in this part of the country?—That is not the case in this part of the country in Oudh.

15347. (*Mr. Wilson.*) I think you said, except at the time of collecting the opium there was not much labour involved?—No, not much labour.

15348. We have been told that there are a great many ploughings, is that the case?—Not more so than with other crops: there are not so many ploughings as with wheat.

15349. Weeding is necessary, I believe?—There may be some weeding. There may be two weedings in a year; but this year one weeding only was necessary.

15350. I think you said there had been a considerable extension of poppy cultivation?—Yes, since the annexation.

15351. Are you referring to the Rai Bareli District?—Yes.

15352. Can you tell us to what extent it has extended?—Since I have been in the district it has more than doubled, but it is going down again now.

15353. Are you aware that taking Oudh as a whole two years ago the cultivation was 20 per cent. greater than it was last year?—I have no information on that subject.

15354. You were not aware of that?—No, I can speak of my own district. The cultivation was less this year and was less last year than it was four or five years ago.

15355. When was the period of great extension?—The extension began, I should say, about 1875 or 1876, or probably in 1873.

15356. You have spoken of a state of prosperity resulting from the poppy cultivation: do you consider that the state of agriculture is very satisfactory in the Rai Bareli District?—It is highly satisfactory.

15357. In Hunter's Gazetteer the average of cultivated acres for each male agriculturist is given as less than $2\frac{1}{2}$: do you think that that is probably correct?—That may be correct; of course I cannot say from any statistics I have taken.

15358. You are not surprised to hear that?—No.

15359. Do you think that $2\frac{1}{2}$ acres to each family (I suppose that is what it is substantially) is a satisfactory amount?—Not if they were dependent on that alone.

15360. What do they depend upon besides?—In the Rai Bareli District, in nearly every family there is somebody on foreign service.

15361. In point of fact, they do not live on the land?—It is a densely populated district.

15362. They do not live on the land—they go elsewhere to get a living?—Yes, those who have small holdings: those who have large holdings and get sufficient occupation on their holdings do not go.

15363. Is that what you consider a satisfactory agricultural condition?—It depends whether it carries on well or not. These small cultivators are the better classes in the district.

15364. We have had the same kind of thing in Ireland. It has never been considered there that it was entirely satisfactory if the absent members of the family had not only to maintain themselves, but to remit money home?—It depends upon the number of people in the family.

15365. (*Mr. Mowbray.*) Do these people come back again?—Yes. Some of them only go away for six months. They do not abandon the country. The families are at home; the male members go away.

15366. We have had some statistics put in with regard to the poppy cultivation in the North-Western Provinces in 1885-86. Taking Oudh only, there does not seem to be very much difference in the last 10 or 12 years. You say in the Rai Bareli District you consider it has increased: up to when?—Up to about three years ago—up to 1890.

15367. The figure for 1890 was very nearly 2 lakh—196,000 bighas; the last figure for 1892-93 is 1,58,000—Yes, it is rather less.

15368. Could you give me any idea of the number of villages in this estate?—There are 23 small villages.

15369. What is the revenue now?—We pay no Government revenue. It is purchased in fee simple. It was jungle ground, which we purchased under Lord Canning's Rules.

Mr. G. P.
Garlan.
—
13 Jan. 1894.

Mr. G. P. Gartlan. 15370. (*Mr. Haridas Veharidas.*) Can you give any reason why there has been a decrease during late years in the amount of opium?—There is a decrease for several reasons. The opium crop has been rather an inferior one for the last two years. That is one reason. Another reason is that the price has been less than in former years. Opium is taken at a certain consistency, and if it is up to the proper consistency the people get Rs. 5 per seer and up to Rs. 6 per seer. If it is under that, the price is diminished.

The witness withdrew.

Babu Ram Singh.

BABU RAM SINGH

15374. (*Sir James Lyall.*) I believe you are a Deputy Collector in Government service?—Yes.

15375. And you have been selected to be manager of the Court of Ward's Estates in the Rai Bareli District?—Yes.

15376. Are there many estates in that Court of Wards?—Yes, five estates.

15377. What is the total revenue?—About Rs. 1,50,000 is what we pay to Government.

15378. How many villages do you suppose you have under you?—About two hundred.

15379. Are you a native of Oudh?—Yes.

15380. I believe you have risen in the service from a Naib Tahsildar?—Yes.

15381. And your service has brought you greatly into contact with the agricultural classes?—Yes.

15382. What is your opinion with respect to the use of opium in the present day as compared with its use under native rule?—Opium-eaters were much more in number during the Native rule than they are now, because there was not a single big landholder who did not keep in his service a great number of fighting men, of whom several men used opium in order to keep themselves strong and healthy. Lots of these men are alive who take opium.

15383. Have you noticed any bad effects from the habit on the moral or physical condition of the consumers?—No, not as far as I know.

15384. Is it common in the villages?—No, it is almost unknown.

15385. Is it used as a domestic medicine in the villages?—Yes, sometimes.

15386. For what kind of complaints?—Cold, bowel complaints, rheumatic pains and other diseases.

15387. How do they get it when they want it for that purpose: do they keep it in their houses?—They purchase it from licensees, and from the Government Treasury. There are very few in the villages who take opium, or who use it as medicine.

15388. It is supposed that the cultivators keep a certain amount back: a few cases have been brought to light?—In the Hardoi District there were several cases discovered, and they were all convicted.

15389. What is the general opinion about the use of opium in the country?—The people do not dislike it generally. There is no dislike of opium among the people if it be used in moderate quantities, which is for the most part done; but its use in excessive quantities is objectionable, but not so objectionable as the excessive use of spirit and liquor. The substitution of spirit or liquor for opium will create a great row, as there are persons who will, for sake of their religion, prefer death to the taking of spirit or liquor instead of opium.

15390. Do you think that it would necessarily follow that if opium were stopped people would take to spirit or liquor?—They will take some stimulant, as they generally do.

15391. What would be the effect in the country if the use of opium were prohibited and fresh taxation had to be incurred?—They would not be able to pay any more tax.

15392. What would be the effect on the popular opinion?—Discontent. It is absolutely unnecessary to prohibit the use of opium or poppy cultivation.

15393. Do the cultivators on the estates under your management cultivate poppy?—Yes, it is cultivated extensively in almost all the villages.

15394. It has been asserted before us by some witness that the cultivators think they are under some obligation to

15371. You think there will be a further diminution in poppy?—No, I doubt if there will be any further decrease now.

15372. You think that it has got to its lowest point?—I think it will stick at its present rate.

15373. You do not think there will be any increase?—No, I do not suppose there would be any increase.

called in and examined.

cultivate because the cultivation is carried on for the sake of Government?—They take advances willingly.

15395. Do you think that sometimes any pressure is brought to bear on them?—No, I do not think so.

15396. Either by Government officials or by the zemindars?—No, I do not think so. They get advances in September, which is a great benefit to them. If they did not get those advances they would have to go to the money lenders for seeds and for things, and they would have to pay a large interest.

15397. It is the advances which are the great inducement to them?—Yes, and good will.

15398. (*Mr. Pease.*) Are the Government advances of great advantage to you in collecting the rents of the estate?—Yes, in clearing off arrears.

15399. When is the first advance made?—In the month of September.

15400. When is the rent due?—The rent is due in four instalments, October and November, and again in April and May.

15401. And they clear off the arrears in September, do you say?—Yes.

15402. Does the agent accompany the tenants when they go to receive the money for their opium?—Yes, in the cases of unpunctual payers.

15403. What Agent?—The Estate Agent.

15404. (*Mr. Wilson.*) Is it quite a common practice for Estate Agents to accompany them?—It is not a common practice.

15405. Who does it?—Sometimes when there is an unpunctual tenant then the Estate Agent will accompany him as was done this year.

15406. Done by whom?—By the zilladar.

15407. On behalf of the Court of Ward's Estate?—Yes.

15408. Is it your opinion that the use of opium is almost unknown to the village people?—Yes.

15409. Are you aware that in several official documents there are statements that very large quantities are retained by them for their own use?—Yes, there may be. They might keep it privately, but it is not publicly known.

15410. You mean that the legal use of Government opium is unknown?—Not as far as I know. I am also a resident of a village: it is not used now-a-days to a large extent.

15411. I want to know whether you agree or disagree with those official statements that considerable quantities are retained for use in the villages?—I disagree in certain cases with them.

15412. Do you think there is a dislike amongst the inhabitants generally for those people who use opium in moderation?—No.

15413. Have you heard some of the evidence this morning?—Yes, I heard two witnesses.

15414. We have had several witnesses here who have said that it is very much disapproved of and is looked on generally as disgraceful?—Those people are responsible for their statements.

15415. They have said that even opium-eaters themselves are rather ashamed of their habit: you do not agree with that?—It is not a vice to eat opium. I do not agree with them.

15416. What is the size of this estate that you have the management of?—The rental of all the five estates amounts to about Rs. 3,85,000.

15417. Do you know how many bighas there are?—I know, but I cannot say at this time without my accounts.

15418. I think you said they pay the rents of their entire holdings from the proceeds of the opium land?—Yes, those who cultivate it.

15419. I want to know whether by the term “proceeds” you mean the total money that they get for their opium, or whether you mean the profit that they get?—I mean the money they receive from Government on account of opium and the price of the seed sold by them.

15420. When is the close of the Revenue year?—In the month of September.

15421. Is that the close or the beginning of the year?—It is the close of the year.

15422. What proportion of the total money paid by the Opium Department is paid in the month of August or thereabouts?—I should say about one-fourth.

15423. Is that the time when the balance should be paid?—Yes, it is paid up to the month of September.

15424. When are the first agreements made with the people for the new year?—Agreements are made sometimes in the month of June, and sometimes in July.

15425. Agreements for the new year are made before the old year is out?—Yes.

15426. Is that legal?—Yes, it is not illegal.

The witness withdrew.

HAKIM NAZIR HUSAIN KHAN called in and examined (through an interpreter).

15438. (*Sir James Lyall.*) I believe you are Superintendent of the King's Yunani Hospital, Lucknow?—Yes.

15439. How many years have you been Superintendent?—14 years.

15440. You follow the Yunani, or ancient Greek system of medicine, I believe?—Yes.

15441. Have your family always followed the profession of physicians?—Yes, physicians of Kings.

15442. Is your home in Lucknow?—Yes.

15443. What is your opinion of the effect of the use of opium on the physical and moral conditions of the people who use it?—It is not injurious to the moral condition, but it is injurious physically if the drug is taken in excess.

15444. I suppose if taken in excess it might be injurious to the moral condition too, might it not?—No.

15445. Is most of the opium consumed used for the purpose of luxury and enjoyment, or for purposes of health?—Some persons use it for both.

15446. And some use it for one, and some for the other?—Yes.

15447. Is it easy, in your opinion as a physician, to say when it is used for the purposes of health and when it is used for enjoyment?—Young people generally use it for the purpose of luxury: for health no line can be drawn.

15448. I suppose you think that young people ought not to use it, and that it ought only to be used by older people?—It is not harmful when persons are young, but when they are old it is harmful.

15449. Is it your general opinion that a man may take it in moderation after he is 40, to keep up his strength?—Those who suffer from cold use it.

15450. Do you think it is possible to stop the use of opium?—It would be difficult.

15451. If Government stopped the cultivation and sale, where would people get it from?—They would get it from neighbouring countries, as the Nepal people would get it, and have it smuggled in.

15452. What would be the general opinion of people if Government prohibited the cultivation and sale of opium by law, and if owing to the loss of revenue fresh taxation had to be imposed?—Public opinion would be against it.

15453. Can you quote anything from the Yunani medical books in respect to the use of opium?—The medical evidence as to the consumption of opium as given in our books is as follows:—It stops dysentery, brings sleep, removes the swellings, relieves the pains, is mixed with compound medicines, is used in the diseases of eye, head, ears, cough, asthma and old fevers. It removes hunger, warms the body when cold, and is used in healing the wounds, adding

15427. Why is that done?—They make agreements before the time for cultivation comes.

15428. Do you think the cultivation of opium should be encouraged?—Yes.

15429. More than it is at present?—Yes, certainly, because rents of lands have now risen high.

15430. How far would you allow opium cultivation to be encouraged?—I should say not less than one-tenth per cent.

15431. One-tenth of the land?—Yes.

15432. (*Mr. Mowbray.*) Do you think there is more poppy grown on the estates you are managing than on other estates round about in the district?—I should say equally the same.

15433. All the estates you have been speaking of are in the Kai Bareli District?—Yes.

15434. (*Mr. Haridas Vekharidas.*) How many villages are there in which poppy is not grown?—Very few. I should say there are perhaps four or five hamlets where paddy is grown.

15435. In those four or five villages do they pay the rent as regularly as the others?—The rent is delivered in kind.

15436. So that there is no difficulty in realising the revenue?—No.

15437. (*Mr. Fanshawe.*) Do you think that prohibition of the use of opium, except for medical purposes, would lead to discontent?—Certainly.

Babu Ram Singh.

13 Jan. 1894.

the sensual power, etc. Its application in itch and other bodily diseases is useful. The defects by using it are as under:—It makes the man thin, cheeks pale; injures the five senses of seeing, smelling, hearing, and tasting and touch; makes a man look sad and sorrowful; also afraid of little things; the heart, the liver, the stomach, and other limbs are also in disorder by using the opium in excess.

15454. Do you mean to say that the effects you mention come from the use or from the excessive use?—Excessive use.

15455. You live in the town, I suppose?—Yes.

15456. You do not know much about the villages, I suppose?—I go to my estate.

15457. You own land yourself?—I own land.

15458. Do you think the cultivation of poppy is a benefit to the cultivators?—Certainly it is.

15459. Some witnesses have said that they cultivate under pressure, and not of their own free will: do you think that is the case?—I do not think any pressure is brought to bear.

15460. (*Mr. Pease.*) What are the medical books to which you refer?—They are numerous.

15461. Can you give us the names of any of the books that refer to opium?—One is *Makhzam*.

15462. What is the date of that book?—It is over 100 years old.

15463. Does this in any way refer to Indian experience?—Yes; Indian experience is referred to greatly, because it is written by an Indian.

15464. Does your own experience agree with the medical evidence of those books?—It certainly agrees with them.

15465. Have you seen many of those who are suffering from the influence of opium as described here?—Yes.

15466. How many persons have you known as persons who take opium in excess?—Numerous persons.

15467. Have you any view with regard to the differences of the effect of eating and smoking opium?—There is not much difference.

15468. (*Mr. Wilson.*) You have said that it injures the sight?—Excessive use.

15469. Is a little opium beneficial to the sight?—There is no advantage, but it is not injurious.

15470. Have you any information to give us with reference to the cultivation of opium?—The cultivation of opium is made in many villages. Its cultivators are more benefited by it. The cultivators get money from the Government for its cultivation. The price of opium is more than that of other cultivated things, and is recovered

Hakim Nazir Hussain Khan.
13 Jan. 1894.
at once. The fields in which the opium is cultivated produce a good manure by the falling of the opium leaves, and thus the land is enriched and more productive. The landholder gets the advantages of recovering his money from the cultivators very easily, and thus pay the rent to Government without any possible delay.

15471. Is it not a fact than opium land is more richly manured than any other lands?—Certainly it is richly manured.

15472. And if it were not manured, would it be benefited by the leaves which fall from it?—It would be somewhat benefited.

15473. What does the landholder get by the cultivation of opium?—The rent is realised quickly.

15474. Have you any land yourself: are you a zemin-dar?—Yes.

15475. How much land have you?—The gross rental amounts to Rs. 20,000 or Rs. 25,000. I have some rent-free land.

The witness withdrew.

Saiyid Abu Ibrahim.

SAIYID ABU IBRAHIM called in and examined (through an interpreter).

15485. (*Sir James Lyall.*) I believe you are a Yunani Hakim?—Yes.

15486. Where do you practise?—At Fyzabad.

15487. Are you a hereditary Hakim?—No.

15488. Where did you study medicine?—From Shafa-ud-daula, the King's physician.

15489. Will you describe what your experience is in prescribing opium?—I have had experience of opium for the last eighteen years. In the following diseases I have been prescribing opium in various ways with success. Its effect is astringent, *i.e.*, it contracts the intestines of the stomach and bowels, stops the pores of the body, and alleviates every kind of pain. It produces stronger and more beneficial effects than other medicines when used in diseases affecting the nervous system, catarrh, diarrhoea, dysentery, and wounds in the intestines. It produces instantaneous effect when used externally in cases of inflammation, rheumatism, neuralgia, and inflammation of the eyes. Besides these there are other diseases in which opium has been found to be more beneficial than any other medicine.

15490. Will you tell us in your opinion why the people take to using opium generally?—Men of this country generally use opium, more especially the Mahomedans, who have an impression that opium is a panacea to every illness. The women of the country give opium to their children up to seven or eight years of age to counteract the effects of chill and cold, and it has never been found to have any injurious effect either on the brain or any other organ. Its use in small quantities has not been found to be injurious either physically or morally. Of course in case of exceeding the limit of moderation it acts detrimentally on the body as well as on the brain; it makes men lethargic and of dirty habits. Young men of sensual habits, who use it as an aphrodisiac generally, by degrees, impair their natural powers. They become lean and lose their virile powers. Another serious effect of opium is that its users often find it difficult to give up its use, although other intoxicating medicines may be offered to them having an almost equally stimulating effect. I tried to induce several persons to give up its use and also administered very efficacious medicines, but, although assuring me that they were trying to abandon the drug, as a fact they never did so. Old men who use it as a preventive of cough and cold and diseases due to phlegm have found it very beneficial like "triyak." I have

15476. How much land revenue do you pay?—Rs. 10,000, or a little more.

15477. What is the King's Yunani Hospital?—It is a Hospital endowed by the King.

15478. Who makes the appointment of the staff in that Hospital?—There is a Charity Meeting which makes the appointments.

15479. Do you mean a Committee?—Yes.

15480. Who are the principal people on the Committee?—There are Natives and Europeans.

15481. Who are the Europeans?—The Commissioner, City Magistrate, Civil Surgeon, Executive Engineer, and Civil Chaplain.

15482. (*Sir James Lyall.*) How many native members are there on the Committee?—There are sixteen or seventeen native members on the Committee.

15483. Are they all Mahomedan gentlemen in Lucknow?—They are both Hindus and Mahomedans.

15484. How are they elected?—They are appointed by the Government.

never found it to produce bad effects at all comparable to those of liquor or other intoxicants.

15491. What is triyak?—It is a specific medicine for the cure of all diseases.

15492. You say "In case of exceeding the limit of moderation it acts detrimentally": what do you think is about the limit of moderation?—Young people should not take it, but if they do take it, they should take from 2 to 6 grains.

15493. If they go above that it does them harm?—Yes.

15494. Can old people take more than that without hurting themselves, or do you put the same limit on it for them?—The same.

15495. Would it in your opinion be wise for Government to try to stop the use of opium, except for medicinal purposes in this country?—I do not think it would be wise; many people would die if it were done.

15496. Would it be a bad thing for the cultivators, or would it leave them just as they are if the cultivation were stopped?—The cultivators would suffer. I would suffer because I have land.

15497. (*Mr. Pease.*) Have you known many persons who have injured themselves by taking opium?—I have seen many who have become lean and of dirty habits.

15498. (*Sir William Roberts.*) Have you seen, on the other hand, many people benefited by the habitual use of opium in India?—Yes, I have seen many of them take it after they are 40 years of age.

15499. (*Mr. Wilson.*) Have you lived most of your life in Fyzabad?—I was born there and have lived there.

15500. Have you any idea how many persons there are in that town who are suffering in their health because they have taken too much opium?—I have no idea: I cannot give the number.

15501. Is it a very large number?—It is not very large; there are 10 or 20 persons of that kind.

15502. Do you know the city of Lucknow?—I do not know it well. I have visited it at times.

15503. Do you think that more persons suffer at Lucknow than in your own town?—I do not know.

The witness withdrew.

BABU BEPIN BEHARI BOSE, M.A., called in and examined.

Babu Bepin Behari Bose.
M.A.

15504. *Mr. Wilson.*) Are you a graduate of the Calcutta University?—Yes, I am a graduate of the Calcutta University, educated in the colleges of these provinces, and I have been practising as a vakil of the Allahabad High Court and of the Court of the Judicial Commissioner of Oudh at Lucknow for the last eleven years. Before I joined the Bar at Lucknow I was second master of the Government High School, Allahabad, and served in that capacity for about nine years. My opportunities for observing the effects of opium were considerable.

15505. Is there a great deal of opium consumed in Lucknow?—Yes.

15506. Is that principally amongst well-to-do people?—Yes, amongst well-to-do people principally, and especially among Mahomedans.

15507. Are the poor people almost free of it?—The village poor people are almost free of it.

15508. Is opium sometimes used for pure self-indulgence?—Very often.

15509. Is the term "*Aphimi*" a term of reproach in Lucknow as well as in the villages?—Yes, it is a term of universal reproach.

15510. It is a very offensive term to use?—It denotes moral degradation of the lowest kind.

15511. What have you to tell us about opium as a remedy for fever?—I have had some personal experience of it. I took malarial fever when I was a boy, and I am positive that opium was never prescribed for me by any doctor.

15512. Have you heard of its being prescribed as a protection or preventive against fever?—No, I am not aware of it.

15513. Have you heard of it lately?—Lately of course I have heard of it,—since this Commission came to India; but I never heard of it before.

15514. Do you approve of the present system of licensing?—No.

15515. What effect do you think it has on the consumption?—It is unquestionably increasing.

15516. You know that licensed smoking-shops have been closed?—Yes.

15517. What is your opinion as to the effect of that?—They were only closed one year ago. There are other evils arising from the closing of the shops. It has increased unlicensed smoking dens.

15518. Do you approve of the refusal of licenses for opium-smoking shops?—Yes, I do. Licenses for smoking saloons should not be given, but at the same time measures would be taken by Government that unlicensed and illicit smoking dens should not be opened in consequence thereof.

15519. Are you in favour of further restrictions as to the sale of opium?—Yes.

15520. Would you be disposed to favour the prohibition of the sale of opium except for medical purposes, and except for those persons who have become so accustomed to it that they might suffer if they did not get a little?—That is my opinion. I look upon those persons who are habitual opium-eaters as morally and physically diseased. I consider that they should come under the category of diseased persons.

15521. Do you think that some strong action of that kind on the part of the Government would be supported by the general opinion of the people?—Yes, I devoutly believe that.

15522. Are you at all afraid that it would lead to any disturbances?—No, I do not believe that, because the opinion of the country is very settled on this point,—that opium-eating is not good at all.

15523. Do you think that any inconvenience that might arise either to Government or to the consumers would be more than counterbalanced by the moral good effect?—Yes, certainly I do.

15524. What have you to say with reference to the popularity of the cultivation of opium?—That there is no very great readiness to cultivate opium on the part of cultivators is even admitted by Government officials. The special correspondent of the *Pioneer* with the Lieutenant-Governor's party in camp is forced to admit this fact, as is evidenced by his correspondence published in the issue of that paper of the 6th instant, an extract of which is appended to this statement. I am not prepared to say that poppy crop is more profitable than other crops, such as sugarcane, linseed or even wheat. But one thing tells in favour of poppy, and that probably induces cultivators to plant in preference to other crops, and that is the temptation of advances from Government which cannot fail to act powerfully on the inclinations of an impecunious and impoverished peasantry. The chronic pecuniary difficulties of the cultivators make the advances a boon to them which they readily accept, although they know that the cultivation of the poppy is a more troublesome and labourousome task, requiring more expenditure of money than other ordinary crops. I am told it also exhausts the soil. The impression that cultivators keep back portions of raw opium for illicit sale is incorrect: for no better price they can hope to get from the people than the Government, and in fact the cases are very rare indeed.

The following is the quotation from the *Pioneer*:—

"The native of this country does not give himself away by stating that he has everything he wants; if he cultivates opium, he does so solely to accommodate Government, whose order he says it is that the poppy should be grown; the case which he makes out of this grievance

is one which the anti-opiumists would gladly seize on, but his statement is not a true one. He does not add with what keenness he has striven to get the necessary permission to plant the poppy on his land, and how much he appreciates the advances which Government makes on his crop, and the great ease of mind given to him by the fixed rate at which he is paid for his opium, while his less fortunate brother-cultivator, who may have sown wheat, receives for his produce prices which vary at every harvest with the rise and fall of the market." I think those words are an admission on the part of the Government that the opinion generally existing in the country is that poppy cultivation is not very popular. I have had frequent occasions to talk with village cultivators in my professional capacity as well as with zemindars. I have been told that that is so.

15525. I believe you practise in the High Court?—In the Judicial Commissioner's Court, which is the High Court for Oudh.

15526. You have practised in the other Courts, I presume?—Yes, in the Lower Courts as well.

15527. In your opinion is the habit of opium-eating a common cause of petty crime?—Yes.

15528. Would you say that it is also a cause of crimes of violence?—It is not generally considered to be a cause of violent crimes.

15529. Why is it not a cause of violent crimes?—The reason can be easily explained—because the opium-eater never stirs out of his own home. His body and mind are enfeebled, and he is totally unfit for energetic action. Violent crimes require a little bodily energy, and the opium-eater has not any left.

15530. So that it leads to petty crime, but not to crimes of violence?—No.

15531. (*Mr. Mowbray.*) You say in your printed statement, "As opium-smoking is more injurious than opium-taking, the habit can be rooted out by stringent penal regulations which will be thought inexpedient by many": is that your opinion?—Yes, that is my opinion.

15532. I suppose "stringent penal regulations" mean that persons who either smoke or eat opium after prohibition, except under medical prescription, will be liable to be fined and ultimately sent to prison?—Of course that is my meaning.

15533. You say that would be considered inexpedient by many; do you think there would have to be a large number of people sent to prison under those circumstances?—There would be a large number.

15534. Do you not think it would be very demoralizing to the people to pass a large number of people through the jails for that which they themselves would not regard as a crime?—Yes, of course; but I think that contingency would not arise. I think those who take opium for medical purposes should be excluded. Other persons will not take opium after there is prohibition, and consequently the danger will be very much minimized.

15535. You also say, "There is some difficulty in entirely prohibiting the sale of opium except for medicinal purposes": I may take it, I suppose, that you recognize the difficulty?—Yes. We have a large population that take opium ordinarily. I consider those persons to be diseased.

15536. You refer to the sale of opium through the drug shops; I shall be glad if you will define exactly what you mean by drug shops?—Drug shops are shops which sell medicine; or I may modify my opinion a little and say that we may sell opium by such persons who sell poisons, and they might sell opium to those persons after keeping a register of the description of such persons.

15537. Is there any general law in Oudh with regard to the sale of poisons?—Yes, there is a clause in the Municipal Law.

15538. I asked you whether there is a general law?—I am not aware of any general law with regard to the sale of poisons.

15539. I suppose in the ordinary way the number of what you call drug shops in a town where drugs are sold is very much larger than the number of opium shops at the present moment?—They are.

15540. Therefore unless you introduce some very stringent regulations with regard to drug shops you would have more places selling opium than you have at present?—I have mentioned drug shops because they are of a more respectable character. Government can rely upon their honesty, or perhaps their ability, a little more than the opium licensed shops.

*Babu Bepin
Behari Bose,
M.A.*

13 Jan. 1894.

Babu Bepin Behari Bose, M. A. 15541. You think it would be more safe to trust to the general drug shops at present existing than to the opium shops?—Yes.

15542. (*Mr. Haridas Vedaridas.*) Do you know whether this Municipal Law is framed by the Municipal Committee or by the Government?—The Municipal Act is passed by the Governor General in Council.

15543. And there is some provision about poisons?—Yes, there is a section which gives power to Municipalities to enact bye-laws, and the bye-laws have the force of law after they are sanctioned by the Lieutenant-Governor.

15544. So that it is a Government Act?—Yes.

15545. (*Mr. Fanshawe.*) Is it not the case that there is a special class of idle Mahomedans in Lucknow who are addicted to vicious habits?—Yes.

15546. I suppose it will be fair to conclude that great care must be exercised in drawing general conclusions as to the opium habit in India from the experience of Lucknow: would that not be so?—Yes; Lucknow possesses some special circumstances, I must own.

15547. With regard to the term "*Aphimi*" is it not the case that, speaking generally, it represents as regards opium what the term "drunkard" represents as regards alcohol?—Yes.

15548. Am I right in understanding that places in which unlicensed smoking is now carried on have come into existence since the licensed shops were closed?—I cannot say exactly, but a great number of them must have come into existence after the former shops were suppressed.

15549. Do you say that the opium habit is a frequent cause of petty offences against property?—Yes.

15550. Would you apply that generally to Oudh?—Yes, not only to Oudh, but also to Calcutta, and cities generally.

15551. Have you had any experience of Calcutta?—Yes, I have had some experience of Calcutta.

15552. That was not the evidence we received in Calcutta from the Commissioner of Police?—I have some personal experience.

15553. Would you express a strong opinion that the opium habit was a frequent cause of such offences?—It is a cause. Opium-eating leads to poverty, and poverty leads to those petty offences.

15554. If it were a frequent cause, would not the officers in charge of jails be able to speak on that subject?—Of course these petty offences are not very severely punished.

15555. They are often punished with imprisonment, I presume?—Yes; but the character of the persons is not so much enquired into. That is what I mean.

15556. You seem to think that the views expressed in the paragraph you have quoted from the *Pioneer* represent the views of Government?—That is the idea of the officials. I do not mean that it is the opinion of the Government. So far it is a recognized fact even by officials under Government.

15557. Perhaps you are not aware that Sir Charles Crosthwaite told us yesterday that he himself had heard cultivators say, when asked in the first instance, that they cultivate poppy by order of the Government, but when they were asked to explain they said there was no compulsion; it was merely a form of speech?—I do not mean that there is any compulsion in the legal sense of the term, but I think there is moral compulsion.

15558. I will put it to you generally. There is a very large body of cultivators in these provinces: do you not think that they are free, and that they are quite aware that they are free, to cultivate poppy or not?—One fact should be borne in mind—there was only one class of persons cultivating opium, that is the Muraos. No other class of persons ever cultivated it, whether Frahmin, Khattaris or Mahomedans. It is thought to be degrading, or rather it is against their religion. Muraos only cultivated it at one time, but now opium is cultivated by all classes almost.

15559. What conclusion do you wish to found on that?—I wish to found this conclusion, that it is either moral compulsion or temptation which has led these persons to disregard their customs and religious behests.

15560. Do you not think that the fairer conclusion would be that these classes had found poppy cultivation profitable?—As to its being profitable, I have made enquiries, and I do not think opium is more profitable than sugarcane or linseed, or even wheat.

15561. I was not asking for your own opinion, as to the profit of poppy cultivation, but whether the conclusion I have indicated was not the fairer conclusion?—It is a conclusion which might be drawn, but I cannot say whether this conclusion would be the right one.

15562. (*Sir James Lyall.*) What do you mean by drug shops?—A drug shop is a shop where medicines are sold.

15563. Most of the Banias' shops sell medicines, do they not?—Banias' shops are not considered to be drug shops. There are Attar shops where they make up the prescriptions of Hakims and Vaidis.

15564. It is much the same thing as Pansari?—Pansari is a grocer's shop, I believe. Ordinary medicines might be kept by the Pansari, but they do not make up prescriptions.

15565. Are there many such attar shops in Lucknow now?—Yes.

15566. How many?—Four or five respectable firms.

15567. I suppose you would never find such a shop in a country village?—There are such shops in big places. I have no personal experience.

15568. My experience is considerable in India, but I do not know whether I ever saw such a shop in a *kasba* or small town, and I certainly never saw one in a village?—I have no experience of villages; but I know in the city there are.

15569. Is the purport of the extract you have given from the *Pioneer* that the cultivator does not cultivate willingly?—The true meaning I attach to this extract is this, that even Government is forced to admit that all cultivators do not cultivate willingly.

15570. What do you think the writer means by saying "He (the cultivator) does not add with what keenness he has striven to get the necessary permission to plant the poppy on his land, and how much he appreciates the advances"? that means to say that the cultivator strives with great keenness to get permission to cultivate and highly appreciates his advance; that does not look as if the passage meant that the cultivator cultivates unwillingly?—Of course, this is the reason he gives for proving the opinion to be unfounded.

15571. (*Sir William Roberts.*) Do you draw a distinction between the moderate use of opium and the use of opium in excess?—Yes.

15572. Does your description of the disastrous effects of the opium habit apply only to the people who use it in excess?—Generally it applies to people who use it in excess; but the use of opium in moderation is a thing not very much known.

15573. Did I understand you to say that before this Commission came round you did not know that opium was a remedy for fever: are you aware that the most abundant constituent of Bengal opium was sent out from the Government factories expressly for the purpose of being used in malarious districts for the relief and help of people suffering from malarious fevers?—I heard so yesterday from the Head Assistant of the Opium Agency at Ghazipur, but I never heard it before. It has been stopped since quinine has been known.

15574. You say that you suffered much and long from malaria in your boyhood, but that you are positive no doctor prescribed opium for you: has it never struck you that had your doctor been led to prescribe opium for you, you would not have suffered so much and so long from malaria?—That is a question I cannot answer.

15575. (*Chairman.*) You agree that under any Government, especially under a Government by foreign rulers, it is most desirable that any measure affecting the social experience and personal habits of the people should be supported by public opinion among those directly concerned?—Yes.

15576. In fact, you indicate that you hold that view: you gave an expression of your confidence that the limitation of the use of opium which you recommend would be supported by public opinion?—Yes.

15577. Can you give us any proof that the proposed limitation of the use of opium would be supported by public opinion beyond your own personal opinion?—I may say I am Secretary of a Political Association which has also social and other objects in view. I know the opinion of the members of that Association.

15578. How many members have you in that Association?—There are about 150 on the register now. They are mostly composed of Mahomedans. About 40 per cent. are Hindus, the rest are Mahomedans.

15579. Is that society called the Public Good Society?—Yes. It is the oldest body in Oudh except the British Indian Association. I know there is a firm opinion that opium-eating is bad. If Government takes any action to minimise its effects I do not think that Government will not be supported by public opinion; but if Government goes in for prohibitive measures I rather think it will be supported in its action.

15580. Have you followed with interest the proceedings of the Native Indian Congress?—Yes.

15581. Are you a member of it?—Yes, I often visit the places where the Congresses are held.

15582. You have some general knowledge of its proceedings?—Yes. I attend as a Delegate.

15583. Is not that a body which was expressly constituted by those who set it up to give expression to every grievance, as far as practicable, of which the people of India could complain?—Yes.

15584. That body has found it practicable to pass resolutions which would command general assent with reference to restrictions upon the use of alcohol, has it not?—Yes.

15585. But it has not found it practicable to pass similar resolutions restraining the use of opium?—That is true.

15586. Is not the difference of the action that has been taken by that Congress due to an instinctive sense that popular opinion in India is more advanced with reference to a policy of restricting the use of alcohol than with reference to a policy of restricting the use of opium?—It has an opinion, though not pronounced authoritatively. I think there is a numerous class of educated natives who have an equally strong opinion on the question of opium; but I may say that the opium habit is not so immediately ruinous as the use of alcohol.

15587. The opium habit is not so detrimental as the excessive use of alcohol?—It is equally detrimental.

15588. But it does not constitute such a grave social offence?—I am familiar with the effects of alcohol in families in Bengal as well as here; but the effects of opium are not so immediately and ruinously detrimental, though they do become detrimental after some time.

15589. When you contrast the action taken by the Indian Congress with reference to alcohol and its silence with reference to opium, do you not think that you may fairly admit that the difference is due to an instinctive sense on the part of those who conduct the proceedings of the Congress that the public opinion of this country is less matured and less advanced with reference to restrictions upon opium than it is with reference to restrictions upon alcohol?—That is not exactly the case. There is a great difference of opinion existing in this country with regard to this question, and the Congress advisedly leaves questions in which there is a great deal of difference of opinion alone.

15590. That is exactly what I wish to hear from you. The difference of opinion is so divided that the Congress do not think it prudent to take up the opium question at present?—Yes, probably that is the case.

15591. Does not that lead you to the conclusion that if anything is to be done in relation to opium the social movement must be pushed further before you can call upon the Government to act in this matter by legislation. I do not say whether it is desirable or not, but looking at it from your point of view?—I believe that social action is more important in this respect than even Government interference.

The witness withdrew.

Mr. BHUBAN MOHAN ROY, Mr. CHARU CHANDRA GHOSE and Mr. PREO NATH BOSE called in and examined.

15606. (*Mr. Wilson to Mr. Roy.*) Are you Secretary of the Brahm Samaj community in Lucknow?—Yes.

15607. I believe you are also a druggist and chemist?—Yes.

15608. As a member of the Brahm Samaj I presume you are in favour of the disuse of alcohol and of all intoxicating drugs?—Yes.

15609. What have you to say as to the use of opium with regard to the physical, intellectual and moral conditions of the people?—It makes men pilferers and thieves and degenerates them generally.

15610. Is there much difference between the effects of opium on rich men and poor men?—Decidedly. Those who can afford to have rich food can keep their health.

15611. Has the practice of eating and smoking opium done a great deal of harm in Lucknow to the lower classes

interference. That is my personal opinion. In the case of alcohol the Temperance Societies have done a great deal of good by their social and moral action. The same argument applies to opium, but it is none the less necessary for Government to restrict the sale of opium.

15592. Still you think it would not be advisable to deal with such questions unless there is popular support?—The people will support Government if Government are advised to take action in this matter.

15593. (*Mr. Mowbray.*) Are you a Bengali yourself, or native of this province?—I am a Bengali, but I have been brought up in this province. I was born in Bengal, and spent some years there.

15594. Have you been in Calcutta?—Yes, I have been in Calcutta. I was born in Bengal, but I came into this province very early owing to malaria.

15595. (*Sir James Lyall.*) You rely upon the opinion that exists in your Rafa-i Am Society?—Yes, I am supposed to be an exponent of it.

15596. Are you not aware that in Bengal several societies express very different opinions with regard to this opium question?—Yes; there is this question, and there is the currency question. I know people have expressed very different opinions.

15597. You say that the majority of your members are Mahomedans?—Yes.

15598. The Central Mahomedan Association of Calcutta and the Mahomedan Literary Association, I think, both express different opinions?—Yes. They may have expressed different opinions; but here Mahomedans have one great reason for expressing an unfavourable opinion, and that is because they have been daily familiar with the miserable condition of opium-eaters. It requires no very great effort of the imagination or reasoning to arrive at that conclusion.

15599. (*Chairman.*) You recognise that what you are asking to be done applies to the whole of India?—Yes. There will be no harm.

15600. As far as your community is concerned, your Society is to a very limited extent representative; there are other Societies which are even more representative and hold different views?—Yes.

15601. (*Mr. Wilson.*) You know what is meant by "local option"?—Yes.

15602. It is applying a law in one part of the country which does not apply in other parts: do you think it might be possible to apply that in India in the case of this opium question?—Yes.

15603. So that where there was a strong opinion in one part of the country opium would be prohibited, but it would not be prohibited where the feeling was not so strong in that direction?—I am decidedly in favour of local option.

15604. We had a witness this morning who said that he thought one reason why Congress did not take up the opium question was because the Commission was sitting: do you share that opinion at all?—Yes, I share that opinion too.

15605. (*Chairman.*) Might not that be a very strong reason for taking the matter up?—We cannot speak on the subject very decidedly. As far as this Congress is concerned the views I have expressed are the views held by the delegates.

as well as the better classes of people?—Yes. Because they, the poorer, cannot afford to take sufficient rich food, milk and ghi.

15612. What effect has it upon their occupation and work?—They are dull and inactive.

15613. Do they take to pilfering and cheating?—Yes.

15614. Have you known a case in which an opium-eater or an opium smoker would let his family starve while he is spending his money on opium?—Yes.

15615. Is it common?—Yes, it is common amongst the lower people here.

15616. In your experience as a druggist I suppose you have orders for prescriptions from doctors?—Yes.

15617. Do they very often prescribe opium?—No; very rarely—occasionally.

Babu Bipin Behari Bose, M.A.

13 Jan. 1894.

Mr. Bhuban Mohan Roy, Mr. Charu Chandra Ghose, and Mr. Preo Nath Bose.

Mr. Bhuban Mohan Roy, Mr. Charu Chandra Ghose, and Mr. Preo Nath Bose. 15618. Would you say that it was a very common medicine for them to order?—No, only in bowel complaints tincture opii is administered. When there is pain in the body liniment opii is used.

15619. Do the doctors prescribe it in any of the other forms such as laudanum and morphia?—Yes, but not often.

15620. I suppose you have no doubt that opium and these other preparations of opium are useful as medicines at times?—Yes.

15621. You do not dispute that?—No.

15622. But its common use for other purposes you think is bad?—I am dead against it.

15623. I think you make some suggestions in which the expenditure might be reduced?—Yes.

15624. In what way do you complain of inadequate information in regard to public affairs?—The public are not sufficiently informed of the exact figures expended on each item.

15625. Cannot you buy the published accounts?—Only the large items are shown. The details are not given.

15626. You would be distinctly in favour of some very stringent restrictions or of entire prohibition except for medicinal purposes?—Yes.

15627. And for the sake of those persons who have become thoroughly accustomed to the use of opium what would you do?—There must be some restrictions on the part of the druggist and chemist or doctors whom the Government will place confidence in.

15628. From your knowledge of the people of Lucknow do you believe that they would generally be in favour of some such proposals?—Yes. There are a great many people who would be in favour of them.

15629. Most of the people?—At least half the population of Lucknow.

15630. (*To Mr. Bose.*) You have heard what Mr. Roy has said?—Yes.

15631. Do you agree with what he has said?—Yes.

15632. (*To Mr. Ghose.*) What are you?—I am a medical practitioner.

15633. According to what system?—According to Homeopathy and Allopathy systems—the European method.

15634. Do you agree?—Yes.

15635. (*Mr. Mowbray.*) (*to Mr. Roy.*) You are the Secretary of the same Brahma Samaj Association of which we heard yesterday?—No.

15636. What are the numbers of your branch of the Brahma Samaj Association in Lucknow?—About 20 or 22.

15637. I see you are a chemist and druggist?—Yes.

15638. Is it necessary for you to take out any special license as a chemist and druggist in Lucknow?—No.

15639. But of course you would not be able to sell opium yourself without a license?—No.

15640. Do you have to take out a license for making up prescriptions. Supposing opium is included in a prescription, how do you obtain the opium which you have to put into it?—If a pill is prepared the extract opii and some other ingredients are put into it—according to the prescriptions of the doctor.

15641. But how do you get opium?—We get it from the Treasury Office.

15642. As you want it you buy it from the Treasury?—Yes.

15643. (*To Mr. Ghose.*) But I understand you to say that you were an Allopathic medical practitioner?—Yes. Both Allopathic and Homeopathic.

15644. (*Mr. Fanshawe.* *to Mr. Roy.*) What prescriptions do you generally make up. Are they the prescriptions of Vaidas and Hakims?—No.

15645. Have you any large number of prescriptions to make up?—Yes; sometimes.

15646. How many in the day or month?—About 200 a month.

15647. You spoke of the lower class of people as being large consumers of opium in Lucknow?—Yes.

15648. Do you not rather mean the poorer people?—Yes.

15649. Is it your opinion that the number of crimes is on the increase here?—Yes, small crimes and petty thefts.

15650. Have you any statistics to justify that?—We often have petty thefts and other things.

15651. That is your general belief, not founded on any facts?—No.

15652. (*Sir James Lyall.*) (*To Mr. Roy.*) You and Mr. Ghose and Mr. Bose are all Bengalis?—Yes, we are.

15653. Are the 20 or 22 members of your society Bengalis too?—Yes.

15654. Are the members of your society equally opposed to all intoxicants?—Yes; I am deady opposed to all intoxicants.

15655. If you had to make a choice, which do you think would produce the worst effects in India—opium or alcohol?—I hate both of them; opium of course demoralises the man.

15656. You think both should be prohibited by law?—Yes.

15657. Except under medical advice?—Yes.

15658. Your two friends here are doctors?—Yes.

15659. If opium and alcohol and all other intoxicants can only be got by a doctor's certificate, that would be a very good thing for the doctors, would it not?—There would be a great number of people going to doctors and asking for certificates, of course.

15660. I suppose there would be a considerable income to be got?—Not necessarily.

15661. I have no doubt that these gentlemen here would be perfectly honest in giving their prescriptions, but the profession of a doctor in India is one that anybody can adopt, is it not?—Yes. There are a great many men in this city who are thoroughly honest and there are others who want to make money. There are different kinds of men.

15662. Would you limit it to honest doctors?—Yes.

15663. Who would sift out the honest doctors from the dishonest doctors?—That depends upon the choice of the people.

15664. You would have it elective?—Yes.

15665. (*Sir William Roberts* *to Mr. Roy.*) I think in answer to Mr. Wilson you said that the use of opium makes men immoral and degraded in the extreme?—Yes.

15666. Did you apply that to moderate users or only to the excessive users of opium?—But when people commence opium they gradually increase the quantity they take. That is generally the case.

15667. The sort of people whom, if you were speaking of alcohol, you would call drunkards?—Yes.

The witnesses withdrew.

Pandit Jagat Narain, B.A.

PANDIT JAGAT NARAIN, B.A., and Member Municipal Board, Lucknow, called in and examined.

15668. (*Mr. Wilson.*) I believe you are a pleader?—Yes. 15669. I think you desired to give evidence before this Commission, but through somebody's absence or some difficulty you did not know in sufficient time to enable you to prepare an abstract?—That is so.

15670. You have had considerable criminal practice here?—Not very considerable.

15671. Will you give us your opinion as to the general effect of opium on the morality of the people of Lucknow?—My opinion (which is confined only to Lucknow and the surrounding villages) is that almost all the respectable and educated natives look upon the habit with

disgust. The people of other provinces taunt and ridicule the Lucknow people. They call us "drinkers of Goomti water," "afimchis" and "chandubaz."

15672. What is the meaning of that?—They think the effect of "Goomti water" is to make the person a coward. The last two words are applied to persons who have not energy and no strength of character, and all that. There are a very small number of people who take opium for medicinal purposes. In the majority of cases young children are given opium by their mothers. Poverty is the cause of this, because the majority of the people cannot employ other servants to look after their children, and after working hard for the whole day, in order that their own sleep may not

be disturbed, and also that children may sleep for the whole night opium is given to them. Children are given opium from the time they are six months old to the time they are four or five years of age. That is why they get addicted to the habit. Then again it is taken for immoral purposes by eighty per cent. of the opium-eaters here.

15673. What is your opinion with regard to opium being a cause of crime?—My experience in the criminal courts dates back seven years. In at least all petty cases the police look after these opium-eaters. The police go to the gambling-places and *chandu*-places; they go there first to seek for offenders. Any person as a Government pleader of the High Court of this province cannot say whether opium is a cause of crime or not. His experience as such Government pleader will be confined to the record of cases which go up to High Court in revision or appeal. The records are silent on that point; no such questions are asked by the Magistrates or the Sessions Judges. Opium being cause of petty offences not violent crimes, hardly any such case goes up to High Court.

15674. Supposing some stringent regulations were adopted by the Government with regard to the sale of opium to the people at large, making two exceptions, one for strictly medicinal purposes, and the other a temporary arrangement whereby those persons who had become habituated to the use of the drug might be registered; do you think public opinion would justify and support the Government in such action?—I think every head of a family would be very pleased if such a course were adopted, except those addicted to the habit.

15675. Do you think that even some of those would be glad to have the temptation put out of their way?—Yes. I may say one thing more. If it is said that opium is taken for the purpose of fever and other diseases, I do not see why more females should not take it than they do, because you will find a very insignificant number of females, as compared with males, who are opium-eaters.

15676. If it were necessary as a preventive against fever or for general purposes, you do not understand why the women do not take it as much as the men?—No, I do not. No respectable Hindu or Mahomedan will dare to take opium before his elder; that fairly shows that his elders do not like it.

15677. (Mr. Mowbray.) Are you a native of this province?—Yes.

15678. Is your knowledge practically confined to Hindus?—Yes, i.e., to Hindus as far as females are concerned.

15679. We have heard that opium-smoking and opium-eating in Lucknow is principally indulged in by Mahomedans?—As far as females are concerned my experience is principally confined to Hindus. No difference as far as the males are concerned.

15680. (Mr. Fanshawe.) Is it not the case that the circumstances of Lucknow are special as regards opium consumption?—Yes; there is a great consumption as far as I know.

15681. What you said with regard to the police looking for criminals among opium consumers refers especially to Lucknow?—Yes.

The witness withdrew.

Mr. J. PRESCOTT HEWETT, Secretary to the Commission, called in and examined.
